(4) The determination of the Roman pound from its ratio to the *Attic talent*, namely, as 1 : 80 (see Böckh, c. 9) is not to be much relied on; since we do not know whether that ratio was exact, or only approximate.

On the whole, the result obtained from the coins is probably nearest to the truth.

12. *Connection between Weights and Measures.*—Upon the interesting, but very difficult, subjects of the connection of the Greek and Roman weights with one another, and of both with the Greek measures, our space does not permit us to add anything to the passages quoted from Böckh and Grote under *MENSURA*, p. 754; and to what is said under *QUADRANTAL*.

13. *Authorities.*—The following are the chief authorities on the subject of ancient weights, money, and measures.

i. *Ancient Authorities.*—In addition to the classic writers in general, especially the historians and geographers, (1) the *Ancient Grammarians* and lexicographers contain many scattered notices, some of which are preserved from the last metrological treatises of Dardanus, Diodorus, Polemarchus, and others. (2) We possess a number of *small metrological treatises*, which are printed in the fifth volume of Stephanus's *Thesaurus Linguae Graecae*, and with the works of Galen, vol. xix. ed. Kühn. The most important of them are, that ascribed to Dioscorides, the piece entitled *περί μέτρων ὕψους*, and the extract from the *Κοσμητικὴ* of Cleopatra. Besides these, we have a good treatise on the subject, printed in the Benedictine *Analecta Graeca*, pp. 393, foll., and in Montfaucon's *Palaographiae Graecae*, pp. 369, foll.:—two works, of but little value, ascribed to Epiphanius, entitled *περί μέτρων καὶ σταθμῶν* and *περί πηλικότητος μέτρων*, printed in the *Varia Sacra* of Steph. Le Moyné, vol. i. pp. 470, foll.:—various writings of Heron (see *Dict. of Biog.* s. v.):—and a treatise by Didymus of Alexandria, *μέτρα μαρμαρέων καὶ παντοίων ἔξλων*, published by Angelo Mai from a MS. in the Ambrosian Library at Milan, 1817, 8vo. Certain difficulties respecting the authorship of some of these works are discussed by Böckh, c. 2. In Latin, we have two works by Priscian; the one in prose, entitled, *De Figuris et Nominibus Numerorum et de Nummis ac Ponderibus ad Symmachum Liber*; the other is the poem *De Ponderibus et Mensuris*, in 208 hexameter verses, which is commonly ascribed to Rhemnius Fannius, and which is printed in Wernsdorf's *Poetae Latini Minores*, vol. v. pt. 1. pp. 212, foll., and in Weber's *Corpus Poetarum Latinorum*, pp. 1369, 1370. The statements of all these metrological writers must be used with great caution on account of their late age. (3) The chief *Existing Monuments* such as buildings, measures, vessels, weights, and coins, have been mentioned in the articles *MENSURA*,

and *NUMMUS*. Further information respecting them will be found in Böckh.

ii. *Modern Works*: see the list given at the end of the article *NUMMUS*. The present position of our knowledge is marked by the work of Böckh, so often referred to, with Mr. Grote's review of it. There is no satisfactory English work on the subject. The best, so far as it goes, is the treatise of Raper, in the *Philosophical Transactions*, vol. lxi. Mr. Hussey's work is very useful, but its value is much impaired by the want of more of that criticism, at once ingenious and sound, which has guided Böckh to so many new and firm results amidst intricacies which were before deemed hopeless.

For a general view of the value of the several weights, measures, and money in terms of our own, see the Tables at the end of this work. [P. S.]

PONDO. [LIBRA.]

PONS (γέφυρα), a bridge. The most ancient bridge upon record, of which the construction has been described, is the one erected by Nitocris over the Euphrates at Babylon. (Herod. i. 186.) It was in the nature of a drawbridge; and consisted merely of stone piers without arches, but connected with one another by a framework of planking, which was removed at night to prevent the inhabitants from passing over from the different sides of the river to commit mutual depredations. The stones were fastened together by iron cramps soldered with lead; and the piers were built whilst the bed of the river was free from water, its course having been diverted into a large lake, which was again restored to the usual channel when the work had been completed. (Herod. l. c.) Compare the description given by Diodorus Siculus (ii. 8, vol. i. p. 121, ed. Wesseling), who ascribes the work to Semiramis.

Temporary bridges constructed upon boats, called *σχεῖλαι* (Heysch. s. v.; Herod. vii. 36; Aesch. Pers. 69, ed. Blomf., et Gloss.), were also of very early invention. Dareius is mentioned as having thrown a bridge of this kind over the Thracian Bosphorus (Herod. iv. 83, 85); but we have no details respecting it, beyond the name of its architect, Mandrocles of Samos. (Herod. i. 87, 88.) The one constructed by order of Xerxes across the Hellespont is more celebrated, and has been minutely described by Herodotus (vii. 36). It was built at the place where the Chersonese forms almost a right angle, between the towns of Sestos and Madytus on the one side, and Abydos on the other. The first bridge, which was constructed at this spot, was washed away by a storm almost immediately after it was completed (Herod. vii. 34), and of this no details are given. The subsequent one was executed under the directions of a different set of architects. (*Id.* 36.) Both of them appear to have partaken of the nature of *suspension* bridges, the platform which formed the passage-way being secured upon enormous cables formed by ropes of flax (λευκόλινον) and papyrus (βυβάλινον) twisted together, and then stretched tight by means of windlasses (ὄνοι) on each side.

The bridges hitherto mentioned cannot be strictly denominated Greek, although the architects by whom the two last were constructed were natives of the Greek islands. But the frequent mention of the word in Homer proves that bridges were not uncommon in the Greek states, or at least in the western part of Asia Minor, during his time.

The Greek term for a permanent bridge is γέφυρα, which the ancient etymologists connected with the Gephyraei (Γεφυραίοι), a people whom Herodotus (v. 57) states to have been Phoenicians, though they pretended to have come from Eretria; and the etymologists accordingly tell us that the first bridge in Greece was built by this people across the Cephissus; but such an explanation is opposed to sound etymology and common sense. As the rivers of Greece were small, and the use of the arch known to them only to a limited extent [Ancus], it is probable that their bridges were built entirely of wood, or, at best, were nothing more than a wooden platform supported upon stone piers at each extremity, like that of Nitocris described above. Pliny (*H. N.* iv. 1) mentions a bridge over the Acheron 1000 feet in length; and also says (iv. 21) that the island Euboea was joined to Boeotia by a bridge; but it is probable that both these works were executed after the Roman conquest.

In Greece also, as well as in Italy, the term *bridge* was used to signify a roadway raised upon piers or arches to connect the opposite sides of a ravine, even where no water flowed through it (τῆς γέφυρας, ἢ τοῦ τῆς πόλεως ἱερ., Xen. *Anab.* vi. 5. § 22).

The Romans were undoubtedly the first people who applied the arch to the construction of bridges, by which they were enabled to erect structures of great beauty and solidity, as well as utility; for by this means the openings between the piers for the convenience of navigation, which in the bridges of Babylon and Greece must have been very narrow, could be extended to any necessary span.

The width of the passage-way in a Roman bridge was commonly narrow, as compared with modern structures of the same kind, and corresponded with the road (*via*) leading to and from it. It was divided into three parts. The centre one, for horses and carriages, was denominated *agger* or *iter*; and the raised footpaths on each side (*decursoria*), which were enclosed by parapet walls similar in use and appearance to the *plateas* in the basilica. [BASILICA, p. 199, b.]

Eight bridges across the Tiber are enumerated by P. Victor as belonging to the city of Rome. I. Of these the most celebrated, as well as the most ancient, was the PONS SUBLICIVUS, so called because it was built of wood; *sublicus*, in the language of the Formiani, meaning wooden beams. (Festus, s. v. *Sublicivum*.) It was built by Ancus Martius, when he united the Janiculum to the city (Liv. i. 33; Dionys. iii. p. 183), and became renowned from the well-known feat of Horatius Coclès in the war with Porsenna. (Liv. ii. 10; Val. Max. iii. 2. § 1; Dionys. v. pp. 295, 296.) In consequence of the delay and difficulty then experienced in breaking it down, it was reconstructed without nails, in such a manner that each beam could be removed and replaced at pleasure. (Plin. *H. N.* xxxvi. 23.) It was so rebuilt by the pontifices (Dionys. iii. p. 183), from which fact, according to Varro (*De Ling. Lat.* v. 83), they derived their name; and it was afterwards considered so sacred, that no repairs could be made in it without previous sacrifice conducted by the pontifex in person. (Dionys. ii. l. c.) In the age of Augustus it was still a wooden bridge, as is manifest from the epithet *roboreo*, used by Ovid (*Fast.* v. 621); in which state it appears to have

remained at the time of Otho, when it was carried away by an inundation of the Tiber. (Tacit. *Hist.* i. 86, who calls it *pons sublicivus*.) In later ages it was also called *pons Aemilius*, probably from the name of the person by whom it was rebuilt; but who this Aemilius was is uncertain. It may have been Aemilius Lepidus the triumvir, or probably the Aemilius Lepidus who was censor with Munatius Plancus, under Augustus, ten years after the *pons sublicivus* fell down, as related by Dion Cassius (p. 423, c.) We learn from P. Victor, in his description of the Regio xi., that these two bridges were one and the same—"Aemilius qui ante sublicivus." It is called Aemilian by Juvenal (*Sat.* vi. 32) and Lampridius (*Heliog.* c. 17), but it is mentioned by Capitolinus (*Antonin. Pius*, c. 8) as the *pons Sublicivus*; which passage is alone sufficient to refute the assertion of some writers that it was built of stone at the period when the name of Aemilius was given to it. (Nardini, *Rom. Ant.* viii. 3.)

This bridge was a favourite resort for beggars, who used to sit upon it and demand alms. (Senec. *De Vit. Beat.* 25.) Hence the expression of Juvenal (xiv. 134), *aliquis de ponte*, for a beggar. (Compare also Juv. iv. 116.)

It was situated at the foot of the Aventine, and was the bridge over which C. Gracchus directed his flight when he was overtaken by his opponents. (Plut. *Gracch.* p. 842, c.; compare Val. Max. iv. 7. § 2; Ovid. *Fast.* vi. 477.)

II. PONS PALATINUS formed the communication between the Palatine and its vicinities and the Janiculum, and stood at the spot now occupied by the "ponte Rotto." It is thought that the words of Livy (xl. 51) have reference to this bridge. It was repaired by Augustus. (*Inscrip. ap. Grut.* p. 160. n. 1.)

III. IV. PONS FABRICIVS and PONS CESTIVS were the two which connected the Insula Tiberina with the opposite sides of the river; the first with the city, and the latter with the Janiculum. Both are still remaining. The *pons Fabricius* was originally of wood, but was rebuilt by L. Fabricius, the *curator viarum*, as the inscription testifies, a short time previous to the conspiracy of Catiline (Dion Cass. xxxvii. p. 50); which passage of Dion Cassius, as well as the words of the Scholiast on Horace (*Sat.* ii. 3. 36), warrant the assumption that it was then first built of stone. It is now called "Ponte quattro capi." The *pons Cestius* is, by some authors, supposed to have been built during the reign of Tiberius by Cestius Gallus, the person mentioned by Pliny (x. 60; Tacit. *Ann.* vi. 31), though it is more reasonable to conclude that it was constructed before the termination of the republic, as no private individual would have been permitted to give his own name to a public work under the empire. (Nardini, l. c.) The inscriptions now remaining are in commemoration of Valentinianus, Valens, and Gratianus, the emperors by whom it was restored. Both these bridges are represented in the following woodcut: that on the right hand is the *pons Fabricius*, and is curious as being one of the very few remaining works which bear a date during the republic; the *pons Cestius* on the left represents the efforts of a much later age; and, instead of the buildings now seen upon the island, the temples which originally stood there, as well as the island itself, have been restored.

V. **PONS JANICULENSIS**, which led direct to the Janiculum. The name of its founder and the period of its construction are unknown; but it occupied the site of the present "ponte Sisto," which was built by Sixtus IV. upon the ruins of the old bridge.

VI. **PONS VATICANUS**, so called because it formed the communication between the Campus Martius and Campus Vaticanus. When the waters of the Tiber are very low, vestiges of the piers are still discernible at the back of the Hospital of San Spirito. By modern topographers this bridge is often called "Pons Triumphalis," but without any

classical authority; the inference, however, is not improbable, because it led directly from the Campus to the Clivus Cinnae (now Monte Mario), from which the triumphal processions descended.

VII. **PONS AELIUS**, built by Hadrian, which led from the city to the Mausoleum [**MAUSOLEUM**] of that emperor, now the bridge and castle of St. Angelo. (Spart. *Hadr.* c. 19; Dion Cass. lxi. p. 797, π .) A representation of this bridge is given in the following woodcut, taken from a medal still extant. It affords a specimen of the style employed at the period when the fine arts are considered to have been at their greatest perfection at Rome.

VIII. **PONS MILVIUS**, on the Via Flaminia, now ponte Molle, was built by Aemilius Scaurus the censor (Aur. Vict. *De Viris Illustr.* c. 27. § 8), and is mentioned by Cicero about forty-five years after its formation. Upon this bridge the ambassadors of the Allobroges were arrested by Cicero's retainers during the conspiracy of Catiline. (Cic. *in Cat.* iii. 2.) Catulus and Pompey encamped here against Lepidus when he attempted to annul the acts of Sulla. (Florus, iii. 23.) Its vicinity was a favourite place of resort for pleasure and debauchery in the licentious reign of Nero. (Tacit. *Ann.* xiii. 47.) And finally, it was at this spot that the battle between Maxentius and Constantine, which decided the fate of the Roman empire, took place. (A. D. 312.)

The Roman bridges without the city were far too many to be enumerated here. They formed one of the chief embellishments in all the public roads; and their numerous and stupendous remains, still existing in Italy, Portugal, and Spain, attest, even to the present day, the scale of grandeur with which their works of national utility were always carried on. Subjoined is a representation of the bridge at Ariminum (*Rimini*), which remains entire: it was commenced by Augustus and terminated by Tiberius, as we learn from the inscription, which is still extant. It is introduced in order to give the reader an idea of the style of art during the age of Vitruvius, that peculiar period of transition between the austere simplicity of the republic and the profuse magnificence of the empire.

The bridge thrown across the bay of Baiae by Caligula (Dion Cass. lix. p. 652, π ; Suet. *Cal.* 19), the useless undertaking of a profligate prince, does not require any further notice; but the bridge

which Trajan built across the Danube, which is one of the greatest efforts of human ingenuity, must not pass unmentioned. A full account of its construction is given by Dion Cassius (lxviii. p. 776, B.); and it is also mentioned by the younger Pliny (*Ep.* viii. 4; compare Procopius, *De Aedificiis*). The form of it is given in the annexed woodcut, from a representation of it on the column

It will be observed that the piers only are of stone, and the superstructure of wood.

The Conte Marigli, in a letter to Montfaucon (*Giornale de' Letterati d'Italia*, vol. xxiii. p. 116), gives the probable measurements of this structure, from observations made upon the spot, which will serve as a faithful commentary upon the text of Dion. He considers that the whole line consisted of 23 piers and 22 arches (making the whole bridge about 3010 feet long, and 48 in height), which are much more than the number displayed upon the column. But this is easily accounted for without impairing the authority of the artist's work. A few arches were sufficient to show the general features of the bridge, without continuing the monotonous uniformity of the whole line, which would have produced an effect ill adapted to the purposes of sculpture. It was destroyed by Hadrian (Dion Cass. l. c.), under the pretence that it would facilitate the incursions of the barbarians into the Roman territories, but in reality, it is said, from jealousy and despair of being able himself to accomplish any equally great undertaking; which is supposed to be confirmed by the fact that he afterwards put to death the architect, Artemidorus, under whose directions it was constructed.

The Romans also denominated by the name of *pontes* the causeways which in modern language are termed "viaducts." Of these the *Pons ad Nonam*, now called ponte Nono, near the ninth mile from Rome on the *Via Praenestina* is a fine specimen.

Amongst the bridges of temporary use, which were made for the immediate purposes of a campaign, the most celebrated is that constructed by Julius Caesar over the Rhine within the short period of ten days. It was built entirely of wood, and the whole process of its construction is minutely detailed by its author (*De Bell. Gall.* iv. 17). An elevation of it is given by Palladio, constructed in conformity with the account of Caesar, which has been copied in the edition of Oudendorp and in the Delphin edition.

Vegetius (iii. 7), Herodian (viii. 4, 8), and Lucan (iv. 420) mention the use of caaks (*dolia, supae*) by the Romans to support rafts for the pas-

of Trajan at Rome; which has given rise to much controversy, as it does not agree in many respects with the description of Dion Cassius. The inscription, supposed to have belonged to this bridge, is quoted by Leunclav. p. 1041. 6, and by Gruter, 448. 3.

SUB JUGUM ECCE RAPITUR ET DANUVIUS.

sage of an army; and Vegetius (l. c.) says that it was customary for the Roman army to carry with them small boats (*monocauli*) hollowed out from the trunk of a tree, together with planks and nails, so that a bridge could be constructed and bound together with ropes upon any emergency without loss of time. Pompey passed the Euphrates by a similar device during the Mithridatic war. (Florus, iii. 5.) The preceding woodcut, taken from a bas-relief on the column of Trajan, will afford an idea of the general method of construction and form of these bridges, of which there are several designs upon the same monument, all of which greatly resemble each other.

When the Comitia were held, the voters, in order to reach the enclosure called *septum* and *ovile*, passed over a wooden platform, elevated above the ground, which was called *pons suffragiorum*, in order that they might be able to give their votes without confusion or collusion.

Pons is also used to signify the platform (*ἐπιβάθρα, ἀποβάθρα*) used for embarking in or disembarking from, a ship.

"Interea Aeneas socios de puppibus altis
Pontibus exponit." Virg. *Aen.* x. 288.

The method of using these *pontes* is represented in the annexed woodcut, taken from a very curious intaglio representing the history of the Trojan war, discovered at Bovillae towards the latter end of the 17th century; which is given by Fabretti, *Syntagma de Columna Trajani*, p. 315. (See further, Hirt, *Lehre der Gebäude*, § x.) [A. R.]

PO'NTIFEX (*ῥοιδοδίσκαλος, ῥοινομός, ῥοιφύλαξ, ῥοιφάντης*). The origin of this word is explained in various ways. Q. Scaevola, who was himself pontifex maximus, derived it from *posse* and *facere*, and Varro from *pons*, because the pontiffs, he says, had built the *pons sublicius*, and afterwards frequently restored it, that it might be

possible to perform sacrifices on each side of the Tiber. (Varro, *de Ling. Lat.* v. 83, ed. Müller; Dionys. ii. 73.) This statement is, however, contradicted by the tradition which ascribes the building of the pons publicus to Ancus Martius (Liv. i. 33), at a time when the pontiffs had long existed and borne this name. Güttling (*Gesch. d. Röm. Staatsv.* p. 173) thinks that *pontifex* is only another form for *pompifex*, which would characterise the pontiffs only as the managers and conductors of public processions and solemnities. But it seems far more probable that the word is formed from *pons* and *facere* (in the signification of the Greek *ποιεῖν*, to perform a sacrifice), and that consequently it signifies the priests who offered sacrifices upon the bridge. The ancient sacrifice to which the name thus alludes, is that of the Argeans on the sacred or suburban bridge, which is described by Dionysius (i. 38; compare *ARGENT*). Greek writers, moreover, sometimes translate the word pontiffs by *ἱερεῖς*.

The Roman pontiffs formed the most illustrious among the great colleges of priests. Their institution, like that of all important matters of religion, was ascribed to Numa. (Liv. i. 20; Dionys. ii. 73.) The number of pontiffs appointed by this king was four (Liv. x. 6), and at their head was the pontifex maximus, who is generally not included when the number of pontiffs is mentioned. Cicero (*de Re Publ.* ii. 14), however, includes the pontifex maximus when he says that Numa appointed five pontiffs. Niebuhr (*Hist. of Rome*, i. p. 302, &c.; compare iii. p. 410; Liv. x. 6; Cic. *de Re Publ.* ii. 9) supposes with great probability, that the original number of four pontiffs (not including the pontifex maximus) had reference to the two earliest tribes of the Romans, the Ramnes and Tities, so that each tribe was represented by two pontiffs. In the year B. C. 300, the Ogulnian law raised the number of pontiffs to eight, or, including the pontifex maximus, to nine, and four of them were to be plebeians. (Liv. x. 6.) The pontifex maximus, however, continued to be a patrician down to the year A. C. 254, when Tib. Coruncanius was the first plebeian who was invested with this dignity. (Liv. *Epit.* 18.) This number of pontiffs remained for a long time unaltered, until in 81 A. C. the dictator Sulla increased it to fifteen (Liv. *Epit.* 89), and J. Caesar to sixteen. (Dion Cass. xlii. 51.) In both these changes the pontifex maximus is included in the number. During the empire the number varied, though on the whole fifteen appears to have been the regular number.

The mode of appointing the pontiffs was also different at different times. It appears that after their institution by Numa, the college had the right of co-optation, that is, if a member of the college died (for all the pontiffs held their office for life), the members met and elected a successor, who after his election was inaugurated by the augurs. (Dionys. ii. 22, 73.) This election was sometimes called *captio*. (Gellius, i. 12.) In the year 212 B. C. Livy (xxv. 5) speaks of the election of a pontifex maximus in the comitia (probably the comitia tributa) as the ordinary mode of appointing this high-priest. But in relating the events of the year 181 A. C. he again states that the appointment of the chief pontiff took place by the co-optation of the college. (Liv. xl. 42.) How these anomalies arose (unless Livy expresses himself carelessly) is uncertain (see Güttling, *l. c.* p.

375); for, as far as we know, the first attempt to deprive the college of its right of co-optation, and to transfer the power of election to the people, was not made until the year B. C. 145, by the tribune C. Licinius Crassus; but it was frustrated by the praetor C. Laelius. (Cic. *de Am.* 25, *Brut.* 21, *de Nat. Deor.* iii. 2.) In 104 B. C. the attempt was successfully repeated by the tribune Cn. Domitius Ahenobarbus: and a law (Lex Domitia) was then passed, which transferred the right of electing the members of the great colleges of priests to the people (probably in the comitia tributa); that is, the people elected a candidate, who was then made a member of the college by the co-optatio of the priests themselves, so that the co-optatio, although still necessary, became a mere matter of form. (Cic. *de Leg. Agr.* ii. 7, *Epist. ad Brut.* i. 5; Vell. Pat. ii. 12; Sueton. *Nero*, 2.) The lex Domitia was repealed by Sulla in a lex Cornelia de Sacerdotiis (81 B. C.), which restored to the great priestly colleges their full right of co-optatio. (Liv. *Epit.* 89; Pseudo-Ascon. in *Divinat.* p. 102, ed. Orelli; Dion Cass. xxxvii. 37.) In the year 63 B. C. the law of Sulla was abolished, and the Domitian law was restored, but not in its full extent; for it was now determined, that in case of a vacancy the college itself should nominate two candidates, and the people elect one of them. This mode of proceeding is expressly mentioned in regard to the appointment of augurs, and was, no doubt, the same in that of the pontiffs. (Cic. *Philipp.* ii. 2.) Julius Caesar did not alter this modified lex Domitia, but M. Antonius again restored the right of co-optatio to the college. (Dion Cass. xlv. 53.)

The college of pontiffs had the supreme superintendence of all matters of religion, and of things and persons connected with public as well as private worship. A general outline of their rights and functions is given by Livy (i. 20) and Dionysius (ii. 73). This power is said to have been given to them by Numa; and he also entrusted to their keeping the books containing the ritual ordinances, together with the obligation to give information to any one who might consult them on matters of religion. They had to guard against any irregularity in the observance of religious rites that might arise from a neglect of the ancient customs, or from the introduction of foreign rites. They had not only to determine in what manner the heavenly gods should be worshipped, but also the proper form of burials, and how the souls of the departed (manes) were to be appeased; in like manner what signs either in lightning or other phenomena were to be received and attended to. They had the judicial decision in all matters of religion, whether private persons, magistrates, or priests were concerned, and in cases where the existing laws or customs were found defective or insufficient, they made new laws and regulations (*decreta pontificum*) in which they always followed their own judgment as to what was consistent with the existing customs and usages. (Gell. ii. 28, x. 15.) They watched over the conduct of all persons who had anything to do with the sacrifices or the worship of the gods, that is, over all the priests and their servants. The forms of worship and of sacrificing were determined by the pontiffs, and whoever refused to obey their injunctions was punished by them, for they were "rerum quae ad sacra et religiones pertinent, iudices et vindices." (Fest. s. v. *Maximus pontifex*; compare

Cic. de Leg. ii. 8, 12.) The pontiffs themselves were not subject to any court of law or punishment, and were not responsible either to the senate or to the people. The details of these duties and functions were contained in books called *libri pontificii* or *pontificales*, *commentarii sacrorum* or *sacrorum pontificalium* (*Fest. s. v. Axiota* and *Occisum*), which they were said to have received from Numa, and which were sanctioned by Ancus Martius. This king is said to have made public that part of these regulations which had reference to the *sacra publica* (*Liv.* i. 32); and when at the commencement of the republic the wooden tables on which these published regulations were written had fallen into decay, they were restored by the pontifex maximus C. Papirius. (*Dionys.* iii. 36.) One part of these *libri pontificales* was called *Indigitamenta*, and contained the names of the gods as well as the manner in which these names were to be used in public worship. (*Serv. ad Virg. Georg.* i. 21.) A second part must have contained the formulas of the *jus pontificium*. (*Cic. de Re Publ.* ii. 31.) The original laws and regulations contained in these books were in the course of time increased and more accurately defined by the decrees of the pontiffs, whence perhaps their name *commentarii*. (*Plin. H. N.* xviii. 3; *Liv.* iv. 3; *Cic. Brut.* 14.) Another tradition concerning these books stated that Numa communicated to the pontiffs their duties and rights merely by word of mouth, and that he had buried the books in a stone chest on the Janiculum. (*Plut. Num.* 22; *Plin. H. N.* xiii. 27; *Val. Max.* i. 1. 12; *August. de Civit. Dei*, vii. 34.) These books were found in 181 A. C., and one half of them contained ritual regulations and the *jus pontificium*, and the other half philosophical inquiries on the same subjects, and were written in the Greek language. The books were brought to the praetor urbanus Q. Petilius, and the senate ordered the latter half to be burnt, while the former was carefully preserved. Respecting the nature and authenticity of this story, see Hartung, *Die Reliq. d. Röm.* i. p. 214. The *annales maximi* were records of the events of each year kept by the pontifex maximus, from the commencement of the state to the time of the pontifex maximus, P. Mucius Scaevola, A. C. 133.

As to the rights and duties of the pontiffs, it must first of all be borne in mind that the pontiffs were not priests of any particular divinity, but a college which stood above all other priests, and superintended the whole external worship of the gods. (*Cic. de Leg.* ii. 8.) One of their principal duties was the regulation of the *sacra* both *publica* and *privata*, and to watch that they were observed at the proper times (for which purpose the pontiffs originally had the whole regulation of the calendar, see *CALENDARIVM*, p. 230, &c.), and in their proper form. In the management of the *sacra publica* they were in later times assisted in certain performances by the *triumviri epulones* [*EPULONES*], and had in their keeping the funds from which the expenses of the *sacra publica* were defrayed. [*SACRA.*]

The pontiffs convoked the assembly of the *curies* (*comitia calata* or *curiata*) in cases where priests were to be appointed, and *flamines* or a *rex sacrorum* were to be inaugurated; also when wills were to be received, and when a *detestatio sacrorum* and adoption by *adrogatio* took place. (*Gell.* v. 19,

xv. 27; *ADOPTIO.*) Whether the presence of the pontiffs together with that of the *augurs* and two *flamines* was necessary in the *comitia curiata* also in cases when other matters were transacted, as Niebuhr thinks (*i.* p. 342, ii. p. 223), does not appear to be quite certain. The curious circumstance that on one occasion the pontifex maximus was commanded by the senate to preside at the election of tribunes of the people, is explained by Niebuhr (*ii.* p. 359, &c.).

As regards the jurisdiction of the pontiffs, magistrates and priests as well as private individuals were bound to submit to their sentence, provided it had the sanction of three members of the college. (*Cic. de Harusp. Resp.* 6.) In most cases the sentence of the pontiffs only inflicted a fine upon the offenders (*Cic. Philip.* xi. 8; *Liv.* xxxvii. 51, xl. 42), but the person fined had a right to appeal to the people, who might release him from the fine. In regard to the Vestal virgins and the persons who committed incest with them, the pontiffs had criminal jurisdiction and might pronounce the sentence of death. (*Dionys.* ix. 40; *Liv.* xxii. 57; *Fest. s. v. Probrum.*) A man who had violated a Vestal virgin was according to an ancient law scourged to death by the pontifex maximus in the comitium, and it appears that originally neither the Vestal virgins nor the male offenders in such a case had any right of appeal. Götting (p. 185) considers that they had the right of appeal, but the passage of Cicero (*de Re Publ.* ii. 31) to which he refers, does not support his opinion. Incest in general belonged to the jurisdiction of the pontiffs, and might be punished with death. (*Cic. de Leg.* ii. 19.) In later times we find that even in the case of the pontiffs having passed sentence upon Vestal virgins, a tribune interfered and induced the people to appoint a quaestor for the purpose of making a fresh inquiry into the case; and it sometimes happened that after this new trial the sentence of the pontiffs was modified or annulled. (*Ascon. ad Milon.* p. 46, ed. Orelli.) Such cases, however, seem to have been mere irregularities founded upon an abuse of the tribunitian power. In the early times the pontiffs were in the exclusive possession of the civil as well as religious law, until the former was made public by C. Flavius. [*ACTIO.*] The regulations which served as a guide to the pontiffs in their judicial proceedings, formed a large collection of laws, which was called the *jus pontificium*, and formed part of the *libri pontificii*. (*Cic. de Orat.* i. 43, iii. 33, *pro Domo*, 13; compare *Jus*, pp. 656, 657.) The new decrees which the pontiffs made either on the proposal of the senate, or in cases belonging to the *sacra privata*, or that of private individuals, were, as Livy (xxxix. 16) says, innumerable. (Compare *Cic. de Leg.* ii. 23; *Macrobi. Sat.* iii. 3; *Dionys.* ii. 73.)

The meetings of the college of pontiffs, to which in some instances the *flamines* and the *rex sacrorum* were summoned (*Cic. de Harusp. Resp.* 6), were held in the *curia regia* on the *Via Sacra*, to which was attached the residence of the pontifex maximus and of the *rex sacrorum*. (*Suet. Caes.* 46; *Serv. ad Aen.* viii. 363; *Plin. Epist.* iv. 11.) As the chief pontiff was obliged to live in a *domus publica*, Augustus, when he assumed this dignity, changed part of his own house into a *domus publica*. (*Dion. Cass.* liv. 27.) All the pontiffs were in their appearance distinguished by the conic cap

called tutulus or galerus, with an apex upon it, and the toga praetexta.

The pontifex maximus was the president of the college and acted in its name, whence he alone is frequently mentioned in cases in which he must be considered only as the organ of the college. He was generally chosen from among the most distinguished persons, and such as had held a curule magistracy, or were already members of the college. (Liv. xxxv. 5, xl. 42.) Two of his especial duties were to appoint (*capere*) the Vestal virgins and the flamines [VESTALES; FLAMEN], and to be present at every marriage by confarreatio. When festive games were vowed or a dedication made, the chief pontiff had to repeat over before the persons who made the vow or the dedication, the formula with which it was to be performed (*praeire verba*, Liv. v. 40, ix. 46, iv. 27). During the period of the republic, when the people exercised sovereign power in every respect, we find that if the pontiff on constitutional or religious grounds refused to perform this solemnity, he might be compelled by the people.

A pontifex might, like all the members of the great priestly colleges, hold any other military, civil or priestly office, provided the different offices did not interfere with one another. Thus we find one and the same person being pontiff, augur, and decemvir sacrorum (Liv. xl. 42); instances of a pontifex maximus being at the same time consul, are very numerous. (Liv. xxviii. 38; Cic. *de Harusp. Resp.* 6; compare Ambrosch, *Studien und Andeutungen*, p. 229, note 105.) But whatever might be the civil or military office which a pontifex maximus held beside his pontificate, he was not allowed to leave Italy. The first who violated this law was P. Licinius Crassus, in B. C. 131 (Liv. *Epit.* 59; Val. Max. viii. 7. 6; Oro. v. 10); but after this precedent, pontiffs seem to have frequently transgressed the law, and Caesar, though pontifex maximus, went to his province of Gaul.

The college of pontiffs continued to exist until the overthrow of paganism (Arnob. iv. 35; Symmach. *Epit.* ix. 128, 129); but its power and influence were considerably weakened as the emperors, according to the example of Caesar, had the right to appoint as many members of the great colleges of priests as they pleased. (Dion Cass. xliii. 51, xliii. 51, li. 20, liii. 17; Suet. *Caes.* 31.) In addition to this, the emperors themselves were always chief pontiffs, and as such the presidents of the college; hence the title of pontifex maximus (P. M. or PON. M.) appears on several coins of the emperors. If there were several emperors at a time, only one bore the title of pontifex maximus; but in the year A. D. 238, we find that each of the two emperors Maximus and Balbinus assumed this dignity. (Capitol. *Maxim. et Balb.* 8.) The last traces of emperors being at the same time chief pontiffs are found in inscriptions of Valentinian, Valens, and Gratianus. (Orelli, *Inscript.* n. 1117, 1118.) From the time of Theodosius the emperors no longer appear in the dignity of pontiff; but at last the title was assumed by the Christian bishop of Rome.

There were other pontiffs at Rome who were distinguished by the epithet minores. Various opinions have been entertained as to what these pontifices minores were. Niebuhr (i. p. 302. n. 775) thinks that they were originally the pontiffs

of the Luceres; that they stood in the same relation to the other pontiffs as the patres minorum gentium to the patres majorum gentium; and that subsequently, when the meaning of the name was forgotten, it was applied to the secretaries of the great college of pontiffs. In another passage (iii. p. 411) Niebuhr himself demonstrates that the Luceres were never represented in the college of pontiffs, and his earlier supposition is contradicted by all the statements of ancient writers who mention the pontifices minores. Livy (xxii. 57; compare Jul. Capitol. *Opil. Macrin.* 7), in speaking of the secretaries of the college of pontiffs, adds, "quos nunc minores pontifices appellant;" from which it is evident that the name pontifices minores was of later introduction, and that it was given to persons who originally had no claims to it, that is, to the secretaries of the pontiffs. The only natural solution of the question seems to be this. At the time when the real pontiffs began to neglect their duties, and to leave the principal business to be done by their secretaries, it became customary to designate these scribes by the name of pontifices minores. Macrobius (*Sat.* i. 15), in speaking of minor pontiffs previous to the time of Cn. Flavius, makes an anachronism, as he transfers a name customary in his own days to a time when it could not possibly exist. The number of these secretaries is uncertain; Cicero (*de Harusp. Resp.* 6) mentions the name of three minor pontiffs. The name cannot have been used long before the end of the republic, when even chief pontiffs began to show a disregard for their sacred duties, as in the case of P. Licinius Crassus and Julius Caesar. Another proof of their falling off in comparison with former days, is that about the same time the good and luxurious living of the pontiffs became proverbial at Rome. (Horat. *Carm.* ii. 14. 26, &c.; Mart. xii. 48. 12; Macrobi. *Sat.* ii. 9.) [L. S.]

PONTIFICALES LUDI. [LUDI PONTIFICALES.]

PONTIFICIUM JUS. [JUS, pp. 656, 657.]

POPA. [CAUPONA; SACRIFICIUM.]

POPINA. [CAUPONA.]

POPULARES. [NOBILES, p. 799, b.]

POPULARIA. [AMPHITHEATRUM, p. 88, b.]

POPULIFUGIA or POPULIFUGIA, the day of the people's flight, was celebrated on the Nones of July, according to an ancient tradition preserved by Varro (*De Ling. Lat.* vi. 18, ed. Müller), in commemoration of the flight of the people, when the inhabitants of Ficulea, Fidenae, and other places round about, appeared in arms against Rome shortly after the departure of the Gauls, and produced such a panic that the Romans suddenly fled before them. Macrobius (*Satura.* iii. 2), however, says that the Populifugia was celebrated in commemoration of the flight of the people before the Tuscans, while Dionysius (ii. 76) refers its origin to the flight of the people on the death of Romulus. Niebuhr (*Hist. of Rome*, vol. ii. p. 573) seems disposed to accept the tradition preserved by Varro; but the different accounts of its origin given by Macrobius and Dionysius render the story uncertain.

POPULUS. [PATRICII.]

PORISTAE (*πορισται*), were magistrates at Athens, who probably levied the extraordinary supplies. (*Πορισται εἰσι δρχη τῆς Ἀθήνης, ἧτις πόρους ἐτίθει*, Bekker, *Anec.* p. 294. 19.) Antiphon (*De Chor.* p. 791, Reiske) classes them

with the Poletae and Praetores; and Demosthenes (*Philipp.* i. p. 49. 15) joins τῶν χρημάτων ταμίαι καὶ πορισταί, from which it would appear that they were public officers in his time, although the words do not necessarily prove this. (Böckh, *Publ. Econ. of Athens*, p. 166, 2d ed.)

PORNAE (πόρναι). [HETAEARAE.]

PORPE (πόρπη). [FIBULA.]

PORTA (πόλη, dim. πύλις), the gate of a city, citadel, or other open space inclosed by a wall, in contradistinction to JANUA, which was the door of a house or any covered edifice. The terms *porta* and *πύλη* are often found in the plural, even when applied to a single gate, because it consisted of two leaves. (Thucyd. ii. 4; Virg. *Aen.* ii. 330.)

The gates of a city were of course various in their number and position. The ancient walls of Paestum, Sepianum, and Aosta, still remain and inclose a square: in the centre of each of the four walls was a gate. If, instead of being situated on a plain, a city was built on the summit of a precipitous hill, there was a gate on the sloping declivity which afforded the easiest access. If, in consequence of the unevenness of the ground, the form of the walls was irregular, the number and situation of the gates varied according to the circumstances. Thus Megara had 5 gates (Reinganum, *Megara*, pp. 125, 126); Thebes, in Boeotia, had 7; Athens had 8 (Ersch u. Gruber, *Encyc. s. v. Attica*, pp. 240, 241); and Rome 20, or perhaps even more.

The jambs of the gate were surmounted, 1. by a lintel, which was large and strong in proportion to the width of the gate: examples of extremely massive jambs and lintels are presented by the gates in the so-called Cyclopean Walls; see, for instance, the engraving of the celebrated Lion-Gate at Mycenae, under MURUS, p. 770, b. The lintel of the centre gate leading into the Athenian Acropolis, is 17 feet long. 2. by an arch, as we see exemplified at Pompeii, Paestum, Sepianum, Volterra, Suza, Autun, Bezançon, and Treves. 3. At Arpinum, one of the gates now remaining is arched, whilst another is constructed with the stones projecting one beyond another, after the manner represented in the wood-cut, at p. 125. (Keppel Craven, *Excursions in the Abruzzi*, vol. i. p. 108.)

At Como, Verona, and other ancient cities of Lombardy, the gate contains two passages close together, the one designed for carriages entering, and the other for carriages leaving the city. The same provision is observed in the magnificent ruin of a gate at Treves. (See the following woodcut, showing a view of it, together with its plan.) In other instances we find only one gate for carriages, but a smaller one on each side of it (παρὰ πύλιν, Heliodor. viii. p. 394) for foot-passengers. (See the plan of the gate of Pompeii, p. 256.) Each of the fine gates which remain at Autun has not only two carriage-ways, but exterior to them two sideways for pedestrians. (Millin, *Voyage dans les Départemens*, &c. vol. i. ch. 22. Atlas, Pl. 18. Figs. 3, 4.) When there were no sideways, one of the valves of the large gate sometimes contained a wicket (portula, πύλις: βινωτήλη), large enough to admit a single person. The porter opened it when any one wished to go in or out by night. (Polyb. viii. 20, 24; Liv. xxv. 9.)

The contrivances for fastening gates were in general the same as those used for doors [JANUA],

but larger in proportion. The wooden bar placed across them in the inside (μοχλός) was kept in its position by the following method. A hole, passing through it perpendicularly (βαλανοδόκη, Aen. Tact. 18), admitted a cylindrical piece of iron, called βάλανος, which also entered a hole in the gate, so that, until it was taken out, the bar could not be removed either to the one side or the other. (Thucyd. ii. 4; Aristoph. *Vesp.* 200; βεβαλάνονται, Aves, 1159.) Another piece of iron, fitted to the βάλανος and called βαλανόγρυς, was used to extract it. (Aen. Tact. l. c.) When the besiegers, for want of this key, the βαλανόγρυς, were unable to remove the bar, they cut it through with a hatchet (Thucyd. iv. 111; Polyb. viii. 23, 24), or set it on fire. (Aen. Tact. 19.)

The gateway had commonly a chamber, either on one side or on both, which served as the residence of the porter or guard. It was called πύλιν (Polyb. viii. 20, 23, 24). Its situation is shown in the following plan. (See wood-cut.) But the gate-way was also, in many cases, surmounted by a tower, adapted either for defence (portis turres imposuit, Caes. B. G. viii. 9; Virg. *Aen.* vi. 552—554) or for conducting the general business of government. In the gates of Como and Verona this edifice is 3 stories high. At Treves it was 4 stories high in the flanks, although the 4 stories remain standing in one of them only, as may be observed in the annexed wood-cut. The length

of this building is 115 feet; its depth 47 in the middle, 67 in the flanks; its greatest height, 92. All the 4 stories are ornamented in every direction with rows of Tuscan columns. The gateways are each 14 feet wide. The entrance of each appears to have been guarded, as at Pompeii (see p. 256), first by a portcullis, and then by gates of wood and iron. The barbian, between the double portcullis and the pair of gates, was no doubt open to the sky, as in the gates of Pompeii. This edifice was probably erected by Constantine.

(Wytttenbach's *Roman Ant. of Treves*, pp. 9—39.) Its rows of ornamental windows and the general style of its architecture, afford sufficient indications, that although very strong, it was not intended solely, nor principally, for the purposes of defence, but to be applied in time of peace to the various objects of civil government. To these latter purposes the gate house (*πυλῶν*) was commonly devoted, more especially in Eastern countries. Hence Polybius (xv. 29) calls a building at Alexandria *τὸν χρηματιστικὸν πυλῶνα τῶν βασιλείων*, i. e. "the gate-house of the palace, used for the transaction of public business." In the Old Testament the references to this custom are very frequent. By metonymy "the gates" meant those who administered justice at the gates and wielded the powers of government. (Hom. *Il.* ix. 312; Matt. xvi. 18.)

Statues of the gods were often placed near the gate, or even within it in the barbican, so as to be ready to receive the adoration of those who entered the city. (Paus. iv. 33. § 4; Lucr. i. 314; *Act.* xiv. 13.) The probable position of the statue was the point S in the above plan. The gate was sometimes much ornamented. Sculptured elephants, for example, were placed upon the Porta Aurea at Constantinople. [J. Y.]

PORTENTUM. [PRODIGIUM.]

PORTICUS (*στέδιον*), a walk covered with a roof, which is supported by columns, at least on one side. A porticus was either attached to temples and other public buildings, or it was built independent of any other edifice. Such shaded walks and places of resort are almost indispensable in the southern countries of Europe, where people live much in the open air, as a protection from the heat of the sun and from rain. This was the case in ancient times to a much greater extent than at present. The porticoes attached to the temples were either constructed only in front of them, or went round the whole building, and temples received different names according to these different porticoes, and according to the arrangement of the columns of the porticoes. [TEMPLEUM.] They were originally intended as places for those persons to assemble and converse in who visited the temple for various purposes. As such temple-porticoes, however, were found too small or not suited for the various purposes of private and public life, most of the Greek towns had independent porticoes, some of which were very extensive, especially in their places of public assembly [AGORA]; and as the Greeks, in all their public works, soon went beyond the limits of mere utility, these public walks were not only built in the most magnificent style, but were adorned with pictures and statues by the best masters. Of this kind were the *Ποικίλη* (*στέδιον ποικίλον*) and *στέδιον βασιλείου* at Athens (*Athen.* xiii. p. 577; Paus. i. 3. § 1, &c.), and the *στέδιον Περικλέους* at Sparta. (Paus. iii. 11. § 3.) The *Stoa* at Sparta, where the popular assemblies were held, seems to have been a building of the same kind. (Paus. iii. 12. § 8.) In most of these stoaes, seats [EXEDRAE] were placed, that those who were tired might sit down. They were frequented not only by idle loungers, but also by philosophers, rhetoricians, and other persons fond of intellectual conversation. The Stoic school of philosophy derived its name from the circumstance, that the founder of it used to converse with his disciples in a stoa. The Romans derived their

great fondness for such covered walks from the Greeks; and as luxuries among them were carried in everything to a greater extent than in Greece, wealthy Romans had their private porticoes, sometimes in the city itself, and sometimes in their country-seats. In the public porticoes of Rome, which were exceedingly numerous and very extensive (as that around the Forum and the Campus Martius), a variety of business was occasionally transacted: we find that law-suits were conducted here, meetings of the senate held, goods exhibited for sale, &c. (See Pitiscus, *Lexicon*, s. v. *Porticus*, who has given a complete list of all the porticoes of Rome.) [L. S.]

PORTISCVLUS (*κελευστής*), an officer in a ship, who gave the signal to the rowers, that they might keep time in rowing. The same name was also given to the pole or hammer, by the striking of which he regulated the motion of the oars. (Festus, s. v.) The duties of this officer are thus described by Silius Italicus (vi. 360, &c.):—

"Mediæ stat margine puppiæ,
Qui voce alternos nautarum temperet ictus,
Et remis dictet sonitum, pariterque relatis
Ad sonitum plaudat resonantia caerulea tonsis."

This officer is sometimes called *Hortator* (Ovid, *Mét.* iii. 618; Plaut. *Merc.* iv. 2. 5; Virg. *Æn.* iii. 128) or PAUSARIUS. (Compare Blomfield, *ad Aesch. Pers.* 403.)

PORTITORES. [PORTORIUM; PUBLICANI.]

PORTORIUM was one branch of the regular revenues of the Roman state, consisting of the duties paid on imported and exported goods: sometimes, however, the name portorium is also applied to the duties raised upon goods for being carried through a country or over bridges. (Plin. *H. N.* xii. 31; Sueton. *Vitell.* 14.) A portorium, or duty upon imported goods, appears to have been paid at a very early period, for it is said that Valerius Publicola exempted the plebes from the portoria at the time when the republic was threatened with an invasion by Porcenna. (Liv. ii. 9; compare Dionys. v. 22.) The time of its introduction is uncertain; but the abolition of it ascribed to Publicola can only have been a temporary measure; and as the expenditure of the republic increased, new portoria must have been introduced. Thus the censors M. Aemilius Lepidus and M. Fulvius Nobilior instituted portoria *ad vectigalia multa* (Liv. xl. 51), and C. Gracchus again increased the number of articles which had to pay portoria. (Vell. Pat. ii. 6.) In conquered places and in the provinces the import and export duties, which had been paid there before, were generally not only retained, but increased, and appropriated to the aerarium. Thus we read of portoria being paid at Capua and Puteoli on goods which were imported by merchants. (Liv. xxxii. 7.) Sicily, and above all, Asia furnished to the Roman treasury large sums which were raised as portoria. (Cic. *c. Verr.* ii. 75, *pro Leg. Manil.* 6.) In some cases, however, the Romans allowed a subject nation, as a particular favour, to raise for themselves whatever portoria they pleased in their ports, and only stipulated that Roman citizens and socii Latini should be exempted from them. (Liv. xxxviii. 44; Gruter, *Inscript.* p. 500.) In the year 60 a. c. all the portoria in the ports of Italy were done away with, by a lex Caecilia carried by the prætor Q. Metellus Nepos. (Dion.

Caes. xxxvii. 51 ; *Cic. ad Att. ii. 16.*) It appears, however, that the cause of this abolition was not any complaint by the people of the tax itself, but of the portitores, i. e. the persons who collected it, and who greatly annoyed the merchants by their unfair conduct and vexatious proceedings. [*PUBLICANI*] Thus the republic for a time only levied import and export duties in the provinces, until Julius Caesar restored the duties on commodities imported from foreign countries. (*Suet. Caes. 43.*) During the triumvirate new portoria were introduced (*Dion Cass. xlviii. 34.*), and Augustus partly increased the old import duties and partly instituted new ones. The subsequent emperors increased or diminished this branch of the revenue as necessity required, or as their own discretion dictated.

As regards the articles subject to an import duty, it may be stated in general terms, that all commodities, including slaves, which were imported by merchants for the purpose of selling them again, were subject to the portorium; whereas things which a person brought with him for his own use, were exempted from it. A long list of such taxable articles is given in the Digest (*39. tit. 4. s. 16* ; compare *Cic. a. Verr. ii. 72, 74.*) Many things, however, which belonged more to the luxuries than to the necessities of life, such as eunuchs and handsome youths, had to pay an import duty, even though they were imported by persons for their own use. (*Suet. De clar. Rhet. 1* ; *Cod. 4. tit. 42. s. 2.*) Things which were imported for the use of the state were also exempt from the portorium. But the governors of provinces (*praesides*), when they sent persons to purchase things for the use of the public, had to write a list of such things for the publicani (*portitores*) to enable the latter to see whether more things were imported than what were ordered (*Dig. 39. tit. 4. s. 4*) ; for the practice of smuggling appears to have been as common among the Romans as in modern times. Respecting the right of the portitores to search travellers and merchants, see *PUBLICANI*. Such goods as were duly stated to the portitores were called *scriptae*, and those which were not, *inscriptae*. If goods subject to a duty were concealed, they were, on their discovery, confiscated. (*Dig. 39. tit. 4. s. 16.*)

Respecting the amount of the import or export duties we have but very few statements in the ancient writers. In the time of Cicero the portorium in the ports of Sicily was one-twentieth (*vicesima*) of the value of taxable articles (*Cic. a. Verr. ii. 75*) ; and as this was the customary rate in Greece (*Böckh, Publ. Econ. p. 325, 2d edit.*), it is probable that this was the average sum raised in all the other provinces. In the times of the emperors the ordinary rate of the portorium appears to have been the fortieth part (*quadragesima*) of the value of imported goods. (*Suet. Vespas. 1* ; *Quintil. Declam. 359* ; *Symmach. Epist. v. 62, 65.*) At a late period the exorbitant sum of one-eighth (*octava*, *Cod. 4. tit. 61. s. 7*) is mentioned as the ordinary import duty ; but it is uncertain whether this is the duty for all articles of commerce, or merely for certain things.

The portorium was, like all other vectigalia, farmed out by the censors to the publicani, who collected it through the portitores. [*VECTIGALIA* ; *PUBLICANI*.] (*Burmman, De Vectigalibus Populi Rom. pp. 50—77* ; *R. Bosse, Grundsätze des Finanz-*

wesens im Röm. Staat, Braunschweig 1803, 2 vols. ; *Hegewisch, Versuch über die Röm. Finanzen, Altona, 1804.*) [*L. S.*]

PORTUMNA'LIA, or *PORTUNA'LIA*, a festival celebrated in honour of Portunus, or Portunus, the god of harbours. (*Varro, De Ling. Lat. vii. 19*, ed. Müller.) It was celebrated on the 17th day before the Kalends of September. (*Calendarium Maff.*)

POSCA, vinegar mixed with water, was the common drink of the lower orders among the Romans, as of soldiers when on service (*Spart. Hadr. 10*), slaves (*Plaut. Mil. iii. 2. 23*), &c.

POSEIDON'IA (*ποσειδωνία*), a festival held every year in Aegina in honour of Poseidon. (*Athen. xiii. p. 588* ; *Plut. Quaest. Gr. 44.*) It seems to have been celebrated by all the inhabitants of the island, as Athenaeus (*xiii. p. 590*) calls it a panegyria, and mentions that during one celebration Phryne, the celebrated hetæra, walked naked into the sea in the presence of the assembled Greeks. The festival is also mentioned by Theodoretus (*Therop. 7*), but no particulars are recorded respecting the way in which it was celebrated. (*Comp. Müller, Aeginet. p. 148.*) [*L. S.*]

POSSESSIO. Paulus (*Dig. 41. tit. 2. s. 1*) observes, "*Possessio appellata est, ut et Labeo ait, a pedibus*, quasi positio: quia naturaliter tenetur ab eo qui insistit.*" The absurdity of the etymology and of the reason are equal. The elements of Possidere are either *pot* (pot-is), and *sedere* ; or the first part of the word is related to *aped*, and the cognate Greek form of *πῶς* (*πῶς*).

Possessio, in its primary sense, is the power by virtue of which a man has such a mastery over a corporeal thing as to deal with it at his pleasure and to exclude other persons from meddling with it. This condition or power is called Detention, and it lies at the bottom of all legal senses of the word Possession. This Possession is no legal state or condition, but it may be the source of rights, and it then becomes *Possessio* in a juridical or legal sense. Still even in this sense, it is not in any way to be confounded with Property (*proprietas*). A man may have the juridical possession of a thing without being the proprietor ; and a man may be the proprietor of a thing without having the Detention of it, or even the juridical possession. (*Dig. 41. tit. 2. s. 12.*) Ownership is the legal capacity to operate on a thing according to a man's pleasure and to exclude everybody else from doing so. Possession, in the sense of Detention, is the actual exercise of such a power as the owner has a right to exercise.

Detention becomes juridical possession and the foundation of certain rights, when the Detainer has the intention (*animus*) to deal with the thing as his own. If he deal with it as the property of another, as exercising over it the rights of another, he is not said "*possidere*" in a juridical sense ; but he is said "*alieno nomine possidere.*" This is the case with the Commodatarius and with him who holds a deposit. (*Dig. 41. tit. 2. s. 18, 30.*)

When the Detention is made a juridical Possessio by virtue of the animus, it lays the foundation of a right to the Interdicts, and by virtue of Usucapion it may become ownership. The right to the Interdicts is simply founded on a juridical possession, in whatever way it may have originated,

* "*Sedibus.*" — Ed. Flor.

except that it must not have originated illegally with respect to the person against whom the Interdict is claimed. [INTERDICTUM.] Simply by virtue of being possessor, the possessor has a better right than any person who is not possessor. (Dig. 43. tit. 17. s. 1, 2.) Usucapion requires not only a juristical possessio, but in its origin it must have been bona fide and founded on a *justa causa*, that is, on some legal transaction. He who buys a thing from a man who is not the owner, but whom he believes to be the owner, and obtains possession of the thing, is a bona fide possessor with a *justa causa*. [USUCAPIO.]

The right which is founded on a juristical possessio is a *Jus possessionis*, or right of possession, that is, a right arising from a juristical possession. The expression *Jus possessionis* is used by the Roman Jurists. The right to possess, called by modern Jurists, *Jus possidendi*, belongs to the theory of Ownership.

All Juristical Possessio then, that is, Possessio in the Roman Law, as a source of rights, has reference only to Usucapion and Interdicts; and all the rules of law which treat Possession as a thing of a juristical nature have no other object than to determine the possibility of Usucapion and of the Interdicts. (Savigny, *Das Recht des Besitzes*, p. 24, &c.)

In answer to the question to which class of Rights Possession belongs, Savigny observes (§ 6),—So far as concerns Usucapion, one cannot suppose the thing to be the subject of a question. No one thinks of asking, to what class of rights a *justa causa* belongs, without which tradition cannot give ownership. It is no right, but it is a part of the whole transaction by which ownership is acquired. So is it with Possession in respect to Usucapion.

The right to Possessorial Interdicts belongs to the Law of Obligationes ex maleficiis. "The right to possessorial Interdicts then belongs to the Law of Obligationes, and therein possession is only so far considered, as containing the condition without which the Interdicts cannot be supposed possible. The *Jus Possessionis* consequently, that is the right, which mere possession gives, consists simply in the claim which the Possessor has to the Interdicts, as soon as his possession is disturbed in a definite form. Independent of this disturbance, bare possession gives no rights, neither a *Jus Obligationis*, as is self-evident, nor yet a right to the thing, for no dealing with a thing is to be considered as a legal act simply because the person so dealing has the possession of the thing." (Savigny, p. 34.)

The term Possessio occurs in the Roman jurists in various senses. There is Possessio generally, and Possessio Civilis, and Possessio Naturalis.

Possessio denoted originally bare Detention. But this Detention under certain conditions becomes a legal state, inasmuch as it leads to ownership through Usucapion. Accordingly the word Possessio, which required no qualification so long as there was no other notion attached to Possessio, requires such qualification when Detention becomes a legal state. This Detention then, when it has the conditions necessary to Usucapion, is called Possessio Civilis; and all other Possessio as opposed to Civilis is Naturalis. But Detention may also be the foundation of Interdicts, which notion of possession is always expressed by Possessio

simply; and this is the meaning of Possessio, when it is used alone, and yet in a technical sense. As opposed to this sense of Possessio all other kinds of Detention are also called Naturalis Possessio, the opposition between the Natural and the Juristical Possession (*possessio*) being here expressed just in the same way as this opposition is denoted in the case of the Civilis Possessio. There is therefore a twofold Juristical Possessio: Possessio Civilis or Possession for the purpose of Usucapion; and Possessio or Possession for the purpose of the Interdicts. It follows that Possessio is included in Possessio Civilis, which only requires more conditions than Possessio. If then a man has Possessio Civilis, he has also Possessio, that is the right to the Interdicts; but the converse is not true. Possessio Naturalis, as above observed, has two significations, but they are both negative, and merely express in each case a logical opposition, that is, they are respectively not Possessio Civilis, or Possessio (ad Interdicta). The various expressions used to denote bare Detention are "tenere," "corporaliter possidere," "esse in possessione." (Savigny, p. 109.)

In the case of a thing being pignorated, the person who pledges it has still the possessio ad usucapionem, but the pledgee alone has the possessio ad interdicta. It is not a Possessio Civilis which is the foundation of the pledger's title by usucapion; but by a special fiction he is considered to have such Possession, and so the case is a special exception to the general rule, "sine possessione usucapio contingere non potest."

Possessio Justa is every Possessio that is not illegal in its origin, whether such Possessio be mere Detention or Juristical Possessio. The word Justa is here used, not in that acceptance in which it has reference to *Jus Civile* and is equivalent to *Civilis* or *Legitima*; but in another sense, which is more indefinite and means "rightful" generally, that is, not wrongful. The creditor who is in possession of a pledge, has a *Justa Possessio*, but not a *Civilis Possessio*; he has, however, a Juristical Possessio, that is, Possessio, and consequently a right to the Interdicts. The *Misio in Possessionem* is the foundation of a *Justa Possessio*, but, as a general rule, not of a Juristical Possessio. Possessio Injusta is the logical opposite of Justa, and in the case of Possessio Injusta there are three special *Vitia possessionis*, that is when the Possession has originated *Vi*, *Clam*, or *Precario*. (Terentius, *Euuch.* ii. 3. *Hanc tu mihi vel vi, vel clam, vel precario fac tradas*: Dig. 43. tit. 17. s. 1, 2.)

With respect to the *causa Possessionis*, there was a legal maxim: *Nemo sibi ipse causam possessionis mutare potest*, which applies both to Civilis and Naturalis Possessio. This rule is explained by Savigny by means of Gaius (ii. 52, &c.) as having reference to the old usucapio pro herede, and the meaning of it was that if a person had once begun to possess with any particular *causa*, he could not at his pleasure change such Possessio into a Possessio pro herede. (Savigny, p. 56.)

A Possessor *bonae fidei* is he who believes that no person has a better right to possess than himself. A Possessor *malae fidei* is he who knows that he has no right to possess the thing. (Savigny, p. 84.)

Besides these various meanings of Possessio, Possessor, Possidere, at the bottom of all which lies

the notion of Possession in the sense of Detention, there are some other meanings. "To have ownership" is sometimes expressed by Possidere, the thing, which is the object of ownership, is sometimes Possessio, and the owner is Possessor. This use of the word occurs frequently in the Code and Pandect, and also in Cicero, Quintilian, Horace, and other writers. But it is remarked by Savigny that these meanings of Possidere, Possessio, &c., always refer to land as their object. The phrase "Possessio populi Romani," is applied by Cicero to public land, and it is translated by Plutarch (*Pomp.* 39), κράτος τοῦ δήμου *Populorum*.

Possessio also denotes the relation of a defendant with respect to a plaintiff. For instance, when ownership is claimed, the demand must be against a person in possession; but this does not mean that such person must have a juridical possession. In a Vindicatio accordingly the plaintiff is called Petitor, and the defendant is named Possessor, because in fact he has the possession of that which the plaintiff claims. The procedure by the Vindicatio was also adapted to the case of an hereditas; and here also the term possessor was applied to the defendant. In many cases the possessor was really such, and one object of the hereditatis petitio was to recover single things which the defendant possessed pro herede or pro possessore. But the term possessor was not limited to such cases, for the defendant is called possessor when the petitio is not about a matter of possession. He is called Juris possessor, because he refuses to do something which the heres claims of him to do, or because he asserts his right to a portion of the hereditas. (Savigny, p. 87.)

The juridical notion of Possession implies a thing which can be the object of ownership: it also implies that the Possessor can be no other than a person who has a capacity for ownership.

The notion of possession is such that only one person at a time can possess the whole of a thing (*plures eandem rem in solidum possidere non possunt*). When several persons possess a thing in common, so that their possession is mutually limited, each in fact possesses only a fractional part of the thing, but does not possess the other parts, and though the division into parts is only ideal, this does not affect the legal consideration of the matter. Persons may also possess the same thing in different senses, as in the case of the debtor and his creditor who has received from him a pignus.

Though things incorporeal are not strictly objects of possession, yet there is a Juris quasi possessio of them, as for instance in the case of servitudes. The exercise of a right of this kind is analogous to the possession of a corporeal thing: in other words, as real possession consists in the exercise of ownership, so this kind of possession, which is fashioned from analogy to the other, consists in the exercise of a jus in re or a right which is not ownership. In the case of Possession, it is the thing (*corpus*) which is possessed, and not the property: by analogy then we should not say that the servitus or the jus in re is possessed. But as in the case of a jus in re there is nothing to which the notion of possession can be attached, while in the case of ownership there is the thing to which we apply the notion of possession, we are compelled to resort to the expression Juris Quasi Possessio, by which nothing more is meant than the exercise of a jus in re, which exercise has the same

relation to the jus in re, that proper possession has to ownership. (Savigny, p. 166.)

In order to the acquisition of juridical Possessio, apprehension and animus are necessary. The apprehension of a corporeal thing is such a dealing with it as empowers the person who intends to acquire the possession to operate on the thing to the exclusion of all other persons. Actual corporeal contact with the thing is not necessary to apprehension: it is enough if there is some act on the part of the person who intends to acquire possession, which gives him the physical capacity to operate on the thing at his pleasure. Thus in the case of a piece of ground, he who enters upon part is considered to have entered upon the whole. A man may acquire possession of what is contained in a thing by delivery of the key which gives him access to the contents, in the presence of (*apud*) the thing. The case mentioned in the Digest (Dig. 18. tit. 1. s. 74) is that of the key of a granary being delivered in sight of the granary (*apud horrea*). The delivery of the key is not a symbolical delivery, as some have supposed, but it is the delivery of the means of getting at the thing. (Compare Lord Hardwicke's remarks on this matter, *Ward v. Turner*, 2 Vez.)

The animus consists in the will to treat as one's own the thing that is the object of our apprehension. All persons therefore who are legally incompetent to will, are incompetent to acquire a juridical possession. Infantes and furiosi are examples of such persons. If a man has the detention of a thing, he can acquire the Possessio by the animus alone; for the other condition has been already complied with.

In order that juridical possession may be acquired, there must always be the animus on the part of him who intends to acquire the possession; but the act of apprehension (*corpus*) may be effected by another as his representative, if that other does the necessary acts, and with the intention of acquiring the possession for the other, and not for himself. (*Paulus, S. R. v. tit. 2. s. 1.*) There must be a certain relation between the person for whom possession is thus acquired and the person who acquires it for him, either of legal power (*potestas*), or of agency: the former is the case of a slave or filius familias who obeys a command, and the latter is the case of an agent who follows instructions (*mandatum*). A person, who is already the representative of another, and has the Possessio of a thing, may by the animus alone cease to have the Possessio for himself and have it for that other, retaining only the bare detention.

Possessio, that is the Right of Possession, can be transferred, without the transfer of ownership. In this case of derivative Possessio the apprehension is the same as in the case of acquiring a juridical possessio; but the animus with which the thing is apprehended, cannot be the "animus domini," but merely the "animus possidendi," that is, the will to acquire the Jus Possessionis, which the Possessor transfers, and nothing more. The Detention of a thing may be transferred without the ownership, but the transfer of the detention is not always accompanied by a transfer of the Jus Possessionis. There are three classes into which all acts may be distributed which are accompanied with a transfer of Detention: 1, those which are never the foundation of a derivative Possessio, 2, those which always are, and 3, those

which are sometimes. The First class comprehends such cases as those when the detention of a thing is transferred to an agent (*procurator*), and the case of a *Commodatum*. [*COMMODATUM*.] The Second class comprehends the case of the *Emphyteuta*, which is a *Possessio*, but only a derivative one, as the *Emphyteuta* has not the *animus domini*; it also comprehends the case of the creditor who receives the detention of a *pignus* by a *contractus pignoris*, and with the detention, the *Jus Possessionis*; but it does not comprehend the case of a *Pignus praetorium*, *Pignus in causa judicati captum*, nor a *Pactum hypothecae*. In the case of a *contractus Pignoris*, when the thing was delivered to the creditor, he had *Possessio*, that is, a right to the *Interdicta*, but not *Possessio Civilis*, that is, the Right of *Usucapion*. The debtor had no *Possessio* at all, but by virtue of an exception to a general rule, the *usucapion* that had been commenced, still continued. The Third class comprehends *Depositum* and *Precarium*.

The Right of *Possession* consists in the right to the protection of the *Interdict* [*INTERDICTUM*], and this protection is also extended to *Jura in re*. The relation of the *Juris quasi possessio* to *Possessio* has been already explained. The objects of this *Juris quasi possessio* are *Personal servitudes*, *Real servitudes*, and *Jura in re* which do not belong to the class of *Servitudes*, of which *Superficies* is the only proper instance. (Savigny, p. 525.) In all the cases of *Juris quasi possessio*, the acquisition and the continuance of the right of possession depend on the corpus and animus; and the animus is to be viewed exactly in the same way as in the case of possession of a corporeal thing. The exercise of *Personal servitudes* (particularly *usus* and *usufructus*) is inseparable from the natural possession of the thing; and the possession of them is consequently acquired in the same way as the possession of a corporeal thing. As to the *Juris quasi possessio* of *Real Servitudes*, there are two cases: either he who has a right to the *Servitus*, must do some act, which if he had not the right, he might be forbidden to do (*servitus quae in patiendi consistit*); or the owner of property has no right to do some particular thing, which, if the right did not exist, he might do (*servitus quae in non faciendo consistit*). As to the first class, which may be called *Positive Servitudes*, the acquisition of the *Juris quasi possessio* consists merely in doing some act, which is the object of the right, and the doing of this act must be for the purpose of exercising the right. (Dig. 8. tit. 6. s. 25.) This rule applies to the *Jus Itineris*, *Actus*, *Viae*, and others, which are independent of the possession of any other property by the person who claims the *Jus*. Such an act as the *Jus tigni immittendi*, or the driving a beam into the wall of one's neighbour's house, is a right connected with the possession of another piece of property, and the possession of this right consists in the exercise of it. As to the second class which may be called *Negative Servitudes*, the *Juris quasi possessio* is acquired in consequence of the person whose right is thereby limited, attempting to do some act contrary to the right of the person who claims the *servitus*, and meeting with opposition to such act and acquiescing in the opposition. (Dig. 8. tit. 5. s. 6.) This *Juris quasi possessio* may also be founded on a legal title, that is, on any juristical transaction which can give such right.

Every possession continues so long as the corpus and the animus continue. (Savigny, p. 339.) If both cease or either of them ceases, the possession is gone. (Dig. 41. tit. 2. s. 3. 46.) As to the corpus, the possession is lost, when in consequence of any event the possessor cannot operate on the thing at his pleasure, as before. In the case of moveable things, the possession is lost, when another person has got hold of them, either by force or secretly: in the case of immoveable things, it is lost when a man has turned another out of the possession; but if in the absence of the possessor, another occupies his land without his knowledge, he does not lose the possession till he attempts to exercise ownership over the land and is prevented by the person then in possession of it, or through fear does not attempt to recover his possession. The possession thus acquired by the new possessor is a violenta possessio. If the former possessor knows the fact and acquiesces by doing nothing, he loses the possession by the animus alone. In the case of possession being lost by animus alone, it may be effected either expressly or tacitly; the only thing necessary is that there must be an intention to give up the possession. The possession is lost *corpore et animo*, when the possessor gives up a thing to another to possess as his own. In the case of a *Juris quasi possessio*, as well as in that of *Possessio* proper, the continuance of the possession depends on the corpus and animus together. There can be no *Juris quasi possessio* without the animus possidendi; and if there be merely the animus possidendi, the *Juris quasi possessio* must cease.

Possessio can be lost by means of a person who represents the Possessor. Such person may himself acquire the possession by exercising the animus possidendi, when it is accompanied with a sufficient corporeal act: in the case of moveable things, this is *furtum*; in the case of immoveable things, it is violent dispossession. The possession can be lost through the representative, in all cases in which it would have been lost by the possessor, if there had been no representation.

In many of the systematic expositions of Roman Law, the theory of *Possessio* is treated as introductory to the theory of Ownership (*Dominium*). The view which has been here given of it, is also not universally acquiesced in, but it is the correct view. For instance, Gans in his chapter on Possession (*System des Röm. Civilrechts im Grundriss*, &c.) begins with the two following sections:—

§ 103. Darstellung der verschiedenen herrschenden Meinungen über den Besitz. — Der Besitz ist kein blosses Factum, und entsteht nicht als Recht, durch den umweg des Unrechts.

§ 104. Der Besitz als das Eigenthum nach der Seite des bloss besondern willens. — Anfangendes präsumtives Eigenthum.

Savigny's view on the contrary is briefly this: "Possession is a Fact (*Factum*), so far as a mere factish (*unjuristical*) relation (*detention*) is the foundation of it. But Possession is also a Right, so far as rights are connected with the bare existence of the relation of Fact. Consequently Possession is both Fact and Right."

Also—"The only Right arising from bare Possession is a Right to the *Interdicts*"—and "the Right to the *Interdicts* is founded on the fact of the Exercise of Ownership being obstructed wrongfully, as for instance, by force."

On what ground is bare Possession to be maintained, if it is not a Right? The answer is, that Possession cannot be disturbed except by force, and force is not allowed. The fundamental notion then is this; a violent disturbance of Possession is an attack on a man's personality, on his freedom.

It is shown in the article *AGRARIAR LEGES* that the origin of the Roman doctrine of Possession may probably be traced to the Possessio of the *Ager Publicus*. Possessio, Possessor, and Possidere are the proper technical terms used by the Roman writers to express the possession and the enjoyment of the Public Lands. These terms did not express ownership (*ex jure Quiritium*): they had in fact no more relation to ownership than the Possessio of which this article treats. Still the notion of this kind of use and enjoyment was such, that one may easily conceive how the term Possessio became applicable to various cases in which there was no Quiritarian ownership, but something that had an analogy to it. Thus in the case of *Damnū infectum*, with reference to the second *missio in possessionem* (*ex secundo decreto*), the Praetor says "*possidere jubebo*," which is equivalent to giving bonitarian ownership with the power of usucapion. A *usufructus* which could only be maintained by the *Jus Praetorium*, was a *Possessio usufructus* as opposed to *Dominium usufructus*. The expressions *Hereditatis* or *bonorum possessio* do not mean the actual possession of the things, but the peculiar character of the *Praetoria hereditas*: for this *Bonorum possessio* has the same relation to the *Hereditas* that *Bonitarian* has to *Quiritarian* ownership. [*DOMINIUM*; *HERED.*] Now there is a clear analogy in all these instances to the Possessio of the *Ager Publicus*, which consists in this, that in both cases an actual exclusive enjoyment of a particular person to a particular thing is recognized. This will also explain how property in provincial ground came to be called Possessio: such property was not Quiritarian ownership, but it was a right to the exclusive enjoyment of the land, a right which the word Possessio sufficiently expressed. Thus the name Possessio was transferred from the Right to its Object; and *Ager* and Possessio were thus opposed: *Ager* was a piece of land which was the object of Quiritarian ownership, and Possessio a piece of land which was either accidentally an object only of Bonitarian ownership, as a *fundus Italicus* of which there had been merely tradition; or it was land that could not be the object of Quiritarian ownership, such as Provincial land (*Javolenus*, Dig. 50. tit. 16. s. 115), and the old *Ager Publicus*.

Other matters relating to Possessio appear to be explained by this view of its historical origin. The *Interdictum recuperandae possessionis* relates only to land, a circumstance which is consistent with the hypothesis of the origin of Possessio. The nature of the *Precarium* also is explained, when we know that it expressed originally the relation between the Patronus and the Clients who occupied the Possessio of the Patronus as a tenant at will and could be ejected by the *Interdictum de precario*, if he did not quit on notice. Further, we may thus explain the apparent inconsistency in the case of a lessee of *Ager Vectigalis*, who though he had only a *jus in re*, had yet *juristical Possessio*: the *Ager Vectigalis* was in fact fashioned according to the analogy of the old *Ager Publicus*, and it

was a simple process to transfer it to that notion of Possessio which had existed in the case of the *Ager Publicus*. [*EMPHYTEUSIS*.]

This article read in connection with the article on the *Agrariae Leges*, and the *Licinian Rogationes* [*LXX*, pp. 693, 694], will give the reader an outline of the law of Possession both in relation to the *Ager Publicus* and *Privatus*.

The preceding view of possession is from Savigny, *Das Recht des Besitzes*, fifth ed. 1827. There is an analysis of this excellent work by Warnkönig, "*Analyse du traité de la possession* par M. de Savigny, Liège 1824;" and a summary view of Savigny's Theory is given by Mackeldey, *Lehrbuch*, etc. ii. p. 7. See also Puchta, *Inst.* ii. § 224; *Gaius*, iv. 138—170; *Inst.* 4. tit. 15; Dig. 41. tit. 2, 3; 43. tit. 16—23, 26, 31; Cod. 7. tit. 32; 8. tit. 4, 5, 6, 9; Cod. Theod. 4. tit. 22, 23. [G. L.]

POSSESSIO BONORUM. [*BONORUM POSSESSIO*.]

POSSESSIO CLANDESTINA. [*INTERDICTUM*.]

POSTICUM. [*JANUA*.]

POSTLIMINIUM, *JUS POSTLIMINII*.

"There are," says Pomponius (Dig. 49. tit. 15. s. 14), "two kinds of Postliminium, for a man may either return himself or recover something." Postliminium is further defined by Paulus (Dig. 49. tit. 15. s. 19) to be the "right of recovering a lost thing from an extraneous and of its being restored to its former status, which right has been established between us (the Romans) and free people and kings by usage and laws (*moribus ac legibus*); for what we have lost in war or even out of war, if we recover it, we are said to recover postliminio; and this usage has been introduced by natural equity, in order that he who was wrongfully detained by strangers, should recover his former rights on returning into his own territories (*in fines suas*)." Again Paulus says, "a man seems to have returned Postliminio, when he has entered our territory (*in fines nostros intraverit*); as a foundation is laid for a Postliminium (*sicuti admittitur*)" (?) when he has gone beyond our territories (*ubi fines nostros excessit*). But if a man has come into a state in alliance (*socio*) or friendship with Rome, or has come to a King in alliance or friendship with Rome, he appears to have forthwith returned by Postliminium, because he then first begins to be safe under the name of the Roman state." These extracts are made for the purpose of clearing up the Etymology of this word, as to which there was a difference of opinion. (*Cic. Top.* 8.) The explanation of Scaevola, as given by Cicero, has reference to the etymology of the word, *post* and *limen*: "what has been lost by us and has come to an enemy and as it were has gone from its own limen, and then has afterwards (*post*) returned to the same limen, seems to have returned by Postliminium." According to this explanation, the limen was the boundary or limit within which the thing was under the authority of Rome and an object of Roman law. A recent writer (Goetting, *Geschichte der Röm. Staatsverfassung*, p. 117) suggests that Postliminium must be viewed in a sense analogous to *Pomoerium*. There is a fanciful explanation of the matter by Plutarch (*Quaest. Rom.* 5) in his answer to the question, Why are

* "*Sicuti amittitur*," Flor., Geb. et Spang.

those who have been falsely reported to have died in a foreign land, not received into the house through the door, in case of their return, but let down through an opening in the roof?

If a Roman citizen during war came into the power of an enemy, he sustained a diminutio capitis maxima, and all his civil rights were in abeyance. Being captured by the enemy, he became a slave; but his rights over his children, if he had any, were not destroyed, but were said to be in abeyance (*pendere*) by virtue of the *Jus Postliminii*: when he returned, his children were again in his power: and if he died in captivity, they became *sui juris*. Whether their condition as *sui juris* dated from the time of the captivity or of the death, was a disputed matter (Gaius, i. 129); but Ulpian, who wrote after Gaius, declares that in such case he must be considered to have died, when he was made captive; and this is certainly the true deduction from the premises. In the case of a filius or nepos being made a captive, the parental power was suspended (*in suspensio*). If the son returned, he obtained his civic rights and the father resumed his parental power; which is the case mentioned in the Digest (49. tit. 15. a. 14). As to a wife, the matter was different: the husband did not recover his wife *jure postliminii*, but the marriage was renewed by consent. This rule of law involves the doctrine, that if a husband was captured by the enemy, his marriage, if any then existed, was dissolved. If a Roman was ransomed by another person, he became free, but he was in the nature of a pledge to the ransomers, and the *Jus Postliminii* had no effect till he had paid the ransom money.

Sometimes by an act of the state a man was given up bound to an enemy; and if the enemy would not receive him, it was a question whether he had the *Jus Postliminii*. This was the case with Sp. Postumius who was given up to the Samnites, and with C. Hostilius Mancinus who was given up to the Numantines; but the better opinion was that they had no *Jus Postliminii* (Cic. *De Or.* i. 40, *De Off.* iii. 30, *Top.* 8, *Pro Caecina*, c. 34; Dig. 49. tit. 15. a. 4; 50. tit. 7. a. 17): and Mancinus was restored to his civic rights by a Lex. (Dig. 50. tit. 7. a. 17.)

Cicero (*Pro Balbo*, c. 12) uses the word *Postliminium* in a different sense; for he applies it to the case of a man who had, by his own voluntary act, ceased to be a citizen of a state, and subsequently resumed his original civic rights by *Postliminium*.

It appears that the *Jus Postliminii* was founded on the fiction of the captive having never been absent from home; a fiction which was of easy application, for as the captive during his absence could not do any legal act, the interval of captivity was a period of legal non-activity, which was terminated by his showing himself again.

The Romans acknowledged capture in war as the source of ownership in other nations, as they claimed it in their own case. Accordingly things taken by the enemy lost their Roman owners; but when they were recovered, they reverted to their original owners. This was the case with land that had been occupied by the enemy, and with the following moveables, which are enumerated by Cicero as *Res Postliminii* (*Top.* 8), "homo (that is slaves), navis, mulus clitellarius, equus, equa quae fraena recipere solet." (Compare Festus, s.v. *Postliminium*.)

Arms were not *Res Postliminii*, for it was a maxim that they could not be honourably lost.

The recovery above referred to seems to mean the recovery by the Roman state or by the original owner. If an individual recaptured from an enemy what had belonged to a Roman citizen, it would be consistent that we should suppose that the thing recaptured was made his own by the act of capture; but if it was a *res postliminii*, this might not be the case. If a thing, as a slave, was ransomed by a person not the owner, the owner could not have it till he had paid the ransom: but it does not appear to be stated how the matter was settled, if a Roman citizen recaptured property (of the class *res postliminii*) that had belonged to another Roman citizen. This apparent difficulty may perhaps be solved thus: in time of war no Roman citizen could individually be considered as acting on his own behalf under any circumstances, and therefore whatever he did was the act of the State. It is a remark of Labeo (Dig. 49. tit. 15. a. 28), "Si quid bello captum est, in praeda est, non postliminio redit;" and Pomponius (Dig. 49. tit. 15. a. 20) states, that if the enemy is expelled from Roman lands, the lands return to their former owners, being neither considered public land nor praeda; in making which remark he evidently assumes the general doctrine laid down by Labeo. Paulus also, in his remark on Labeo's rule of law, merely mentions an exception to the rule, which is of a peculiar kind. If then anything taken in war was booty (*praeda*), to what did the *Jus Postliminii* apply? It applied at least to all that was restored by treaty or was included in the terms of surrender, and slaves no doubt were a very important part of all such things as were captured or lost in time of war; and they were things that could be easily identified, and restored to their owners. It also applied to a slave who escaped from the enemy and returned to his master. The maxim "quae res hostiles apud nos sunt, occupantium fiunt" (Dig. 40. tit. 1. a. 51) has no reference to capture from the enemy, as it sometimes seems to be supposed. (Mühlenbruch, *Doct. Pand.* p. 242.)

It may be objected that the explanation of one difficulty, that has been already suggested, raises another. According to this explanation, if a man in time of war recaptured his own slave, it would be praeda, and he would not at once recover the ownership, as above supposed. The answer is, that it may be so, and that this matter of *Postliminium*, particularly as regards things, waits for a careful investigation. As a general rule all moveables belonging to an enemy, which were captured by a Roman army, were *Praeda*, apparently not the property of the individual soldier who happened to lay his hands on them, but the property of the state or at least of the army. Now the difficulty is to ascertain whether all moveables so taken were *Praeda*, except *Res Postliminii*; or whether all things so taken were *Praeda*, *Res Postliminii* included. In the former case, the *Res Postliminii* would be the property of the owner when he could prove them to have been his, as in the case mentioned by Livy (v. 16): in the latter, when a thing had become *Praeda*, it had lost its capacity (if we may so speak) of being a *Res Postliminii*. The distinction here made is a fundamental one. The difficulty partly arises from the expression of Labeo above quoted, &c

quid &c., where the Florentine reading has been followed. But Bynkershoek (*Op. Om.* i. p. 76) amends the reading into *Si quod*, &c., the propriety of which may be doubted. [PRAEDA.]

If a man made a will before he was taken captive, and afterwards returned, the will was good *jure postliminii*. If he died in captivity, the will was good by the *Lex Cornelia*. The law of *Postliminium* applied to time of peace as well as war, when the circumstances were such that the person or the thing could become the property of another nation (*Dig.* 49. tit. 15. s. 5), as for instance of a nation that had neither an *amicitia*, *hospitium*, nor a *foedus* with Rome; for such might be the relation of a nation to Rome, and yet it might not be *Hostia*. A nation was not *Hostia*, in the later acceptance of that term, till the Romans had declared war against it, or the nation had declared war against Rome. Robbers and Pirates were not *hostes*, and a person who was captured by them did not become a slave, and therefore had no need of the *Jus Postliminii*. There are some remarks on *Postliminium* in Walter, *Geschichte des Röm. Rechts*, p. 50, and the notes, 1st ed. [G. L.]

POSTSIGNA'NI. [EXERCITUS, p. 502, b.]

PO'STUMUS. [HERES, p. 601, a.]

POTESTAS. [PATRIA POTESTAS.]

PRA'CTORES (πράκτορες), subordinate officers (ὄνομα ὑπηρέτας, says Pollux, viii. 114) who collected the fines and penalties (ἐπιβολὰς and τιμήματα) imposed by magistrates and courts of justice, and payable to the state. The magistrate who imposed the fine, or the ἡγεμὼν δικαστηρίου, gave notice thereof in writing to the πράκτορες. He was then said ἐπιγράφει τὸ τίμημα τοῖς πράκτορσιν, and the debtor's name παραδίδηται τοῖς πράκτορσιν. If the fine, or any part thereof was to go to a temple, the like notice was sent to the ταμίαι of the god or goddess to whom the temple belonged. (Aesch. *c. Timarch.* 5; Andoc. *de Myst.* 11, ed. Steph.; Demosth. *c. Theocr.* 1328.) The name of the debtor, with the sum which he was condemned to pay, was entered by the πράκτορες in a tablet in the Acropolis. Hence the debtor was said to be ἐγγεγραμμένος τῷ δημοσίῳ, or ἐν τῇ ἀκροπόλει. It was the business of the πράκτορες to demand payment of this sum, and, if they received it, to pay it over to the ἀποδέκται, and also to erase the name of the debtor in the register (ἐξαλείφειν or ἀναλείφειν). Such erasure usually took place in the presence of some members of the senate. An ἑνδείξις lay against any man who made or caused to be made a fraudulent entry or erasure of a debt. (Harpoc. and Suidas, *s. v. Ἀγραπίον*, ἀποδέκται, ψευδεγγράφη; Andoc. *de Myst.* 11, ed. Steph.; Demosth. *c. Aristog.* 778, *c. Theoc.* 1338.) The collectors took no steps to enforce payment; but after the expiration of the ninth πρυτανεία from the registering of the debt, (or in case of a penalty imposed on a γραφή βέρεως, after the expiration of eleven days), if it still remained unpaid, it was doubled, and an entry made accordingly. (Aesch. *c. Timarch.* 3, ed. Steph.; Demosth. *c. Pant.* 973, *c. Theocr.* 1322, *c. Neaer.* 1347.) Thereupon immediate measures might be taken for seizure and confiscation of the debtor's goods; but here the πράκτορες had no further duty to perform, except perhaps to give information of the default to the senate. [C. R. K.]

PRAECINCTIO. [AMPHITHEATRUM, p. 87.]

PRAECO'NES, criers, were employed for various purposes: 1. In sales by auction, they frequently advertised the time, place, and conditions of sale: they seem also to have acted the part of the modern auctioneer, so far as calling out the biddings and amusing the company, though the property was knocked down by the magister auctionis. (Hor. *Ars Poet.* 419; Cic. *ad Att.* xii. 40, *de Off.* ii. 23.) [AUCTIO.] 2. In all public assemblies they ordered silence. (Liv. iii. 47; Plaut. *Poen.* prol. 11.) 3. In the comitia they called the centuries one by one to give their votes, pronounced the vote of each century, and called out the names of those who were elected. (Cic. *c. Verr.* v. 15, *pro Mil.* 35.) They also recited the laws that were to be passed. 4. In trials, they summoned the accuser and the accused, the plaintiff and defendant. (Suet. *Tib.* 11.) 5. In the public games, they invited the people to attend, and proclaimed the victors. (Cic. *ad Fam.* v. 12.) 6. In solemn funerals they also invited people to attend by a certain form; hence these funerals were called *Funera Indictiva*. (Festus, *s. v. Quirites*; Suet. *Jul.* 84.) 7. When things were lost, they cried them and searched for them. (Plaut. *Merc.* iii. 4, 78; Petron. 57.) 8. In the infliction of capital punishment, they sometimes conveyed the commands of the magistrates to the lictors. (Liv. xvi. 15.)

Their office, called *praeconium*, appears to have been regarded as rather disreputable: in the time of Cicero a law was passed preventing all persons who had been praecoens from becoming decuriones in the municipia. (Cic. *ad Fam.* vi. 18.) Under the early emperors, however, it became very profitable (Jur. iii. 157, vii. 6; Martial, v. 56. 11, vi. 8. 5), which was no doubt partly owing to fees, to which they were entitled in the courts of justice and on other occasions, and partly to the bribes which they received from the suitors, &c.

PRAECO'NIUM. [PRAECONES.]

PRAEDA signifies moveable things taken by an enemy in war. Such things were either distributed by the Imperator among the soldiers (Liv. ii. 42, vi. 13; Sall. *Jug.* 68), or sold by the quaestors, and the produce was brought into the Aerarium:—

"istos captivos duos,
Here quos emi de praeda de Quaestoribus."
(Plaut. *Capt.* i. 2. 1.)

The difference between *Praeda* and *Manubiae* is explained by Gellius (xiii. 24) to be this:—*Praeda* is the things themselves that are taken in war, and *Manubiae* is "pecunia per quaestorem populi Romani ex praeda vendita contracta:" nor can any objection to this explanation be derived from the words of Cicero (*de Leg. Agr.* ii. 22). When prisoners were sold, they were said to be sold "sub corona," the true explanation of which expression is probably that given by Gellius (*est autem alia, &c.* vii. 4). The mode of sale of other things than slaves was at first probably in detail, but afterwards in the lump, that is, the whole *praeda* might be sold to the highest bidder, or it might be sold in large masses which contained a great number of separate things, in which cases the whole or the mass would pass to the purchaser as a *universitas*, and he might retail it if he chose. This mode of sale in the lump was called "sectionem venire," and the purchaser was called *sector*. It

was the practice to set up a spear at such sales, which was afterwards used at all sales of things by a magistratus in the name of the people. [SECTIO.]

Corresponding to the acquisition of moveable things in warfare, and their being made private property, is the transfer of *Ager publicus*, which was acquired in war, to individuals by a *Lex Agraria* or *de coloniis deducendis* or by a sale by the quaestors (*ager quaestorius*). [POSTLIMINIUM.] [G. L.]

PRAEDIATOR. [PRAES.]

PRAEDIATORIUM JUS. [PRAES.]

PRAEDIUM. This word originally signified according to Varro (*L. L.* v. 40, ed. Müller) any property which was made a security to the State by a Praes: "Praedia dicta, item ut praedes, a praestando, quod ea pignori data publice mancipis fidem praestent." Subsequently the word was limited to signify land generally. In this sense Praedia were divided into *Rustica* and *Urbana*, of which the following definition has been given: *Rustica* are those on which there are no aedes or which are in the country (*in agro*); and *Urbana* are those which are in the city and comprise buildings. Those incorporeal things which consisted not in the ownership of Praedia, but in certain rights with respect to them, were called *Jura Praediorum*. As to a difference in the mode of transferring such *Jura* in the case of *Praedia Rustica* and *Urbana* see Gaius (ii. 29). A Praedium which was liable to a servitus was said "servire," and was "a praedium serviens."

Provincialia Praedia were either *stipendiaria* or *tributaria*: the former were in those provinces which were considered to belong to the *Populus Romanus*; and the latter in those provinces which were considered to belong to the Caesar. (Gaius, ii. 21.) [G. L.]

PRAEFECTURA. [COLONIA, pp. 318, b, 319, a.]

PRAEFECTUS AERARII. [AERARIUM.]
PRAEFECTUS ANNONAE, the praefect of the provisions, especially of the corn-market, was not a regular magistrate under the republic, but was only appointed in cases of extraordinary scarcity, when he had the entire charge of supplying the capital with provisions, especially with corn, and fixed the price at which the latter was to be sold. This magistrate was appointed for the first time in B. C. 439. (Liv. iv. 12; Niebuhr, *Hist. of Rome*, ii. p. 418.) The superintendence of the corn-market throughout the whole republic was at a later period entrusted to Pompey for a period of five years (Dion Cass. xxxix. 9; Cic. *ad Att.* iv. 1; Liv. *Epit.* 104); and in accordance with this example Augustus took the same superintendence upon himself, and commanded that two persons, who had been praetors five years before, should be appointed every year for the distribution of the corn. (Dion Cass. liv. 1; *curam frumenti populo dividendi*, Suet. *Aug.* 37.) Subsequently Augustus assigned this duty to two persons of consular rank (Dion Cass. iv. 26, 31); but he also created an officer under the title of *Praefectus Annonae*, who must be distinguished from the above-mentioned officers. This office was a permanent one, and appears to have been only held by one person at a time: he had jurisdiction over all matters appertaining to the corn-market, and, like the *Praefectus Vigilum*, was chosen from the Equites, and was not reckoned among the ordinary

magistrates. (Dion Cass. lii. 24; Dig. 1. tit. 2. s. 2. § 33; 14. tit. 1. s. 1. § 18. tit. 5. s. 8; 48. tit. 2. s. 13.) The Praefectus Annonae continued to exist till the latest times of the empire: respecting his duties in later times see Walter, *Geogr. des Röm. Rechts*, § 360, 2d ed. Comp. *FRUMENTARIAE LEGES*.

PRAEFECTUS AQUARUM. [AQUAE DUCTUS, p. 115, b.]

PRAEFECTUS CASTRORUM, praefect of the camp, is first mentioned in the reign of Augustus. There was one to each legion. (Vell. Pat. ii. 119; Tac. *Ann.* i. 20, xiv. 37.) We learn from Vegetius (ii. 10) that it was his duty to attend to all matters connected with the making of a camp, such as the vallum, fossa, &c., and also to the internal economy of it.

PRAEFECTUS CLASSIS, the commander of a fleet. This title was frequently given in the times of the republic to the commander of a fleet (Liv. xxvi. 48, xxxvi. 42); but Augustus appointed two permanent officers with this title, one of whom was stationed at Ravenna on the Adriatic and the other at Misenum on the Tuscan sea, each having the command of a fleet. (Suet. *Aug.* 49; Veget. iv. 32; Tac. *Hist.* iii. 12.)

PRAEFECTUS FABRUM. [FABRI.]

PRAEFECTUS JURI DICENDO. [COLONIA, p. 318, b.]

PRAEFECTUS PRAETORIO, was the commander of the troops who guarded the emperor's person. [PRAETORIANI.] This office was instituted by Augustus, and was at first only military, and had comparatively small power attached to it (Dion Cass. lii. 24, iv. 10; Suet. *Aug.* 49); but under Tiberius, who made Sejanus commander of the praetorian troops, it became of much greater importance, till at length the power of these praefects became second only to that of the emperors. (Tac. *Ann.* iv. 1, 2; Aurel. Vict. *de Caes.* 9.) The relation of the praefectus praetorio to the emperor is compared to that of the magistrate equitum to the dictator under the republic. (Dig. 1. tit. 11.) From the reign of Severus to that of Diocletian, the praefects, like the vixirs of the East, had the superintendence of all departments of the state, the palace, the army, the finances, and the law: they also had a court in which they decided cases. (Dig. 12. tit. 1. s. 40.) The office of praefect of the praetorium was not confined to military officers; it was filled by Ulpian and Papinian, and other distinguished jurists.

Originally there were two praefects; afterwards sometimes one and sometimes two; from the time of Commodus sometimes three (Lamprid. *Commod.* 6), and even four. They were as a regular rule chosen only from the equites (Dion Cass. lii. 24; Suet. *Tib.* 6; Lamprid. *Commod.* 4); but from the time of Alexander Severus the dignity of senator was always joined with their office. (Lamprid. *Alex. Sev.* 21.)

Under Constantine the praefects were deprived of all military command, and changed into governors of provinces. He appointed four such praefects: the one, who commonly attended on the imperial court, had the command of Thrace, the whole of the East, and Egypt; the second had the command of Illyricum, Macedonia, and Greece, and usually resided first at Sirmium, afterwards at Thessalonica; the third of Italy and Africa; the fourth, who resided at Trèves, of Gaul, Spain, and

Britain. (Zosimus, ii. 33.) These praefects were the proper representatives of the emperor, and their power extended over all departments of the state: the army alone was not subject to their jurisdiction. (Walter, *Gesch. des Röm. Rechts*, §§ 269, 341; Gibbon, *Decline and Fall*, c. 17.)

PRAEFECTUS SOCIO'RUM. [EXERCITUS, p. 497, b.]

PRAEFECTUS VI'GILUM. [EXERCITUS, p. 510, a.]

PRAEFECTUS URBI, praefect or warden of the city, was originally called *Custos Urbis*. (Lydus, *De Magistr.* i. 34, 38.) The name *Praefectus Urbis* does not seem to have been used till after the time of the Decemviri. The dignity of *Custos Urbis*, being combined with that of *Princeps Senatus*, was conferred by the king, as he had to appoint one of the decem primi as princeps senatus. (Liv. i. 59, 60; Dionys. ii. 12.) The functions of the *custos urbis*, however, were not exercised except in the absence of the king from Rome; and then he acted as the representative of the king; but whether he also had the right to convoke the assembly of the populus, is doubtful, but on any emergency he might take such measures as he thought proper; for he had the imperium in the city. (Tacit. *Annal.* vi. 11; Liv. i. 59, iii. 24.) Romulus is said to have conferred this dignity upon Denter Romulius, Tullus Hostilius upon Numa Martius, and Tarquinius Superbus upon Sp. Lucretius. During the kingly period the office of warden of the city was probably for life. Under the republic the office and its name of *custos urbis* remained unaltered; but in 487 a. c. it was elevated into a magistracy, to be bestowed by election. (Lydus, *De Magistr.* i. 38.) The *custos urbis* was, in all probability, elected by the curiae, instead of whom Dionysius (viii. 64) mentions the senate. Persons of consular rank were alone eligible; and down to the time of the Decemvirate every praefect that is mentioned occurs previously as consul. The only exception is P. Lucretius in Livy (iii. 24), whose name, however, is probably wrong. (Niebuhr, ii. p. 120, note 255.) In the early period of the republic the warden exercised within the city all the powers of the consuls, if they were absent: he convoked the senate (Liv. iii. 9; Gell. xiv. 7. § 4), held the comitia (Liv. iii. 24), and, in times of war, even levied civic legions, which were commanded by him.

When the office of praetor urbanus was instituted, the wardenship of the city was swallowed up in it (Lydus, *De Mens.* 19, *De Magistr.* ii. 6); but as the Romans were at all times averse to dropping altogether any of their old institutions, a praefectus urbi, though a mere shadow of the former office, was henceforth appointed every year, only for the time that the consuls were absent from Rome for the purpose of celebrating the *Feriae Latinae*. This praefectus had neither the power of convoking the senate nor the right of speaking in it; as in most cases he was a person below the senatorial age, and was not appointed by the people, but by the consuls. (Gell. xiv. 8.) When Varro, in the passage of Gellius here referred to, claims for the praefectus urbi the right of convoking the senate, he is probably speaking of the power of the praefect such as it was previously to the institution of the office of praetor urbanus. Of how little importance the office of praefect of the city had gradually become, may be inferred

from the facts, that it was always given to young men of illustrious families (Tacit. *Annal.* iv. 36), and that Julius Caesar even appointed to it several youths of equestrian rank under age. (Dion Cass. xlix. 42, xliii. 29, 48.) During the empire such praefects of the city continued to be appointed so long as the *Feriae Latinae* were celebrated, and were even invested with some kind of jurisdiction. (Tacit. *Annal.* vi. 11; Suet. *Nero*, 7, *Claud.* 4; Dion Cass. liv. 17; J. Capitol. *Antonin. Phil.* 4.) On some occasions, however, no praefectus urbi was appointed at all; and then his duties were performed by the praetor urbanus. (Dion Cass. xli. 14, xlix. 16; comp. Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 146.)

An office very different from this, though bearing the same name, was instituted by Augustus on the suggestion of Maecenas. (Dion Cass. lii. 21; Tacit. *l. c.*; Suet. *Aug.* 37.) This new praefectus urbi was a regular and permanent magistrate, whom Augustus invested with all the powers necessary to maintain peace and order in the city. He had the superintendence of butchers, bankers, guardians, theatres, &c.; and to enable him to exercise his power, he had distributed throughout the city a number of milites stationarii, whom we may compare to a modern police. He also had jurisdiction in cases between slaves and their masters, between patrons and their freed men, and over sons who had violated the pietas towards their parents. (Dig. 1. tit. 12. s. 1. § 5—14; 37. tit. 15. s. 1. § 2.) His jurisdiction, however, became gradually extended; and as the powers of the ancient republican praefectus urbi had been swallowed up by the office of the praetor urbanus, so now the power of the praetor urbanus was gradually absorbed by that of the praefectus urbi; and at last there was no appeal from his sentence, except to the person of the princeps himself, while anybody might appeal from a sentence of any other city magistrate, and, at a later period, even from that of a governor of a province, to the tribunal of the praefectus urbi. (Vopisc. *Florian.* 5, 6; Suet. *Aug.* 33; Dion Cass. lii. 21, 33; Dig. 4. tit. 4. s. 38.) His jurisdiction in criminal matters was at first connected with the *questiones* (Tacit. *Annal.* xiv. 41, with the note of Lipsius); but from the third century he exercised it alone, and not only in the city of Rome, but at a distance of one hundred miles from it, and he might sentence a person to deportatio in insulam. (Dig. 1. tit. 12. s. 1. § 3 and 4.) During the first period of the empire and under good emperors, the office was generally held for a number of years, and in many cases for life (Dion Cass. lii. 21, 24, lxxviii. 14; J. Capitol. *Antonin. Pius*, 8; Lamprid. *Commod.* 14; Vopisc. *Carin.* 16); but from the time of Valerian a new praefect of the city occurs almost every year.

At the time when Constantinople was made the second capital of the empire, this city also received its praefectus urbi. The praefects at this time were the direct representatives of the emperors, and all the other officers of the administration of the city, all corporations, and all public institutions, were under their control. (Cod. 1. tit. 28. s. 4; Symmach. *Epist.* x. 37, 43; Cassiod. *Variar.* vi. 4.) They also exercised a superintendence over the importation and the prices of provisions, though these subjects were under the more immediate regulation of other officers. (Cod. 1.

tit. 28. s. 1; Orelli, *Inscript.* n. 3116.) The praefects of the city had every month to make a report to the emperor of the transactions of the senate (Symmach. *Epist.* x. 44), where they gave their vote before the consulars. They were the medium through which the emperors received the petitions and presents from their capital. (Symmach. *Epist.* x. 26, 29, 35; Cod. 12. tit. 49.) At the election of a pope the praefect of Rome had the care of all the external regulations. (Symmach. *Epist.* x. 71—83.) [L. S.]

PRAEFICAE. [FUNUS, p. 558, b.]

PRAEFURNIUM. [BALNEAE, p. 192, b; FORNAE.]

PRAEJUDICIUM. This word, as appears from its etymology, has a certain relation to Judicium, to which it is opposed by Cicero (*Divinat.* 4): "de quo non praejudicium, sed plane jam judicium factum." The commentator, who goes under the name of Asconius, observes on this passage, that a praejudicium is something, which when established becomes an *aesemplum* for the judges (*judicatori*) to follow; but this leaves us in doubt whether he means something established in the same cause, by way of preliminary inquiry, or something established in a different, but a like cause, which would be what we call a precedent. Quintilian (*Inst. Orat.* v. l. 2) states that it is used both in the sense of a precedent, in which case it is rather *aesemplum* than *praejudicium* (*res cu paribus causis judicatae*); and also in the sense of a preliminary inquiry and determination about something which belongs to the matter in dispute (*judicis ad ipsam causam pertinentibus*), from whence also comes the name Praejudicium. This latter sense is in conformity with the meaning of Praejudiciales Actiones or Praejudicia in which there is an Intentio only and nothing else. (Gaius, iv. 44.) These accordingly were called Praejudiciales Actiones which had for their object the determination of some matter, which was not accompanied by a condemnation. "A praejudicium is an actio, which has not any condemnatio as a consequence, but only a judicial declaration as to the existence of a legal relation. The name of this kind of actions comes from the circumstance that they serve as preliminary to other and future actions. All these Actiones are *in rem*, that is, they avail not exclusively against a determinate person who owes a duty, like actions which are founded on Obligations." (Savigny, *System*, &c. vol. i. p. 356.) For instance, the question might be, Whether a man is a father or not, or Whether he has a Potestas over his child: these were the subject of Praejudiciales Actiones. If a father denied that the child who was born of his wife, or with which she was then pregnant, was his child, this was the subject of a "Praejudicium cum patre de partu agnoscendo." If a Judex should have declared that the child must be maintained by the reputed father, there must still be the Praejudicium to ascertain whether the reputed father is the true father. If it was doubtful whether the mother was his wife, there must be a praejudicium on this matter before the praejudicium de partu agnoscendo. These praejudicial actions then, were, as it appears, actions respecting Status; and they were either Civiles or Praetoriae. It was a Civilis Actio when the question was as to libertas; the rest seem to have been Praetoriae Actiones. Quintilian makes a third class of Praejudicia, "sum de eadem causa pronuntiatum est," &c.

Sometimes Praejudicium means inconveniences, damage, injury, which sense appears to arise from the notion of a thing being prejudged, or decided without being fairly heard; and this sense of the word seems to be very nearly the same in which it occurs in our law in the phrase "without prejudice to other matters in the cause."

(Gaius, iii. 123, iv. 44; Dig. 25. tit. 3; Dig. 22. tit. 3. s. 8; Dig. 43. tit. 30. De liberis exhibendis, Inst. 4. tit. 6. s. 13; and Theophilus, *Paraphr.* ad Inst. 4. tit. 6. s. 13.) [G. L.]

PRAELUSIO. [GLADIATORIA, p. 575, a.]

PRAENOMEN. [NOMEN.]

PRAEPETES. [AUGUR, p. 175, b.]

PRAEPOSITUS, which means a person placed over, was given as a title in the later times of the Roman empire to many officers: of these the most important was the *Praepositus Sacri Cubiculi*, or chief chamberlain in the emperor's palace. (Cod. 12. tit. 5; Cod. Theod. 6. tit. 8.) Under him was the *Primicerius*, together with the *Cubicularii* and the corps of *Silentiarii*, commanded by three *decuriones*, who preserved silence in the interior of the palace. (Cod. 12. tit. 16; Walter, *Gesch. des Röm. Rechts*, § 340, 2d ed.)

PRAEROGATIVA. [COMITIA, pp. 338, b, 339, b.]

PRAES. If we might trust a definition by Ausonius (*Idyll.* xii. 9), he was called Vas who gave security for another in a *Causa Capitalis*; and he who gave security for another in a civil action was Praes. But this authority cannot be trusted, and the usage of the words Vas and Praes was certainly not always conformable to this definition. According to Varro (*Ling. Lat.* vi. 74, ed. Müller), any person was Vas, who promised Vadimonium for another, that is, gave security for another in any legal proceeding. Festus (*s.v. Vadom*) says that Vas is a Sponsus in a *res capitalis*. If Vas is genus, of which Vas in its special sense, and Praes are species, these definitions will be consistent. (Comp. Sallust. *Jug.* 35, 61; Horat. *Sat.* i. l. 11, and Heindorf's note.) Under *Manceps* Festus remarks, that *Manceps* signifies him who buys or hires any public property (*qui a populo emit conducit*), and that he is also called Praes because he is bound to make good his contract (*praestare quod promisit*), as well as he who is his Praes. (See also Varro, *l.c.*) According to this, Praes is a surety for one who buys of the state, and so called because of his liability (*praestare*). But the etymology at least is doubtful, and we are inclined to think, false. The passage of Festus explains a passage in the Life of Atticus (*C. Nep.* 6), in which it is said that he never bought anything at public auction (*ad hastam publicam*) and never was either *Manceps* or Praes. A case is mentioned by Gellius (vii. 19) in which a person was committed to prison who could not obtain Praedes. The goods of a Praes were called Praedia (*Pseudo-Ascon. in Verr.* ii. l. 54), and in Cicero (*l.c.*) and Livy (xxii. 60) "praedibus et praediis" come together. The phrase "praedibus cavere," to give security, occurs in the Digest (10. tit. 3. s. 6), where some editions have "pro aedibus cavere." (See the various readings ed. Gebauer and Spangenberg.) The phrase "praedes vendere" means to sell, not the praedes properly so called, but the things which are given as a security.

Praediores are supposed by Brissonius to be the same as Praedes (Cic. *pro Balb.* c. 20, *ad Att.* xii.

14, 17; Sueton. *Claud.* c. 9; Val. Max. viii. 12), at least so far as they were sureties to the State. But praedictor is defined by Gaius (ii. 61) to be one "who buys from the people," and from the context it is clear that it is one who buys a Praedium, which is further defined to be a thing pledged to the populus "res obligata populo." The Praedictor then is he who buys a Praedium, that is, a thing given to the populus as a security by a Praes; and the whole law relating to such matters was called Jus Praedictorium. [G. L.]

PRAESCRIPTIO, or rather **TEMPORIS PRAESCRIPTIO**, signifies the Exceptio or answer which a defendant has to the demand of a plaintiff, founded on the circumstance of the lapse of time. The word has properly no reference to the plaintiff's loss of right, but to the defendant's acquisition of a right by which he excludes the plaintiff from prosecuting his suit. This right of a defendant did not exist in the old Roman law. When the Praetors gave new actions by their Edict, they attached to them the condition that those actions must be brought within a year (*intra annum judicium dabo*), that is a year from the time when the right of action accrued. These actions then were exceptions from the old rule, that all actiones were perpetuae. This rule became extended by the Longi temporis praescriptio, which established that in actions about ownership, or jura in re, ten, or in some cases twenty years, would give a praescriptio, when the Possessor could show that he had complied with the main conditions of Usucapion, without having acquired ownership by Usucapion, for if he had, he had no need of any Exceptio. This rule was further extended by Constantine, and a period of 30 or 40 years, for it seems that the time was not quite settled, was to be considered as sufficient for a praescriptio, though the defendant had not complied with the conditions of Usucapion. A general constitution was made by Theodosius, A. D. 424, which with some variations appears in both the Codes (Cod. Theod. 4. tit. 14; Cod. 7. tit. 39. s. 3); and it enacted that, as in the case of the actiones already mentioned, there should be no hereditatis petitio after 30 years, and that after the same time no personal action should be brought. The actio finium regundorum was excepted, and also the action of a creditor for his pignus or hypotheca against the debtor, but not against others. Praejudiciales actiones as to Status are not enumerated among those against which there was a Praescriptio, but they seem to be included in the general words of the law. Justinian, by a constitution of the year 530 (Cod. 7. tit. 40. s. 1), established the general rule of 30 years for all actions, with the exception of the actio hypothecaria, for which he required 40 years. His constitution enumerates the following actions to which the praescriptio of 30 years would apply: Familiae heriscundae, Communi dividundo, Finium regundorum, Pro Socio, Furti et Vi Bonorum Raptorum; and it adds, "neque alterius cujusque personae actio vitam longiorem esse triginta annis, &c., sed ex quo ab initio competit, et semel nata est, &c., post memoratum tempus finiri." It thus appears that all actions were originally perpetuae, that is, the right of action continued without any interruption from the lapse of time; then some were made subject to Praescriptio, and finally all were made so. In consequence of this change the

term Perpetuae, originally applied to actiones that were not subject to praescriptio, was used to signify an actio in which 30 years were necessary to give a Praescriptio, as opposed to actiones in which the right to a Praescriptio accrued in a shorter time. (Inst. 4. tit. 12.)

The conditions necessary to establish a Praescriptio were, 1. Actio Nata, for there must be a right of action in order that a praescriptio may have an origin, and the date of its origin must be fixed by the date of the right of action. 2. There must be a continuous neglect on the part of the person entitled to bring the action, in order that the time of the Praescriptio may be reckoned uninterruptedly. 3. Bona fides was not a necessary ingredient in a Praescriptio, as such, because it was the neglect of the plaintiff which laid the foundation of the Praescriptio. But the longi temporis praescriptio was made like to Usucapion as to its conditions, of which bona fides was one. Justinian (Cod. 7. tit. 39. s. 8) required a bona fides in the case of a thirty year Praescriptio, but this was no new rule except so far as the Possessor claimed the benefit of Usucapio; and as the longi temporis praescriptio, as an independent rule of law, disappeared from the legislation of Justinian, the bona fides as a condition of praescriptio went with it. 4. The lapse of time, which was 30 years; but to this there were many exceptions.

The sources on the subject of Praescriptio are referred to in Brinkmann's *Institutiones Juris Romani*, and Mühlenthal's *Doctrina Pandectarum*, § 261, and § 481, on the distinction being ultimately abolished between Praescriptio and Usucapio; Savigny, *System des heutigen Röm. Rechts*, vol. v., from whom this outline is taken. See also **USUCAPIO**.

Praescriptio had a special sense in Roman pleadings, which Gaius has explained as existing in his time (iv. 130). These Praescriptiones were pro actore, and not pro reo; and an example will explain the term. It often happens that an obligatio is such that a man is bound to another to do certain acts at certain times, as for instance, yearly, half yearly, or monthly. The payment of interest on money would be an example. At the close of any of these certain periods, the party to whom the obligatio was due, might sue for what was due, but not for what was not due, though an obligatio was contracted as to future time. When a debt had become due in consequence of an obligatio, there was said to be a Praestatio, or it was said, "aliquid jam praestari oportet;" when the obligatio existed, but the Praestatio was not due, it was "futura praestatio," or it was said, "praestatio adhuc nulla est." If then the plaintiff wished to limit his demand to what was due, it was necessary to use the following Praescriptio: "Ea res agatur cujus rei dies fuit." (Compare Cic. de Or. i. 37.) The name of Praescriptiones, observes Gaius, is manifestly derived from the circumstance of their being prefixed (praescribuntur) to the formulae, that is, they came before the Intentio. In the time of Gaius the Praescriptiones were only used by the actor; but formerly they were used also in favour of a defendant (reus), as in the following instance: "Ea res agatur quod praedictum hereditatis non fiat," which in the time of Gaius was turned into a kind of exceptio or answer, when the petitioner hereditatis, by using a different kind of actio, was prejudging the ques-

tion of the hereditas (*cum petitor, dec. . . praedictum hereditati faciat*). Compare Gaius Dig. 10. tit. 2. s. 1; and see *PRÆJUDICIUM*.

Savigny shows that in the legislation of Justinian, *Præscriptio* and *Exceptio* are identical and that either term can be used indifferently. He observes that the *Præscriptiones* which in the old form of procedure were introduced into the formula for the benefit of the defendant, were properly *Exceptiones*, and it was merely an accident that certain *Exceptiones* were placed before the intentio instead of being placed at the end of the formula, as was the usual practice. Subsequently, as appears from Gaius, only the *Præscriptiones* pro actore were prefixed to the formula; and those pro reo were placed at the end, and they retained, though improperly, the name of *Præscriptiones*. Thus *Exceptio* and *Præscriptio* came to be used as equivalent terms, a circumstance to which the disuse of the *Ordo judiciorum* contributed. Yet in the case of particular exceptions, one or other of the names was most in use, and the indiscriminate employment of them was an exception to the general rule. The prevalence of one or the other name in particular cases is easily explained: thus, the *Doli* and *Rei Judicatae* *Exceptiones* were always at the end of the Formula, and the *Temporis* and *Fori* *Præscriptiones* in earlier times were placed at the beginning. Savigny adds that in modern times *Præscriptio* has acquired the sense of *Usucapion*, but this is never the sense of the word *Præscriptio* in the Roman law. Though *Exceptio* and *Præscriptio* came to be used as equivalent, yet neither *Exceptio* nor *Præscriptio* is used in the sense of *Temporis præscriptio* without the addition of the words *Temporis*, *Temporalis*, *triginta annorum*, &c. (Savigny, *System*, dec. iv. 309, v. 163.) [G. L.]

PRAESES. [PROVINCIA.]

PRAESUL. [SALU.]

PRAETERITI SENATO'RES. [SENATUS.]

PRAETEXTA. [TOGA.]

PRAETOR. According to Cicero (*de Leg.* iii. 3) *Prætor* was a title which designated the consuls as the leaders of the armies of the state; and he considers the word to contain the same elemental parts as the verb *præire*. The period and office of the command of the consuls might appropriately be called *Prætorium*. (Liv. viii. 11.) *Prætor* was also a title of office among the Latins; and it is the name which Livy gives to the strategus of the Achæans.

The first *prætor* specially so called was appointed in the year B. C. 366, and he was chosen only from the Patricians, who had this new office created as a kind of indemnification to themselves for being compelled to share the consulship with the Plebeians. (Liv. vi. 42, vii. 1.) No Plebeian *prætor* was appointed till the year B. C. 337. The *Prætor* was called *collega consulis*, and was elected with the same auspices at the *Comitia Centuriata*. The consuls were elected first, and then the *prætores*. (Liv. xlv. 44.)

The *Prætorship* was originally a kind of third consulship, and the chief functions of the *prætor* (*ius in urbe dicere*, Liv. vi. 42; *iura reddere*, Liv. vii. 1) were a portion of the functions of the consuls, who according to the passage of Cicero above referred to, were also called *iudices* a *judicando*. The *prætor* sometimes commanded the armies of the state; and while the consuls were absent with

the armies, he exercised their functions within the city. He was a *Magistratus Curulis* and he had the *Imperium*, and consequently was one of the *Magistratus Majores*: but he owed respect and obedience to the consuls. (Polyb. xxxiii. 1.) His insignia of office were six lictors, whence he is called by Polybius *ἑξαμένον* or *στρατηγὸς ἑξαέλευκος*, and sometimes simply *ἑξαέλευκος*. Plutarch (*Sulla*, 5) uses the expression *στρατηγία πολιτικῇ*. At a later period the *Prætor* had only two lictors in Rome. (Censorinus, c. 24.) The *prætorship* was at first given to a consul of the preceding year as appears from Livy. L. Papirius was *prætor* after being consul. (Liv. x. 47.)

In the year B. C. 246 another *Prætor* was appointed, whose business was to administer justice in matters in dispute between peregrini, or peregrini and Roman citizens; and accordingly he was called *Prætor Peregrinus*. (Dig. 1. tit. 2. s. 28.) The other *Prætor* was then called *Prætor Urbanus* "qui ius inter cives dicit," and sometimes simply *Prætor Urbanus* and *Prætor Urbis*. The two *Prætores* determined by lot which functions they should respectively exercise. If either of them was at the head of the army, the other performed all the duties of both within the city. Sometimes the military imperium of a *Prætor* was prolonged for a second year. When the territories of the state were extended beyond the limits of Italy, new *prætores* were made. Thus two *prætores* were created B. C. 227, for the administration of Sicily and Sardinia, and two more were added when the two Spanish provinces were formed B. C. 197. When there were six *prætores*, two stayed in the city, and the other four went abroad. (Liv. xlv. 44.) The Senate determined their provinces, which were distributed among them by lot. (Liv. xxxii. 27, 28.) After the discharge of his judicial functions in the city, a *Prætor* often had the administration of a province with the title of *Proprætor*, and sometimes with the title of *Proconsul*. Sulla increased the number of *Prætores* to eight, which Julius Cæsar raised successively to ten, twelve, fourteen, and sixteen. (Dion Cassius, xlii. 51, xliii. 51, and the notes of Reinmarus.) Augustus after several changes fixed the number at twelve. Under Tiberius there were sixteen. Two *prætores* were appointed by Claudius for matters relating to *Fideicommissa*, when the business in this department of the law had become considerable, but Titus reduced the number to one; and Nerva added a *Prætor* for the decision of matters between the *Fiscus* and individuals. "Thus," says Pomponius, speaking of his own time, "eighteen *prætores* administer justice (*ius dicunt*) in the State." (Dig. 1. tit. 2. s. 34.) M. Aurelius, according to Capitolinus (*M. Aur.* c. 10), appointed a *Prætor* for matters relating to *tutela*, which must have taken place after Pomponius wrote. [PANDECTÆ.] The main duties of the *Prætores* were judicial, and it appears that it was found necessary from time to time to increase their number, and to assign to them special departments of the administration of justice.

Sometimes, extraordinary duties were imposed on them, as in the case of the *Prætor Peregrinus* (B. C. 144) who was commissioned by a *Senatus-consultum* to look after the repair of certain aqueducts and to prevent the improper use of the water. (Frontinus, *De Aqueduct.* lib. 1.)

The *Prætor Urbanus* was specially named

Praetor, and he was the first in rank. His duties confined him to Rome, as is implied by the name, and he could only leave the city for ten days at a time. It was part of his duty to superintend the Ludi Apollinares. He was also the chief magistrate for the administration of justice, and to the Edicta of the successive praetors the Roman Law owes in a great degree its development and improvement. Both the Praetor Urbanus and the Praetor Peregrinus had the Jus Edicendi (Gaius, i. 2), and their functions in this respect do not appear to have been limited on the establishment of the imperial power, though it must have been gradually restricted as the practice of Imperial Constitutions and Rescripts became common. [EDICTUM.] The limits of these two praetors' administration were expressed by the term Urbanae Provinciae.

The chief judicial functions of the Praetor in civil matters consisted in giving a judex. [JUDEX.] It was only in the case of Interdicta, that he decided in a summary way. [INTERDICTUM.] Proceedings before the praetor were technically said to be in *jure*.

The Praetors also presided at trials of criminal matters. These were the Quaestiones perpetuae (Cic. *Brut.* c. 27), or the trials for Repetundae, Ambitus, Majestas, and Peculatus, which, when there were six praetors, were assigned to four out of the number. Sulla added to these Quaestiones those of Falsum, De Sicariis et Veneficiis, and De Parricidiis, and for this purpose he added two or according to some accounts four praetors, for the accounts of Pomponius and of other writers do not agree on this point. (Sueton. *Caesar*, 41; Dion Cass. xlii. 51.) On these occasions the Praetor presided, but a body of judges determined by a majority of votes the condemnation or acquittal of the accused. [JUDICIUM.]

The Praetor when he administered justice sat on a sella Curulis in a Tribunal, which was that part of the Court which was appropriated to the Praetor and his assessors and friends, and is opposed to the Subsellia, or part occupied by the Judges, and others who were present. (Cic. *Brut.* 84.) But the Praetor could do many ministerial acts out of court, or as it was expressed *in plano*, or *ex aequo loco*, which terms are opposed to *in tribunali* or *ex superiore loco*: for instance, he could in certain cases give validity to the act of manumission when he was out of doors, as on his road to the bath or to the theatre. (Gaius, i. 20.)

A person who had been ejected from the senate could recover his rank by being made Praetor (Dion Cassius, xxxvii. 30; Plutarch, *Cicero*, 17). Sallustius was made praetor *ἐπὶ τῷ τῆν βουλῆν ἀναλαβεῖν*. (Dion Cassius, xlii. 52.)

The Praetors existed with varying numbers to a late period in the Empire, and they had still jurisdiction. (Cod. 7. tit. 62. s. 17; 5. tit. 71. s. 18.)

The functions of the Praetors, as above observed, were chiefly judicial, and this article should be completed by a reference to EDICTUM, IMPERIUM, JUDEX, JURISDICTIO, MAGISTRATUS, PROVINCIA. To the authorities referred to under Edictum may be added, "Die Prätorischen Edicte der Römer, &c., von D. Eduard Schrader, Weimar, 1815." [G. L.]

PRAETORIA ACTIO. [ACTIO.]

PRAETORIA COHORS. [PRAETORIANI.]

PRAETORIANI, sc. *milites*, or *Prætorias*

Cohortes, a body of troops instituted by Augustus to protect his person and his power, and called by that name in imitation of the *Prætorias Cohors*, or select troop, which attended the person of the praetor or general of the Roman army. (Salust. *Cat.* 60; Cic. *Cat.* ii. 11; *Caes. Bell. Gall.* i. 40.) This cohort is said to have been first formed by Scipio Africanus out of the bravest troops, whom he exempted from all other duties except guarding his person, and to whom he gave sixfold pay (Festus, s. v.); but even in the early times of the republic the Roman general seems to have been attended by a select troop. (Liv. ii. 20.) In the time of the civil wars the number of the praetorian cohorts was greatly increased (Appian, *Bell. Civ.* iii. 67, v. 8); but the establishment of them as a separate force was owing to the policy of Augustus. They originally consisted of nine (Tac. *Ann.* iv. 5; Suet. *Aug.* 49) or ten cohorts (Dion Cass. iv. 24), each consisting of a thousand men, horse and foot. They were chosen only from Italy, chiefly from Etruria and Umbria, or ancient Latium, and the old colonies (Tac. *l. c. Hist.* i. 84), but afterwards from Macedonia, Noricum, and Spain also. (Dion Cass. lxxiv. 2.) Augustus, in accordance with his general policy of avoiding the appearance of despotism, stationed only three of these cohorts in the capital, and dispersed the remainder in the adjacent towns of Italy. (Suet. *Aug.* 49.) Tiberius, however, under pretence of introducing a stricter discipline among them, assembled them all at Rome in a permanent camp, which was strongly fortified. (Tac. *Ann.* iv. 2; Suet. *Tiber.* 37; Dion Cass. lvii. 19.) Their number was increased by Vitellius to sixteen cohorts, or 16,000 men. (Tac. *Hist.* ii. 93.)

The Praetorians were distinguished by double pay and especial privileges. Their term of service was originally fixed by Augustus at twelve years (Dion Cass. liv. 25), but was afterwards increased to sixteen years; and when they had served their time, each soldier received 20,000 sesterces. (Id. iv. 23; Tac. *Ann.* i. 17.) All the Praetorians seem to have had the same rank as the centurions in the regular legions, since we are told by Dion (lv. 24) that they had the privilege of carrying a vitis (*πάσσαλος*) like the centurions. The Praetorians, however, soon became the most powerful body in the state, and like the janissaries at Constantinople, frequently deposed and elevated emperors according to their pleasure. Even the most powerful of the emperors were obliged to court their favour; and they always obtained a liberal donation upon the accession of each emperor. After the death of Pertinax (A. D. 193) they even offered the empire for sale, which was purchased by Didius Julianus (Dion Cass. lxxiii. 11; Spartian. *Julian.* 2; Herodian. ii. 7); but upon the accession of Severus in the same year they were disbanded, on account of the part they had taken in the death of Pertinax, and banished from the city. (Dion Cass. lxxiv. 1.) The emperors, however, could not dispense with guards, and accordingly the Praetorians were restored on a new model by Severus, and increased to four times their ancient number. Instead of being levied in Italy, Macedonia, Noricum, or Spain, as formerly, the best soldiers were now draughted from all the legions on the frontiers; so that the praetorian cohorts now formed the bravest troops of the empire. (Dion Cass. lxxiv. 2; Herodian. iii. 13.) Diocletian reduced their num-

bers and abolished their privileges (Aurel. Vict. *de Caes.* 39); they were still allowed to remain at Rome, but had no longer the guard of the emperor's person, as he never resided in the capital. Their numbers were again increased by Maxentius, but after his defeat by Constantine, A. D. 312, they were entirely suppressed by the latter, their fortified camp destroyed, and those who had not perished in the battle between Constantine and Maxentius were dispersed among the legions. (Zosimus, ii. 17; Aurel. Vict. *de Caes.* 40.) The new form of government established by Constantine did not require such a body of troops, and accordingly they were never revived. The emperor's body guards now only consisted of the Domestici, horse and foot under two comites, and of the Protectores. (Cod. 12. tit. 17; Cod. Theod. 6. tit. 24.)

The commanders of the Praetorians were called **PRÆFECTI PRÆTORIO**, whose duties, powers, &c. are mentioned in a separate article.

PRÆTORIUM was the name of the general's tent in the camp, and was so called because the name of the chief Roman magistrate was originally praetor, and not consul. [CASTRÆ, p. 249.] The officers who attended on the general in the *Prætorium*, and formed his council of war, were called by the same name. (Liv. xxx. 5.) The word was also used in several other significations, which were derived from the original one. Thus the residence of a governor of a province was called the *Prætorium* (Cic. *a. Verr.* iv. 28, v. 35; St. John, xviii. 28, 33); and the same name was also given to any large house or palace. (Suet. *Aug.* 72, *Cal.* 37; Juv. i. 75; *prætoria voluptati tantum deservientia*, Dig. 50. tit. 16. s. 198.) The camp of the Praetorian troops at Rome, and frequently the Praetorian troops themselves, were called by this name. [PRÆTORIANI.]

PRAEVARICATOR. [SENATUSCONSULTUM TURPILIANUM.]

PRA'NDIUM. [COENA, p. 306, b.]

PRECA'RIUM. [INTERDICTUM.]

PRELUM, or **PRÆLUM**, is a part of a press used by the ancients in making wine, olive-oil, and paper. The press itself was called *torcular*; and the prelum was that part which was either screwed or knocked down upon the things to be pressed, in order to squeeze out the last juices. (Serv. *ad Virg. Georg.* ii. 242; Vitruv. vi. 9.) Sometimes, however, prelum and torcular are used as convertible terms, a part being named instead of the whole. As regards the pressing of the grapes, it should be remembered that they were first trodden with the feet; but as this process did not press out all the juice of the grapes, they were afterwards, with their stalks and peels (*scopi et folliculi*), put under the prelum. (Varro, *de Re Rust.* i. 54; comp. Colum. xii. 38.) Cato (*de Re Rust.* 31) advised his countrymen always to make the prelum of the wood of black maple (*carpinus atra*). After all the juice was pressed out of the grapes, they were collected in casks, water was poured upon them, and after standing a night they were pressed again. The liquor thus obtained was called *lora*; it was preserved in casks, and was used as a drink for workmen during the winter. (Varro, *l. c.*) Respecting the use of the prelum in making olive-oil, and in the manufacture of paper, see Plin. *H. N.* xv. 1, xiii. 25; Colum. xii. 50.

[L. S.]

PRIMICE'RIUS, a name given to various

officers and dignitaries under the later Roman empire, is explained by Suidas (*s. v.*) to be the person who holds the first rank in any thing. The etymology of the word is doubtful: it is supposed that a person was called *Primicerius* because his name stood first in the wax (*ceræ*), that is, the tablet made of wax, which contained a list of persons of any rank.

The word *Primicerius* does not seem to have been always applied to the person who was at the head of any department of the state or army, but also to the one second in command or authority; as, for instance, the *Primicerius Sacri Cubiculi*, who was under the *Praepositus Sacri Cubiculi*. [PRÆPOSITUS.] Various *Primicerii* are mentioned, as the *Primicerius Domesticorum* and *Protectorum* (Cod. 12. tit. 17. s. 2), *Fabrice* (Cod. 11. tit. 9. s. 2), *Mensorum* (Cod. 12. tit. 28. s. 1), *Notariorum* (Cod. 12. tit. 7), &c.

PROAGOGIAS GRAPHE (*προαγωγίας γραφή*), a prosecution against those persons who performed the degrading office of pimps or procurers (*προαγωγοί*). By the law of Solon the heaviest punishment (*τὰ μέγιστα ἐπιτίμια*) was inflicted on such a person (*ἐάν τις ἐλευθέρων παῖδα ἢ γυναῖκα προαγωγέωσιν*, Aesch. *c. Timarch.* 3. 26. ed. Steph.). According to Plutarch (*Sol.* 23), a penalty of twenty drachms was imposed for the same offence. To reconcile this statement with that of Aeschines, we may suppose with Platner (*Proc. und Klag.* vol. ii. p. 216) that the law mentioned by Plutarch applied only to prostitutes. An example of a man put to death for taking an Olynthian girl to a brothel (*σῆσας ἐν οἰκήματι*) occurs in Dinarchus (*c. Demosth.* 93, ed. Steph.). A prosecution of a man by Hyperides *ἐν προαγωγῇ* is mentioned by Pollux (iii. 27). A charge (probably false) was brought against Aspasia for getting freeborn women into her house for the use of Pericles. (Plut. *Pericl.* 32; Aristoph. *Acharn.* 527.) In connection with this subject see the **ἩΤΑΙΡΕΣΕΩΣ GRAPHE** and **ΠΗΘΟΡΑΣ ΤΩΝ ΕΛΕΥΘΕΡΩΝ GRAPHE**. (Meier, *Att. Proc.* p. 332.) [C. R. K.]

PRO'BOLE (*προβολή*), an accusation of a criminal nature, preferred before the people of Athens in assembly, with a view to obtain their sanction for bringing the charge before a judicial tribunal. It may be compared in this one respect (*viz.*, that it was a preliminary step to a more formal trial) with our application for a criminal information; though in regard to the object and mode of proceeding there is not much resemblance. The *προβολή* was reserved for those cases where the public had sustained an injury, or where, from the station, power, or influence of the delinquent, the prosecutor might deem it hazardous to proceed in the ordinary way without being authorised by a vote of the sovereign assembly. In this point it differed from the *εἰσαγγελία*, that in the latter the people were called upon either to pronounce final judgment or to direct some peculiar method of trial; whereas in the *προβολή*, after the judg-

ment of the assembly, the parties proceeded to trial in the usual manner. The court before whom they appeared, however influenced they might be by the *præjudicium* of the people, were under no legal compulsion to abide by their decision; and on the other hand it is not improbable that if the people refused to give judgment in favour of the complainant, he might still proceed against his adversary by a *γραφή*, or a private action, according to the nature of the case. (Platner, *Proc. and Kl.* vol. i. p. 382.)

The cases to which the *προβολή* was applied were complaints against magistrates for official misconduct or oppression; against those public informers and mischief-makers who were called *συκοφανταί*; against those who outraged public decency at the religious festivals; and against all such as by evil practices exhibited disaffection to the state. (Harpor. and Suidas, s. v. *Καραχειροτονία*; Pollux, viii. 46; Aesch. *de Fals. Leg.* 47; Isocr. *περὶ ἀσπίδ.* 344, ed. Steph.)

With respect to magistrates, Schömann (*de Comit.* p. 231) thinks that the *προβολαί* could only be brought against them at those *ἐπιχειροτονίαι* which were held at the first *κύβλα ἐκκλησία* in every Prytaneia, when the people inquired into the conduct of magistrates, with a view to continue them in office or depose them, according to their deserts. An example of magistrates being so deposed occurs in Demosth. c. *Theor.* 1330. The people (says Schömann) could not proceed to the *ἐπιχειροτονία* except on the complaint (*προβολή*) of some individual; the deposed magistrate was afterwards brought to trial, if the accuser thought proper to prosecute the matter further. There appears, however, to be no authority for limiting the *προβολαί* against magistrates to these particular occasions; and other writers have not agreed with Schömann on this point. (Platner, *Proc. and Kl.* vol. i. p. 385; Meier, *Att. Proc.* p. 273.)

An example of a *προβολή* against Sycophants is that which the people, discovering too late their error in putting to death the generals who gained the battle of Arginusæ, directed to be brought against their accusers. (Xen. *Hell.* i. 7. § 89.) Another occurs in Lysias (c. *Agorat.* 135, ed. Steph.), where the words *συλλήθεον πάντας καὶ ἐν τῷ δήμῳ καὶ ἐν τῷ δικαστηρίῳ συκοφαντίας κατέργοντε*, describe the course of proceeding in this method of prosecution. (Schömann, *de Com.* p. 234.)

Those who worked the public mines clandestinely, and those who were guilty of peculation or embezzlement of the public money, were liable to a *προβολή*. A case of embezzlement is referred to by Demosthenes c. *Mid.* 584. (Schömann, l. c.; Platner, *Proc. and Kl.* vol. i. p. 381.)

But the *προβολή* which has become most celebrated, owing to the speech of Demosthenes against Meidias, is that which was brought for misbehaviour at public festivals. We learn from the laws cited in that speech (517, 518, 571) that *προβολαί* were enjoined against any persons who, at the Dionysian, Thargelion, or Eleusinian festival (and the same enactment was probably extended to other festivals), had been guilty of such an offence as would fall within the description of *ἀσέβεια περὶ ἱερῇν*. A riot or disturbance during the ceremony, an assault, or other gross insult or outrage, committed upon any of the performers or spectators of the games, whether citizen or foreigner,

and even upon a slave, much more upon a magistrate or officer engaged in superintending the performance; an attempt to imprison by legal process, and even a levying of execution upon the goods of a debtor, during the continuance of the festival, was held to be a profanation of its sanctity, and to subject the offender to the penalties of these statutes. For any such offence complaint was to be made to the Prytanes (i. e. the Proedri), who were to bring forward the charge at an assembly to be held soon after the festival in the theatre of Dionysus. The defendant was to be produced before the assembly. Both parties were heard, and then the people proceeded to vote by show of hands. Those who voted in favour of the prosecution were said *καταχειροτονεῖν*, those who were against it *ἀποχειροτονεῖν*. The complainant was said *προβάλλεσθαι τὸν ἀδικούντα*, and the people, if they condemned him, *προκαταγρύναι*. (Demosth. c. *Mid.* 578, 583, 586.)

Some difficulty has arisen in explaining the following words in the law above referred to: — *τὰς προβολὰς παραδίδόντων εἶναι ἂν μὴ ἐκτεταμέναι εἶναι*. Platner (*Proc. and Kl.* vol. i. p. 384) and Schömann (*de Com.* p. 238) suppose that by these words the Prytanes are commanded to bring before the people those complaints, for which satisfaction has not been made by the offender to the prosecutor; and, to show that a compromise would be legal, Platner refers to Demosthenes, c. *Mid.* 568, 583; to which we may add the circumstance that Demosthenes is said to have compromised his charge against Meidias for a sum of money. Meier (*Att. Proc.* p. 275) explains it thus: that the Prytanes (or rather Proedri) were to bring before the people all the *προβολαί*, except those of a trifling character, for which they were themselves empowered to impose a fine. (As to the power of fining see *Att. Proc.* p. 34.) If we suppose the complaint to take the name of *προβολή* upon its being presented to the Proedri, the expression *ἐκτεταμένη προβολή* will cause no difficulty; for as *δικὴν τίτειν* signifies to pay the damages awarded in an action, so *προβολὴν τίτειν* may signify, to pay the fine imposed by the magistrates before whom the charge was brought; and *προβολὴν* is not used improperly for *ἐπιβολὴν*, any more than *δικὴν* is for *τίμημα* in the other case. Perhaps there is more force in another objection urged by Platner, viz., that (according to this interpretation) the not bringing the case before the assembly is made to depend on the *non-payment*, and not (as might have been expected) on the imposition of the fine.

The people having given their sentence for the prosecution, the case was to be brought into the court of Heliaea. In certain cases of a serious nature the defendant might be required to give bail for his appearance, or (in default thereof) go to prison. (Meier, *Att. Proc.* p. 276.) The persons on whom devolved the *ἡγεμονία δικαστηρίου* were, according to Pollux (viii. 87), the *Thesmothetae*. Meier (l. c.) thinks this would depend on the nature of the cause, and that upon a charge for the profanation of a festival, the cognizance would belong to such of the three superior archons as had the superintendence thereof. This would (no doubt) follow from the ordinary principles of Athenian jurisprudence; but it may be conceived that the extraordinary nature of the complaint by *προβολή* might take it out of the common course of practice. (Platner, p. 385.) The dicasts had to pro-

nounce their verdict on the guilt of the party, and to assess the penalty, which might be death, or only a pecuniary fine, according to their discretion. The trial (it seems) was attended with no risk to the prosecutor, who was considered to proceed under the authority of the popular decree. (Meier, *Att. Proc.* p. 277.) [C. R. K.]

PROBOULEUMA (προβούλευμα). [BOULE, p. 210, b.]

PROBOULI (πρόβουλοι), a name applicable to any persons who are appointed to consult or take measures for the benefit of the people. Thus, the delegates who were sent by the twelve Ionian cities to attend the Panionian council, and deliberate on the affairs of the confederacy, were called πρόβουλοι. (Herod. vi. 7.) So were the deputies sent by the several Greek states to attend the congress at the Isthmus, on the occasion of the second Persian invasion (Herod. vii. 172); and also the envoys whom the Greeks agreed to send annually to Plataea. (Plutarch, *Arist.* 21.) The word is also used like νομοφύλακες, to denote an oligarchical body, in whom the government of a state was vested, or who at least exercised a controlling power over the senate and popular assemblies. Such were the sixty senators of Cnidus; and a similar body appears to have existed at Megara, where, although democracy prevailed at an earlier period, the government became oligarchical before the beginning of the Peloponnesian war. (Arist. *Pol.* iv. 12. § 8, vi. 5. § 13; Müller, *Dor.* iii. 9. § 10; Wachsmuth, *Alterth.* vol. i. pt. 2. p. 91; Schömann, *Antiq. jur. publ.* p. 82.) A body of men called πρόβουλοι were appointed at Athens, after the end of the Sicilian war, to act as a committee of public safety. Thucydides (viii. 1) calls them ἀρχὴν τινα πρεσβυτέρων ἀνδρῶν, οἵτινες περὶ τῶν παρόντων ὡς ἐν καιρὸς ἢ προβολεύουσιν. They were ten in number. (Suidas, s. v. Πρόβουλοι.) Whether their appointment arose out of any concerted plan for overturning the constitution, is doubtful. The ostensible object at least was different; and the measures which they took for defending their country, and prosecuting the war, appear to have been prudent and vigorous. Their authority did not last much longer than a year; for a year and a half afterwards Pisander and his colleagues established the council of Four Hundred, by which the democracy was overthrown. (Thucyd. viii. 67; Wachsmuth, vol. i. pt. 2. p. 197.) The first step which had been taken by Pisander and his party, was to procure the election of a body of men, called συγγραφεῖς αὐτοκράτορες, who were to draw up a plan, to be submitted to the people, for remodelling the constitution. Thucydides says they were ten in number. Harpocration (s. v. Συγγραφεῖς) cites Androtion and Philochorus as having stated that thirty were chosen, and adds, 'Ὁ δὲ Θουκυδίδης τῶν δέκα ἐμπημόνευσεν μόνον τῶν προβούλων. This and the language of Suidas (s. v. Πρόβουλοι) have led Schömann to conjecture that the πρόβουλοι were elected as συγγραφεῖς, and twenty more persons associated with them, making in all the thirty mentioned by Androtion and Philochorus. (*Ant. jur. publ.* 181.) Others have thought that the συγγραφεῖς of Thucydides have been confounded by grammarians with the thirty tyrants, who were first chosen of τοὺς πατέρας νόμους συγγράψασιν καθ' οὓς πολιτεύουσιν. (Xen. *Hell.* ii. 3. § 2; Goeller, *ad Thuc.* viii. 67.) These Athenian πρόβουλοι are alluded to by Aristophanes in the *Lysistrata* (467), which was acted the year

after the Sicilian defeat, and by Lysias, c. *Eratosth.* 126, ed. Steph. [C. R. K.]

PROCHÉIROTONIA (προχειροτονία). [BOULE, p. 211, a.]

PROCLÉ/SIS (πρόκλησις). [ΔΙΑΓΕΤΤΑΡ, p. 398, b.]

PROCONSUL is an officer who acts in the place of a consul without holding the office of consul itself; though the proconsul was generally one who had held the office of consul, so that the proconsulship was a continuation, though a modified one, of the consulship. The first time that we meet with a consul, whose imperium was prolonged after the year of his consulship, is at the commencement of the second Samnite war, at the end of the consular year 327 B. C., when it was thought advisable to prolong the imperium (*imperium prorogare*) of Q. Publilius Philo, whose return to Rome would have been followed by the loss of most of the advantages that had been gained in his campaign. (Liv. viii. 23, 26.) The power of proconsul was conferred by a *senatusconsultum* and *plebiscitum*, and was nearly equal to that of a regular consul, for he had the imperium and jurisdiction, but it differed inasmuch as it did not extend over the city and its immediate vicinity (see Niebuhr, *Hist. of Rome*, iii. p. 186, who infers it from Gaius, iv. 104, 105), and was conferred without the auspices by a mere decree of the senate and people, and not in the comitia for elections. (Liv. ix. 42, x. 22, xxxii. 28, xxiv. 13.) Hence whenever a proconsul led his army back to Rome for the purpose of holding a triumph, the imperium (*in urbe*) was especially granted to him by the people, which was, of course, not necessary when a consul triumphed during the year of his office. Livy (iii. 4), it is true, mentions men appointed with proconsular power at a much earlier period than the time of Publilius Philo; but there is this difference, that in this earlier instance the proconsular power is not an *imperium prorogatum*, but a fresh appointment as commander of the reserve, and Niebuhr (*Hist. of Rome*, ii. p. 123) justly remarks that Livy here probably applies the phraseology of a much later time to the commander of the reserve; and this is the more probable as Dionysius (ix. 12) speaks of this ἀντιστρατηγός as having been appointed by the consuls. Nineteen years after the proconsulship of Publilius Philo, 308 B. C., Livy (ix. 42) relates that the senate alone, and without a plebiscitum, prolonged the imperium of the consul Q. Fabius Maximus Rullianus; but it is manifest that here again Livy transfers a later institution to a time when it did not yet exist; for it was only by the lex Maenia (236 B. C.) that the Senate obtained the right to prolong the imperium.

When the number of Roman provinces had become great, it was customary for the consuls, who during the latter period of the republic spent the year of their consulship at Rome, to undertake at its close the conduct of a war in a province, or its peaceful administration. (Cic. *de Nat. Deor.* ii. 3; Liv. xxxiii. 25; Cic. *ad Fam.* viii. 5. 13.) There are some extraordinary cases on record in which a man obtained a province with the title of proconsul without having held the consulship before. The first case of this kind occurred in B. C. 211, when young P. Cornelius Scipio was created proconsul of Spain in the comitia centuriata. (Liv. xxvii. 18.) During the last period of the republic such cases occurred more frequently. (Plut. *Aemil. Paul.* 4;

Cic. *de Leg.* i. 20.) Respecting the powers and jurisdiction of the proconsuls in the provinces, see *PROVINCIA*.

After the administration of the empire was newly regulated by Constantine, parts of certain dioceses were under the administration of proconsuls. Thus a part of the diocese of Asia, called Asia in a narrower sense, Achaia in the diocese of Macedonia, and the consular province in the diocese of Africa, were governed by proconsuls. (Walter, *Geschichte des Römischen Rechts*, § 366, 2d edit.) [L. S.]

PROCUBITO'RES. [EXERCITUS, p. 503, a.]

PROCURATOR is the person who has the management of any business committed to him by another. Thus it is applied to a person who maintains or defends an action on behalf of another, or, as we should say, an attorney [ACTIO]: to a steward in a family [CALCULATOR]: to an officer in the provinces belonging to the Caesar, who attended to the duties discharged by the quaestor in the other provinces [PROVINCIA]: to an officer engaged in the administration of the Fiscus [FISCUS]: and to various other officers under the empire.

PRODIGIUM in its widest acceptance denotes any sign by which the gods indicated to men a future event, whether good or evil, and thus includes omens and auguries of every description. (Virg. *Aen.* v. 638; Servius, *ad loc.*; Plin. *H. N.* xi. 37; Cic. *in Verr.* iv. 49.) It is, however, generally employed in a more restricted sense to signify some strange incident or wonderful appearance which was supposed to herald the approach of misfortune, and happened under such circumstances as to announce that the calamity was impending over a whole community or nation rather than private individuals. The word may be considered synonymous with *ostentum*, *monstrum*, *portentum*. "Quia enim ostendunt, portentunt, monstrant, praedicunt; ostenta, portenta, monstra, prodigia dicuntur." (Cic. *de Div.* i. 42.) It should be observed, however, that *prodigium* must be derived from *ago*, and not from *dico*, as Cicero would have it.

Since prodigies were viewed as direct manifestations of the wrath of heaven, and warnings of coming vengeance, it was believed that this wrath might be appeased, and consequently this vengeance averted, by prayers and sacrifices duly offered to the offended powers. This being a matter which deeply concerned the public welfare, the necessary rites were in ancient times regularly performed, under the direction of the pontifices, by the consuls before they left the city, the solemnities being called *procuratio prodigiomm*. Although from the very nature of the occurrences it was impossible to anticipate and provide for every contingency, we have reason to know that rules for expiation, applicable to a great variety of cases, were laid down in the *Orontaria*, the *Libri Rituales*, and other sacred books of the Etrurians (Cic. *de Div.* i. 33; Müller, *Etrusker*, vol. i. pp. 33, 36, 343, vol. ii. pp. 30, 99, 122, 131, 146, 337), with the contents of which the Roman priests were well acquainted; and when the prodigy was of a very terrible or unprecedented nature it was usual to seek counsel from some renowned Tuscan seer, from the Sibylline books, or even from the Delphic oracle. Prodigies were frequently suffered to pass unheeded when they were considered to have no direct reference to public

affairs, as, for example, when the marvel reported had been observed in a private mansion or in some town not closely connected with Rome, and in this case it was said *non suscipi*, but a regular record of the more important was carefully preserved in the Annals, as may be seen from the numerous details dispersed throughout the extant books of Livy. (See Liv. ii. 42, iii. 10, xxiv. 44, xxxvii. 3, xliii. 13; Müller, *die Etrusker*, vol. ii. p. 191; Hartung, *die Religion der Römer*, vol. i. p. 96; and for an interesting essay on the illustrations of Natural History to be derived from the records of ancient prodigies, Heyne, *Opusc. Acad.* vol. iii. pp. 198, 255.) [W. R.]

PRO'DOMUS. [DOMUS, p. 425, b; TEM-PLUM.]

PRODOSIA (προδοσία). Under this term was included not only every species of treason, but also every such crime as (in the opinion of the Greeks) would amount to a betraying or desertion of the interest of a man's country. The highest sort of treason was the attempt to establish a despotism (τυραννίς), or to subvert the constitution (καταλύειν τὴν πολιτείαν), and in democracies καταλύειν τὸν δῆμον or τὸ πλῆθος. Other kinds of treason were a secret correspondence with a foreign enemy; a betraying of an important trust, such as a fleet, army, or fortress; a desertion of post; a disobedience of orders, or any other act of treachery, or breach of duty in the public service. (Demosth. *pro Cor.* 242, *a. Lept.* 481, *a. Timoc.* 745, *a. Timoth.* 1204, *pro Cor. Triararch.* 1230; Lys. *c. Agor.* 130, 131, ed. Steph.; Lycurg. *c. Leocr.* 155, ed. Steph.) It would be a betrayal of the state, to delude the people by false intelligence or promises; or to disobey any special decree, such as that (for instance) which prohibited the exportation of arms or naval stores to Philip, and that which (after Philip had taken possession of Phocia) forbade Athenian citizens to pass the night out of the city. (Demosth. *c. Lept.* 487, 498, *pro Cor.* 238, *de Fals. Leg.* 433.) But not only would overt acts of disobedience or treachery amount to the crime of *προδοσία*, but also the neglect to perform those active duties which the Greeks in general expected of every good citizen. Cowardice in battle (δουλία) would be an instance of this kind; so would any breach of the oath taken by the ἑθνοὶ at Athens; or any line of conduct for which a charge of disaffection to the people (μισοδημία) might be successfully maintained. (Xen. *Cyrop.* vi. 4. § 14, vi. 3. § 27; Eurip. *Phoenissae*, 1003; Andoc. *c. Alcib.* 30, ed. Steph.; Lycurg. *c. Leocr.* 157, ed. Steph.; Demosth. *pro Cor.* 242.) Thus, we find persons, whose offence was the propounding unconstitutional laws, or advising bad measures, or the like, charged by their political opponents with an attempt to overthrow the constitution. (Demosth. *περὶ συνταξ.* 170; Aesch. *c. Timarch.* 1, *c. Ctes.* 82, ed. Steph.; Lys. *pro Polyst.* 159, ed. Steph.) Of the facility with which such charges might be made at Athens, especially in times of political excitement, when the most eminent citizens were liable to be suspected of plots against the state, history affords abundant proof; and Greek history, no less than modern, shows the danger of leaving the crime of treason undefined by the law, and to be interpreted by judges. (Aristoph. *Eq.* 236, 475, 862, *Vesp.* 483, 953; Wachsmuth, *Hell. Alt.* vol. i. pt. ii. p. 154, vol. ii. pt. i. p. 178.) One of the most remarkable

trials for constructive treason at Athens was that of Leocrates, who left the city after the defeat at Chaeroneia, and was prosecuted by Lycurgus for desertion of his country. The speech of Lycurgus is preserved to us, and is a good specimen of his eloquence. The facts of the case are stated in p. 150, ed. Steph. The nature of the charge may be seen from various expressions of the orator, such as *προβούς τοὺς νεὸς καὶ τὰ ἔθνη καὶ τὰς ἐν τοῖς νόμοις δυσίας* (147), *μὴ βοηθήσας τοῖς πατρίοις ἱεροῖς, ἐγκαταλείπων τὴν πόλιν* (148), *οὐ συμβεβλημένος οὐδὲν εἰς τὴν τῆς πόλεως σωτηρίαν* (153), *φείγων τὸν ὑπὲρ τῆς πατρίδος κίνδυνον* (154), and the like. The defence of the accused was, that he did not leave Athens with a traitorous intention (*ἐπὶ προδοσίᾳ*), but for the purposes of trade (*ἐπὶ ἐμπορίᾳ*). (See Argument, and p. 155.)

The ordinary method of proceeding against those who were accused of treason or treasonable practices was by *εἰσαγγελία*, as in the case of Leocrates. (Pollux, viii. 52.) In some cases a *γραφὴ* might be laid before the Thesmothetæ. (Demosth. c. Steph. 1137.) We read of an old law, by which the jurisdiction in trials for high treason was given to the archon *βασιλεύς*. (Meier, *Att. Proc.* p. 50.) But it could hardly be expected that in a Greek city state offences would always be prosecuted according to the forms of law; and we find various instances in which magistrates, generals, and others, took a summary method for bringing traitors and conspirators to justice. Thus a certain person, named Antiphon, who had promised Philip to burn the Athenian arsenal, was seized by the council of Areiopagus, and afterwards put to the torture, and condemned to death by the people. (Demosth. *pro Cor.* 271; Aesch. c. *Ctes.* 89, ed. Steph.) As to the power of the Areiopagus, see further Lycurg. c. *Leoc.* 154. The people in assembly might of course direct any extraordinary measures to be taken against suspected persons, as they did in the affair of the Hermes busts (Thucyd. vi. 60, 61), and by their *ψήφισμα* might supersede even the form of a trial. So fearful were the Athenians of any attempt to establish a tyranny or an oligarchy, that any person who conspired for such purpose, or any person who held an office under a government which had overthrown the constitution, might be slain with impunity. Every citizen indeed was under an obligation to kill such a person, and for so doing was entitled by law to honours and rewards. (Andoc. *de Myst.* 12, 13, ed. Steph.; Lys. *Δημ. καταλ.* ἀπολ. 172, ed. Steph.)

The regular punishment appointed by the law for most kinds of treason appears to have been death (Xen. *Hellen.* i. 7. § 22; Demosth. *pro Cor.* 238; Lycurg. c. *Leoc.* 148, 152, ed. Steph.), which, no doubt, might be mitigated by decree of the people, as in the case of Miltiades (Herod. vi. 136) and many others. The less heinous kinds of *προδοσία* were probably punished at the discretion of the court which tried them. (Demosth. c. *Timoc.* 740, c. *Theor.* 1344.) The goods of traitors, who suffered death, were confiscated, and their houses razed to the ground; nor were they permitted to be buried in the country, but had their bodies cast out in some place on the confines of Attica and Megara. Therefore it was that the bones of Themistocles, who had been condemned for treason, were brought over and buried secretly by his

friends. (Thucyd. i. 138.) The posterity of a traitor became *ἐτίμοι*, and those of a tyrant were liable to share the fate of their ancestor. (Meursina, *Them. Att.* ii. 2, 15; Platner, *Proc. and Klag.* vol. ii. p. 82; Meier, *Att. Proc.* p. 341, *De bon. damn.* pp. 11—13, 136.) Traitors might be proceeded against even after their death, as we have seen done in modern times. Thus, the Athenians resolved to prosecute Phrynichus, who had been most active in setting up the oligarchy of the Four Hundred (*τὸν νεκρὸν κρίνειν προδοσίας*), and also to subject his defenders to the punishment of traitors, in case of a conviction. This was done. Judgment of treason was passed against Phrynichus. His bones were dug up, and cast out of Attica; his defenders put to death; and his murderers honoured with the freedom of the city. (Thuc. viii. 92; Lysias, c. *Agor.* 136; Lycurg. c. *Leoc.* 164, ed. Steph.) [C. R. K.]

PROEDRI (*πρόδρομοι*). [BOULE, pp. 210, 212.]

PROEISPORA (*ΕΙΣΦΟΡΑ*.)

PROEISPORA DIKE (*προεισφοράς δίκα*), an action brought by a member of a *Symmoría*, to recover a rate paid on account of another. The *Symmoríæ* being so arranged, that three hundred of the richest men were selected to form a superior board, responsible to the state in the first instance for the collection of a property tax; the people passed a decree, in case of need, commanding them to pay the whole tax in advance. These then were entitled to be reimbursed by the remaining nine hundred of the *Symmoríæ*, and each of them probably had a certain number assigned to him by the Strategi for that purpose; against whom he might bring actions for contribution according to their respective assessments. To recover money so advanced was called *προεισφορὰν κομίσασθαι*. (Demosth. c. *Pantæn.* 977, c. *Phaenipp.* 1046, c. *Polyd.* 1208.) This cause, like others relating to the property tax and the trierarchy, belonged to the jurisdiction of the Strategi. (Böckh, *Publ. Econ. of Athens*, pp. 450, 526, 533, 2d ed.; Meier, *Att. Proc.* pp. 107, 550.) [C. R. K.]

PROELIA/LES DIES. [DIES.]

PROEROSIA or PROEROSIAE (*προερόσια* or *προερόσια*) were sacrifices (or, according to other writers, a festival) offered to Demeter at the time when the seeds were sown, for the purpose of obtaining a plentiful harvest. (Suidas, Hesych., Etymol. Mag. s. v.; Arrian in *Epictet.* iii. 21.) According to Suidas the Athenians performed this sacrifice in Ol. 5. on behalf of all the Greeks; but from all the other accounts it would appear that the Athenians did so at all times, and that the instance mentioned by Suidas is only the first time that *proerosia* were offered by the Athenians for all the Greeks. They are said to have been instituted by the command of some oracle at a time when all the world was suffering from scarcity or from a plague. (Suid. s. v. *Εἰσεσίωσις*; compare Lycurg. *Fragment.* c. *Menecech.*) [L. S.]

PROFESTI DIES. [DIES.]

PROGAMEIA (*προγάμεια*). [MATRIMONIUM, p. 737, a.]

PROIX (*πρόξ*). [DOS, p. 436.]

PROLETA'RII. [CAPUT.]

PROMETHEIA (*προμηθεΐα*), a festival celebrated at Athens in honour of Prometheus. (Xenoph. *de Re Publ. Ath.* 3. § 4; Harpocrat. s. v. *Λαμύρας*.) The time at which it was solemnised is not known but it was one of the five Attic festi-

vals, which were held with a torch-race in the Ceramicus (Harpocrat. *l. c.*; Schol. *ad Aristoph. Ran.* 131; comp. LAMPADEPHORIA), for which the gymnasiarchs had to supply the youths from the gymnasia. Prometheus himself was believed to have instituted this torch-race, whence he was called the torch-bearer. (Hygin. *Poet. Astr.* ii. 15; Eurip. *Phoeniss.* 1139; Philostrat. *Vit. Sophist.* ii. 20.) The torch-race of the Prometheia commenced at the so-called altar of Prometheus in the academia (Paus. i. 30. § 2; Schol. *ad Soph. Oed. Col.* 58), or in the Ceramicus, and thence the youths with their torches raced to the city. (Welcker, *Die Aeschyl. Trilog.* p. 120, &c.) [L. S.]

PROPRIETAS. [DOMINIUM.]

PROPYLAEA (προπύλαια), the entrance to a temple, or sacred enclosure, consisted of a gateway flanked by buildings, whence the plural form of the word. The Egyptian temples generally had magnificent *propylaea*, consisting of a pair of oblong truncated pyramids of solid masonry, the faces of which were sculptured with hieroglyphics. (See Herod. ii. 63, 101, 121, and other passages; the modern works on Egyptian antiquities; the *Atlas* to Kugler's *Kunstgeschichte*, sect. 1. pl. 5. fig. 1.)

In Græk, except when the Egyptian temples are spoken of, the word is generally used to signify the entrance to the Acropolis of Athens, which was the last completed of the great works of architecture executed under the administration of Pericles. The building of the Propylaea occupied five years, *b. c.* 437—432, and cost 2012 talents. The name of the architect was Mnesicles. (Plut. *Per.* 13; Thuc. ii. 13, with Poppo's Notes; Aristoph. *Eqn.* 1326; Demosth. *de Rep. Ord.* 28. p. 174. 23, ed. Bekker; Harpocrat. *Suid.* *s. v.*; Cic. *de Off.* ii. 17.) The edifice was of the Doric order, and presented in front the appearance of a hexastyle portico of white marble, with the central intercolumniation wider than the rest, and with two advanced wings, containing chambers, the northern one of which (that on the left hand) was adorned with pictures, which are fully described by Pausanias (i. 22. §§ 4—7), and among which were works by Polygnotus, and, probably, by Protogenea. (See *Dict. of Biog.* *s. vv.*) On the right hand, and in front of the Propylaea, stood the temple of *Nike Apteros*, and close to the entrance the statue of *Hermes Propylæus*; and the Propylaea themselves were adorned with numerous statues. (Paus. *l. c.*) A broad road led straight from the *Agora* to the Propylaea, which formed the only entrance to the Acropolis, and the immediate approach to which was by a flight of steps, in the middle of which there was left an inclined plane, paved with Pentelic marble, as a carriage-way for the processions. Both ancient and modern writers have agreed in considering the Propylaea as one of the most perfect works of Grecian art.

(For fuller descriptions and restored views, see Stuart, ii. 5; Leake, *Topog.* c. 8; Müller, *Archæol. d. Kunst*, § 109. n. 1, 3; and a beautiful elevation and plan in the *Atlas* to Kugler's *Kunstgeschichte*, sect. 2. pl. 3. figs. 12, 13.)

The great temple at Eleusis had two sets of *propylaea*, the smaller forming the entrance of the inner enclosure (περίβολος), and the greater, of the outer. The latter were an exact copy of the Athenian *propylaea*. (Müller, *l. c.* n. 5.) There were also *propylaea* at Corinth, surmounted by two chariots of gilt bronze, the one carrying Phaëthon, and the other the Sun himself. (Paus. ii. 3. § 2.) [P. S.]

PROSCENIUM. [THEATRUM.]

PROSCLE'SIS (προσκλησις). [DIKE.]

PROSCRIPTIO. The verb *proscribere* properly signifies to exhibit a thing for sale by means of a bill or advertisement: in this sense it occurs in a great many passages. But in the time of Sulla it assumed a very different meaning, for he applied it to a measure of his own invention (Vell. Pat. ii. 28), namely, to the sale of the property of those who were put to death at his command, and who were themselves called *proscripti*. Towards the end of the year 82 *b. c.* Sulla, after his return from Praeneste, declared before the assembly of the people that he would improve their condition, and punish severely all those who had supported the party of Marius. (Appian. *B. C.* i. 95.) The people appear tacitly to have conceded to him all the power which he wanted for the execution of his design, for the *lex Cornelia de proscriptione et proscriptis* was sanctioned afterwards when he was made dictator. (Cic. *de Leg.* i. 15, *de Leg. Agr.* iii. 2, &c.; Appian. *B. C.* i. 98.) This law, which was proposed by the interrex L. Valerius Flaccus at the command of Sulla, is sometimes called *lex Cornelia* (Cic. *c. Verr.* i. 47), and sometimes *lex Valeria*. Cicero (*pro Rosc. Am.* 43) pretends not to know whether he should call it a *lex Cornelia* or *Valeria*. (Comp. Schol. Gronov. p. 435, ed. Orelli.)

Sulla drew up a list of the persons whom he wished to be killed; and this list was exhibited in the forum to public inspection. Every person contained in it was an outlaw, who might be killed by any one who met him with impunity, even by his slaves and his nearest relatives. All his property was taken and publicly sold. It may naturally be supposed that such property was sold at a very low price, and was in most cases purchased by the friends and favourites of Sulla; in some instances only a part of the price was paid at which it had been purchased. (Sallust. *Fragm.* p. 238, ed. Gerlach.) The property of those who had fallen in the ranks of his enemies was sold in the same manner. (Cic. *pro Rosc. Am.* 43.) Those who killed a proscribed person, or gave notice of his place of concealment, received two talents as a reward; and whoever concealed or gave shelter to a proscribed, was punished with death. (Cic. *c. Verr.* i. 47, Plut. *Sull.* 31; Suet. *Cæs.* 11.) But this was not all; the proscription was regarded as a corruption of blood, and consequently the sons and grandsons of proscribed persons were for ever excluded from all public offices. (Plut. *l. c.*; Vell. Pat. ii. 28; Quintil. xi. 1. 85.)

After this example of a proscription had once been set, it was readily adopted by those in power

ough the general administration of the Roman
inces is adequately understood, there are dif-
ferences of opinion as to some matters of detail;
e cause of which lies in the differences which
tually existed in the administration of the pro-
vinces and which had their origin in the different
circumstances of their conquest and acquisition,
and in the diversity of the native customary law in

of Phrygia, Lydia, Caria, and Mysia were confused, and that the Romans had added to the confusion, by not attending to the subsisting national divisions, but making the administrative divisions different (*τὰς διοικήσεις*), in which are the *Fora* (*ἀγορὰς* MS.) and the administration of justice. The word *ἀγορὰ* probably represents *Conventus* (as to the reading, see Casaubon's note). The *Conventus*, it appears, were sometimes held (*conventus acti*) in the winter (Caesar, *Bell. Gall.* i. 54, vi. 44); but in Caesar's case this might be a matter of convenience. Cicero proposed to do the same in his province (*ad Att.* v. 14). The expression "*forum agere*" is equivalent to "*conventus agere*." (Praetor Romanus *conventus agit*, Liv. xxxi. 29.)

The *Conventus* were attended by the Romans who were resident in the province, among whom were the publicani, and generally by all persons who had any business to settle there. The judges for the decision of suits were chosen from the persons who attended the *conventus*. Other acts were also done there, which were not matters of litigation but which required certain forms in order to be legal. In the case of manumission by persons under thirty years of age certain forms were required by the *Lex Aelia Sentia*, and in the provinces it was effected on the last day of the *Conventus* (Gaius, i. 20); from which it appears that *Conventus* means also the time during which business was transacted at the place "*in quem conveniebant*."

The governor upon entering on his duties published an edict, which was often framed upon the *Edictum Urbanum*. Cicero when Proconsul of Cilicia says that as to some matters he framed an edict of his own, and as to others he referred to the *Edicta Urbana*. (*Ad Att.* vi. 1.) Though the Romans did not formally introduce their law into the provinces, and so much of it as applied to land and the status of persons was inapplicable to Provincial land and Provincial persons, great changes were gradually introduced by the edictal power both as to the forms of procedure and all other matters to which the Roman Law was applicable; and also by special enactments. (Gaius, i. 183, 185, iii. 122.)

There was one great distinction between Italy and the Provinces as to the nature and property in land. Provincial land could not be an object of Quiritarian ownership, and it was accordingly appropriately called *Possessio*. The ownership of Provincial land was either in the *Populus* or the *Caesar*: at least this was the doctrine in the time of Gaius (ii. 7). Provincial land could be transferred without the forms required in the case of Italian land, but it was subject to the payment of a land-tax (*vectigal*). Sometimes the *Jus Italicum* was given to certain provincial towns, by which their lands were assimilated to Italian land, for all legal purposes. With the *Jus Italicum* such towns received a free constitution like that of the towns of Italy, with magistrates, as *decemviri*, *quinquennales* (*censores*) and *aediles*; and also a *jurisdictio*. It was a ground of complaint against Piso that he exercised *jurisdictio* in a *Libera Civitas*. (*Cic. de Prov. Cons.* 3.) Towns possessing the *Jus Italicum* in Hispania, Gallia and other countries are enumerated. The *Latinitas* or *Jus Latii* also, which was conferred on many provincial towns, appears to have carried with it a certain

jurisdictio; and those who filled certain magistratus in these towns thereby obtained the Roman *Civitas*. (Strabo, p. 186, Casaub.) It is not easy to state what was the precise condition of the *Coloniae Romanae* and *Latinae* which were established in the Provinces: if the name is a certain indication of their political condition, that is pretty well ascertained.

It has been stated that the terms *Italia* and *Provinciae* are opposed to one another as the component parts of the Roman State, after it had received its complete development. Under the Emperors we find *Gallia Cisalpina* or *Citerior* an integral part of Italy and without a governor, the Provincial organisation having entirely disappeared there. In the year a. c. 49 when Caesar crossed the Rubicon on his march towards Rome, it was a Province of which he was Proconsul, a circumstance which gives a distinct meaning to this event. Cicero still calls it *Provincia Gallia* at the epoch of the battle of Mutina. In the autumn of a. c. 43 D. Brutus the Proconsul of the *Provincia Gallia* was murdered, and from that time we hear of no more Proconsuls of this Province, and it is a reasonable conjecture that those who then had all the political power were unwilling to allow any person to have the command of an army in a district so near to Rome. The name *Italia* was however applied to this part of *Italia* before it became an integral portion of the *Peninsula* by ceasing to be a *Provincia*. (Caesar, *Bell. Gall.* i. 54, v. 1, vi. 44, &c.; *Cic. Phil.* v. 12.) On the determination of the Provincial form of government in *Gallia Cisalpina*, it was necessary to give to this part of Italy a new organization suited to the change of circumstances, particularly as regarded the administration of justice, which was effected by the *Lex Rubria de Gallia Cisalpina*. The Proconsul of *Gallia Cisalpina* had the *Imperium*, but on his functions ceasing, the *Jurisdictio* was placed in the hands of local magistrates who had not the *Imperium*. These magistratus could give a *judex*; in some cases their jurisdiction was unlimited; in others it did not extend to cases above a certain amount of money; they could remit a *novi operis nuntiatio*, require a *Cautio* in case of *Damnnum Infectum*, and if it was not given, they could grant an action for damages.

The Roman provinces up to the battle of Actium as enumerated by Sigonius are: *Sicilia*; *Sardinia* et *Corsica*; *Hispania Citerior* et *Uterior*; *Gallia Citerior*; *Gallia Narbonensis* et *Comata*; *Illyricum*; *Macedonia*; *Achaia*; *Asia*; *Cilicia*; *Syria*; *Bithynia* et *Pontus*; *Cyprus*; *Africa*; *Cyrenaica* et *Creta*; *Numidia*; *Mauritania*. Those of a subsequent date which were either new, or arose from division are according to Sigonius: *Rhaetia*; *Noricum*; *Pannonia*; *Moesia*; *Dacia*; *Britannia*; *Mauritania Caesariensis* and *Tingitana*; *Aegyptus*; *Cappadocia*; *Galatia*; *Rhodus*; *Lycia*; *Commagene*; *Judaea*; *Arabia*; *Mesopotamia*; *Armenia*; *Assyria*. The accuracy of this enumeration is not warranted. It will appear that it does not contain *Lusitania*, which is one of the two divisions of *Hispania Uterior*, the other being *Baetica*: *Lusitania* may however not have had a separate governor. Originally the whole of Spain, so far as it was organised, was divided into the two provinces *Citerior* and *Uterior*; the division of *Uterior* into *Baetica* and *Lusitania* belonged to a later period. Under Augustus *Gallia* was divided

into four provinces: Narbonensis, Celtica or Lugdunensis, Belgica, and Aquitania. The Provincia of Caesar's Commentaries, from which term the modern name Provence is derived, appears to have corresponded to the subsequent province Narbonensis. He had also the Province of Gallia Cisalpina, or Citerior (Caesar, *Bell. Gall.* i. 54) which, as already explained, was subsequently incorporated with Italia as an integral part of it. Cicero speaks of the two Galliae, as then united in one Imperium under C. Julius Caesar, and he further distinguishes them by the names of Citerior and Ulterior. (*De Prov. Cons.* ii. 15, 16.) The same expressions are used by Caesar in his Commentaries. (*Bell. Gall.* i. 7, v. 1, 2.)

Strabo (xvii. p. 840, Cassaub.) gives the division into Provinces (*ἐπαρχίαι*) as constituted by Augustus. The provinces of the Populus (*ἔθνος*) were two consular provinces (*ὀψαρικαὶ*), and ten praetorian provinces (*στρατηγικαὶ*). The rest of the eparchies, he says, belong to the Caesar. Lusitania is not enumerated among the eparchies of the Populus, and if it was a distinct eparchy, it must have belonged to the Caesar according to the principle of the division of the provinces, as stated by Strabo. The list of provinces in the "Demonstratio Provinciarum" (*Mythog. Vat. Bode*) mentions the Province of Asturia et Galloeca Lusitania. Dion Cassius (liii. 12) states the distribution of the Provinces by Augustus as follows: the Provinces of Africa, Numidia, Asia, Hellas (Achaëa) with Epirus, Dalmatia, Macedonia, Sicilia, Creta with the Cyrenaica, Bithynia with the adjacent Pontus, Sardinia, and Baetica belonged to the Senate and the people (*ἔθνος* and *γενοῦσα*). Tarraconensis, Lusitania, all Gallia, Coele Syria, Phoenice, Cilicia, Cyprus, and Aegyptus, belonged to Augustus. He afterwards took Dalmatia from the Senate, and gave to them Cyprus and Gallia Narbonensis, and other changes were made subsequently.

At first Praetors were appointed as governors of provinces, but afterwards they were appointed to the government of provinces, upon the expiration of their year of office at Rome, and with the title of Proprætores. In the later times of the republic, the consuls also, after the expiration of their year of office, received the government of a province with the title of Proconsules: such provinces were called Consulares. Cicero was Proconsul of Cilicia a. c. 55, and his colleague in the consulship, C. Antonius, obtained the proconsulship of Macedonia immediately on the expiration of his consular office. The provinces were generally distributed by lot, but the distribution was sometimes arranged by agreement among the persons entitled to them. By a Sempronian Lex the proconsular provinces were annually determined before the election of the consuls, the object of which was to prevent all disputes. A Senatusconsultum of the year 55 a. c., provided that no consul or prætor should have a province till after the expiration of five years from the time of his consulship or prætorship. A province was generally held for a year, but the time was often prolonged. When a new governor arrived in his province, his predecessor was required to leave it within thirty days. A Lex Julia passed in the time of C. Julius Caesar limited the holding of a Prætorial Provincia to one year, and a Consularis Provincia to two years. (Dion Cassius, xliii. 25; Cic. *Phil.* i. 8, v. 3.) The governors of provinces had no pay as such, but cer-

tain expenses were provided for out of the Aerarium. Augustus first attached pay to the office of provincial governor. (Dion Cassius, liii. 15; Sueton. *August.* 36.)

The governor of a province had originally to account at Rome (*ad urbem*) for his administration from his own books and those of his Quæstors; but after the passing of a Lex Julia a. c. 61, he was bound to deposit two copies of his accounts (*rationes*) in the two chief cities of his province and to forward one (*totidem verbis*) to the Aerarium. (Cic. *ad Fam.* ii. 17, v. 20, *ad Attic.* vi. 7.) If the governor misconducted himself in the administration of the province, the provincials applied to the Roman Senate, and to the powerful Romans who were their Patroni. The offences of Repe-tundæ and Peculatus were the usual grounds of complaint by the provincials; and if a governor had betrayed the interests of the State, he was also liable to the penalties attached to Majestas. Quæstiones were established for inquiries into these offences; yet it was not always an easy matter to bring a guilty governor to the punishment that he deserved.

With the establishment of the Imperial power under Augustus, a considerable change was made in the administration of the provinces. Augustus took the charge of the provinces where a large military force was required; the rest were left to the care of the Senate and the Roman people. (Strabo, xvii. p. 840.) Accordingly we find in the older jurists (Gaius, ii. 21) the division of provinciae into those which were "proprie Populi Romani," and those which were "proprie Caesaris," and this division with some modifications continued to the third century. The Senatorial provinces were distributed among consulares and those who had filled the office of Prætor, two provinces being given to the consulares and the rest to the Prætorii: these governors were called Proconsules, or Præsides, which latter is the usual term employed by the old jurists for a provincial governor. The Præsides had the jurisdiction of the Prætor Urbanus and the Prætor Peregrinus; and their Quæstors had the same jurisdiction that the Curule Aediles had at Rome. (Gaius, i. 6.) The Imperial provinces were governed by Legati Caesaris with Prætorian power, the Proconsular power being in the Caesar himself, and the Legati being his deputies and representatives. The Legati were selected from those who had been consuls or prætors, or from the Senators. They held their office and their power at the pleasure of the Emperor; and he delegated to them both military command and jurisdiction, just as a Proconsul in the Republican period delegated these powers to his Legati. These Legati had also Legati under them. No quæstors were sent to the provinces of the Caesar, and for this reason observes Gaius, this edict (*hoc edictum*) is not published in those provinces, by which he appears, from the context, to mean the edict of the Curule Aediles. In place of the quæstors, there were Procuratores Caesaris, who were either Equites or freedmen of the Caesar. Egypt was governed by an Eques with the title of Præfectus. The Procuratores looked after the taxes, paid the troops, and generally were intrusted with the interests of the Fiscus. Judæa, which was a part of the province of Syria, was governed by a Procurator who had the powers of a Legatus. It appears that there were also Procuratores Cæ-

aria in the Senatorial provinces, who collected certain dues of the Fiscus, which were independent of what was due to the Aerarium. The regular taxes, as in the Republican period, were the poll-tax and land-tax. The taxation was founded on a census of persons and property, which was established by Augustus. The Portoria and other dues were farmed by the Publicani, as in the Republican period.

The governors of the Senatorial provinces and the legati of the Caesar received their instructions from him, and in all cases not thus provided for they had to apply to the Caesar for special directions. The Rescripta of the Emperors to the provincial governors are numerous. Justice was administered in the provinces according to the laws of the Provinces, and such Roman laws as were specially enacted for them, and according to Imperial Constitutiones, Senatusconsulta and the Edict of the governors. In some instances the provisions of Roman laws were extended to the provinces. (Gaius, i. 47; Ulp. *Frag.* xi. 20.)

The organization of the Italian towns under the Empire has been already explained in the article *COLONIA*; and the same observations apply in general to the Senates of Provincial towns which have been made with respect to the functions of the Senates of Italian towns. Even in the provinces the names Senate and Senator occur in the sense respectively of Curia and Decuriones. But there was a great distinction between the Magistratus of Provincial and those of Italian towns. The functions of these personages in the Provincial towns were generally Munera (*burdens*) and not Honores. [HONORES.] Such Honores as have reference to religious functions they certainly had, and probably others also; but they had nothing corresponding to the Duumviri Juri dicundo of the Italian towns, that is, no functionary "qui jus dicebat." The only exception were such towns as had received the Jus Italicum, the effect of which, as elsewhere explained, appears to have been, in brief, to give to a certain city and district the same character that it would have had, if it had been a part of the Italic soil; but only so far as affected the whole district: it did not affect the status of individuals. Freedom from the land-tax, and a free constitution in Italian form, with Duumviri J. D., Quinquennales, Aediles, and Jurisdictio were essential ingredients of this Jus Italicum. Sicily received the Civitas after the death of C. Julius Caesar, and from the occurrence of the mention of Duumviri in the inscriptions of a Sicilian town, Savigny draws the probable inference that the Sicilian towns received the Jus Italicum also: at least if in any case, we can show that any provincial city had Duumviri, we may conclude that such city had the Jus Italicum and consequently Magistratus with Jurisdictio. The regular Jurisdictio in all the provinces was vested in the governor, who exercised it personally and by his legati: with reference to his circuits in the provincia the governor in the later ages of the Empire was called Juxex Ordinarius and sometimes simply Juxex. The towns which had the Jus Italicum were, as already observed, not under his immediate Jurisdictio, though a right of appeal to the governor from the judgment of the Duumviri must be considered as always existing. The provincial towns had the management of their own revenue; and some of the principal towns could coin money. It

does not appear that the religion of the provincials was ever interfered with, nor had it been put under any restraint in the Republican period.

The constitution of Caracalla, which gave the Civitas to all the provinces and towns of the Empire, merely affected the personal status of the people. The land remained Provincial land, when the Jus Italicum had not been communicated to it, and the cities which had not received the Jus Italicum, were immediately under the Jurisdictio of the governors. This constitution however must have made considerable changes in the condition of the provincials, for when they all became Roman citizens, the Roman incidents of marriage, such as the Patria Potestas, and the Roman Law of succession in case of intestacy would seem to be inseparable consequents of this change, at least so far as the want of the Jus Italicum did not render it inapplicable.

The constitution of the provincial towns was materially affected by the establishment of Defensores, whose complete title is "Defensores Civitatis Plebis Locis." Until about the time of Constantine, so far as the Pandect shows, Defensor was the title of persons who were merely employed in certain municipal matters of a temporary kind. In the year A. D. 365, the Defensores appear as regularly established functionaries. (Cod. i. tit. 55. *De Defensoribus*.) They were elected by the Decuriones and all the city; but, unlike the magistratus, they could not be elected out of the body of Decuriones. The office was originally for five years, but after the time of Justinian only for two years. The principal business of the Defensor was to protect his town against the oppression of the Governor. (Cod. i. tit. 55. a. 4.) He had a limited Jurisdictio in civil matters, which Justinian extended from matters to the amount of 60 solidi to matters to the amount of 300 solidi. There was an appeal from him to the Governor. (Nov. 15. c. 5.) He could not impose a Multa; but he could appoint a Tutor. In criminal matters, he had only Jurisdictio in some of the less important cases.

The number of Senators both in the Italic and provincial towns seems to have been generally one hundred; and this was the number in Capua. (Cic. *in Rull.* ii. 35.) But the number was not in all places the same. Besides the actual members, the Album Decurionum comprised others who were merely honorary members. The Album of the town of Canusium, of the year A. D. 223, which has been preserved, consists of 148 members, of whom 30 were Patroni, Roman Senators, and 2 were Patroni, Roman Equites; the remainder were 7 quinquennialicii, a term which is easily explained by referring to the meaning of the term Quinquennales [COLONIA], 4 allecti inter quinquennales, 22 duumviralicii, 19 sedilicii, 21 pedani, 34 praetextati. The distinction between Pedani and Praetextati Savigny professes himself unable to explain. In many towns the first persons in the list of actual senators were distinguished from the rest, and generally the first Ten, as Decemprimi; of which there is an example in Livy (xxix. 15. magistratus denosque principes); and in the case of America, and of Centuripae in Sicily (Cic. *pro Ros. Amer.* c. 9, *In Verrem*, ii. 67).

It has been previously shown that at the time when the Roman Republica had attained its complete development, Italia and the Provinciae were

the two great component parts of the Empire ; and one great distinction between them was this, that in Italia the towns had magistratus with Jurisdictio ; in the provinces, except in places which had received the Jus Italicum, the governor alone had Jurisdictio. But with the growth and development of the Imperial power, a greater uniformity was introduced into the administration of all parts of the Empire ; and ultimately Italy itself was under a Provincial form of government. [COLONIA.] As above shown, the relation of the Governor to the province was not the same, when a city had magistratus, and when it had not ; and consequently it was in this respect not the same in Italy as in the Provinces.

The constitution of Constantine was based on a complete separation of the Civil and Military power, which were essentially united in the old system of provincial government : Justinian however ultimately re-united the civil and military power in the same person. The governor who had Civil power was called Rector, Judex, Judex Ordinarius ; and of these governors there were three classes, Consulares, Correctores, Praesides, among whom the only distinction was in the extent and rank of their government. In the writings of the older jurists, which are excerpted in the Pandect, the Praeses is a general name for a Provincial governor. (Dig. 8. tit. 18.) The military power was given to Duces who were under the general superintendence of the Magistri Militum. Some of these Duces were called Comites, which was originally a title of rank given to various functionaries and among them to the Duces ; and when the title of Comes was regularly given to certain Duces, who had important commands, the name Dux was dropped, and Comes became a title. This was more particularly the case with important commands on the frontier. (Cod. Theod. 7. tit. 1. s. 9.) The Comes is mentioned in Imperial Constitutions before the Dux, whence we infer his higher rank. (Cod. Theod. 8. tit. 7. s. 11. *Ad magistratos militum, et comites, et duces omnes.*)

It remains to add a few remarks on the exercise of the Jurisdictio, so far as they have not been anticipated in speaking of the functionaries themselves. In Italy, and in the towns which had the privileges of Italian towns, all matters as a general rule came before the magistratus in the first instance ; but in certain excepted matters, and in cases where the amount in question was above a certain sum (the precise amount of which is not known), the matter came before the governor of the province in the first instance, or in Italy before the Roman Praetor. Until the middle of the fourth century A. D. all matters in the Provincial towns, which had not magistratus, came before the governor in the first instance ; but about this time the Defensor acquired a power, like that of the magistratus of the privileged towns, though more limited. The old form of proceeding in civil matters has been explained elsewhere [JUDEX] : the magistratus empowered the Judex to make a condemnatio ; and this institution was the Ordo Judiciorum Privatorum. That which the magistratus did without the aid of a Judex was Extra Ordinem. [INTERDICTUM.] The same institution prevailed in those towns which had a magistratus, for it was of the essence of a Magistratus or of Jurisdictio to name a Judex. (*See Gall. Cisalp. c. 20.*) Under the emperors, it gradually became common

for the magistratus to decide various cases without the aid of a Judex, and these are the Extraordinariae Cognitiones spoken of in the Digest (50. tit. 13). In the reign of Diocletian the Ordo Judiciorum, as a general rule, was abolished in the provinces and the pedanei judices (hoc est qui negotia humiliora disceptent) were only appointed by the praeses when he was very much occupied with business, or for some trifling matters [JUDEX PEDANEUS] ; (Cod. 3. tit. 3. s. 2) ; and in the time of Justinian the institution had entirely disappeared (Inst. 4. tit. 15. s. 8), and, as it is conjectured, both in Rome and the Municipia.

By the aid of the Judices, two Praetors were able to conduct the whole judicial business between citizens and Peregrini at Rome ; and by the aid of the same institution, the judicial business was conducted in the Jurisdictiones out of Rome. In no other way is it conceivable how the work could have been got through. But when the Ordo Judiciorum was abolished, the difficulty of transacting the business must have been apparent. How this was managed, is explained by Savigny, by referring to the growth of another institution. Even in the time of the Republic, the Praetors had their legal advisers, especially if they were not jurists themselves ; and when all the power became concentrated in the Caesars, they were soon obliged to form a kind of college, for the dispatch of business of various kinds and particularly judicial matters which were referred to the Caesar. This college was the Caesar's Consistorium or Auditorium. The Provincial governors had their body of assessors, which were like the Caesar's Auditorium (Dig. 1. tit. 22) ; and it is a conjecture of Savigny, which has the highest probability in its favour, that the new institution was established in the municipal towns and in the provincial towns, so that here also the magistratus and the Defensor had their assessors.

Besides the Jurisdictio, which had reference to Litigation, the so-called Contentiosa Jurisdictio, there was the Voluntaria. Matters belonging to this Jurisdictio, as Manumission, Adoption, Emancipation, could only be transacted before the Magistratus Populi Romani, and, unless these powers were specially given to them, the Municipal Magistrates had no authority to give the legal sanction to such proceedings ; though in the old Municipia it is probable that the power of the magistratus was as little limited in the Voluntaria as in the Contentiosa Jurisdictio. In the Imperial period it was usual to perform many acts before the public authorities, and in the three cases of large Gifts, the making of a Will, and the Opening of a Will, it was necessary for these acts to be done before a public authority. Such acts could be done before a provincial governor ; and also before the Curia of a city in the presence of a Magistratus and other persons. (Compare the Constitution of Honorius, Cod. Theod. 12. tit. 1. s. 151, and a Novel of Valentinian, Nov. Theod. tit. 23, with Savigny's remarks on them.)

Though the general administration of the Roman provinces is adequately understood, there are differences of opinion as to some matters of detail ; one cause of which lies in the differences which actually existed in the administration of the provinces and which had their origin in the different circumstances of their conquest and acquisition, and in the diversity of the native customary law in

the different provinces, with a large part of which the Romans originally did not interfere. A general view of the Provinces should therefore be completed and corrected by a view of the several provinces.

The authorities for this view of the Provincial government have been generally referred to. They are, more particularly, Sigonius, *De Antiquo Jure Provinciaarum*, Lib. i.—iii.; Goettling, *Geschichte des Römischen Staatsverfassung*; Walter, *Geschichte des Römischen Rechts*, where the authorities are very conveniently collected and arranged, and chap. xxxi. Notes 76, 79, wherein he differs from Savigny as to the *Jus Italicum*; in chapter xxxvii. Walter has described the provincial divisions of the Empire, which existed about the middle of the fifth century A. D.; Savigny, *Geschichte des Röm. R. im Mittelalter*, vol. i.; Puchta, *Ueber den Inhalt der Lex Rubria*, *Zeitschrift*, &c., vol. x. [G. L.]

PROVOCATIO. [APPELLATIO, p. 107, a.]
PROVOCATO'RES. [GLADIATO'RES, p. 575, b.]

PROXENIA, PROXENUS (*προξενία*, *πρόξενος*). [HOSPITIUM.]

PRUDENTES. [JURISCONSULTI.]

PRYTANEIUM (*πρυτανεῖον*). The *πρυτανεῖα* of the ancient Greek states and cities were to the communities living around them, the common houses of which they in some measure represented, what private houses were to the families which occupied them. Just as the house of each family was its home, so was the *πρυτανεῖον* of every state or city the common home of its members or inhabitants, and was consequently called the *ἐστία πόλεως*, the "focus" or "penetrate urbia." (Cic. *de Leg.* ii. 12; Liv. xli. 20; Dionys. ii. 23, 65.) This correspondence between the *πρυτανεῖον*, or home of the city, and the private home of a man's family, was at Athens very remarkable. A perpetual fire or *ῥῆν ἁθέστωτος* was kept continually burning on the public altar of the city in the Prytaneum, just as in private houses a fire was kept up on the domestic altar in the inner court of the house. (Pollux, i. 7; Arnold, *ad Thucyd.* ii. 15.)

The same custom was observed at the Prytaneum of the Eleans, where a fire was kept burning night and day. (Paus. v. 15. § 5.) Moreover the city of Athens exercised in its Prytaneum the duties of hospitality, both to its own citizens and strangers. Thus foreign ambassadors were entertained here, as well as Athenian envoys on their return home from a successful or well conducted mission. (Aristoph. *Acharn.* 125; Pollux, ix. 40.) Here, too, were entertained from day to day the successive Prytanes or Presidents of the Senate, together with those citizens who, whether from personal or ancestral services to the state, were honoured with what was called the *στῆνσις ἐν Πρυτανείῳ*, the "victus quotidianus in Prytaneo" (Cic. *de Orat.* i. 54), or the privilege of taking their meals there at the public cost. This was granted sometimes for a limited period, sometimes for life, in which latter case the parties enjoying it were called *ἀελοῖστοι*. The custom of conferring this honour on those who had been of signal service to the state and their descendants, was of so great antiquity that one instance of it was referred to the times of Codrus; and in the case to which we allude the individual thus honoured was a foreigner, a native of Delphi. (Lycarg. c. *Leocr.* p. 158.) Another illustration of the uses to which the Prytaneum was dedicated,

is found in the case of the daughters of Aristides, who on the death of their father were considered as the adopted children of the state, and married from (*ἐκδοθεῖσαι*) that common home of the city, just as they would have been from their father's home had he been alive. (Plut. *Arist.* c. 27.) Moreover, from the ever-burning fire of the Prytaneum, or home of a mother state, was carried the sacred fire which was to be kept burning in the prytaneia of her colonies; and if it happened that this was ever extinguished, the flame was rekindled from the prytaneum of the parent city. (Duker, *ad Thucyd.* i. 24.) Lastly, a Prytaneum was also a distinguishing mark of an independent state, and is mentioned as such by Thucydides (ii. 15), who informs us that before the time of Theseus, every city or state (*πόλις*) of Attica possessed a prytaneum. The Achaeans, we are told (Herod. vii. 197), called their prytaneum *ἁγίον* (from *ἅγιος*, *populus*), or the "town-hall," and exclusion from it seems to have been a sort of civil excommunication.

The Prytaneum of Athens lay under the Acropolis on its northern side (near the *ἀγορά*), and was, as its name denotes, originally the place of assembly of the *Πρυτανεῖς*: in the earliest times it probably stood on the Acropolis. Officers called *Πρυτανεῖς* were entrusted with the chief magistracy in several states of Greece, as Corcyra, Corinth, Miletus, and the title is sometimes synonymous with *βασιλεῖς*, or princes, having apparently the same root as *πρώτος* or *πρότατος*. At Athens they were in early times probably a magistracy of the second rank in the state (next to the Archon), acting as judges in various cases (perhaps in conjunction with him), and sitting in the Prytaneum. That this was the case is rendered probable by the fact, that even in aftertimes the fees paid into court by plaintiff and defendant, before they could proceed to trial, and received by the dicasts, were called *πρυτανεῖα*. (Pollux, viii. 38.) This court of the Prytaneum, or the *ῥῆ ἐν Πρυτανείῳ*, is said (Pollux, viii. 120) to have been presided over by the *φυλοβασιλεῖς*, who perhaps were the same as the *πρυτανεῖς*.

In later ages, however, and after the establishment of the courts of the Heliaes, the court of the Prytaneum had lost what is supposed to have been its original importance, and was made one of the courts of the Ephetae, who held there a species of mock trial over the instruments by which any individual had lost his life, as well as over persons who had committed murder, and were not forthcoming or detected.

The tablets or *ἄξονες* otherwise *κύβεις*, on which Solon's laws were written (Plut. *Sol.* 25), were also deposited in the Prytaneum (Paus. i. 18. § 3); they were at first kept on the Acropolis, probably in the old Prytaneum, but afterwards removed to the Prytaneum in the *ἀγορά*, that they might be open to public inspection. (Pollux, viii. 128.) Ephialtes is said to have been the author of this measure (Harpocrat. s. v. *Ὁ κἀταθέν νόμος*), but their removal may have been merely the consequence of the erection of a new Prytaneum on the lower site in the time of Pericles. (Thirlwall, *Hist. of Greece*, vol. ii. p. 54.) [R. W.]

PRYTANES (*πρυτανεῖς*). [BOULE, pp. 210, 212; PRYTANEIUM.]

PSEPHISMA (*ψήφισμα*). [BOULE, pp. 210, 211; NOMOTHETES.]

PSEPHUS (ψῆφος). The Athenian dicasts, in giving their verdict, voted by ballot. For this purpose they used either sea-shells, *χορίλαι* (Aristoph. *Vesp.* 333, 349, *Eq.* 1382), or beans (hence the ὄσμος is called *καυμοτρόφος* by Aristophanes, *Eq.* 41), or balls of metal (*σπόνδυλοι*) or stone (ψῆφοι). These last were the most common: hence *ψηφίσσθαι*, and its various derivatives, are used so often to signify voting, determining, &c. The balls were either pierced (*τερτυρημένοι*) and whole (*πληρεῖς*), the former for condemnation, the latter for acquittal (Aesch. *c. Timarch.* 11, ed. Steph.; Harpoc. *s. v.* *Τερτυρημένη*); or they were black and white, for the same purposes, respectively, as the following lines show (Ovid. *Met.* xv. 41):—

“Mos erat antiquus niveis atrique lapillis,
His damnare reos, illis absolvere culpa.”

There might be three methods of voting. First, the secret method, called *κρύβδην ψηφίσσθαι*, when each dicast had two balls given him (say a black and a white); two boxes (*κάδοι*, *καδίσκοι*, or *ἀμφορεῖς*) were prepared, one of brass, called the judgment-box (*κρίσιος*), into which the dicast put the ball by which he gave his vote, and the other of wood, called *ἀνυρος*, into which he put the other ball, and the only object of which was to enable him to conceal his vote. Each box had a neck or funnel (*κηρός*, *i. e.* *ἐκτόμημα μίαν ψήφον χάραξ ἔχον*), into which a man could put his hand, but only one ball could pass through the lower part into the box. (Aristoph. *Vesp.* 99, 751.) Secondly, there might be only one box, in which the dicast put which of the two balls he pleased, and returned the other to the officer of the court. Thirdly, there might be two boxes, one for condemnation, the other for acquittal, and only one ball. (Harpoc. *s. v.* *Καδίσκος*.) The first method was most commonly practised at Athens. Where, however, there were several parties before the court, as in inheritance causes, to one of whom an estate or other thing was to be adjudged, it was customary to have as many ballot-boxes as there were parties, or at least parties in distinct interests; and the dicast put the white or whole ball into the box of that person in whose favour he decided. [HΕΡΕΣ (ΓΕΡΕΚ).] The same system of balloting was employed when the dicasts voted on the question of damages. Hence the verdict on the question, *guilty or not guilty, or for the plaintiff or defendant* (to distinguish it from the other), is called *πρόρη ψήφος*. (Aesch. *c. Ctes.* 82, ed. Steph.; Demosth. *de Fals. Leg.* 434, *c. Aristocr.* 676, *c. Aristog.* 795, *c. Noer.* 1347.) A curious custom was in vogue in the time of Aristophanes. Each dicast had a waxen tablet, on which, if the heavier penalty was awarded, he drew a long line (lengthway on the tablet); if the lighter penalty, he drew a short line (breadthway on the tablet). We must suppose, not that the voting took place in this way, but that, on the votes being counted, the jurors took a note of the result for their own satisfaction; unless we resort to this hypothesis, viz. that the drawing lines on the tablets was an act preliminary to the division, whereby the jury intimated to the parties how the matter was likely to go, unless they came to a compromise. Such intimation might be necessary in those cases, where, the estimates of the parties being widely different, the one proposing too high a penalty, the other too low a one, the jury wished to inform the more un-

reasonable party, that, unless he offered them some better alternative, they should adopt the estimate of his adversary. (As to this point, see Meier, *Att. Proc.* p. 181.) The tablet is called by Aristophanes *πινάκιον τιμητικόν*. In the expression *τιμῆν τὴν μακράν*, we understand *γραμμὴν* or *τιμήσιν* (*Vesp.* 106, 167, 850). See Pollux, viii. 16, 17, 123; Meier, *Att. Proc.* pp. 720, 726; Platner, *Proc. and Klag.* vol. i. p. 188; Wachsmuth, vol. ii. pt. i. p. 344.

In the popular assemblies the common method of voting was by show of hands. [CΗΗΡΙΟΤΟΝΙΑ.] There were some occasions, however, when the ballot was employed; as where it was deemed important that the voting should be secret, or that the numbers should be accurately counted. Thus, to pass a law for the naturalization of a foreigner, or for the release of a state debtor, or for the restoration of a disfranchised citizen, and indeed in every case of a *privilegium*, it was necessary that six thousand persons should vote in the majority, and in secret. (Andoc. *de Myst.* 12, ed. Steph.; Demosth. *c. Timoc.* 715, 719, *c. Neaer.* 1375.) On the condemnation of the ten generals who gained the battle of Arginusæ, the people voted by ballot, but openly, according to the second of the plans above mentioned. The voting was then by tribes, *κατὰ φυλὰς*. (Xen. *Hell.* i. 7. § 9.) Secret voting by the Senate of Five Hundred is mentioned in Aeschines (*c. Timarch.* 5, ed. Steph.); and in ostracism the voting was conducted in secret. (Schömann, *De Comit.* pp. 121—128, 245.)

The people or jury were said *ψηφίσσθαι*, *ψήφον φέρειν* or *δέσσειν*, to vote, or give their vote or judgment. *Ψήφον τιθέναι*, to cast accounts, is used with a different allusion. (Demosth. *pro Cor.* 304.) The presiding magistrate or officer, who called on the people to give their votes, was said *ἐπιψηφίζειν*, *ψήφον ἐνδύειν* or *διδόναι*, though the last expression is also used in the sense of voting in favour of a person. *Ψηφίσσθαι*, to vote, to resolve, *ἀποψηφίσσθαι*, to acquiesce, and other derivations from *ψῆφος*, are often used metaphorically, where the method of voting was *χειροτονία*, and conversely. *Χειροτονεῖν*, however, is not used, like *ψηφίσσθαι*, with the accusative of the thing voted. As to this see Schömann, *de Comitibus*, p. 123. [C. R. K.]

PSEUDENGRAPHES GRAPHE (ψευδεγγραφῆς γραφή). It is shown under ΠΡΑΚΤΟΡΕΣ that the name of every state debtor at Athens was entered in a register by the practores, whose duty it was to collect the debts, and erase the name of the party when he had paid it. The entry was usually made upon a return by some magistrate, to whom the incurring of the debt became officially known; as, for instance, on a return by the *πωλητᾶς*, that such a person had become a lessee of public lands, or farmer of taxes, at such a rent or on such terms. In case, however, the authorities neglected to make the proper return, any individual might, on his own responsibility, give information to the registering officers of the existence of the debt; and thereupon the officers, if they thought proper, might make an entry accordingly, though it would probably be their duty to make some inquiry before so doing. If they made a false entry, either wilfully, or upon the suggestion of another person, the aggrieved party might institute a prosecution against them, or against the person upon whose suggestion it was made. Such prosecution was called *γραφὴ ψευ-*

δευγγραφής. It would lie also, where a man was registered as debtor for more than was really due from him. And the reader must understand the like remedy to be open to one, who was falsely recorded as a debtor by the *ταμίαι τῶν δέων*. Whether this form of proceeding could be adopted against magistrates for making a false return, or whether the remedy against them could only be at the *ἐπιχειροτοναί* or *εὐθύναι*, we cannot say. The *γραφὴ ψευδεγγραφής* was brought before the *Thesmothetæ*. If the defendant was convicted, the name of the complainant was struck out of the register, and that of the defendant was entered in his stead, as debtor for the same amount. The *γραφὴ βουλεύσεως* was similar to this; only it lay in those cases where a man, who had been a state debtor, had paid all that was due, but his name was not erased, or having been erased, was re-entered. We may presume, that fraudulent or malicious motives were necessary to be proved on such a charge; but it is reasonable also to suppose that in any case of gross negligence, fraud or malice might (as matter of course) be presumed by the *dicastæ*. (Pollux, viii. 40, 43; Harpoc. and Suid. s. *βουλεύσεως, ψευδεγγραφή, ψευδέγγραφος δίκη*; Büchh, *Publ. Econ. of Athens*, pp. 349, 390, 2d ed.; Meier, *Att. Proc.* p. 337; Platner, *Proc. und Klag.* vol. ii. p. 117.) [C. R. K.]

PSEUDOCLETEIAS GRAPHE (*ψευδοκλητίας γραφή*), a prosecution against one, who had appeared as a witness (*κλητήρ* or *κλήτωρ*) to prove that a defendant had been duly summoned, and thereby enabled the plaintiff to get a judgment by default. To prevent fraud, the Athenian law directed that the names of the witnesses who attended the summons should be subscribed to the bill of plaint or indictment (*ἑγκλημα*), so that the defendant, if he never had been summoned, and judgment had nevertheless been given against him by default, might know against whom to proceed. The false witness (*κλητήρ*) was liable to be criminally prosecuted, and punished at the discretion of the court. Even death might be inflicted in a case of gross conspiracy. (Demosth. c. *Nicostr.* 1252.) A person thrice convicted of this offence was, as in the case of other false testimony, *ἴσοῦ* *ῥα* disfranchised; and even for the first offence the jury might, if they pleased, by a *πρόστιμης* inflict the penalty of disfranchisement upon him. (Andoc. *de Myst.* 10, ed. Steph.; Meier, *de Bon. Damn.* p. 125.) Here we may observe this distinction, that the proceeding against the false witness to a summons was of a criminal nature, while the witness in the cause (*μαρτυρία*) was liable only to a civil action. The cause might be that the former offence was more likely to do mischief. The magistrate, before whom the defendant neglected to appear, when by the evidence of the witness it was shown that he had been duly summoned, had no discretion but to pronounce judgment against him; whereas the *dicastæ*, to whom the witness gave false evidence at the trial, might disbelieve him and find their verdict according to the truth. If the fraud was owing to a conspiracy between the plaintiff and the witness, it is probable that an action at the suit of the defendant would lie against the former, to recover compensation; for, though the conviction of the witness would lead to a reversal of the judgment, still he (the defendant) might have suffered damage in the meantime, which the setting aside of the judgment would not

repair. Such action (it has been conjectured) might be a *δίκη συκοφαντίας*, or perhaps *κακοτεχνία*. If the name of the witness had been fraudulently used by the plaintiff, and the witness had thereby been brought into trouble, we may conclude, by analogy to the case of other witnesses, that he had a *δίκη βλάβης* against the plaintiff (Demosth. c. *Aplob.* 849.) The *γραφὴ ψευδοκλητίας* came before the *Thesmothetæ*, and the question at the trial simply was, whether the defendant in the former cause had been summoned or not. (Platner, *Proc. und Klag.* vol. i. p. 417; Meier, *Att. Proc.* pp. 336, 577, 758.) [C. R. K.]

PSEUDODIPTEROS. [TEMPLUM.]

PSEUDOMARTYRION GRAPHE (*ψευδομαρτυριῶν γραφή*). [MARTYRIA, p. 734, b.]

PSILI (ψιλοί). [ARMA.]

PSYCTER (*ψυκτήρ*, *dim.* *ψυκτηρίδιον*), a wine-cooler. (Plat. *Conviv.* p. 332, d; Tim. *Law. Plat.* s. v.; Menander, p. 177, ed. Meineke; Athen. xi. pp. 469, 502, 503.) The vessel specially adapted for this operation, was sometimes made of bronze (Athen. iv. p. 142) or silver (v. p. 199). One of earthenware is preserved in the Museum of Antiquities at Copenhagen. It consists of one deep vessel for holding ice, which is fixed within another for holding wine. The wine was poured in at the top. It thus surrounded the vessel of ice and was cooled by the contact. It was drawn off so as to fill the drinking-cups by means of a cock at the bottom. Thus the *ψυκτήρ* was a kind of CRATER; and accordingly, where Phylarchus (*ap. Athen.* iv. p. 142) in describing the mode of life of Cleomenes, King of Sparta, uses the former term, Plutarch (*Cleom.* p. 1486, ed. Steph.) adopts the latter.

The size of the *ψυκτήρ* was very various. It contained from 2 quarts (Plat. *l. c.*) to a great number of gallons. (Athen. v. p. 199, d. f.) It was sometimes given as a prize to the winners in the game of the COTTABOS. [J. Y.]

PUBES, PUBERTAS. [CURATOR; IMPUBES; INFANS.]

PUBLICANI, farmers of the public revenues of the Roman state (*publicani*). Their name is formed from *publicum*, which signifies all that belongs to the state, and is sometimes used as synonymous with vectigal. (Dig. 39. tit. 4. s. 1. § 1; 50. tit. 16. s. 16; Suet. *Nero*, 1; Cic. *pro Rabir. Post.* 2; Val. Max. vi. 9. § 7.) The revenues which Rome derived from conquered countries, consisting chiefly of tolls, tithes, harbour duties, the scriptura or the tax which was paid for the use of the public pasture lands, and the duties paid for the use of mines and salt-works (*salinae*), were let out, or, as the Romans expressed it, were sold by the censors in Rome itself to the highest bidder. (Cic. *de Leg. Agr.* ii. 21, c. *Verr.* iii. 7.) This sale generally took place in the month of Quintilis and was made for a lustrum. (Macrob. *Sat.* i. 12.) The terms on which the revenues were let, were fixed by the censors in the so-called *leges censoriae*. (Cic. *ad Quint. Frnt.* i. 1; Varro, *de Re Rust.* ii. 1; Fest. s. v. *Prodit.*) The people or the senate however sometimes modified the terms fixed by the censors in order to raise the credit of the publicani (Plut. *Flaminius*, 19; Polyb. vi. 17; Liv. xxxix. 44), and in some cases even the tribunes of the people interfered in this branch of the administration. (Liv. xliii. 16.) The tithes raised in the province of Sicily alone, with the exception of those of wine, oil, and garden

produce, were not sold at Rome, but in the districts of Sicily itself, according to a practice established by Hiero. (Cic. *c. Verr.* ii. 3, 64, &c.) The persons who undertook the farming of the public revenue of course belonged to the wealthiest Romans. Their wealth and consequent influence may be seen from the fact, that as early as the second Punic war, after the battle of Cannae, when the aerarium was entirely exhausted, the publicani advanced large sums of money to the state, on condition of repayment after the end of the war. (Val. Max. v. 6. § 8; Liv. xxiv. 18; compare xxiii. 48, &c.) But what class of Romans the publicani were at this time is not stated; scarcely half a century later however we find that they were principally men of the equestrian order (Liv. xliii. 16); and down to the end of the republic, as well as during the early part of the empire, the farming of the public revenues was almost exclusively in the hands of the equites; whence the word equites and publicani are sometimes used as synonymous. (Cic. *c. Verr.* i. 51, ii. 71, *ad Att.* ii. 1; Suet. Aug. 24; Tacit. *Annal.* iv. 6.)

The publicani had to give security to the state for the sum at which they bought one or more branches of the revenue in a province; but as for this reason the property of even the wealthiest individual must have been inadequate, a number of equites generally united together and formed a company (*socii, societates* or *corpus*), which was recognized by the state (Dig. 3. tit. 4. s. 1), and by which they were enabled to carry on their undertakings upon a large scale. Such companies appear as early as the second Punic war. (Liv. xxiii. 48, 49.) The shares which each partner of such a company took in the business, were called *partes*, and if they were small, *particulae*. (Cic. *pro Rabir. Post.* 2; Val. Max. vi. 9. § 7.) The responsible person in each company, and the one who contracted with the state, was called *manceps* (Fest. s. v. *Manceps*; Pseudo-Ascon. in *Divinat.* p. 113, ed. Orelli.) [*MANCEPS*]; but there was also a magister to manage the business of each society, who resided at Rome, and kept an extensive correspondence with the agents in the provinces. (Cic. *ad Att.* v. 15, *c. Verr.* ii. 74.) He seems to have held his office only for one year; his representative in the provinces was called *sub magistro*, who had to travel about and superintend the actual business of collecting the revenues. The ἀρχιτελώνης in St. Luke (xix. 2) was probably such a sub magister. The magister at Rome had also to keep the accounts which were sent in to him (*tabulae accepti et expensi*). The credit of these companies of publicani and the flourishing state of their finances were of the utmost importance to the state, and in fact its very foundation: of this the Romans were well aware (Cic. *pro Leg. Manil.* 6), and Cicero therefore calls them the "ornamentum civitatis et firmamentum reipublicae." (Comp. *pro Planc.* 9.) It has been already mentioned that the publicani, in case of need, acted as a kind of public bank and advanced sums of money to the state (compare Cic. *ad Fam.* v. 20), which therefore thought them worthy of its especial protection. But they abused their power at an early period, in the provinces as well as at Rome itself; and Livy (xlv. 18) says, "ubi publicanus est, ibi aut jus publicum vanum, aut libertas sociis nulla." (Compare Liv. xxv. 3, 4.)

Nobody but a Roman citizen was allowed to

become a member of a company of publicani; freedmen and slaves were excluded. (Pseudo-Ascon. in *Divinat.* p. 113; Cic. *c. Verr.* iii. 39.) No Roman magistrate however, or governor of a province, was allowed to take any share whatever in a company of publicani (Cic. *c. Verr.* iii. 57), a regulation which was chiefly intended as a protection against the oppression of the provincials. During the later period of the empire various changes were introduced in the farming of the public revenues. Although it was, on the whole, a rule that no person should be compelled to take any share in a company of publicani, yet such cases sometimes occurred. (Burmman, *Vectig. Pop. Rom.* p. 138, &c.) From the time of Constantine the leases of the publicani were generally not longer than for three years. (Cod. 4. tit. 61. s. 4.) Several parts of the revenue which had before been let to publicani, were now raised by special officers appointed by the emperors. (Burmman, *l. c.* p. 141, &c.)

All the persons hitherto mentioned as members of these companies, whether they held any office in such a company or not, and merely contributed their shares and received their portions of the profit (Cic. *ad Att.* i. 19; Nepos, *Att.* 6), did not themselves take any part in the actual levying or collecting of the taxes in the provinces. This part of the business was performed by an inferior class of men, who were said *operas publicanis dare*, or *esse in operis societatis*. (Val. Max. vi. 9. § 8; Cic. *c. Verr.* iii. 41, *ad Fam.* xiii. 9; compare *c. Verr.* ii. 70, *pro Planc.* 19.) They were engaged by the publicani, and consisted of freemen as well as slaves, Romans as well as provincials. (Cic. *c. Verr.* ii. 77, *de Prov. Cons.* 5.) This body of men is called *familia publicanorum*, and comprehended, according to the praetor's edict (Dig. 39. tit. 4. s. 1), all persons who assisted the publicani in collecting the vectigal. Various laws were enacted in the course of time, which were partly intended to support the servants of the publicani in the performance of their duty, and partly to prevent them from acts of oppression. (See Digest. 39. tit. 4: *De Publicanis et vectigalib. et commissis*; Gaius, iv. 28.)

The separate branches of the public revenue in the provinces (*decumae, portoria, scriptura*, and the revenues from the mines and saltworks) were mostly leased to separate companies of publicani; whence they were distinguished by names derived from that particular branch which they had taken in farm; e.g. *decumarii, pecuarii* or *scripturarii, salinarii* or *manceps salinarum*, &c. (Pseudo-Ascon. *l. c.*; compare *DECUMAE, PORTORIUM, SALINAE, SCRIPTURA*.) On some occasions, however, one company of publicani farmed two or more branches at once; thus we have an instance of a *societas* farming the *portorium* and the *scriptura* at the same time. (Cic. *c. Verr.* ii. 70.) The commentator, who goes by the name of Asconius, asserts that the *portitores* were publicani who farmed the *portorium*; but from all the passages where they are mentioned in ancient writers, it is beyond all doubt that the *portitores* were not publicani properly so called, but only their servants engaged in examining the goods imported or exported, and levying the custom-duties upon them. They belonged to the same class as the publicans of the New Testament. (St. Luke, v. 27, 29.) Respecting the impudent

way in which these inferior officers sometimes behaved towards travellers and merchants, see *Plaut. Menæch.* i. 2. 5, &c.; *Cic. ad Quint. Fr.* i. 1; *Plut. de Curiosit.* p. 518, e. (Compare Burmann, *de Vectig.* c. 9.) [L. S.]

PUBLICIANA IN REM ACTIO, was given to him who had obtained possession of a thing *ex justa causa*, and had lost the Possession before he had acquired the ownership by Usucapion. This was a Praetorian action, so called from a Praetor Publicius; and the fiction by which the Possessor was enabled to sue, was that he had obtained the ownership by Usucapion. (Gaius, iv. 36, where the intentio is given.) This actio was an incident to every kind of possessio which was susceptible of Usucapion (the thirty years' excepted). In the old Roman Law, this Actio resembled the Vindicatio, and in the newer Roman Law it was still more closely assimilated to it, and consequently in this actio, mere Possession was not the only thing considered, but the matter was likened to the case where ownership and Possession were acquired at the same time by Occupatio or Traditio. Accordingly Possessio for the purposes of Usucapion may be viewed in two ways: viewed with respect to the ownership of which it is the foundation, it is an object of jurisprudence as bare Possession; viewed with reference to the Publiciana Actio, which is incident to it, it is viewed as ownership. The owner of a thing might avail himself of this action, if he had any difficulty in proving his ownership.

This action was introduced for the protection of those who had a *civilis possessio*, but that only, and consequently could not recover a thing by the *Rei vindicatio*, an action which a man could only have, when he had the Quiritarian ownership of a thing. According to the definition a man could have this actio both for a thing which he had in bonis and for a thing of which he had a *civilis possessio*, without having it in bonis. When he had the thing in bonis his action was good against the Quiritarian owner, for if such owner pleaded his ownership, the plaintiff might reply that the thing had been sold and delivered and therefore was his in bonis. The Publiciana actio of the plaintiff who had a *civilis possessio*, without having the thing in bonis, was not good against the owner, who had the right of ownership, in fact, while the plaintiff had it only in fiction; nor was it valid against another who had a *Civilis possessio* as good as his own. His action was good against a Possessor who had not a *civilis possessio*. In this action the plaintiff had to prove that he possessed *civiliter*, before the time when he lost the possession. [POSSESSIO.]

The object of the action was the recovery of the thing and all that belonged to it (*cum omni causa*). In the legislation of Justinian, the distinction between *Res Mancipi* and *Nec Mancipi* was abolished, and ownership could in all cases be transferred by tradition. The Publiciana actio therefore became useless for any other purpose than a case of *bonae fidei possessio*, and this seems to explain why the words "non a domino" appear in the Edict as cited in the Digest (6. tit. 2. s. 1), while they do not appear in Gaius (iv. 36).

The Publiciana actio applied also to Servitudes, the right to which had not been transferred by *Mancipatio* or *In jure cessio*, but which had been enjoyed with the consent of the owner of the

land. As the legislation of Justinian rendered the old forms of transfer of servitudes unnecessary, the Publiciana actio could then only apply to a case of Possessio.

(Dig. 6. tit. 2; Inst. 4. tit. 6; Savigny, *Das Recht des Besitzes*, p. 13, 5th ed.; Puchta, *Inst.* ii. § 233; Mackeldey, *Lehrbuch*, 12th ed. § 270, and the notes.) [G. L.]

PUER. [SERVUS.]

PUGILATUS (πύξ, πυγμή, πυγμαχία, πυγμοσύνη), boxing. The fist (pygma, πύξ) being the simplest and most natural weapon, it may be taken for granted that boxing was one of the earliest athletic games among the Greeks. Hence even gods and several of the earliest heroes are described either as victors in the πυγμή, or as distinguished boxers, such as Apollo, Heracles, Tydeus, Polydeuces, &c. (Paus. v. 7. § 4; Theocrit. xxiv. 113; Apollod. iii. 6. § 4; Paus. v. 8. § 2.) The Scholiast on Pindar (*Nem.* v. 89) says that Theseus was believed to have invented the art of boxing. The Homeric heroes are well acquainted with it. (Hom. *Il.* xxiii. 691, &c.; compare *Od.* viii. 103, &c.) The contest in boxing was one of the hardest and most dangerous, whence Homer gives it the attribute ἀλγαινή. (*Il.* xxiii. 653.) Boxing for men was introduced at the Olympic games in Ol. 23, and for boys in Ol. 37. (Paus. v. 8. § 3.) Contests in boxing for boys are also mentioned in the Nemea and Isthmia. (Paus. vi. 4. § 6.)

In the earliest times boxers (pugiles, πύκται) fought naked, with the exception of a ὄμμα round their loins (Hom. *Il.* xxiii. 683; Virg. *Aen.* v. 421); but this was not used when boxing was introduced at Olympia, as the contests in wrestling and racing had been carried on here by persons entirely naked ever since Ol. 15. Respecting the leathern thongs with which pugilists surrounded their fists, see CESTRUS, where its various forms are illustrated by wood-cuts.

The boxing of the ancients appears to have resembled the practice of modern times. Some particulars, however, deserve to be mentioned. A peculiar method, which required great skill, was not to attack the antagonist, but to remain on the defensive, and thus to wear out the opponent, until he was obliged to acknowledge himself to be conquered. (Dio Chrysost. *Melania.* ii. orat. 29; Eustath. *ad Il.* p. 1322. 29.) It was considered a sign of the greatest skill in a boxer to conquer without receiving any wounds, so that the two great points in this game were to inflict blows, and at the same time not to expose oneself to any danger (πληγὴ καὶ φυλακή, J. Chrysost. *Serm.* vii. 1; Plut. *Sympos.* ii. 5; compare Paus. vi. 12. § 3). A pugilist used his right arm chiefly for fighting, and the left as a protection for his head, for all regular blows were directed against the upper parts of the body, and the wounds inflicted upon the head were often very severe and fatal. In some ancient representations of boxers the blood is seen streaming from their noses, and their teeth were frequently knocked out. (Apollon. Rhod. ii. 785; Theocrit. ii. 126; Virg. *Aen.* v. 469; Aelian. *V. H.* x. 19.) The ears especially were exposed to great danger, and

with regular pugilists they were generally much mutilated and broken. (Plat. *Gorg.* p. 516; *Protag.* p. 342; Martial, vii. 32. 5.) Hence in works of art the ears of the pancratiasts always appear beaten flat, and although swollen in some parts, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called *ἀντιορίδες*, were invented. (Pollux, ii. 82; *Etymol. Mag.* s. v.) But these ear-covers which, according to the Etymologist, were made of brass, were undoubtedly never used in the great public games, but only in the gymnasia and palaestrae, or at most in the public contests of boxing for boys; they are never seen in any ancient work of art.

The game of boxing, like all the other gymnastic and athletic games, was regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancratium. (Plut. *Symp.* ii. 4; Lucian, *Anach.* 3.) Cases of death either during the fight itself or soon after, appear to have occurred rather frequently (Schol. *ad Pind. Ol.* v. 34), but if a fighter wilfully killed his antagonist, he was severely punished. (Paus. viii. 40. § 3, vi. 9. § 3.) If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength; and in some cases they are described as resting on their knees. (Apollon. Rhod. ii. 86; Stat. *Theb.* vi. 796.) If the fight lasted too long, recourse was had to a plan called *καμὰς*, that is, both parties agreed not to move, but to stand still and receive the blows without using any means of defence, except a certain position of the hands. (Eustath. *ad Il.* xxiii. p. 1324; Paus. viii. 40. § 3.) The contest did not end until one of the combatants was compelled by fatigue, wounds or despair, to declare himself conquered (*ἀνταρπόμεναι*, Paus. vi. 10. § 1), which was generally done by lifting up one hand. (Plut. *Lycourg.* 19.)

The Ionians, especially those of Samos, were at all times more distinguished pugilists than the Dorians, and at Sparta boxing is said to have been forbidden by the laws of Lycurgus. (Paus. vi. 2. § 4; Plut. *Lycourg.* 19.) But the ancients generally considered boxing as a useful training for military purposes, and a part of education no less important than any other gymnastic exercise. (Lucian, *Anach.* 3; Plut. *Cat. Maj.* 20.) Even in a medical point of view, boxing was recommended as a remedy against giddiness and chronic headaches. (Aretaeus, *De Morb. dist. cur.* i. 2.)

In Italy boxing appears likewise to have been practised from early times, especially among the Etruscans. (Liv. i. 35; Dionys. vii. 72.) It continued as a popular game during the whole period of the republic as well as of the empire. (Suet. *Aug.* 45; Cic. *De Leg.* ii. 15, 18; Tacit. *Annal.* xvi. 21; Suet. *Calig.* 18.) See Krause, *Die Gymnastik und Agon. d. Hellenen*, pp. 497—534. [L. S.]

PUGILLA'RES. [TABULAE.]

PUGIO (*πύγμα*, *dim. μάχαιρον*; *ἐγχειρίδιον*), a dagger; a two-edged knife, commonly of bronze, with the handle in many cases variously ornamented or enriched, sometimes made of the hard black wood of the Syrian terebinth. (Theophr. *H. P.* v. 3. § 2.) The accompanying woodcut shows three ancient daggers. The two upper figures are

copied from Beger (*Thes. Brand.* vol. iii. pp. 398, 419): the third represents a dagger about a foot long, which was found in an Egyptian tomb, and is preserved in the Museum at Leyden. The middle figure is entirely of metal. The handles of the two others were fitted to receive a plate of wood on each side. The lowermost has also two bosses of ivory or horn, and shows the remains of a thin plate of gilt metal, with which the wood was covered.

In the heroic ages the Greeks sometimes wore a dagger suspended by the sword on the left side of the body [GLADIUS], and used it on all occasions instead of a knife. (Hom. *Il.* iii. 271; Athen. vi. p. 232, c.) The custom is continued to the present day among the Arnauts, who are descended from the ancient Greeks. (Dodwell, *Tour*, vol. i. p. 133.) The Romans (see woodcuts, pp. 2, 554), wore the dagger as the Persians did [ACINACES] on the right side, and consequently drew it with the thumb at the upper part of the hilt, the position most effective for stabbing. The terms *pugio* and *ἐγχειρίδιον* denote both its smallness and the manner of grasping it in the hand (*πρὸς πύγμα*). In the same way we must understand "the two swords" (*duos gladios*, Gell. ix. 13) worn by the Gallic chieftain, slain by Manlius Torquatus; and the monuments of the middle ages prove that the custom long continued in our own and in adjoining countries. (See Stothard, *Mon. Effigies of Gl. Britain.*) Among some of the northern nations of Europe, a dirk was constantly worn on the side, and was in readiness to be drawn on every occasion. (Ovid. *Trist.* v. 8, 19, 20.) The Chalybes employed the same weapon, stabbing their enemies in the neck. (Xen. *Anach.* iv. 7. § 16.) For the Greek horsemen the dagger was considered preferable to the long sword as a weapon of offence. (Xen. *de Re Equest.* xii. 11.) [J. Y.]

PULLA'RIOUS. [AUGUR, p. 176, a.]

PULPITUM [THEATRUM.]

PULVINAR. A representation of the mode of using cushions or pillows (*pulvini*), to recline upon at entertainments, is given in the wood-cut under SYMPOSIUM. The most luxurious of such cushions were stuffed with swan's-down. (Mart. xiv. 161.) An ancient Egyptian cushion is preserved in the British Museum. In reference to this practice, the Romans were in the habit of placing the statues of the gods upon pillows at the lectisternia. [EPULONES; LECTISTERNIUM.] The couches provided for this purpose in the temples were called *pulvinaria*. (Hor. *Carm.* i. 37. 3; Ovid. *Met.* xiv. 827; Cic. *in Cat.* iii. 10, *Horusp.* 5, *Dom.* 53, *Tusc.* iv. 2; Val. Max. iii. 7. § 1;

Servius, in *Virg. Georg.* iii. 533.) There was also a pulvinar, on which the images of the gods were laid, in the Circus. (Sueton. *August.* 45, *Claud.* 4.) [J. Y.]

PUPPIS. [NAVIS, p. 787, a.]

PUTEAL, properly means the enclosure surrounding the opening of a well, to protect persons from falling into it. It was either round or square, and seems usually to have been of the height of three or four feet from the ground. There is a round one in the British Museum, made of marble, which was found among the ruins of one of Tiberius's villas in Capreae; it exhibits five groups of fauns and bacchanalian nymphs; and around the edge at the top may be seen the marks of the ropes used in drawing up water from the well. Such putealia seem to have been common in the Roman villas: the *putealia signata*, which Cicero (*ad Att.* i. 10) wanted for his Tusculan villa, must have been of the same kind as the one in the British Museum; the *signata* refers to its being adorned with figures. It was the practice in some cases to surround a sacred place with an enclosure open at the top, and such enclosures from the great similarity they bore to *Putealia* were called by this name. There was a *Puteal* of this kind at Rome, called *Puteal Scribonianum* or *Puteal Libonis*, which is often exhibited on coins of the Scribonia gens, and of which a specimen is given below. The puteal is on the reverse of the coin adorned with garlands and two lyres. It is generally stated that there were two putealia in the Roman forum; but C. F. Hermann, who has carefully examined all the passages in the ancient writers relating to this matter (*Ind. Lect. Marburg.* 1840), comes to the conclusion that there was only one such puteal at Rome. It was in the forum, near the Arcus Fabianus, and was dedicated in very ancient times either on account of the whetstone of the Augur Navius (comp. Liv. i. 36), or because the spot had been struck by lightning. It was subsequently repaired and re-dedicated by Scribonius Libo, who had been commanded to examine the state of the sacred places (*Festus, s. v. Scribonianum*). Libo erected in its neighbourhood a tribunal for the praetor, in consequence of which the place was, of course, frequented by persons who had law-suits, such as money-lenders and the like. (Comp. Hor. *Sat.* ii. 6. 36, *Epist.* i. 19. 8; Ov. *Remed. Amor.* 561; Cic. *pro Ses.* 8; C. F. Hermann, *l. c.*)

PUTI'CLAE, PUTI'CULI. [FUNUS, p. 560, b.]

PYANEP'SIA (πυανέψια), a festival celebrated at Athens every year on the seventh of Pyanepsion, in honour of Apollo. (Harpocrat. Hesych. Suidas, s. v. Πυανέψια.) It was said to have been

instituted by Theseus after his return from Crete. (Plut. *Thes.* 22.) The festival as well as the month in which it took place, are said to have derived their names from πύαμος, another form for πύαμος, i. e. pulse or beans, which were cooked at this season and carried about. (Harp. and Suid. *l. c.*; Athen. ix. p. 408.) A procession appears to have taken place at the Pyanepsia, in which the *elpeisidory* was carried about. This *elpeisidory* was an olive-branch surrounded with wool and laden with the fruits of the year; for the festival was in reality a harvest feast. It was carried by a boy whose parents were still living, and those who followed him sang certain verses, which are preserved in Plutarch. (*l. c.*; compare Clem. Alex. *Strom.* iv. p. 474; Eustath. *ad Il.* xxii.; Suid. s. v. *Elpeisidory*; and Etymol. Mag. where a different account is given.) The procession went to a temple of Apollo, and the olive-branch was planted at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one. (Schol. *ad Aristoph. Plut.* 1050.) [L. S.]

PYRGUS (πύργος), a tower. 1. The towers used in fortification and in war are spoken of under TURRIS. 2. An army drawn up in a deep oblong column. [TURRIS, No. VI.] 3. A dice-box, so called from its resemblance to a tower [FRI-TILLUS]. 4. The territory of the town of Teos was distributed among a certain number of towers (πύργοι), to each of which corresponded a symmory or section of the citizens (Böckh, *Corp. Inscr.* No. 3064; and the elucidations of Grote, *Hist. of Greece*, vol. iii. pp. 247, 248).

PYRRHICA. [SALTATIO.]

PYTHIA (πύθια), one of the four great national festivals of the Greeks. It was celebrated in the neighbourhood of Delphi, anciently called Pytho, in honour of Apollo, Artemis, and Lete. The place of this solemnity was the Crissean plain, which for this purpose contained a hippodromus or race-course (Paus. x. 37. § 4), a stadium of 1000 feet in length (Censorin. *de Die Nat.* 13), and a theatre, in which the musical contests took place. (Lucian, *adv. indoct.* 9.) A gymnasium, prytaneium, and other buildings of this kind, probably existed here, as at Olympia, although they are not mentioned. Once the Pythian games were held at Athens, on the advice of Demetrius Poliorcetes (OL 122. 3; see Plut. *Demetr.* 40; Corsini, *Fest. Att.* iv. p. 77), because the Aetolians were in possession of the passes around Delphi.

The Pythian games were, according to most legends, instituted by Apollo himself (Athen. xv. p. 701; Schol. *Arymn. ad Pind. Pyth.*); other traditions referred them to ancient heroes, such as Amphictyon, Adrastus, Diomedes, and others. They were originally perhaps nothing more than a religious panegyria, occasioned by the oracle of Delphi, and the sacred games are said to have been at first only a musical contest, which consisted in singing a hymn to the honour of the

Pythian god with the accompaniment of the cithara. (Paus. x. 7. § 2; Strab. ix. p. 421.) Some of the poets, however, and mythographers represent even the gods and the early heroes as engaged in gymnastic and equestrian contests at the Pythian games. But such statements, numerous as they are, can prove nothing; they are anachronisms in which late writers were fond of indulging. The description of the Pythian games in which Sophocles, in the *Electra*, makes Orestes take part, belongs to this class. The Pythian games must, on account of the celebrity of the Delphic oracle, have become a national festival for all the Greeks at a very early period; and when Solon fixed pecuniary rewards for those Athenians who were victors in the great national festivals, the Pythian agon was undoubtedly included in the number, though it is not expressly mentioned. (Diog. Laërt. i. 55.)

Whether gymnastic contests had been performed at the Pythian games previous to Ol. 47, is uncertain. Böckh supposes that these two kinds of games had been connected at the Pythia from early times, but that afterwards the gymnastic games were neglected: but however this may be, it is certain that about Ol. 47 they did not exist at Delphi. Down to Ol. 48 the Delphians themselves had been the agonothetae at the Pythian games, but in the third year of this Olympiad, when after the Criasæan war the Amphictyons took the management under their care, they naturally became the agonothetae. (Strab. ix. p. 421; Paus. x. 7. § 3.) Some of the ancients date the institution of the Pythian games from this time (Phot. Cod. p. 533, ed. Bekker), and others say that henceforth they were called *Pythian games*. Owing to their being under the management of the Amphictyons they are sometimes called *Ἀμφικτυονικὰ ἀθλα*. (Heliod. *Aeth.* iv. 1.) From Ol. 48. 3, the Pythiads were occasionally used as an æra, and the first celebration under the Amphictyons was the first Pythiad. Pausanias (*l. c.*) expressly states that in this year the original musical contest in *κιθάρα* was extended by the addition of *αὐλὴ*, i. e. singing with the accompaniment of the flute, and by that of flute-playing alone. Strabo (*l. c.*) in speaking of these innovations does not mention the *αὐλὴ*, but states that the contest of cithara-players (*κιθαρισταί*) was added, while Pausanias assigns the introduction of this contest to the eighth Pythiad. One of the musical contests at the Pythian games in which only flute and cithara-players took part, was the so-called *νόμος Πύθικος*, which, at least in subsequent times, consisted of five parts, viz. *ἀνέκρουσις*, *ἄμπερα*, *κατακελευσμός*, *ἰαμβοὶ καὶ δακτύλοι*, and *ὀρχήγες*. The whole of this *νόμος* was a musical description of the fight of Apollo with the dragon and of his victory over the monster. (Strabo, *l. c.*) A somewhat different account of the parts of this *νόμος* is given by the Scholiast on Pindar (*Argum. ad Pyth.*) and by Pollux (iv. 79, 81, 84).

Besides these innovations in the musical contests which were made in the first Pythiad, such gymnastic and equestrian games as were then customary at Olympia, were either revived at Delphi or introduced for the first time. The chariot-race with four horses was not introduced till the second Pythiad. (Paus. x. 7. § 3.) Some games on the other hand were adopted, which had

not yet been practised at Olympia, viz. the *δολιχός* and the *δίαυλος* for boys. In the first Pythiad the victors received *χρήματα* as their prize, but in the second a chaplet was established as the reward for the victors. (Paus. and Schol. ad Pind. *l. c.*) The Scholiasts on Pindar reckon the first Pythiad from this introduction of the chaplet, and their system has been followed by most modern chronologers, though Pausanias expressly assigns this institution to the second Pythiad. (See Clinton, *F. H.* p. 195; Krause, *Die Pyth. Nem.*, &c. p. 21, &c.) The *αὐλὴ*, which was introduced in the first Pythiad, was omitted at the second and ever after, as only elegies and *Σπῆνοι* had been sung to the flute, which were thought too melancholy for this solemnity. The *τεθρίππος* or chariot-race with four horses however was added in the same Pythiad. In the eighth Pythiad (Ol. 55. 3) the contest in playing the cithara without singing was introduced; in Pythiad 23 the foot-race in arms was added; in Pythiad 48 the chariot-race with two full-grown horses (*συνωρίδος δρόμος*) was performed for the first time; in Pythiad 53 the chariot-race with four foals was introduced. In Pythiad 61 the pancratium for boys, in Pythiad 63 the horse-race with foals, and in Pythiad 69 the chariot-race with two foals were introduced. (Paus. *l. c.*) Various musical contests were also added in the course of time, and contests in tragedy as well as in other kinds of poetry and in recitations of historical compositions are expressly mentioned. (Philostr. *Vit. Soph.* ii. 27, 2; Plut. *Sympos.* ii. 4.) Works of art, as paintings and sculptures, were exhibited to the assembled Greeks, and prizes were awarded to those who had produced the finest works. (Plin. xxxv. 35.) The musical and artistic contests were at all times the most prominent feature of the Pythian games, and in this respect they even excelled the Olympic games.

Previous to Ol. 48 the Pythian games had been an *ἐναετηρίς*, that is, they had been celebrated at the end of every eighth year; but in Ol. 48. 3, they became like the Olympia a *τετραετηρίς*, i. e. they were held at the end of every fourth year, and a Pythiad therefore ever since the time that it was used as an æra, comprehended a space of four years, commencing with the third year of every Olympiad. (Paus. *l. c.*; Diod. xv. 60; compare Clinton, *F. H.* p. 195.) Others have, in opposition to direct statements, inferred from Thucydides (iv. 117, v. 1) that the Pythian games were held towards the end of the second year of every Olympiad. Respecting this controversy, see Krause, *l. c.* p. 29, &c. As for the season of the Pythian games, they were in all probability held in the spring, and most writers believe that it was in the month of Bysius, which is supposed to be the same as the Attic Munychion. Böckh (*ad Corp. Inscript.* n. 1688) however has shown that the games took place in the month of Bucatius, which followed after the month of Bysius, and that this month must be considered as the same as the Attic Munychion. The games lasted for several days, as is expressly mentioned by Sophocles (*Elect.* 690, &c.), but we do not know how many. When ancient writers speak of the *day* of the Pythian agon, they are probably thinking of the musical agon alone, which was the most important part of the games, and probably took place on the 7th of Boecstius.

It is quite impossible to conceive that all the numerous games should have taken place on one day.

The concourse of strangers at the season of this panegyria, must have been very great, as undoubtedly all the Greeks were allowed to attend. The states belonging to the amphictyony of Delphi had to send their theori in the month of Bysius, some time before the commencement of the festival itself. (Böckh, *Corp. Inscr. l. c.*) All theori sent by the Greeks to Delphi on this occasion, were called *Πυθαίαι* (Strab. ix. p. 404), and the theories sent by the Athenians were always particularly brilliant. (Schol. ad *Aristoph. Av.* 1585.) As regards sacrifices, processions, and other solemnities, it may be presumed that they resembled in a great measure those of Olympia. A splendid, though probably in some degree fictitious, description of a theoria of Thessalians may be read in Heliodorus (*Aeth.* ii. 34).

As to the order in which the various games were performed, scarcely anything is known, with the exception of some allusions in Pindar and a few remarks of Plutarch. The latter (*Symp.* ii. 4; comp. Philostr. *Apoll. Tyann.* vi. 10) says that the musical contests preceded the gymnastic contests, and from Sophocles it is clear that the gymnastic contests preceded the horse and chariot races. Every game, moreover, which was performed by men and by boys, was always first performed by the latter. (Plut. *Symp.* ii. 5.)

We have stated above that, down to Ol. 48, the Delphians had the management of the Pythian games; but of the manner in which they were conducted previous to that time nothing is known. When they came under the care of the Amphictyons, especial persons were appointed for the purpose of conducting the games and of acting as judges. They were called *Ἐπιμεληταί* (Plut. *Symp.* ii. 4, vii. 5) and answered to the Olympian Hellenodicae. Their number is unknown. (Krause, *l. c.* p. 44.) In later times it was decreed by the Amphictyons that king Philip with the Thessalians and Boeotians should undertake the management of the games (Diod. xvi. 60), but afterwards and even under the Roman emperors the Amphictyons again appear in the possession of this privilege. (Philostr. *Vit. Soph.* ii. 27.) The *Ἐπιμεληταί* had to maintain peace and order, and were assisted by *μαστιγοφόροι*, who executed any punishment at their command, and thus answered to the Olympian *ἀλῦται*. (Luc. *adv. indoct.* 9, &c.)

The prize given to the victors in the Pythian games was from the time of the second Pythiad a laurel chaplet; so that they then became an *ἀγών στεφανίτης*, while before they had been an *ἀγών χρηματίτης*. (Paus. x. 7. § 3; Schol. in *Argum. ad Pind. Pyth.*) In addition to this chaplet, the victor here, as at Olympia, received the symbolic palm-branch, and was allowed to have his own statue erected in the Crissean plain. (Plut. *Symp.* viii. 4; Paus. vi. 15. § 3, 17. § 1; Justin. xxiv. 7, 10.)

The time when the Pythian games ceased to be solemnised is not certain, but they probably lasted as long as the Olympic games, i. e. down to the year A. D. 394. In A. D. 191 a celebration of the Pythia is mentioned by Philostratus (*Vit. Soph.* ii. 27), and in the time of the emperor Julian they still continued to be held, as is manifest from his own words. (Jul. *Epist. pro Argiv.* p. 35, a.)

Pythian games of less importance were celebrated

in a great many other places where the worship of Apollo was introduced; and the games of Delphi are sometimes distinguished from these lesser Pythia by the addition of the words *ἐν Δελφοῖς*. But as by far the greater number of the lesser Pythia are not mentioned in the extant ancient writers, and are only known from coins or inscriptions, we shall only give a list of the places where they were held:—Ancyra in Galatia, Aphrodisias in Caria, Antiochia, Carthaea in the island of Ceos (Athen. x. p. 456, 467), Carthage (Tertull. *Scorp.* 6), Cibyra in Phrygia, Delos (Dionys. *Perieg.* 527), Emisa in Syria, Hierapolis in Phrygia, Magnesia, Megara (Schol. ad *Pind. Nem.* v. 84, *Ol.* xiii. 155; Philostr. *Vit. Soph.* i. 3), Miletus, Neapolis in Italy, Nicaea in Bithynia, Nicomedia, Pergamus in Mysia, Perge in Pamphylia, Perinthus on the Propontia, Philippopolis in Thrace, Side in Pamphylia, Sicyon (Pind. *Ol.* xiii. 105, with the Schol.; *Nem.* ix. 51), Taba in Caria, Thessalonice in Macedonia, in Thrace, Thyatira, and Tralles in Lydia, Tripolis on the Maeander in Caria. (Krause, *Die Pythien, Nemeen und Isthmien*, pp. 1—106.) [L. S.]

PYTHIA. [ORACULUM, p. 837, a.]

PYTHII (πύθιοι), called Πύθιοι in the Lacedaemonian dialect (Photius, a. v.), were four persons appointed by the Spartan kings, two by each, as messengers to the temple of Delphi (Θεορπάροι ἐς Δελφοῦς). Their office was highly honourable and important: they were always the messengers of the Spartan kings. (Herod. vi. 57; Xen. *Rep. Lac.* xv. 5; Müller, *Dor.* iii. 1. § 9.)

PYXIS, *dim.* PYXIDULA (πύξις, *dim.* πυξιδίον), a casket; a jewel-box. (Mart. ix. 38.) Quintilian (viii. 6. § 35) produces this term as an example of catachresis, because it properly denoted that which was made of box (πύξος), but was applied to things of similar form and use made of any other material. In fact, the caskets in which the ladies of ancient times kept their jewels and other ornaments, were made of gold, silver, ivory, mother-of-pearl, tortoise-shell, &c. They were also much enriched with sculpture. A silver coffer, 2 feet long, 1½ wide, and 1 deep, most elaborately adorned with figures in bas-relief, is described by Böttiger. (*Sabina*, vol. i. pp. 64—80. plate iii.) The annexed woodcut (from *Ant. d'Ercoleano*, vol. ii. tab. 7) represents a very plain jewel-box, out of which a dove is extracting a riband or fillet. Nero

deposited his beard in a valuable pyxis, when he shaved for the first time. [BARBA.]

The same term is applied to boxes used to contain drugs or poison (Cic. *pro Caelio*, 25—29; Quintil. vi. 3. § 25); and to metallic rings employed in machinery. (Plin. *H. N.* xviii. 11. a. 29.) [J. Y.]

Q.

QUADRAGESIMA, the fortieth part of the imported goods, was the ordinary rate of the Pur-

torium. (Suet. *Vespas.* l.; Quintil. *Declam.* 359; Symmach. *Epist.* v. 62, 65.) Tacitus (*Ann.* xiii. 51) says that the Quadragesima was abolished by Nero and had not been imposed again (*monet abolitio quadragesimas*); but it appears most probable that this Quadragesima abolished by Nero was not the Portorium, but the tax imposed by Caligula (Suet. *Cal.* 40) of the fortieth part of the value of all property, respecting which there was any law-suit. That the latter is the more probable opinion appears from the fact, that we never read of this tax upon law-suits after the time of Nero, while the former one is mentioned to the latest times of the empire. Considerable difficulty, however, has arisen in consequence of some of the coins of Galba having *Quadragesima Remissa* upon them, which is supposed by some writers to contradict the passage of Tacitus, and by others to prove that Galba abolished the Quadragesima of the portorium. The words, however, do not necessarily imply this; it was common in seasons of scarcity and want, or as an act of special favour, for the emperors to remit certain taxes for a certain period, and it is probable that the coins of Galba were struck in commemoration of such a remission, and not of an abolition of the tax. (See Burmann, *de Vectigal.* p. 64, &c., who controverts the opinions of Spanheim, *de Praest. et Usu Numism.* vol. ii. p. 549.)

QUADRANS. [As, pp. 140, b, 141, a.]

QUADRANTAL, or AMPHORA QUADRANTAL, or AMPHORA only, was the principal Roman measure of capacity for fluids. All the Roman measures of capacity were founded on weight, and thus the *amphora* was originally the space occupied by eighty pounds of wine. (Festus, s. v.)

There is also preserved to us by Festus (s. v. *Publica Pondera*, p. 246, Müller), a plebiscitum (the Silian) of unknown date, regulating the weights and measures, to the following effect:—*Ex ponderibus publicis, quibus hac tempestate populus ceteri solent, uti coaequantur sedulum, uti quadrantal vini octoginta pondo siet: congius vini decem p. (i. e. pondo) siet: sex sextarii congius siet vini; duodecimoquinginta sextarii quadrantal siet vini*:—that is, that the quadrantal should contain 80 pounds of wine*, and the congius 10; and that the sextarius should be 1-6th of the congius, and 1-48th of the quadrantal. The quadrantal was subdivided into 2 urnae, 8 congii, 48 sextarii, 96 heminae, 192 quartarii, 384 acetabula, 576 cyathi, and 2304 ligulae. As compared with the Roman dry measure, the quadrantal was three times the modius. The only measure larger than the quadrantal was the *culeus* of 20 amphorae, which was used, as well as the amphora itself, in estimating the produce of a vineyard. [CULEUS: comp. AMPHORA sub fin.]

The quadrantal was connected with the measures of length, by the law, that it was the cube of the foot, whence its name *quadrantal*, or, as other writers give it (using the Greek *κῆβος* instead of the Latin *quadrantal*) *amphora cubus*.

* The Romans were aware that there is a difference in the specific gravity of wine and of water, and in the different sorts of each, but, for the sake of simplicity, they regarded them as of the same specific gravity: when, however, they wished a very exact determination, they used rain water. (Böckh, c. 3.)

(Cato, *R. R.* 57; Gell. i. 20; Priscian. *Carm. de Mens. et Pond.* vv. 59—63:—

“Pes longo in spatio latoque notetur;
Angulus ut par sit, quem claudit linea triplex.
Quatuor et medium quadris cingitur inane:
Amphora fit cubus, quam ne violare liceat,
Sacravere Jovi Tarpeio in monte Quirites.”

A standard model of the *Amphora* was kept with great care in the temple of Jupiter in the Capitol, and was called *amphora Capitolina* (Priscian. *l. c.*; Capitolin. *Maximis.* 4). There still exists a *congius* which professes to have been made according to this standard. [CONGIUS.] For a full account of this congius, see H. Hase, *Abhandl. d. Berl. Akad.* 1824.

There are two questions of very great interest connected with the Roman *quadrantal*; namely, (1), whether the equality to the cubic foot was originally exact, or only approximate, and (2), whether there was any exact ratio between the Roman and the Grecian measures. The full discussion of these questions would be inconsistent both with the limits and with the chief object of this work. A general statement of the matters in dispute will be found under *MENSURA*, p. 754. It may here be added that, whether there was or was not originally any precise ratio between the Greek and Roman measures of capacity, they were at least so nearly related to one another, that, when the two systems came to exist side by side, it was found easy to establish the following definite ratios. Of the liquid measures; the Roman *amphora*, or *quadrantal*, was 2-5ths of the Aeginetan, and 2-3rds of the Attic *amphora* or *metretres*; and the congius of the Roman system was equal to the $\chi\omicron\upsilon\varsigma$ of the Attic. Again, comparing the Roman liquid with the Greek dry measures, the *quadrantal* was 1-3rd of the Aeginetan, and one half of the Attic *medimnus*. Consequently, of the dry measures, the *modius* (which was 1-3rd of the *quadrantal*) was 1-9th of the Aeginetan, and 1-6th of the Attic *medimnus*. The connecting subordinate unit in all these sets of measures is the Roman *sextarius*, or sixth part of the congius, which was introduced into the Greek system under the name of $\xi\sigma\tau\epsilon\rho\varsigma$, and which stands to the several measures now mentioned in the following relations:—

1. Liquid Measures.

The Roman <i>quadrantal</i>	=	48 sextarii
“ Attic <i>metretres</i>	=	72 “
“ Aeginetan “	=	120 “

2. Dry Measures.

The Roman <i>modius</i>	=	16 sextarii
“ Attic <i>medimnus</i>	=	96 “
“ Aeginetan “	=	144 “

The $\xi\sigma\tau\epsilon\rho\varsigma$, or Roman *sextarius*, is not to be confounded with the genuine Attic $\xi\sigma\tau\epsilon\rho\varsigma$ or sixth of the *medimnus*, which was equal to the Roman *modius*. (On the whole of this part of the subject, see Böckh, cc. iii. xi. xv.—xvii.)

From the preceding remarks it will be seen that the only safe mode of computing the content of the amphora in terms of our own measures of capacity is by deducing it from the value already assigned to the Roman pound, on the authority chiefly of the coins. That value may be taken, in round numbers, at 5050 grains. Now the imperial gallon contains 70,000 grains. Therefore

$$8 \text{ h. } 2$$

the Roman amphora = $\left(\frac{5050 \times 80}{70000}\right) = 5.77$ imperial gallons, or a little more than $5\frac{1}{2}$ gallons, or than 5 gallons and 6 pints. If we were to make the computation directly from the congius of Vespasian, we should have a somewhat higher value; which, as has already been shown under PONDRA, arises probably from a source of error. On the other hand, the computation from the Roman cubic foot gives a somewhat lower value [PONDRA]; but, as already intimated, it is very doubtful whether the true content of the amphora was exactly a cubic foot, and in fact, if Böckh be right, it was a little more. At all events, the value of 6 gallons 6 pints is quite near enough to the truth for all the purposes of the classical student. (See the *Tabulae*.) On the other hand, if we were to reckon the *quadrantal* at exactly 6 gallons, and consequently the *sestarius*, which is the small unit of the system, at exactly 1 pint (instead of .96) we should obtain a system so extremely simple, and with so small a limit of error (namely less than $\frac{1}{40}$ in a pint), that it would probably be allowable to adopt it in the ordinary reading of the classic authors; indicating, however, the small error, by prefixing in each case the words *a little less than*; and correcting it, when the numbers are large, by taking from the result 1-25th of itself. [P.S.]

QUADRIGAE. [CURRUS, p. 379.]

QUADRIGATUS. [DENARIUS.]

QUADRIREMES. [NAVIS, p. 785, b.]

QUADRUPES. [PAUPERIES.]

QUADRUPLATORÆS, public informers or accusers, were so called, either because they received a fourth part of the criminal's property, or because those who were convicted were condemned to pay fourfold (*quadrupli damnavi*), as in cases of violation of the laws respecting gambling, usury, &c. (Pseudo-Ascon, in *Cic. Divin.* p. 110, in *Verr.* ii. p. 208, ed. Orelli; Festus, s. v.) We know that on some occasions the accuser received a fourth part of the property of the accused (*Tac. Ann.* iv. 21); but the other explanation of the word may also be correct, because *uenera*, who violated the law, were subjected to a penalty of four times the amount of the loan. (Cato, *de Re Rust.* init.) When the general right of accusation was given, the abuse of which led to the springing up of the *Quadruplatores*, is uncertain; but originally all fines went into the common treasury, and while that was the case the accusations no doubt were brought on behalf of the state. (Niebuhr, *Hist. of Rome*, vol. iii. p. 37.) Even under the republic an accusation of a public officer, who had merited it by his crimes, was considered a service rendered to the state; the name of *Quadruplatores* seems to have been given by way of contempt to mercenary or false accusers. (*Cic. Div.* ii. 7, c. *Verr.* ii. 7; *Plaut. Pers.* i. 2. 10; *Liv.* iii. 72.) Seneca (*de Benef.* vii. 26) calls those who sought great returns for small favours, *Quadruplatores beneficiorum suorum*.

QUADRUPLICATIO. [ACTIO.]

QUADRUSIS. [AS.]

QUAESTIONES, QAESTIONES PERPETUAE. [JUDEX, p. 648, b; PRÆTOR, p. 957, a.]

QUAESTOR is a name which was given to two distinct classes of Roman officers. It is derived from *quaero*, and Varro (*De Ling. Lat.* v. 81) gives a definition which embraces the principal

functions of both classes of officers: "Quaestores a quaerendo, qui conquirent publicas pecunias et maleficia." The one class therefore had to do with the collecting and keeping of the public revenues, and the others were a kind of public accusers. The former bore the name of *quaestores classici*, the latter of *quaestores parricidii*. (*Dig.* i. tit. 2. s. 2. § 22, 23.)

The *quaestores parricidii* were, as we have said, public accusers, two in number, who conducted the accusation of persons guilty of murder or any other capital offence, and carried the sentence into execution. (Festus, s. v. *Parici* and *Quaestores*; *Liv.* ii. 41; *Dionys.* viii. 77.) There are many points which might make us inclined to believe that the *quaestores parricidii* and the *duumviri perduellionis* were the same officers; but a closer examination shows that the former were a permanent magistracy, while the latter were appointed only on special emergencies. [See *PERDUELLIONIS DUUMVIRI*.] All testimonies agree that these public accusers existed at Rome during the period of the kings, though it is impossible to ascertain by which king they were instituted (*Fest.* l. c.; *Tacit. Annal.* xi. 22; *Dig.* i. tit. 13), as some mention them in the reign of Romulus and others in that of Numa. When Ulpian takes it for certain that they occurred in the time of Tullus Hostilius, he appears to confound them, like other writers, with the *duumviri perduellionis*, who in this reign acted as judges in the case of Horatius, who had slain his sister. During the kingly period there occurs no instance in which it could be said with any certainty, that the *quaestores parricidii* took part. As thus everything is so uncertain, and as late writers are guilty of such manifest confusions, we can say no more than that such public accusers existed, and infer from the analogy of later times that they were appointed by the *populus* on the presentation of the king. In the early period of the republic the *quaestores parricidii* appear to have become a standing office, which, like others, was held only for one year. (*Liv.* iii. 24, 25.) They were appointed by the *populus* or the *curies* on the presentation of the consuls. (*Dig.* i. tit. 2. s. 2. § 23; *Tacit.* l. c.) When these *quaestores* discovered that a capital offence had been committed, they had to bring the charge before the *comitia* for trial. (*Liv.* iii. 24; *Dionys.* viii. 75.) They convoked the *comitia* through the person of a *trumpeter*, who proclaimed the day of meeting from the capitol, at the gates of the city, and at the house of the accused. (Varro, *de Ling. Lat.* vi. 90, ed. Müller.) When the sentence had been pronounced by the people, the *quaestores parricidii* executed it; thus they threw Spurius Cassius from the Tarpeian rock. (*Dionys.* viii. 77; *Liv.* ii. 41; *Cic. de Re Publ.* ii. 35.) They were mentioned in the laws of the Twelve Tables, and after the time of the decemvirate they still continued to be appointed, though probably no longer by the *curies*, but either in the *comitia centuriata* or *tributa*, which they therefore must also have had the right to assemble in cases of emergency. (Varro, *de Ling. Lat.* vi. 9.) This appears to be implied in the statement of Tacitus, that in the year 447 B. C. they were created by the people without any presentation of the consuls. From the year 366 B. C. they are no longer mentioned in Roman history, as their functions were gradually transferred to the *triumviri capitales*. (Val. Max. v. 4. § 7, viii. 4. § 2; Sallust,

Ord. 55; TRIUMVIRI CAPITALES), and partly to the aediles and tribunes. (AEDILES, TRIBUNI; Niebuhr, *Hist. of Rome*, vol. iii. p. 44; Zachariae, *Sulla, als Ordner*, &c. vol. ii. p. 147, &c.) The quaestores paricidii have not only been confounded with the duumviri perduellionis, but also with the quaestores classici (Tacit. *l. c.*; Zonar. vii. 13, &c.), and this probably owing to the fact, that they ceased to be appointed at such an early period, and that the two kinds of quaestors are seldom distinguished in ancient writings by their characteristic epithets. (Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 228, &c.)

The quaestores classici were officers entrusted with the care of the public money. It is established by the clearest possible evidence, that during the kingly period this magistracy did not exist (Liv. iv. 4; Plut. *Popl.* 12), and it would seem that a considerable time elapsed after the expulsion of the kings, before this magistracy was instituted. Their distinguishing epithet classici is not mentioned by any ancient writer, except Lydus (*De Mag.* i. 27), who however gives an absurd interpretation of it. Niebuhr (vol. ii. p. 430) refers it to their having been elected by the centuries ever since the time of Valerius Publicola, who is said to have first instituted the office. (Plut. *Publ.* 12.) They were at first only two in number, and of course taken only from the patricians. As the senate had the supreme administration of the finances, the quaestors were in some measure only its agents or paymasters, for they could not dispose of any part of the public money without being directed by the senate. Their duties consequently consisted in making the necessary payments from the aerarium, and receiving the public revenues. Of both they had to keep correct accounts in their *tabulae publicae*. (Polyb. vi. 13.) Demands which any one might have on the aerarium, and outstanding debts were likewise registered by them. (Pseudo-Ascon. in *Ferrin.* p. 158, Orelli; Plut. *Cat. Min.* 27.) Fines to be paid to the public treasury were registered and exacted by them. (Liv. xxxviii. 60; Tacit. *Annal.* xiii. 28.) Another branch of their duties, which however was likewise connected with the treasury, was to provide the proper accommodations for foreign ambassadors and such persons as were connected with the republic by ties of public hospitality. Lastly they were charged with the care of the burials and monuments of distinguished men, the expenses for which had been decreed by the senate to be defrayed by the treasury. In the aerarium, and consequently under the superintendence of the quaestors, were kept the books in which the senatus-consulta were registered (Joseph. *Ant. Jud.* xiv. 10, 10; Plut. *Cat. Min.* 17), while the original documents were in the keeping of the aediles, until Augustus transferred the care of them also to the quaestors. (Dion Cass. liv. 36.)

In the year A. C. 421 the number of quaestors was doubled, and the tribunes tried to effect by an amendment of the law that a part (probably two) of the quaestores should be plebeians. (Liv. iv. 43; Niebuhr, vol. ii. p. 430, &c.) This attempt was indeed frustrated, but the interrex L. Papirius effected a compromise, that the election should not be restricted to either order. After this law was carried, eleven years passed without any plebeian being elected to the office of quaestor, until in A. C. 409, three of the four quaestors were plebeians. (Liv. iv. 54.) A person who had held the office

of quaestor had undoubtedly, as in later times, the right to take his seat in the senate, unless he was excluded as unworthy by the next censors. And this was probably the reason why the patricians so determinately opposed the admission of plebeians to this office. [SENATUS.] Henceforth the consuls, whenever they took the field against an enemy, were accompanied by one quaestor each, who at first had only to superintend the sale of the booty, the produce of which was either divided among the legion, or was transferred to the aerarium. (Liv. iv. 53.) Subsequently however we find that these quaestors also kept the funds of the army, which they had received from the treasury at Rome, and gave the soldiers their pay; they were in fact the pay-masters in the army. (Polyb. vi. 39.) The two other quaestors, who remained at Rome, continued to discharge the same duties as before, and were distinguished from those who accompanied the consuls by the epithet *urbani*. In the year A. C. 265, after the Romans had made themselves masters of Italy, and when, in consequence, the administration of the treasury and the raising of the revenues became more laborious and important, the number of quaestors was again doubled to eight (Lyd. *de Mag.* i. 27; Liv. *Epit.* lib. 15; Niebuhr, vol. iii. p. 645); and it is probable that henceforth their number continued to be increased in proportion as the empire became extended. One of the eight quaestors was appointed by lot to the *quaestura ostiensis*, a most laborious and important post, as he had to provide Rome with corn. (Cic. *pro Muræ.* 8, *pro Sext.* 17.) Besides the quaestor ostiensis, who resided at Ostia, three other quaestors were distributed in Italy to raise those parts of the revenue which were not farmed by the publicani, and to control the latter. One of them resided at Calea, and the two others probably in towns on the Upper Sea. (Cic. in *Vol.* 5.) The two remaining quaestors, who were sent to Sicily, are spoken of below.

Sulla in his dictatorship raised the number of quaestors to twenty, that he might have a large number of candidates for the senate (*senatus splendens*, Tacit. *Annal.* xi. 22), and Julius Caesar even to forty. (Dion Cass. xliii. 47, 51.) In the year A. C. 49 no quaestors were elected, and Caesar transferred the keeping of the aerarium to the aediles. From this time forward the treasury was sometimes entrusted to the praetors, sometimes to the praetorii, and sometimes again to quaestors. [AERARIUM.] Quaestors however, both in the city and in the provinces, occur down to the latest period of the empire. Some of them bore the title of *candidati principis*, and their only duty was to read in the senate the communications which the princeps had to make to this assembly (*libri principales, epistolae principis*, Dig. 1. tit. 13. § 2 and 4; Lyd. *de Mag.* i. 28; Lamprid. *Alex. Sev.* 43; Plin. *Epist.* vii. 16). From the time of the emperor Claudius all quaestors, on entering their office, were obliged to give gladiatorial games to the people, at their own expense, whereby the office became inaccessible to any one except the wealthiest individuals. (Suet. *Claud.* 24; Tacit. *Annal.* l. c. xiii. 5; Suet. *Domit.* 4; Lamprid. *Alex. Sev.* 43.) When Constantinople had become the second capital of the empire, it received like Rome its quaestors, who had to give games to the people on entering upon their office; but they were probably, like the praetors, elected by

the senate and only announced to the emperor. (Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 332, &c.; Walter, *Gesch. des Röm. Rechts*, p. 371.)

The proconsul or praetor, who had the administration of a province, was attended by a quaestor. This quaestor had undoubtedly to perform the same functions as those who accompanied the armies into the field; they were in fact the same officers, with the exception that the former were stationary in their province during the time of their office, and had consequently rights and duties which those who accompanied the armies could not have. In Sicily, the earliest Roman province, there were two quaestors answering to the two former divisions of the island into the Carthaginian and Greek territory. The one resided at Lilybaeum, the other at Syracuse. Besides the duties which they had in common with the pay-masters of the armies, they had to levy those parts of the public revenue in the province which were not farmed by the publicani, to control the publicani, and to forward the sums raised, together with the accounts of them, to the aerarium. (Pseudo-Ascon. in *Verris*. p. 167, Orelli.) In the provinces the quaestors had the same jurisdiction as the curule aediles at Rome. (Gaius, i. 6.) The relation existing between a praetor or proconsul of a province and his quaestor was according to ancient custom regarded as resembling that between a father and his son. (Cic. *Divin.* 19, c. *Verr.* ii. l. 15, *pro Plana*. 11, *ad Fam.* iii. 10.) When a quaestor died in his province, the praetors had the right to appoint a proquaestor in his stead (Cic. *c. Verr.* l. c.), and when the praetor was absent, the quaestor supplied his place, and was then attended by lictors. (Cic. *ad Fam.* ii. 15, *pro Plana*. 41.) In what manner the provinces were assigned to the quaestors after their election at Rome, is not mentioned, though it was probably by lot, as in the case of the quaestor ostiensis. But in the consulship of Decimus Drusus and Porcina it was decreed that the provinces should be distributed among the quaestors by lot *ex senatus consulto*. (Dig. l. tit. 13. § 2; Cic. *c. Verr.* ii. l. 13.) During the time of the empire this practice continued, and if the number of quaestors elected was not sufficient for the number of provinces, those quaestors of the preceding year, who had had no province, might be sent out. This was, however, the case only in the provinces of the Roman people, for in those of the emperors there were no quaestors at all. In the time of Constantine the title of *quaestor sacri palatii* was given to a minister of great importance, whose office probably originated in that of the candidati principis. Respecting his power and influence see Walter, *Gesch. d. Röm. R.* p. 365. [L.S.]

QUAESTORII LUDI. [LUDI QUAEITORIL]
QUAESTORIUM. [CASTRA, pp. 249, a, 253, b.]

QUALES-QUALES. [SERVUS.]

QUALUS. [CALATHUS.]

QUANTI MINORIS is an actio which a buyer had against the seller of a thing, in respect of any non-apparent faults or imperfections, at the time of the sale, even if the seller was not aware of them, or for any defects in the qualities of the thing which the seller had warranted: the object of the actio was to obtain an abatement in the purchase-money. This action was to be brought within a year or within six months, according as there was a *Cautio* or not. The actio quanti minoris

might be brought as often as a new defect was discovered; but the purchaser could not recover the value of the same thing twice. [EMTIO ET VENDITIO.] (Dig. 21. tit. 1; 44. tit. 2. a. 25 § 1.) [G.L.]

QUARTA/RIUS, a Roman measure of capacity one fourth of the *sestarius*, and consequently a little less than a quarter of a pint imperial. It is also found in the Greek system of liquid measures under the name of *tétraprov*. [P. S.]

QUINARIUS. [DENARIUS.]

QUINCUNX. [AS, p. 140, b.]

QUINDECIMVIRI. [DECEMVIRI, p. 387, a.]

QUINQUAGESIMA, the fiftieth or a tax of two per cent. upon the value of all slaves that were sold, was instituted by Augustus according to Dion Cassius (lv. 31). Tacitus (xiii. 31), however, mentions the twenty-fifth or a tax of four per cent. upon the sale of slaves in the time of Nero: if both passages are correct, this tax must have been increased after the time of Augustus, probably by Caligula, who, we are told by Suetonius (*in vita*, c. 40), introduced many new taxes. (Burmman, *de Vectig.* p. 69, &c.)

We are also told by Tacitus (*Ann.* xiii. 51) that Nero abolished the Quinquagesima; this must have been a different tax from the above-mentioned one, and may have been similar to the Quinquagesima mentioned by Cicero (*c. Verr.* iii. 49) in connection with the Aratores of Sicily.

A duty of two per cent. was levied at Athens upon exports and imports. [PENTECOSTE.]

QUINQUATRUS or QUINQUATRIA, a festival sacred to Minerva, which was celebrated on the 19th of March (*a. d. xiv. Kal. Apr.*), and was so called according to Varro (*de Ling. Lat.* vi. 14, ed. Müller), because it was the fifth day after the Ides, in the same way as the Tusculans called a festival on the sixth day after the Ides *Sevstrus*, and one on the seventh *Septimistrus*. Gellius (ii. 21) and Festus (*s. v.*) also give the same etymology, and the latter states that the Faliscans too called a festival on the tenth day after the Ides *Decimistrus*. (Comp. Müller, *Etrusker*, vol. ii. p. 49.) Both Varro and Festus state that the Quinquatrus was celebrated for only one day, but Ovid (*Fast.* iii. 809, &c.) says that it was celebrated for five days, and was for this reason called by this name: that on the first day no blood was shed, but that on the last four there were contests of gladiators. It would appear however from the above-mentioned authorities that the first day was only the festival properly so called, and that the last four were merely an addition made perhaps in the time of Caesar to gratify the people, who became so passionately fond of gladiatorial combats. The ancient Calendars too assign only one day to the festival.

Ovid (*l. c.*) says that this festival was celebrated in commemoration of the birth-day of Minerva; but according to Festus it was sacred to Minerva because her temple on the Aventine was consecrated on that day. On the fifth day of the festival, according to Ovid (iii. 849), the trumpets

used in sacred rites were purified; but this seems to have been originally a separate festival called *Tubilustrium* (Festus, s. v.; Varro, l. c.), which was celebrated as we know from the ancient Calendars on the 23d of March (a. d. x. Cal. Apr.), and would of course, when the *Quinquatrus* was extended to five days, fall on the last day of that festival.

As this festival was sacred to Minerva, it seems that women were accustomed to consult fortune-tellers and diviners upon this day. (Plaut. *Mil.* iii. 1. 98.) Domitian caused it to be celebrated every year in his Alban Villa, situated at the foot of the hills of Alba, and instituted a collegium to superintend the celebration, which consisted of the hunting of wild beasts, of the exhibition of plays, and of contests of orators and poets. (Suet. *Dom.* 4.)

There was also another festival of this name called *Quinquatrus Minusculas* or *Quinquatrus Minores*, celebrated on the Ides of June, on which the tibicines went through the city in procession to the temple of Minerva. (Varro, *de Ling. Lat.* vi. 17; Ovid. *Fast.* vi. 651, &c.; Festus, p. 149, ed. Müller.)

QUINQUENNALIA, were games instituted by Nero A. D. 60, in imitation of the Greek festivals, and celebrated like the Greek *penteterides* at the end of every four years; they consisted of musical, gymnastic, and equestrian contests, and were called *Neronia*. (Suet. *Ner.* 12; Tac. *Ann.* xiv. 20; Dion Cass. lxi. 21.) Suetonius and Tacitus (*l. cc.*) say that such games were first introduced at Rome by Nero. The *Quinquennalia*, which had previously been instituted both in honour of Julius Caesar (Dion Cass. xlv. 6) and of Augustus (*Id.* li. 19; Suet. *Aug.* 59, 98), were confined to the towns of Italy and the provinces. The *Quinquennalia* of Nero appear not to have been celebrated after his time, till they were revived again by Domitian in honour of the Capitoline Jupiter. (Suet. *Dom.* 4.)

QUINQUENNALIS. [COLONIA, p. 318, b.]
QUINQUEREMIS. [NAVIS, p. 785, b.]
QUINQUERTIUM. [PENTATHLON.]

QUINQUEVIRI, or five commissioners, were frequently appointed under the republic as extraordinary magistrates to carry any measure into effect. Thus *Quinqueviri Mensarii*, or public bankers, were occasionally appointed in times of great distress [MENSARII]; the same number of commissioners was sometimes appointed to superintend the formation of a colony, though three (*triviri*) was a more common number. [COLONIA, p. 315, b.] We find too that *Quinqueviri* were created to superintend the repairs of the walls and of the towers of the city (Liv. xxv. 7), as well as for various other purposes.

Besides the extraordinary commissioners of this name, there were also permanent officers, called *Quinqueviri*, who were responsible for the safety of the city after sunset, as it was inconvenient for the regular magistrates to attend to this duty at that time: they were first appointed soon after the war with Pyrrhus. (Dig. i. tit. 2. a. 2. § 31.)

QUINTANA. [CASTRA.]

QUIRINALIA, a festival sacred to Quirinus, which was celebrated on the 17th of February (a. d. xiii. Cal. Mart.), on which day Romulus (Quirinus) was said to have been carried up to heaven. (Ovid. *Fast.* ii. 475; Festus, s. v.; Varro,

de Ling. Lat. vi. 13, ed. Müller.) This festival was also called *Stultorum feriae*, respecting the meaning of which see FORNACALIA.

QUIRINALIS FLAMEN. [FLAMEN.]

QUIRITES, QUIRITIUM JUS. [JUS, p. 658, a.]

QUOD JUSSU, ACTIO. [JUSSU, QUOD, ACTIO.]

QUORUM BONORUM, INTERDICTUM. The object of this interdict is to give to the Praetorian heres the possession of anything belonging to the hereditas which another possesses pro herede or pro possessore. The name of this Interdict is derived from the introductory words, and it runs as follows: "Ait Praetor: Quorum bonorum ex edicto meo illi possessio data est: quod de his bonis pro herede aut pro possessore possides, possideresve si nihil usucaptum esset: quod quidem dolo malo fecisti, uti desineres possidere: id illi restituas." The plaintiff is entitled to this Interdict when he has obtained the Bonorum Possessio, and when any one of the four following conditions apply to the defendant.

1. Quod de his bonis pro herede,
2. Aut pro possessore possides,
3. Possideresve si nihil usucaptum esset,
4. Quod quidem dolo malo fecisti, uti desineres possidere.

The two first conditions are well understood, and apply also to the case of the hereditatis petitio. The fourth condition also applies to the case of the hereditatis petitio and the rei vindicatio; but instead of "quod quidem" the reading "quodque" has been proposed, which seems to be required, for No. 4 has no reference to No. 3, but is itself a new condition. The words of No. 3 have caused some difficulty, which may be explained as follows.

In establishing the Bonorum Possessio, the Praetor intended to give to many persons, such as emancipated children and Cognati, the same rights that the heres had; and his object was to accomplish this effectually. The Roman heres was the representative of the person who had died and left an hereditas, and by virtue of this representative or juridical fiction of the person of the dead having a continued existence in the person of the heres, the heres succeeded to his property and to all his rights and obligations. In the matter of rights and obligations the Praetor put the bonorum possessor in the same situation as the heres by allowing him to sue in respect of the claims that the deceased had, and allowing any person to sue him in respect of claims against the deceased, in an actio utilis or fictitia. (Ulp. *Frag.* tit. 28. a. 12; Gaius, iv. 34.) In respect to the property, according to the old law any person might take possession of a thing belonging to the hereditas, and acquire the ownership of it in a certain time by usucapion. (Gaius, ii. 52—58.) The persons in whose favour the Praetor's edict was made could do this as well as any other person; but if they found any other person in possession of anything belonging to the hereditas, they could neither claim it by the vindicatio, for they were not owners, nor by the hereditatis petitio, for they were not heredes. To meet this difficulty the Interdictum Quorum Bonorum was introduced, the object of which was to aid the Bonorum Possessor in getting the possession (whence the title of the Interdictum adipiscendae possessionis) and so commencing the usucapion.

If he lost the possession before the usucapion was complete, he could in most cases recover it by the Possessorial Interdicts, properly so called, or by other legal means. This, according to Savigny, is the origin of the Bonorum Possessio.

In course of time when Bonitarian ownership (in bonis) was fully established and co-existed with Quiritarian ownership, this new kind of ownership was attributed to the Bonorum Possessor, after he had acquired the Bonorum Possessio, and thus all that belonged to the deceased ex jure Quiritium became his in bonis and finally by Usucapion, ex jure Quiritium; though in the mean time he had most of the practical advantages of Quiritarian ownership. Ultimately the Bonorum Possessio came to be considered as a species of hereditas, and the like forms of procedure to those in the case of the real hereditas were applied to the case of the Bonorum Possessio: thus arose the *possessoria hereditatis petitio*, which is mentioned by Gaius, and cannot therefore be of later origin than the time of Marcus Aurelius. Thus the new form of procedure, which would have rendered the Interdict Quorum Bonorum unnecessary, if it had been introduced sooner, co-existed with the Interdict, and a person might avail himself of either mode of proceeding, as he found best. (Gaius, iii. 34.) In the legislation of Justinian, we find both forms of procedure mentioned, though that of the Interdict had altogether fallen into disuse. (Inst. 4. tit. 15.)

According to the old law, any possessor, without respect to his title, could by usucapion pro herede obtain the ownership of a thing belonging to the hereditas; and of course the Bonorum Possessor was exposed to this danger as much as the Heres. If the time of Usucapion of the possessor was not interrupted by the first claim, the heres had no title to the Interdict, as appears from its terms, for such a possessor was not included in No. 1 or 2. Hadrian (Gaius, ii. 57) by a *senatusconsultum* changed the law so far as to protect the heres against the complete usucapion of an *Improbis Possessor*, and to restore the thing to him. Though the words of Gaius are general, there can be no doubt that the *Senatusconsultum* of Hadrian did not apply to the Usucapion of the Bonorum Possessor nor to that of the *Bonae fidei possessor*. Now if we assume that the *Senatusconsultum* of Hadrian applied to the Bonorum Possessor also, its provisions must have been introduced into the formula of the Interdict, and thus the obscure passage No. 3 receives a clear meaning, which is this: You shall restore that also which you no longer possess pro possessore, but once so possessed, and the possession of which has only lost that quality in consequence of a *lucrative usucapio*. According to this explanation the passage No. 3 applies only to the new rule of law established by the *Senatusconsultum* of Hadrian, which allowed the old usucapion of the *improbis possessor* to have its legal effect, but rendered it useless to him by compelling restitution. In the legislation of Justinian consequently these words have no meaning, since that old usucapion forms no part of it; yet the words have been retained in the compilation of Justinian, like many others belonging to an earlier age, though in their new place they are entirely devoid of meaning.

(Savigny, *Ueber das Interdict Quorum Bonorum*, *Zeitschrift*, &c. vol. v.; Dig. 43. tit. 2; Gaius, iv. 144.)

[G. L.]

R.

RAMNES, RAMNENSES. [PATRICII]

RAPINA. [BONA RAPTA; FURTUM.]

RASTER or RASTRUM, *dim.* RASTELLUS, RALLUS, RALLUM (*ῥαστήρ*), a spud (*ῥάπτος*); a rake, a hoe. Agreeably to its derivation from *rado*, to scrape, "Raster" denoted a hoe which in its operation and in its simplest form resembled the scrapers used by our scavengers in cleansing the streets. By the division of its blade into tines or prongs, it assumed more of the form of our garden-rakes, and it was distinguished by the epithets *bidens* and *quadridens* (Cato *de Re Rust.* 10) according to the number of the divisions.

The *raster bidens* was by far the most common species, and hence we frequently find it mentioned under the simple name *bidens*. (Juv. iii. 228.) This term corresponds to the Greek *δίκελλα*, for which *σμίρη* was substituted in the Attic dialect. (Xen. *Cyrop.* vi. 2. § 34, 36; Aristoph. *Nub.* 1488, 1502, *Aves*, 601; Phryn. *Ecl.* p. 302, ed. Lobeck; Plato, *Repub.* p. 426, f; Tim. *Lex. Plat.* s. v.) The *bidens* was used to turn up the soil, and thus to perform on a small scale the part of a plough. (Plin. *H. N.* xvii. 9. a. 6.) But it was much more commonly used in the work called *occatio*, i. e. the breaking down of the clods after ploughing. (Virg. *Georg.* i. 94, 155.) [AGRICULTURA, p. 52, a.] Hence it was heavy. (Ovid. *Met.* xi. 101.) The prongs of the *bidens* held by the rustic in the woodcut at p. 849 are curved, which agrees with the description of the same implement in Catullus (lvi. 39). Vine-dressers continually used the *bidens* in hacking and breaking the lumps of earth, stirring it, and collecting it about the roots of the vines. (Virg. *Georg.* ii. 355, 400; Col. *de Re Rust.* iii. 13, iv. 14, *Geopon.* v. 25.) In stony land it was adapted for digging trenches, whilst the spade was better suited to the purpose when the soil was full of the roots of rushes and other plants. (Plin. *H. N.* xviii. 6. a. 8; Suet. *Nero*, 19.) [PALA.] Wooden rakes were sometimes used. (Col. *de Re Rust.* ii. 13.) [J. Y.]

RATES. [NAVIS, p. 783, a.]

RATIO'NIBUS DISTRAHENDIS ACTIO. [TUTELA.]

RECEPTA; DE RECEPTO, ACTIO. The Praetor declared that he would allow an action against Nautae, Caupones, and Stabularii, in respect of any property for the security of which they had undertaken (*receptum*), whence the name of the action) if they did not restore it. The meaning of the term Nauta has been explained [EXERCITORIA ACTIO]: the meaning of Caupo follows from the description of the business of a Caupo. (Dig. 4. tit. 9. a. 5.) "A Nauta, Caupo, and Stabularius are paid not for the care which they take of a thing; but the Nauta is paid for carrying passengers; the Caupo for permitting travellers to stay in his Caupona; the Stabularius for allowing beasts of burden to stay in his stables, and yet they are bound for the security of the thing also (*custodias nomine tenentur*). The two latter actions are similar to such actions as arise among us against innkeepers, and livery stable keepers, on whose premises loss or injury has been sustained with respect to the property of persons which they have by legal implication undertaken the care of. At first sight there seems no reason

for these Praetoriae actiones, as the person who had sustained loss would either have an actio locati and conducti, in cases where payment had been agreed on, or an actio depositi, where no payment had been agreed on; but Pomponius suggests that the reason was this: in a matter of Locatum and Conductum, the receiver was only answerable for loss in case he was guilty of Culpa; and in a matter of Depositum, only in case he was guilty of Dolus Malus; but the receiver was liable to these Praetoriae actiones, if the thing was lost or injured even without any Culpa on his part, and he was only excused in case of Damnum fatale, such as shipwreck, piracy, and so forth.

These praetorian actions in factum were either "rei persecutoriae" for the recovery of the thing, or "poenales" for damages. The former action might be maintained against the heres of the Nauta, Caupo, or Stabularius. The Exercitor of a ship was answerable for any loss or damage caused to property, which he had received in the legal sense of this term, by any person in his employment. The actio against him was in duplum. The liability on the part of Caupones and Stabularii was the same: a caupo for instance was answerable for loss or damage to the goods of any traveller, if caused by those who were dwelling or employed in the caupona, but not if caused by a mere traveller. The actio for damages could not be maintained against the heres. (Dig. 4. tit. 9; Peckii In Titt. Dig. et Cod. Ad rem nauticam pertinentes Commentarii, &c. Amstel. 1668.)

As to the passages in the Digest (4. tit. 9. s. 1. § 1, and 47. tit. 5. § 6) see Vangerow, *Pandekten*, &c. iii. p. 436.

There is a title in the Digest (4. tit. 8), De Receptis, qui arbitrium receperunt ut sententiam dicant. When parties who had a matter to litigate, had agreed to refer it to an arbitrator, which reference was called Compromissum, and a person had accepted the office of arbitrator (*arbitrium receperit*), the praetor would compel him to pronounce a sentence, unless he had some legal excuse. The Praetor could compel a person of any rank, as a Consularis for instance, to pronounce a sentence after taking upon him the office of arbitrator; but he could not compel a person who held a Magistratus or Potestas, as a Consul or Praetor, for he had no Imperium over them. The parties were bound to submit to the award of the arbitrator; and if either party refused to abide by it, the other had against him a poenae petitio, if a poena was agreed on in the compromissum; and if there was no poena in the compromissum, he had an Incerti actio. (Dig. 4. tit. 8.) [G. L.]

RECINIUM. [RICINIUM.]

RECISSORIA ACTIO. [INTERCESSIO.]

RECUPERATORRES. [JUDEX.]

REDEMPTOR, the general name for a contractor, who undertook the building and repairing of public works, private houses, &c., and in fact of any kind of work. (Festus, s. v.; Hor. Carm. iii. 1. 35, Ep. ii. 2. 72; Cic. de Div. ii. 21.) The farmers of the public taxes were also called Redemptores. (Dig. 19. tit. 2. s. 60. § 8.)

REDHIBITORIA ACTIO was an actio which a buyer had against a seller for rescinding the bargain of sale on account of any non-apparent defect at the time of the purchase in the thing purchased, which the buyer was not acquainted with, and which according to the Edict of the Curule

Aedile, he ought to have been acquainted with; or for any defect in the qualities of the thing which the seller had warranted. The seller was answerable even if he was not aware of the defects. "Redhibere," says Ulpian. "is so to act that the seller shall have back what he had, and because this is done by restoration, for that reason it is called 'Redhibitio,' which is as much as to say 'Redditio.'"

The effect of the redhibitio was to rescind the bargain and to put both parties in the same condition, as if the sale had never taken place. The time allowed for prosecuting the actio redhibitoria was "sex menses utiles," when a cautio had been given, which were reckoned from the day of sale or from the time when any statement or promise had been made relating to the matter (*dictum promissum*, the words of the Edict). If there was no cautio, the time allowed was two months. (Dig. 21. tit. 1.) [G. L.]

REDIMICULUM (*καθέρηφ*), a fillet attached to the Calantica, Diadema, Mitra, or other head-dress at the occiput, and passed over the shoulders, so as to hang on each side over the breast. (Virg. Aen. ix. 616; Ovid. Met. x. 265.) Redimicula were properly female ornaments (Festus, s. v.; Ovid. Epist. ix. 71; Juv. ii. 70; Prudent. Psychom. 448); and in the statues of Venus they were imitated in gold. (Ovid. Fast. iv. 135—137.) [J. Y.]

REGIA LEX. [LEX REGIA.]

REGIFUGIUM or FUGALIA, the king's flight, a festival which was celebrated by the Romans every year on the 24th of February, and according to Verrius (ap. Fest. s. v. *Regifugium*) and Ovid (Fast. ii. 685, &c.) in commemoration of the flight of king Tarquinius Superbus from Rome. The day is marked in the Fasti as nefastus. In some ancient calendaria the 24th of May is likewise called Regifugium, and in others it is described as Q. Rex. C. F., that is, "Quando Rex comitavit, fas," or "Quando Rex comitio fugit." Several ancient as well as modern writers have denied that either of these days had anything to do with the flight of king Tarquinius (Cincius, op. Fest. l. c.), and are of opinion that these two days derived their name from the symbolical flight of the Rex Sacrorum from the comitium; for this king-priest was generally not allowed to appear in the comitium, which was destined for the transaction of political matters in which he could not take part. But on certain days in the year, and certainly on the two days mentioned above, he had to go to the comitium for the purpose of offering certain sacrifices, and immediately after he had performed his functions there, he hastily fled from it; and this symbolical flight is said to have been called Regifugium. (Fest. l. c.; Plut. Quaest. Rom. 63; Ovid. Fast. v. 727.) [L. S.]

REGULA (*καρδύς*), the ruler used by scribes for drawing right lines with pen and ink (Brunck, Anal. iii. 69, 87); also the rule used by carpenters, masons, and other artificers, either for drawing straight lines or making plane surfaces. (Aristoph. Ran. 798; Vitruv. vii. 3. § 5.) That it was marked with equal divisions, like our carpenter's rules, is manifest from the representations of it among the "Instrumenta fabrorum tignariorum," in the woodcuts at pp. 287, 806. The substance, with which the lines were made, was raddle or red ochre (*μύκτος*, Brunck, Anal. i. 221; *πολύκτος καρδύς*, Eurip. Hera. Fur. 925.) [LINÆA.] The

scale-beam is sometimes called *καρὸν* instead of *συρόν*. [JUGUM.] [J. Y.]

REI UXORÆ or DOTIS ACTIO. [DOR.]

RELATIO. [SENATUS.]

RELEGATIO. [EXSILIUM. p. 515, b.]

REMANCIPATIO. [EMANCIPATIO.]

REMULCUM (*ῥιμουλκείν τὰς ναῦς*), a rope for towing a ship, and likewise a tow-barge ("Remulcum, funis, quo deligata navis magna trahitur vice remi," Isid. Orig. xix. 4. § 8; Remulco est, quum scaphæ remis navis magna trahitur," Festus, s. v.; comp. Caes. B. C. ii. 23, iii. 40; Hirt. B. Alex. 11; Liv. xxv. 30, xxxii. 16; Polyb. i. 27, 28, iii. 46).

REMURIA. [LEMURIA.]

REMUS. [NAVIS. pp. 787, b., 788, a.]

REPA'GULA. [JANUA. p. 626, b.]

REPETUNDÆ, or PECUNIAE REPETUNDÆ. Repetundæ Pecuniæ in its widest sense was the term used to designate such sums of money as the Socii of the Roman State or individuals claimed to recover from Magistratus, Judices, or Publici Curatores, which they had improperly taken or received in the Provinciae, or in the Urbs Roma, either in the discharge of their Jurisdictio, or in their capacity of Judices, or in respect of any other public function. Sometimes the word Repetundæ was used to express the illegal act for which compensation was sought, as in the phrase "Repetundarum insinulari, damnari;" and Pecuniæ meant not only money, but anything that had value. The expression which the Greek writers sometimes use for Repetundæ is *δίκη δόπων*. (Plut. Sulla, 5.)

It is stated by Livy (xlii. 1) that before the year B. C. 173, no complaints were made by the Socii of being put to any cost or charge by the Roman magistratus. When complaints of exactions were made, an inquiry was instituted into this offence extra ordinem ex Senatusconsulto as appears from the case of P. Furius Philus and M. Matienus, who were accused of this offence by the Hispani. (Liv. xliii. 2.) The first Lex on the subject was the Calpurnia, which was proposed and carried by the Tribunus Plebis, L. Calpurnius Piso (B. C. 149), who also distinguished himself as an historical writer. By this Lex a Praetor was appointed for trying persons charged with this crime. (Cic. de Off. ii. 21, Brut. 27.) This Lex only applied to Provincial Magistratus, because in the year B. C. 141 according to Cicero (de Fin. ii. 16) the like offence in a Magistratus Urbanus was the subject of a Quaestio extra ordinem. It seems that the penalties of the Lex Calpurnia were merely pecuniary, and at least did not comprise exile, for L. Cornelius Lentulus who was Censor B. C. 147, had been convicted on a charge of Repetundæ in the previous year. The pecuniary penalty was ascertained by the litis aestimatio, or taking an account of all the sums of money which the convicted party had illegally received.

Various leges de repetundis were passed after the Lex Calpurnia, and the penalties were continually made heavier. The Lex Junia was passed probably about B. C. 126 on the proposal of M. Junius Pennus, Tribunus Plebis. It is probable that this was the Lex under which C. Cato, Proconsul of Macedonia, was living in exile at Tarraco (Cic. pro Balbo, 11; Vell. Pat. ii. 8); for at least exile was not a penalty imposed by the Calpurnia Lex, but was added by some later Lex. This

Lex Junia and the Lex Calpurnia are mentioned in the Lex Servilia.

The Lex Servilia Glaucia was proposed and carried by C. Servilius Glaucia Praetor B. C. 100. This Lex applied to any magistratus who had improperly taken or received money from any private person; but a magistratus could not be accused during the term of office. The Lex enacted that the Praetor Peregrinus should annually appoint 450 judices for the trial of this offence: the judices were not to be senators. The penalties of the Lex were pecuniary and exile; the law allowed a comperendinatio. (Cic. in Verr. i. 9.) Before the Lex Servilia, the pecuniary penalty was simple restitution of what had been wrongfully taken; this Lex seems to have raised the penalty to double the amount of what had been wrongfully taken; and subsequently it was made quadruple. Exile was only the punishment in case a man did not abide his trial, but withdrew from Rome. (Savigny, Von dem Schutz der Mind., Zeitschrift, x.) Under this Lex were tried M' Aquilius, P. Rutilius, M. Scaurus, and Q. Metellus Numidicus. The Lex gave the Civitas to any person on whose complaint a person was convicted of Repetundæ. (Cic. pro Balbo, 23, 24.)

The Lex Acilia, which seems to be of uncertain date (probably B. C. 101), was proposed and carried by M' Acilius Glabrio, a Tribunus Plebis, which enacted that there should be neither ampliatio nor comperendinatio. It is conjectured that this is the Lex Caecilia mentioned by Valerius Maximus (vi. 9, 10), in which passage if the conjecture is correct, we should read Acilia for Caecilia. (Cic. in Verr. Act. i. 17, in Verr. i. 9.) It has sometimes been doubted whether the Acilia or Servilia was first enacted, but it appears that the Acilia took away the comperendinatio which the Servilia allowed.

The Lex Cornelia was passed in the dictatorship of Sulla B. C. 81, and continued in force to the time of C. Julius Caesar. It extended the penalties of Repetundæ to other illegal acts committed in the provinces, and to judices who received bribes, to those to whose hands the money came, and to those who did not give into the Aerarium their Proconsular accounts (proconsulares rationes). The Praetor who presided over this quaestio chose the judges by lot from the Senators, whence it appears that the Servilia Lex was repealed by this Lex, at least so far as related to the constitution of the court. This Lex also allowed ampliatio and comperendinatio. The penalties were pecuniary (litis aestimatio) and the aquae et ignis interdictio. Under this Lex were tried L. Dolabella, Cn. Piso, C. Verres, C. Macer, M. Fonteius, and L. Flaccus, the two last of whom were defended by Cicero. In the Verrine Orations Cicero complains of the comperendinatio or double hearing of the cause, which the Lex Cornelia allowed, and refers to the practice under the Lex Acilia, according to which the case for the prosecution, the defence, and the evidence were only heard once, and so the matter was decided. (In Verr. i. 9.)

The last Lex de Repetundis was the Lex Julia passed in the first consulship of C. Julius Caesar B. C. 59. (Cic. in Vat. 12.) This Lex consisted of numerous heads (capita) which have been collected by Sigonius. (Cic. ad Fam. viii. 8.) This Lex repealed the penalty of exile, but in addition to the litis aestimatio, it enacted that persons convicted under this Lex should lose their

rank, and be disqualified from being witnesses, judices, or senators. This is the Lex which was commented on by the Jurists, whose expositions are preserved in the Digest (48. tit. 11), and in the Code (9. tit. 27). This Lex adopted some provisions that existed in previous Leges, as for instance that by which the money that had been improperly retained could be recovered from those into whose hands it could be traced. (Cic. *pro C. Rubir. Post.* 4.) The Lex had been passed when Cicero made his oration against Piso, a. c. 55. (*In Pis.* 21.) A. Gabinius was convicted under this Lex. Many of its provisions may be collected from the oration of Cicero against Piso. Cicero boasts that in his proconsulship of Cilicia there was no cost caused to the people by himself, his legati, quaestor, nor any one else; he did not even demand from the people what the Lex (Julia) allowed him. (*Ad Att.* v. 16.)

Under the Empire the offence was punishable with exile. (Tacit. *Annal.* xiv. 28, and the note of Lipsius.)

In Clinton's *Fasti Hellenici*, the Lex Calpurnia is incorrectly stated to be the first law at Rome against Bribery at Elections. Bribery is *AMBITUS*.

(Sigonius *de Judiciis*, ii. c. 27; Rein, *Das Oriminalrecht der Römer*, p. 604. &c.; Rudorff, *Ueber die Octavianische Formel*, *Zeitschrift für Geschichte. Rechts.* &c. xii. p. 136.) [G. L.]

RESCRIPTUM. [CONSTITUTIONES.]

RESPONSA. [JURISCONSULTI.]

RESTITUTIO IN INTEGRUM, in the sense in which the term will here be used, signifies the rescinding of a contract or legal transaction so as to place the parties to it in the same position with respect to one another which they occupied before the contract was made or the transaction took place. The Restitutio here spoken of is founded on the Edict. If the contract or transaction is such as not to be valid according to the Jus Civile, this Restitutio is not needed; and it only applies to cases of contracts and transaction, which are not in their nature or form invalid. In order to entitle a person to the Restitutio, he must have sustained some injury capable of being estimated, in consequence of the contract or transaction, and not through any fault of his own; except in the case of one who is minor xxv annorum, who was protected by the Restitutio against the consequences of his own carelessness. The injury also must be one for which the injured person has no other remedy.

The Restitutio may either be effected on the complaint of the injured party, which would generally be made after the completion of the transaction, or when he is sued by the other party in respect of the transaction and defends himself by an Exceptio. The complaint as a general rule must be made within four years of the time of the injury being discovered, and of the party being capable of bringing his action; in the case of Minores the four years were reckoned from the time of their attaining their majority. In the case of an Exceptio there was no limitation of time. (Cod. 2. tit. 53.

a. 7.) According to the old law the complaint must be made within one year.

The application for a Restitutio could only be made to one who had Jurisdictio, either original or delegated, which flowed from the possession of the Imperium; and it might, according to the circumstances, be decreed by the Magistratus extra ordinem, or the matter might be referred to a Judex. When a Restitutio was decreed, each party restored to the other what he had received from him with all its accessions and fruits, except so far as the fruits on one side might be set off against the interest of money to be returned on the other side. All proper costs and expenses incurred in respect of the thing to be restored were allowed. If the object of the Restitutio was a right, the injured party was restored to his right; or if he had incurred a duty, he was released from the duty.

The action for Restitutio might be maintained by the person injured, by his heredes, cessionarii, and sureties; but as a general rule it could only be maintained against the person with whom the contract had been made, and not against a third person who was in possession of the thing which was sought to be recovered, except when the actio for restitutio was an actio in rem scripta, or the injured party had an actio in rem, or when the right which he had lost was a right in rem.

The grounds of Restitutio were either those expressed in the Edict, or any good and sufficient cause: "item si qua alia mihi justa causa esse videbitur in integrum restitutum, quod ejus per Leges, Plebiscita, Senatusconsulta, Edicta, Decreta Principum licebit" (Dig. 4. tit. 6. s. 1.)

The following are the chief cases in which a Restitutio might be decreed.

The case of Vis et Metus. If a man did an act that was injurious to himself, through vis or metus, the act was not for that reason invalid, nor was it considered that his assent was wanting (Dig. 4. tit. 2. s. 21. § 5): but it was contra bonos mores to allow such an act to have legal effect. When a man had acted under the influence of force, or reasonable fear caused by the acts of another party, he had an actio quod metus causa for restitution against the party who was the wrongdoer, and also against an innocent person who was in possession of any thing which had thus been got from him, and also against the heredes of the wrongdoer if they were enriched by being his heredes (*quantum ad eos pervenit*). If he was sued in respect of the transaction, he could defend himself by an exceptio quod metus causa. The actio Quod Metus was given by the Praetor L. Octavius, a contemporary of Cicero. (Compare Cic. *de Verr.* iii. 65, and Dig. 4. tit. 2. s. 1.)

The case of Dolus. When a man was fraudulently induced to become a party to a transaction, which was legal in all respects, saving the fraud, he had his actio de dolo malo against the guilty person and his heredes, so far as they were made richer by the fraud, for the restoration of the thing of which he had been defrauded, and if that was not possible, for compensation. Against a third party who was in bona fide possession of the thing, he had no action. If he was sued in respect of the transaction, he could defend himself by the exceptio doli mali. (Compare Dig. 4. tit. 3.)

The case of Minores xxv annorum. A Minor could by himself do no legal act for which the

assent of a Tutor or Curator was required, and therefore if he did such act by himself, no Restitutio was necessary. If the Tutor had given his Auctoritas, or the Curator his assent, the transaction was legally binding, but yet the Minor could claim Restitutio if he had sustained injury by the transaction. Gaius (iv. 57) gives an example, when he says that if too large an amount was inserted in the Condemnatio of the Formula, the matter is set right by the Praetor, or in other words "reus in integrum restituitur," but if too little was inserted in the formula, the Praetor would not make any alteration; "for," he adds, "the Praetor more readily relieves a defendant than a plaintiff; but we except the case of Minores xxv annorum, for the Praetor relieves persons of this class in all cases wherein they have committed error (in omnibus rebus lapsi)."

There were however cases in which Minores could obtain no Restitutio; for instance, when a Minor with fraudulent design gave himself out to be Major; when he confirmed the transaction after coming of age; and in other cases. The benefit of this Restitutio belonged to the heredes of the Minor, and generally also to sureties. The demand could only be made, as a general rule, against the person with whom the Minor had the transaction and his heredes. The Minor had four years after attaining his majority, in which he could sue. The older law allowed only one year. If the time had not elapsed when he died, his heres had the benefit of the remaining time, which was reckoned from the time adeundi hereditatem; and if the heres was a Minor, from the time of his attaining his majority. [CURATOR.]

The case of Absentia: which comprehends not merely absence in the ordinary sense of the word, but absence owing to madness or imprisonment, and the like causes. (Dig. 4. tit. 6. s. 28.) If a man had sustained injury by his own absentia, he was generally intitled to restitutio, if the absentia was unavoidable: if it was not unavoidable, he was intitled to Restitutio, either if he could have no redress from his Procurator, or was not blamable for not having appointed one. If a man found that he might sustain damage on account of the absence of his adversary, he might avoid that by entering a protestation in due form.

The case of Error, Mistake, comprehends such error as cannot be imputed as blame; and in such case, a man could always have restitutio when another was enriched by his loss. The erroris causae probatio somewhat resembles this case. (Gaius, i. 67—75.)

The case of Capitis diminutio through adrogatio or in manum conventio, which was legally followed by the extinction of all the obligations of the person adrogated or in manum. The Praetor restored to the creditors of such persons their former rights. (Gaius, iii. 83, iv. 38.)

The case of alienatio iudicii mutandi causa facta is hardly a case of restitutio, though sometimes considered such. It occurs when a man alienates a thing for the purpose of injuring a claimant by substituting for himself another against whom the claimant cannot so easily prosecute his right. In the case of a thing which the Possessor had thus alienated, the Praetor gave an actio in factum against the alienor to the full value of the thing. If a man assigned a claim or right with the view of injuring his adversary by giving him a harder

claimant to deal with, the adversary could meet the assignee, when he sued, with an exceptio iudicii mutandi causa.

The case of alienatio in fraudem creditorum facta. (Dig. 4.2. tit. 8.) When a man was insolvent (non solvendo), and alienated his property for the purpose of injuring his creditors, the Praetor's Edict gave the creditors a remedy. If for instance a debt was paid post bona possessa, it was absolutely void, for the effect of the Bonorum Possessio in the case of insolvency was to put all the creditors on the same footing. If any alienation was made before the Bonorum Possessio, it was valid in some cases. A debtor might reject any thing which was for his advantage, for the Praetor's edict related only to the diminution of his property, and not to its increase. If the act was such as to diminish his property (fraudationis causa) the creditors, as a general rule, were intitled to have the act undone. A creditor who exacted his just debt, was intitled to retain it. The actio by which the creditors destroyed the effect of an illegal alienation was called Pauliana, which was brought by the Curator bonorum in the name of the creditors, for the restoration of the thing which had been improperly alienated, and all its fruits. The creditors were also intitled to an Interdictum fraudatorium in order to get possession of the thing that had been improperly alienated. (Dig. 36. tit. 1. s. 67.)

In the Imperial times, Restitutio was also applied to the remission of a punishment (Tac. Ann. xiv. 12; Plin. Ep. x. 64, 65; Dig. 48. tit. 19. s. 27) which could only be done by the Imperial grace.

(Dig. 4. tit. 1—7; 44. tit. 4; Paulus, S. R. i. tit. 7—9; Cod. 2. tit. 20—55; Cod. Theod. 2. tit. 15, 16; Mühlbruch, *Doct. Pandect.*; Mackeldey, *Lehrbuch*, &c. 12th ed.; Rein, *Das Römische Privatrecht*; Rudorff, *Zeitschrift für Geschichte. Rechts.* xii. 131, *Ueber die Octavianische Formel*; Puchta, *Inst.* ii. § 209.) [G. L.]

RESTITUTORIA ACTIO. [INTERCESSIO.]

RETIA'RII. [GLADIATORES, p. 575, b.]

RETICULUM, a head-dress. [COMA, p. 329, a.]

RETIS and RETE; *dim.* RETICULUM (*δίκτυον*), a net. Nets were made most commonly of flax from Egypt, Colchia, the vicinity of the Cynips in North Africa, and some other places. Occasionally they were of hemp. (Varro, *de Re Rust.* iii. 5.) They are sometimes called *lina* (*λίνα*) on account of the material of which they consisted. (Hom. *Il.* v. 487; Brunn, *Anal.* ii. 494, 495.) The meshes (*maculae*, Ovid. *Epist.* v. 19; Varro, *de Re Rust.* iii. 11; Nemesiani, *Cyneg.* 302; *ῥόχοι*, *dim.* *ῥόχιδες*, Heliodor. vi. p. 231, ed. Commelin.) were great or small according to the purposes intended; and these purposes were very various. But by far the most important application of net-work was to the three kindred arts of fowling, hunting, and fishing; and besides the general terms used alike in reference to all these employments, there are special terms to be explained under each of these heads.

I. In fowling the use of nets was comparatively limited (Aristoph. *Av.* 528); nevertheless thrushes were caught in them (Hor. *Epod.* ii. 33, 34); and doves or pigeons with their limbs tied up or fastened to the ground, or with their eyes covered or put out, were confined in a net, in order that their cries might allure others into the snare. (Aristoph. *Av.* 1083.) The ancient Egyptians, as

we learn from the paintings in their tombs, caught birds in clap-nets. (Wilkinson, *Man. and Cnat.* vol. iii. pp. 35—38, 45.)

11. In hunting it was usual to extend nets in a curved line of considerable length, so as in part to surround a space into which the beasts of chase, such as the hare, the boar, the deer, the lion, and the bear, were driven through the opening left on one side. (Aelian, *H. A.* xii. 46; Tibullus, iv. 3. 12; Plin. *H. N.* xix. 2. § 2.) This range of nets was flanked by cords, to which feathers dyed scarlet and of other bright colours were tied, so as to flare and flutter in the wind. The hunters then sallied forth with their dogs, dislodged the animals from their covert, and by shouts and barking drove them first within the *formido*, as the apparatus of string and feathers was called, and then, as they were scared with this appearance, within the circuit of the nets. Splendid descriptions of this scene are given in some of the following passages, all of which allude to the spacious enclosure of net-work. (Virg. *Georg.* iii. 411—413, *Æm.* iv. 121, 151—159, x. 707—715; Ovid. *Epist.* iv. 41, 42, v. 19, 20; Oppian, *Cyn.* iv. 120—123; Eurip. *Bacchæ*, 821—832.) The accompanying woodcuts are taken from two bas-reliefs in the collection of ancient marbles at Ince-Blundell in Lancashire. In the uppermost figure three servants with staves carry on their shoulders a large net, which is in-

tended to be set up as already described. (Tibullus, i. 4. 49, 50; Sen. *Hippol.* i. 1. 44; Propert. iv. 2. 32.) The foremost servant holds by a leash a dog, which is eager to pursue the game. In the middle figure the net is set up. At each end of it stands a watchman holding a staff. (Oppian, *Cyneg.* iv.

124.) Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (*retia rura*, Virg. *Æm.* iv. 131; Hor. *Epod.* ii. 33). The net is supported by three stakes (*στέλakes*, Oppian, *Cyneg.* iv. 67, &c.; Pollux, v. 31; *ασκones*, Gratinus, *Cyneg.* 87; *vari*, Lucan, iv. 439). To dispose the nets in this manner was called *retia ponere* (Virg. *Georg.* i. 307), or *retia tendere* (Ovid. *Art. Amat.* i. 45). Comparing it with the stature of the attendants, we perceive the net to be between five and six feet high. The upper border of the net consists of a strong rope, which was called *σαρδόν*. (Xen. *de Venat.* vi. 9.) The figures in the following woodcut represent two men carrying the net home after the chase; the stakes for supporting it, two of which they hold in their hands, are forked at the top, as is expressed by the terms for them already quoted, *ασκones* and *vari*.

Besides the nets used to inclose woods and coverts or other large tracts of country two additional kinds are mentioned by those authors who treat on

hunting. All the three are mentioned together by Xenophon (*διατνα, ενδδια, αρκνες*, ii. 4), and by Nemesianus (*Cyneg.* 299, 300).

The two additional kinds were placed at intervals in the same circuit with the large hunting-net or haye. The road-net (*πλαγα, ενδδιον*) was much less than the others, and was placed across roads and narrow openings between bushes. The purse- or tunnel-net (*ασσις, αρκνς*) was made with a bag (*κεκρόφαλος*, Xen. *de Venat.* vi. 7), intended to receive the animal when chased towards the extremity of the inclosure. Within this bag, if we may so call it, were placed branches of trees, to keep it expanded and to decoy the animals by making it invisible. The words *αρκνς* or *ασσις* are used metaphorically to denote some certain method of destruction, and are more particularly applied, as well as *αμφιβληστρον*, which will be explained immediately, to the large shawl in which Clytemnestra enveloped her husband in order to murder him. (Æschyl. *Agam.* 1085, 1346, 1353, *Choeph.* 485, *Æumen.* 112.)

III. Fishing-nets (*ἀλιευτικά διατνα*, Diod. Sic. xvii. 43, p. 193, Wess.) were of six different kinds, which are enumerated by Oppian (*Hal.* iii. 80—82) as follows:—

Τῶν τὰ μὲν ἀμφιβληστρον, τὰ δὲ γρίφοι καλεῖσθαι,
Γάγγαμα τ', ἥδ' ὑποχαλ περιηγέες, ἥδὲ σαγήναι
Ἄλλα δὲ κικλήσκουσι καλύμματα.

Of these by far the most common were the *αμφιβληστρον*, or casting-net (*funda, jaculum, retinaculum*) and the *σαγήνη*, i. e. the drag-net, or sean (*tragum*, Isid. *Hisp. Orig.* xix. 5; *tragula, verriculum*). Consequently these two are the only kinds mentioned by Virgil in *Georg.* i. 141, 142, and by Ovid. in *Ar. Amat.* i. 763, 764. Of the *καλύμματα* we find nowhere any further mention. We are also ignorant of the exact form and use of the *γρίφος*, although its comparative utility may be inferred from the mention of it in conjunction with the sean and casting-net by Artemidorus (ii. 14) and Plutarch (*περὶ εὐδμ.* vol. v. p. 838, ed. Steph.). We know no more of the *γάγγαμον*. (Hesych. s. v.; Æschyl. *Agam.* 352.) The *ὑποχὴ* was a landing-net, made with a hoop (*κύκλος*) fastened to a pole, and perhaps provided also with the means of closing the circular aperture at the top. (Oppian, *Hal.* iv. 251.) The metaphorical use of the term *αμφιβληστρον* has been already mentioned. That it denoted a casting-net may be concluded both from its etymology and from the circumstances in which it is mentioned by various authors. (Hesiod, *Scut. Herc.* 213—215; Herod. i. 141; Pa. cxi. 10; Is. xix. 8; Hab. i. 15—17 (LXX. and Vulgate versions); St. Matt. iv. 18; St. Mark, i. 16.) More especially the casting-net, being always pear-shaped or conical, was suited to the use mentioned under the article CONOPSEUM.

Its Latin names are found in the passages of Virgil's *Georgics*, and of the Vulgate Bible above referred to, in *Plautus, Asinar.* i. 1. 87, *Truc.* i. 1. 14; and in *Isid. Hisp. Orig.* xix. 5.

The English term *seas* (which is also in the south of England pronounced and spelt *seine*, as in French), has been brought into our language by a corruption of the Greek *σαγήνη* through the Vulgate Bible (*saena*) and the Anglo-Saxon. (*Ezek.* xxvi. 5, 14, xlvii. 10; *St. Matt.* xiii. 47, 48; *St. John* xxi. 6—11.) This net, which, as now used both by the Arabians and by our own fishermen in Cornwall, is sometimes half a mile long, was probably of equal dimensions among the ancients, for they speak of it as nearly taking in the compass of a whole bay. (*Hom. Od.* xxii. 384—387; *Alciphron*, i. 17, 18.) This circumstance well illustrates the application of the term to describe the besieging of a city: to encircle a city by an uninterrupted line of soldiers was called *σαγήνευσεν*. (*Herod.* iii. 145, vi. 31; *Plato, de Leg.* iii. *sub fin.*; *Heliodorus*, vii. p. 304, ed. Commelini.) The use of corks (*φελλοι*, *cortices suberini*, *Sidon.* *Apollin. Epist.* ii. 2; *Plin. H. N.* xvi. 8. s. 13) to support the top, and of leads (*μολιβδίδες*) to keep down the bottom, is frequently mentioned by ancient writers (*Ovid. Trist.* iii. 4. 11, 12; *Aelian, H. A.* xii. 43; *Pausan.* viii. 12. § 1), and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats instead of corks, still remain on a *sean* which is preserved in the fine collection of Egyptian antiquities at Berlin. (See *Yates, Testinum Antiquum*, Appendix C.) [J. Y.]

REUS. [ΑΚΤΩΡ; OBLIGATIONES, p. 658.]

REX (*βασιλεύς, ἄναξ*), king. 1. GREEK. In the earliest ages of Greece, of which we have any authentic records, we find the kingly form of government everywhere prevalent. On this point we may safely trust the pictures of society found in the Homeric poems; for whatever amount of historical truth there may be in the legends which form their subject, there cannot be the smallest question that the poems present a faithful reflection of the feelings, condition and manners of the society in the age of which they were composed.

Whether in early times *absolute* monarchies existed in Greece, we have no historical data for determining. The first of which we can trace the features are *hereditary monarchies with limited functions* (*πρότερον δὲ ἦσαν ἐν ῥητοῖς γέρας πατρικαὶ βασιλείαι*, *Thuc.* i. 13; *ἡ περὶ τοὺς ἡρωϊκοὺς χρόνους [βασιλεία] ἦν ἐκόντων μὲν ἐπὶ τισὶ δ' ὀρισμένους*, *Arist. Pol.* iii. 10, ed. Göttl. 14, ed. Bekker; comp. *Dionys. Halic.* v. 74). By this we are to understand, not only that the kings were themselves under the control of law or custom, but that only a portion of the functions of political sovereignty were in their hands. This is the fourth species of *βασιλεία* which Aristotle recognises; the others being, α. the royalty of the Spartan kings; β. the royalty of barbarian kings (an hereditary despotism administered according to law); γ. the government of an *asymmetes* (*Arist. Pol.* iii. 9 or 14). It is not to be supposed, however, that the Grecian kings of the heroic age were *constitutional* kings, or were responsible to their subjects in any recognised sense. Their authority was founded purely on the personal feeling and reverence entertained for them by their subjects, and its limitations were derived not from any de-

finite scheme, or written code, but from the force of traditional usage, and the natural influence of the circumstances in which the kings were placed, surrounded as they were by a body of chiefs or nobles, whose power was but little inferior to that of the kings themselves. Even the title *βασιλῆς* is applied to them, as well as to the king (*Hom. Il.* ii. 86, *Od.* i. 394, vii. 55, viii. 391). The maintenance of regal authority doubtless depended greatly on the possession of personal superiority in bravery, military prowess, wisdom in council and eloquence in debate. When old age had blunted his powers and activity, a king ran a great chance of losing his influence. (*Od.* xi. 496; comp. *Il.* xii. 310, &c.) There was, however, an undefined notion of a sort of divine right connected with the kingly office (*ἐκ δὲ Διὸς βασιλῆς*, *Hesiod. Theog.* 96; comp. *Hom. Od.* xi. 255. Hence the epithet *διοτρεφής*, so commonly applied to kings in Homer). This, in most cases, was probably strengthened by a belief in the divine descent of kingly families.

Besides the more ordinary kingly accomplishments, there were various others, proficiency in which gave increased dignity and consideration even to a king. To be a skilful carpenter or ploughman was considered not unworthy of being made a matter of boast (*Hom. Od.* v. 246, xviii. 365, xxiii. 188). Prowess in boxing and other athletic exercises was more closely connected with superiority in the use of arms. (*Od.* viii. 180, &c. *Il.* xxiii. 257, &c.)

Aristotle (*l. c.*) mentions, as the functions of the kings in the heroic age, the leadership in war, the offering of such sacrifices as were not appropriated to particular priests, and the duty of deciding judicial causes. But both in the field and in the agora the king always appears in connection with the *βουλή*, or council of chiefs and elders, of which he acts as president. Even before Troy Agamemnon submits his plans to the assembled chieftains and soldiers (*Il.* ii. 53, &c. x. 195, &c.). The restrictive influence of these assemblies was, however, rather indirect than ostensible. The chieftains or princes merely offer their advice (*Il.* ix. 95, &c.), and the multitude assembled outside the circle in which they sit take no part in the deliberations. They only listen, and sometimes applaud (*Il.* ii. 100; *Aristot. ap. Schol. ad Il.* ix. 17). Still less is the matter in hand put in any formal way to the vote of either the *βουλή*, or the assembly of freemen. The assemblies described in the second book of the *Iliad* and the second book of the *Odyssey* will give a good idea of their nature. In judicial trials the council of elders seems always to have held a prominent place. (*Il.* xviii. 504; *Hesiod. Theog.* 85, *Op. et D.* 37.) Theoretically the government of the heroic age was in the strictest sense *monarchical* (see especially the remarkable passage *Il.* ii. 204). Here and there the poet represents kings as using language which would imply a power on the part of the king to deal with his dominions and subjects in a very summary manner (see the offer of Agamemnon to make over to Achilles seven cities, *Il.* ix. 153; and of Menelaus, to depopulate one of his towns to make room for Ulysses, *Od.* iv. 176). No doubt the power of different kings varied, and in the absence of definite constitutional restrictions the actual amount of power in the hands of each depended mainly on his individual qualifications and address. The cases, however, must have been extremely rare in

which it approached to absolute power (παύσασθαι). Even the voice of the commonalty carried a moral weight with it that ensured some degree of respect for it (χαλεπή δέμου φήμη, *Od.* xiv. 239, vi. 273).

Besides such private property as the king might possess, he had the use of a domain attached to the regal office. (*Od.* xi. 185.) The *τεμετήρη* here spoken of are different from the *κτήματα*, or private property of the family, which Telemachus would retain, even if excluded from the throne, and so deprived of the use of the royal domain. (*Od.* i. 402.) There were also stated *δύες* (δέωστες), which formed an important item in the king's emoluments (hence termed *Λισσάρι*, *Il.* ix. 156, 298). But besides these a large part of his revenues was derived from *présents* (δωρίαι or δώρα), which appear to have been given on most occasions on which his aid or protection was invoked (*Il.* ix. 155, xvii. 225). The characteristic emblem of the kingly office was the σκήπτρον (*Il.* ii. 101, 206). [SCPTUM.]

It was doubtless seldom that the rule of hereditary succession was infringed upon, though the case of Telemachus (*Od.* i. 386, &c.) indicates that under peculiar circumstances the idea of departing from it might be entertained. But even here the presumptive right of Telemachus is admitted. Such a departure from the ordinary rule, however, marks a considerable decline in the kingly power, and advance on the part of the nobles. At a later period we find kings deprived of their throne for misconduct, as in the case of Thymoetes in Attica. At a later period than the Homeric age the fact of responsibility was regarded as constituting the difference between a king and a tyrant (*Arist. Pol.* iv. 8). Hence at Argos Peleidon is called a *tyrant*, though he was a legitimate successor to the throne, because he acquired for himself despotic authority.

Our information respecting the Grecian kings in the more historical age is not ample or minute enough to enable us to draw out a detailed scheme of their functions. The rising influence of the nobles gradually reduced these to narrower and narrower limits till at last the establishment of aristocratical or oligarchical governments became almost universal. Respecting the kings of Sparta the reader is referred to the article *EPHORI*. As an illustration of the gradual limitation of the prerogatives of the king or chief magistrate, the reader may consult the article *ARCHON*. The title *Basilens* was sometimes applied to an officer who discharged the priestly functions of the more ancient kings, as in Athens [*ARCHON*], Delphi (*Plut. Quæst. Gr.* 7. p. 177), Siphnos (*Isocr. ad Callim.* p. 685), Megara (*Chandler, Marm. Oxon.* 2, 82), Chalcedon (*Caylus, Recueil*, &c. ii. 55), Cyzicus (*id.* ii. 71, 72), and Samothrace (*Liv.* xiv. 5). (K. F. Hermann, *Lehrbuch der griech. Staatsalterthümer*, §§ 53—55; Wachsmuth, *Hellenische Alterthumskunde*, §§ 38, 43; Thirlwall, *Hist. of Greece*, cc. vi. x.; Grote, *Hist. of Greece*, c. xx. vol. ii. p. 79, &c.) [C. P. M.]

2. ROMAN. Rome was originally governed by kings. All the ancient writers agree in representing the king as elected by the people for life, and as voluntarily entrusted by them with the supreme power in the state. No reference is made to the hereditary principle in the election of the first four kings; and it is not until the fifth king Tarquinius Priscus obtained the sovereignty, that

anything is said about the children of the deceased king. Consequently the ancient writers state that the king was chosen on account of his virtues and not his descent (*Cic. de Rep.* ii. 12; Appian, *B. C.* i. 98). It is true that in the case of Romulus the genuine legend makes no mention of his election to the royalty; and one of the acutest modern writers on the history of the Roman constitution has availed himself of this circumstance to support his theory, that the Roman king was not elected by the people, but derived his power immediately from the gods, and that this power devolved upon the senate at his death, and was transmitted in all its integrity to the next king by means of the interreges (Rubino, *Untersuchungen über Römische Verfassung*, p. 107, &c.). Our limits will not permit us to enter into an examination of this theory. It rests to a great extent upon the assumption that the Patres in the early Roman constitution were the senate; and it falls if it can be proved that the Patres in the earliest times were the same as the whole body of the patricians. We think that W. A. Becker (*Handbuch der Römischen Alterthümer*) has established beyond all doubt that the latter is the true meaning of the Patres, and that the common view is correct, which represents the king as voluntarily entrusted by the people with the supreme power.

Since the people had conferred the regal power, it returned to them upon the death of the king. As in modern states it is held that the king never dies, in like manner in Rome the vacant place was instantly filled up. But as a new king could not be immediately appointed, an Interrex forthwith stepped into his place. The necessity for an immediate successor to the king arose from the circumstance that he alone had had the power of taking the auspices on behalf of the state; and as the auspices devolved upon the people at his death, it was imperative upon them to create a magistrate, to whom they could delegate the auspices and who would thus possess the power of mediating between the gods and the state. Originally the people consisted only of the patres or patricii; and accordingly, on the death of the king, we read *res ad patres rediit* (*Liv.* i. 32), or, what is nearly the same thing, *auspicia ad patres redeunt*. [*AUGUR*, p. 177.] The interrex was elected by the whole body of the patricians, and he appointed (*prodebat*) his successor, as it was a rule that the first interrex could not hold the comitia for the election; but it frequently happened that the second interrex appointed a third, the third a fourth, and so on, till the election took place. This was the custom under the republic; and there would have been no reason to suppose that the practice was different during the kingly period, if it had not been for the account of the appointment of interreges after the death of Romulus, according to which the senate was divided into decuries for the purpose of sharing the interregnum between them. [*INTERREX*.]

The Interrex presided over the comitia curiata, which was assembled for the election of the king. He had previously agreed with the senate upon the person who was to be proposed to the comitia as king; for it is inconceivable that he had the absolute power of selecting whatever person he chose, as Dionysius states in some passages. The person whom the senate had selected was proposed by the interrex to the people in a regular *rogatio*,

which the people could only accept or reject, for they had not the initiative and could not themselves propose any name. If the people voted in favour of the rogation, they were said *creare regem*, and their acceptance of him was called *jussus populi*. (Dionys. iv. 40, 80; Liv. i. 22, 32; Cic. de Rep. ii. 17, 21.) But the king did not immediately enter upon his office. Two other acts had still to take place before he was invested with the full regal authority and power. First, his *inauguratio* had to be performed, as it was necessary to obtain the divine will respecting his appointment by means of the auspices, since he was the high priest of the people. This ceremony was performed by an augur, who conducted the newly-elected king to the *ars*, or citadel, and there placed him on a stone seat with his face turned to the south, while the people waited below in anxious suspense until the augur announced that the gods had sent the favourable tokens confirming the king in his priestly character. (Liv. i. 18; Plut. Num. 7.) The *inauguratio* did not confer upon him the auspices; for these he obtained by his election to the royalty, as the comitia were held *auspicato*. It simply had reference to his priestly character, as already remarked, and consequently did not take place in the case of the republican magistrates, though the *res sacrorum* and other priests were inaugurated. The passage of Dionysius (ii. 6), which is quoted in the article *INAUGURATIO* to prove that the republican magistrates were inaugurated, refers only to their taking the auspices on the morning of the day on which they entered upon their office. (Comp. Becker, *Ibid.* vol. ii. pt. i. p. 314.) The second act which had to be performed was the conferring of the imperium upon the king. The curiae had only determined by their previous vote who was to be king, and had not by that act bestowed the necessary power upon him; they had, therefore, to grant him the imperium by a distinct vote. Accordingly the king himself proposed to the curiae a *lex curiata de imperio*, and the curiae by voting in favour of it gave him the imperium. (Cic. de Rep. ii. 13, 17, 18, 20, 21.) The reason of this double vote of the curiae is clear enough. The imperium could only be conferred upon a determinate person. It was necessary, therefore, first to determine who was to be the person who was capable of receiving the imperium; and when this was determined, the imperium was granted to him by a special vote. Livy in his first book makes no mention of the *lex curiata de imperio*, but he uses the expressions *patres auctores fierent, patres auctores facti*. (Liv. i. 17, 22, 32.) That these expressions, however, are equivalent to the *lex curiata de imperio* in the kingly period is shown by Becker, an abstract of whose explanation is given under *AUCOR*.

It is very difficult to determine the extent of the king's powers, as the ancient writers naturally judged of the kingly period by their own republican constitution, and frequently assigned to the king, the senate, and the comitia of the curiae, the respective powers and functions which were only true in reference to the consuls, the senate, and the comitia of their own time. Most modern writers have represented the supreme power as residing in the people, and have regarded the king, to a great extent, as the executive of the senate and the curiae; but this view of the limited nature of the king's powers is strongly attacked, and we may say dis-

proved, by the masterly investigations of Rabbins. For whatever exception may be taken to many of his propositions, no one can examine his arguments without feeling convinced that the king possessed the supreme power in the earliest times, and that the senate and the comitia of the curiae were very slight checks upon its exercise. In the first place, the king alone possessed the right of taking the auspices on behalf of the state; and as no public business of any kind could be performed without the approbation of the gods expressed by the auspices, the king stood as mediator between the gods and the people, and in an early stage of society must necessarily have been regarded with religious awe. [AUGUR.] He was thus at the head of the national religion; and the priests, who are in all nations most jealous of their exclusive rights and privileges, acknowledged that they were originally instituted by the king, and learnt from him their religious rites. Thus Romulus is not only said to have established the augurs, but to have been himself the best of all augurs (Cic. de Div. i. 2); and the institution of the pontiffs in like manner was not only attributed to Numa Pompilius, but they are said to have been taught by this king the whole doctrine of the public and private *sacra*, the arrangement of the calendar, the division of days into *fasti* and *nefasti*, in one word the *jus pontificium*. (Liv. i. 19, 20; Cic. de Rep. ii. 14; Dionys. ii. 72; Plut. Num. 12.)

Secondly, the people surrendered to the king the supreme military and judicial authority by conferring the *imperium* upon him. It is true that the imperium was granted to the consuls in like manner; but the imperium, though the same nominally, was in reality limited in its exercise, as the consuls at the end of their year of office became private persons again, and might be brought to trial for acts which they had performed during their consulship. In addition to which various laws were passed for the protection of the citizens against the arbitrary use of their power, none of which existed in the kingly period. The *imperium* is usually defined to be the exercise of military authority (*imperium, sine quo res militaris administrari, teneri cogeretur, bellum geri non potest*, Cic. Phil. v. 16; comp. Liv. v. 52; Cic. de Leg. Agr. ii. 12); but this definition simply arises from the fact that the writers are thinking of the imperium of the consuls, who were deprived of judicial power in the city of Rome, and within the first milestone from it, from the time of the institution of the praetorship. (Liv. iv. 42; Gaius, iv. 104.) But the praetors also had the imperium conferred upon them by a *lex curiata*, and it was by possession of the imperium that they were alone qualified to pronounce a *judicium legitimum*, at all events in criminal cases. It must, therefore, be recollected, that the king was not only the commander in war, but the supreme judge in peace. Seated on his throne in the comitium, he administered justice to all comers, and decided in all cases which were brought before him, civil as well as criminal. The opinion of Puchta (*Instit.* vol. i. p. 140, &c.), that private suits were not decided by the king, but came under the jurisdiction of the pontiffs, rests on no sufficient authority, and is refuted by the tale of the pretended dispute which was brought before Tarquinius Priscus by the murderers of that king. (Liv. i. 40.) If we are to place reliance upon Livy, the king did not admin-

ister justice alone, but was fettered by a *consilium*, since it is brought forward as a reproach against Tarquinius Superbus, *cognitiones capitalium rerum sine consiliis per se solus exercebat* (Liv. i. 47); but it is not easy to believe in the existence of such a consilium in the times of the early kings, or if it did exist, it must have been a body simply to advise the king, and could not have had the power of controlling him, as he administered justice in virtue of his possessing the imperium. There is moreover no case recorded in which the consilium had any share in the administration of justice. From the decision of the king there seems to have been no appeal (*provocatio*). This is indeed denied by Niebuhr, who maintains that in all cases affecting the caput of a Roman citizen, an appeal lay from the king to the people in the comitia of the curiae, and who further argues that this was an ancient right of the patricians, and was extended to the plebs by the Lex Valeria, enacted at the establishment of the republic. It is true that the ancient writers refer the institution of the *provocatio* to the kingly period (Liv. i. 26, viii. 33; Cic. *pro Mil.* 3; Val. Max. vi. 3. § 6, viii. 1. § 1; Festus, s. v. *sororium tigillum*; Cic. *de Rep.* ii. 31), but it by no means follows that the *provocatio* of that early time was the same as the right secured by the Lex Valeria, which was regarded as the great bulwark of the liberty of a Roman citizen. We have indeed the record of only one case of *provocatio* under the kings, namely, when the surviving Horatius, who murdered his sister, appealed from the duumviri to the people; and in this case it must be borne in mind that the appeal was not from the sentence of the king, but from the sentence of the duumviri. It appears, even from the narrative of Livy, that the king voluntarily surrendered his right of trying the criminal and passing sentence upon him, in order to avoid the odium of putting to death the hero who had rendered such signal services to the state, and that he appointed duumviri, from whose decision an appeal lay to the people, in order that the people might have the responsibility of pronouncing his acquittal or condemnation. (Liv. i. 26; comp. Dionys. iii. 22.) In addition to which it is expressly stated that the dictatorship was a restoration of the kingly power (Zonar. vii. 13; comp. Cic. *de Rep.* ii. 32); and it is certain that the great distinction between the power of the dictator and that of the consuls consisted in there being no *provocatio* from the decisions of the former, as there was from the decisions of the latter. Our limits do not allow us to enter further into an examination of this question; but the reader will find the arguments against Niebuhr's views stated at great length in Rubino. (*Ibid.* p. 430, &c.)

Again, all the magistrates in the kingly period appear to have been appointed by the king and not elected by the curiae. This is expressly stated of the two most important, the *Tribunus Celerum*, who occupied the second place in the state, and who stood in the same relation to the king as the *magister equitum* did in later times to the dictator (Lydus, *de Mag.* i. 14), and the *Custos* or *Praefectus urbi*, who was nominated by the king to supply his place when he was absent from the city (Tac. *Ann.* vi. 11). We may consequently infer that the *Quaestores* were in like manner nominated by the king, although the ancient authorities differ on the point, Tacitus ascribing their appointment

to the king (Tac. *Ann.* xi. 22) and Junius Gracchanus to the people. (Dig. i. tit. 13.) Livy expressly says (i. 26) that the *Duumviri Perduellionis* were appointed by the king; and if these were the same officers as the *Quaestores* during the kingly period, as many writers maintain, there can be no doubt that the latter were nominated by the king.

Further, the king was not dependent upon the people for his support; but a large portion of the *ager publicus* belonged to him, which was cultivated at the expense of the state on his behalf. (Cic. *de Rep.* v. 2.) He had also the absolute disposal of the booty taken in war and of the conquered lands. (Dionys. ii. 28, 62; Cic. *de Rep.* ii. 9, 14, 18.)

It must not, however, be supposed that the authority of the king was absolute. The senate and the assembly of the people must have formed some check upon his power; though, if the views we have been stating are correct, they were far from possessing the extensive privileges which Dionysius (ii. 14) assigns to them. The senate and the comitia of the curiae were not independent bodies possessing the right of meeting at certain times and discussing questions of state. They could only be called together when the king chose, and further could only determine upon matters which the king submitted to them. The senate was simply the consilium of the king, the members of which were all appointed by him (Liv. i. 8; Dionys. ii. 12; Festus, p. 246, ed. Müller; Cic. *de Rep.* ii. 8), and which only offered their advice to him, which he could follow or reject according to his pleasure. The comitia of the curiae seem to have been rarely assembled, and then probably more to hear the decisions of the king than to ratify his acts; and it is certain that they had no power of discussing any matter that was brought before them. The only public matter in which the king could not dispense with the co-operation of the senate and the curiae was in declarations of war against foreign nations, as appears clearly from the declaration of war against the Latins in the time of Ancus Marcius, as related by Livy (i. 32), who preserves the ancient formula. There is no trace of the people having had anything to do with the conclusion of treaties of peace; and Dionysius in this case as in many others has evidently transferred a later custom to the earlier times. The relation in which the senate and the curiae stood to the kings is spoken of more at length under COMITIA, p. 331, and SENATUS.

The insignia of the king were the *fascēs* with the axes (*securēs*), which twelve lictors carried before him as often as he appeared in public, the *trabea*, the *sella curulis*, and the *toga praetexta* and *picta*. The *trabea* appears to have been the most ancient official dress, and is assigned especially to Romulus: it was of Latin origin, and is therefore represented by the antiquarian Virgil as worn by the Latin kings. (Plin. *H. N.* viii. 48, ix. 39; Ov. *Fast.* ii. 501; Virg. *Aen.* vii. 187, xi. 334.) The *toga praetexta* and *picta* were borrowed, together with the *sella curulis*, from the Etruscans, and their introduction is variously ascribed to Tullus Hostilius or Tarquinius Priscus. (Cic. *de Rep.* ii. 17; Macrob. *Sat.* i. 6; Plin. *H. N.* ix. 39; Dionys. iii. 62.) Dionysius (*l. c.*) also mentions a diadem and a sceptre as insignia of the kings.

For further information respecting the Roman kings, see Niebuhr, *Hist. of Rome*, vol. i. p. 338, &c.; Walter, *Geschichte des Römischen Rechts*, § 17, 2d ed.; and especially Rubino, *Untersuchungen über Römische Verfassung*, passim; and Becker, *Handbuch der Römischen Alterthümer*, vol. ii. pt. i. p. 291, &c.

REX SACRIFICULUS, **REX SACRIFICULUS**, or **REX SACRORUM**. When the civil and military powers of the king were transferred to two praetors or consuls, upon the establishment of the republican government at Rome, these magistrates were not invested with that part of the royal dignity by virtue of which he had been the high priest of his nation and had conducted several of the *sacra publica*, but this priestly part of his office was transferred to a priest called *Rex Sacrificulus* or *Rex Sacrorum*. (Liv. ii. 2; Dionys. iv. 74, v. 1.) The first *rex sacrorum* was designated, at the command of the consuls, by the college of pontiffs, and inaugurated by the augurs. He was always elected and inaugurated in the comitia calata under the presidency of the pontiffs (Gell. xv. 27), and as long as a *rex sacrificulus* was appointed at Rome, he was always a patrician, for as he had no influence upon the management of political affairs, the plebeians never coveted this dignity. (Liv. vi. 41; Cic. *pro Dom.* 14.) But for the same reason the patricians too appear at last to have attributed little importance to the office; whence it sometimes occurs that for one, or even for two successive years no *rex sacrorum* was appointed, and during the civil wars in the last period of the republic, the office appears to have fallen altogether into disuse. Augustus however seems to have revived it, for we find frequent mention of it during the empire, until it was probably abolished in the time of Theodosius. (Orelli, *Inscr.* n. 2280, 2282, 2283.)

Considering that this priest was the religious representative of the kings, he ranked indeed higher than all other priests, and even higher than the pontifex maximus (Festus. s. v. *Ordo sacerdotum*), but in power and influence he was far inferior to him. (*Id sacerdotium pontifici subiecerat*, Liv. ii. 2.) He held his office for life (Dionys. iv. 74), was not allowed to hold any civil or military dignity, and was at the same time exempted from all military and civil duties. (Dionys. l. c.; Plut. *Quaest. Rom.* 60; Liv. xl. 42.) His principal functions were: 1. To perform those *sacra publica* which had before been performed by the kings; and his wife, who bore the title of *regina sacrorum*, had like the queens of former days also to perform certain priestly functions. These *sacra publica* he or his wife had to perform on all the Calends, Ides, and the Nundines; he to Jupiter, and she to Juno, in the regia. (Varro, *de Ling. Lat.* vi. 12, 13; Macrobi. *Sat.* i. 15.) 2. On the days called regifugium he had to offer a sacrifice in the comitium. [REGIFUGIUM.] 3. When extraordinary portents seemed to announce some general calamity, it was his duty to try to propitiate the anger of the gods. (Fest. s. v. *Regiae feriae*.) 4. On the nundines when the people assembled in the city, the *rex sacrorum* announced (*edicebat*) to them the succession of the festivals for the month. This part of his functions however must have ceased after the time of On. Flavius. (Varro, *de Ling. Lat.* vi. 13; Serv. *ad Aen.* viii. 654.) He lived in a domus publica on the via sacra, near the regia and the

house of the Vestal virgins. (Ambrosch, *Studien a. Andeutungen*, pp. 41—76.) [L. S.]

RHEDA or **REDA** was a travelling carriage with four wheels. Like the *COVINUS* and the *ESSUDUM* it was of Gallic origin (Quintil. *Inst. Orat.* i. 5. § 68; Caes. *Bell. Gall.* i. 51), and may perhaps contain the same root as the German *reisen* and our *ride*. It was the common carriage used by the Romans for travelling, and was frequently made large enough not only to contain many persons, but also baggage and utensils of various kinds. (Cic. *pro Mil.* 10, 20; Juven. iii. 10; Mart. iii. 47.) The word *Epirhedum*, which was formed by the Romans from the Greek preposition *ἐν* and the Gallic *rheda* (Quint. l. c.), is explained by the Scholiast on Juvenal (viii. 66) as: "Ornamentum rhedarum aut plaustrum."

RHETOR. [RHETORICÆ GRAPHE.]

RHETORICÆ GRAPHE (ῥητορικὴ γραφή). The best interpretation of this expression is perhaps that given by Harpocration and Suidas, s. v. ἡ κατὰ ῥήτορας γενομένη, γράψαντός τι ἢ εἰσόντος ἢ πρῶτος παρὰ νομον. There was not any particular class of persons called *ῥήτορες*, invested with a legal character, or intrusted with political duties, at Athens. For every citizen, who did not labour under some special disability, was entitled to address the people in assembly, make motions, propose laws, &c. The name of *ῥήτορες*, however, was given in common parlance to those orators and statesmen, who more especially devoted themselves to the business of public speaking; while those who kept aloof from, or took no part in, the business of popular assemblies, were called *ιδίωται*. Hence *ῥήτωρ* is explained by Suidas, s. v. Ὁ δὲμν συμβουλευόν καὶ ὁ ἐν δήμῳ ἀγορεύων. The *ῥητορικὴ γραφή* might be either the same as the *παράνομον γραφή*, or a more special prosecution, attended with heavier penalties, against practised demagogues, who exerted their talents and influence to deceive the people and recommend bad measures. Others have conjectured this to be a proceeding similar to the *ἐπαγγελία δοκιμασίας*, directed against those persons who ventured to speak in public, after having been guilty of some misdemeanour which would render them liable to *ἀτίμια*. Of this nature was the charge brought against Timarchus by Aeschines, whose object was to prevent the latter from appearing as prosecutor against him on the subject of the embassy to Philip. (Schömann, *de Comit.* p. 108; Meier, *Att. Proc.* p. 209.) [C. R. K.]

RHETRAE (ῥήτραι), specially the name of the ordinances of Lycurgus. (Plut. *Lyc.* 6, 13.) The word is defined by the grammarians to signify a compact or treaty (ῥήτρις, ἡ ἐπὶ ῥητοῖς τις συνθήκη, Apollon. *Lex. Hom.* p. 138. 30, ed. Bekker; ῥήτραι, συνθήκαι διὰ λόγων, Hesych.); and most modern writers adopt this interpretation, supposing the word to signify originally words (τὸ ῥητὸν), or a declaration, which bound parties. It is true that the etymology points simply to that which is spoken or declared; but Plutarch gives another meaning to the word in relation to the laws of Lycurgus, and says that they were divine ordinances (ῥήτραις ἀνέμασαν, ὡς παρὰ τοῦ θεοῦ νομιζόμενα καὶ χρησμούςες ἔντα, Plut. *Lyc.* 13). The opinion of Mr. Grote, which reconciles these two accounts, seems the most probable. "The word *Rhetra* means a solemn compact, either originally emanating from, or subsequently sanctioned by the gods, who are always parties to such agreements:

see the old treaty between the Eleians and Heraeans—'Α *ῥάτρη*, between the two, commemorated in the valuable inscription still preserved, — as ancient, according to Böckh, as Olym. 40—60 (Böckh, *Corp. Inscript.* No. ii. p. 26, part i.). The words of Tyrtæus imply such a contract between the contracting parties: first the kings, then the senators, lastly the people, — *εὐθέλας ῥήτρηαι ἄνθρωποι-κομῆνους*,—where the participle last occurring applies not to the people alone, but to all the three. The Rhetra of Lycurgus emanated from the Delphian god: but the kings, senators, and people all bound themselves, both to each other and to the gods to obey it." (Grote, *Hist. of Greece*, vol. ii. p. 462; for a different explanation of the word, see Thirlwall, *Hist. of Greece*, vol. i. p. 335, 2d ed.)

RHYTON (*ῥυτόν*), a drinking-horn (*κέρας*), by which name it was originally called, is said by Athenæus (xi. p. 497, b) to have been first made under Ptolemy Philadelphus; but it is even mentioned in Demosthenes (c. *Mid.* p. 565, 29), as Athenæus himself also remarks. The oldest and original form of this drinking-horn was probably the horn of the ox, but one end of it was afterwards ornamented with the heads of various animals and birds. We frequently find representations of the *ῥυτόν* on ancient vases depicting symposia. Several specimens of these drinking-horns have also been discovered at Pompeii (*Museo Borbonico*, vol. viii. 14, v. 20): representations of two of these are given in the annexed cut.

The *ῥυτόν* had a small opening at the bottom, which the person who drank put into his mouth, and allowed the wine to run in: hence it derived its name (*ἐνομασθῆναι τε ἀπὸ τῆς ῥύσεως*, Athen. xi. p. 497, e). We see persons using the *ῥυτόν* in this way in ancient paintings. (Pitt. d'Ercol. v. t. 46; Zahn, *Ornam. und Wandgem.* t. 90.) Martial (ii. 35) speaks of it under the name of *Rhytium*. (Becker, *Charikles*, vol. i. p. 505.)

RICA. [FLAMEN.]

RICINIUM, RECINIUM or RECINUS, an article of dress. The name was according to Festus (s. v.) applied to any dress consisting of a square piece of cloth. It occurs in a fragment of the Twelve Tables (Cic. *de Leg.* ii. 23), and the ancient commentators according to Festus explained the word there as a toga for women (if the reading *Ver. togam* be right instead of *virilem togam*), with a purple stripe in front. That it was an article of female dress, and more especially a small and short kind of pallium, is stated by Nonius (xiv. 33) on the authority of Varro. It was worn in grief and mourning, and in such a manner that one half of it was thrown back (Varro, *de Ling. Lat.* v. 132; Serv. *ad Aen.* i. 286; Isidor. *Orig.* xix. 25), whence the ancient grammarians derive the word from *rejiçere*, although it is manifestly a derivative from *riçia*, which was a covering of the head used

by females. (Varro, *l. c.*; Fest. s. v. *Riçia*.) The grammarians appear themselves to have had no clear idea of the ricinium; but after careful examination of the passages above referred to, it appears to have been a kind of mantle, with a sort of cowl attached to it, in order to cover the head. It was also worn by mimes upon the stage (Fest. *l. c.* and s. v. *Orchestra*), and the mavortium, mavorte, or mavors of later times was thought to be only another name for what had formerly been called ricinium. [L. S.]

ROBIGA'LIA, a public festival in honour of the god Robigus to preserve the fields from mildew, is said to have been instituted by Numa, and was celebrated a. d. vii. *Kal. Mai.* (April 25th). (Plin. *H. N.* xviii. 29. s. 69; Varro, *de Rust.* i. 1. p. 90, ed. Bip., *Ling. Lat.* vi. 16, ed. Müll.; Festus, s. v.) The sacrifices offered on this occasion consisted of the entrails of a dog and a sheep, accompanied with frankincense and wine: a prayer was presented by a flamen in the grove of the ancient deity, whom Ovid and Columella make a goddess. (Ovid. *Fast.* iv. 907—942; Colum. x. 342.) A god Robigus or a goddess Robigo is a mere invention from the name of this festival, for the Romans paid no divine honours to evil deities. (Hartung, *Die Religion der Römer*, vol. ii. p. 148.)

RORA'RIL. [EXERCITUS, pp. 495, 502, b.]

ROSTRA, or The Beaks, was the name applied to the stage (*suggestus*) in the Forum, from which the orators addressed the people. This stage was originally called *templum* (Liv. ii. 56), because it was consecrated by the augurs, but it obtained its name of *Rostra* at the conclusion of the great Latin war, when it was adorned with the beaks (*rostra*) of the ships of the Antiates. (Liv. viii. 14; Flor. i. 11; Plin. *H. N.* xxxiv. 5. s. 11.) The Greeks also mutilated galleys in the same way for the purpose of trophies: this was called by them *ἀκροτερνιδίσειν*. [ACROTERIUM.]

The Rostra lay between the Comitium or place of meeting for the curies, and the Forum or place of meeting for the tribes, so that the speaker might turn either to the one or the other; but down to the time of C. Gracchus, even the tribunes in speaking used to front the Comitium; he first turned his back to it and spoke with his face towards the forum. (Niebuhr, *Hist. of Rome*, vol. i. p. 426, note 990.) The form of the Rostra has been well described by Niebuhr (vol. iii. p. 144, note 268) and Bunsen (quoted by Arnold, *Hist. of Rome*, vol. ii. p. 164): the latter supposes "that it was a circular building, raised on arches, with a stand or platform on the top bordered by a parapet; the access to it being by two flights of steps, one on each side. It fronted towards the comitium, and the rostra were affixed to the front of it, just under the arches. Its form has been in all the main points preserved in the ambones, or circular pulpits, of the most ancient churches, which also had two flights of steps leading up to them, one on the east side, by which the preacher ascended, and another on the west side, for his descent. Specimens of these old churches are still to be seen at Rome in the churches of St. Clement and S. Lorenzo fuori le mure." The speaker was thus

enabled to walk to and fro, while addressing his audience.

The suggestus or Rostra was transferred by Julius Caesar to a corner of the Forum, but the spot, where the ancient Rostra had stood, still continued to be called *Rostra Vetera*, while the other was called *Rostra Nova* or *Rostra Julia*. (Ascon. in *Cic. Mil.* § 12. p. 43, ed. Orelli; Dion Cass. xliii. 49, lvi. 34; Suet. *Aug.* 100.) Both the Rostra contained statues of illustrious men (*Cic. Philp.* ii. 61); the new Rostra contained equestrian statues of Sulla, Pompey, Julius Caesar, and Augustus. (Vell. Pat. ii. 61.) Niebuhr (*l.c.*) discovered the new Rostra in the long wall, that runs in an angle towards the three columns, which have for a very long time borne the name of Jupiter Stator, but which belong to the Curia Julia. The substance of the new Rostra consists of bricks and casting-work, but it was of course cased with marble: the old Rostra Niebuhr supposes were constructed entirely of peperino.

The following coin of M. Lollius Palicanus contains a representation of the Rostra.

RUDIA RII. [GLADIATORES, p. 575, a.]

RUDIS. [GLADIATORES, p. 575, a.]

RU'FULI, the name of the tribunes of the soldiers chosen by the consul or other general. (Liv. vii. 5; Festus, s. v.) For further information see EXERCITUS, pp. 503, a. 504, b.

RUNCI'NA (ῥυκίνη), a plane (Tertull. *Apol.* 12; Brunck, *Anal.* i. 227), is delineated among joiner's tools (*Instrument. Fabr. Tignar.*) in the woodcut at p. 806. The square hole in the right side of the stock seems intended for the passage of the shavings (*ramento*). The Latin and Greek names for this instrument gave origin to the corresponding transitive verbs *runcio* and *ῥυκνάζω*, meaning to plane. (Min. Felix, 23.) They seem to be allied etymologically with *ῥύγχος*, referring to the operation of those beasts and birds which use their snout or beak to plough up the ground. [J. Y.]

RUTILIA'NA ACTIO was a Praetorian actio introduced by the Praetor Publius Rutilius, by virtue of which the bonorum emptor could sue in the name of the person whose goods he had bought and claim the condemnation to be made in his own favour and in his own name. (Gaius, iii. 80, 81, iv. 35.) [G. L.]

RUTRUM, *dim.* RUTELLUM, a kind of hoe, which had the handle fixed perpendicularly into the middle of the blade, thus differing from the

RASTER. It was used before sowing to level the ground, by breaking down any clods which adhered too long together. (Non. Marc. p. 18, ed. Merceri.) This operation is described by Virgil in the following terms, which also assign the derivation of the name: "Cumuloque ruit male pinguis arenae." (*Georg.* i. 105.) See Festus, s. v.; Varro, *de L. Lat.* v. p. 137, ed. Spengel. The same implement was used in mixing lime or clay with water and straw to make plaster for walls. (Cato, *de Re Rust.* 10, 128; Pallad. *de Re Rust.* i. 15; Plin. *H. N.* xxxvi. 23. s. 55.)

The word *rutabulum* ought to be considered as another form of *rutrum*. It denoted a hoe or rake of the same construction, which was used by the baker in stirring the hot ashes of his oven. (Festus, s. v.) A wooden rutabulum was employed to mix the contents of the vats in which wine was made. (Colum. *de Re Rust.* xii. 20.) [J. Y.]

S.

SACCUS (σάκος), signified in general any kind of sack or bag, made of hair, cloth, or other materials. We have only to notice here its meaning as — 1. A head-dress. [COMA, p. 329.] 2. A sieve for straining wine [VINUM]. 3. A purse for holding money. Hence the phrase in Plautus *ire ad saccum*, "to go a begging." (Plaut. *Capt.* i. 1. 22.)

SACELLUM is a diminutive of sacer, and signifies a small place consecrated to a god, containing an altar, and sometimes also a statue of the god to whom it was dedicated. (Gellius, vi. 12.) Festus (s. v.) completes the definition by stating that a sacellum never had a roof. It was therefore a sacred enclosure surrounded by a fence or wall to separate it from the profane ground around it, and answers to the Greek περιβολος. The form of a sacellum was sometimes square and sometimes round. The ancient sacellum of Janus which was said to have been built by Romulus, was of a square form, contained a statue of the god, and had two gates. (Ovid. *Fast.* i. 275; Terent. Maur. in Wernsdorf's *Post. Min.* ii. p. 279.) Many Romans had private sacella on their own estates; but the city of Rome contained a great number of public sacella such as that of Caca (Serv. *ad Aen.* viii. 190), of Hercules in the Forum Boarium (Solin. i.; Plin. *H. N.* x. 29), of the Lares (Solin. 2), of Naenia (Fest. s. v. *Naenias deae*), of Pudicitia (Liv. x. 23), and others. [L. S.]

SACERDOS, SACERDO TIUM. Cicero (*de Leg.* ii. 8) distinguishes two kinds of sacerdotēs; those who had the superintendence of the forms of worship (*sacrimoniae*) and of the sacra, and those who interpreted signs and what was uttered by seers and prophets. Another division is that into priests who were not devoted to the service of any particular deity, such as the pontifex, augur, fetiales, and those who were connected with the worship of particular divinities, such as the flamines. The priests of the ancient world did not consist of men alone, for in Greece as well as at Rome certain deities were attended only by priestesses. At Rome the wives of particular priests were regarded as priestesses, and had to perform certain sacred functions, as the regina sacrorum and the flaminica. [FLAMEN; REX SACROBUM.] In other cases maidens were appointed priestesses,

as the Vestal virgins, or boys, with regard to whom it was always requisite that their fathers and mothers should be alive (*patrimi et matrimi*). As all the different kinds of priests are treated of separately in this work, it is only necessary here to make some general remarks.

In comparison with the civil magistrates all priests at Rome were regarded as *homines privati* (Cic. *c. Catil.* i. 1, *de Off.* i. 22, *ad Att.* iv. 2, *Philipp.* v. 17), though all of them as priests were *sacerdotes publici*, in as far as their office (*sacerdotium*) was connected with any worship recognised by the state. The appellation of *sacerdos publicus* was however given principally to the chief-pontiff and the *flamen dialis* (Cic. *de Leg.* ii. 9; *Serv. ad Aen.* xii. 534), who were at the same time the only priests who were members of the senate by virtue of their office. All priestly offices or *sacerdotia* were held for life without responsibility to any civil magistrate. A priest was generally allowed to hold any other civil or military office besides his priestly dignity (Liv. xxxviii. 47, xxxix. 45; *Epist.* 19, xl. 45, *Epist.* 59, &c.); some priests however formed an exception, for the *dumviri*, the *rex sacrorum* and the *flamen dialis* were not allowed to hold any state office, and were also exempt from service in the armies. (Dionys. iv. 8.) Their priestly character was, generally speaking, inseparable from their person, as long as they lived (Plin. *Epist.* iv. 8): hence the augurs and *fratres arvales* retained their character even when sent into exile, or when they were taken prisoners. (Plin. *H. N.* xviii. 2; *Plut. Quæst. Rom.* 99.) It also occurs that one and the same person held two or three priestly offices at a time. Thus we find the three dignities of *pontifex maximus*, *augur*, and *decemvir sacrorum* united in one individual. (Liv. xl. 42.) But two persons belonging to the same gens were not allowed to be members of the same college of priests. This regulation however was in later times often violated or evaded by adoption. (*Serv. ad Aen.* vii. 303; *Dion Cass.* xxxix. 17.) Bodily defects rendered, at Rome as among all ancient nations, a person unfit for holding any priestly office. (Dionys. ii. 21; *Senec. Controv.* iv. 2; *Plut. Quæst. Rom.* 73; *Plin. H. N.* vii. 29.)

All priests were originally patricians, but from the year a. c. 367 the plebeians also began to take part in the *sacerdotia* [PLEBES, p. 927], and those priestly offices which down to the latest times remained in the hands of the patricians alone, such as that of the *rex sacrorum*, the *flamines*, *salii* and others, had no influence upon the affairs of the state.

As regards the appointment of priests, the ancients unanimously state that at first they were appointed by the kings (Dionys. ii. 21, &c. 73; Liv. i. 20), but after the *sacerdotia* were once instituted, each college of priests—for nearly all priests constituted certain corporations called *collegia*—had the right of filling up the occurring vacancies by cooptatio. [PONTIFEX, p. 940.] Other priests, on the contrary, such as the Vestal virgins and the *flamines*, were appointed (*capiebantur*) by the *pontifex maximus*, a rule which appears to have been observed down to the latest times; others again, such as the *dumviri sacrorum*, were elected by the people (Dionys. iv. 62), or by the *curiæ*, as the *curiones*. But in whatever manner they were appointed, all priests after their appointment required to be inaugurated by the pontiffs

and the augurs, or by the latter alone. (Dionys. ii. 22.) Those priests who formed colleges had originally, as we have already observed, the right of cooptatio; but in the course of time they were deprived of this right, or at least the cooptatio was reduced to a mere form, by several *leges*, called *leges de sacerdotiis*, such as the *lex Domitia*, *Cornelia*, and *Julia*; their nature is described in the article PONTIFEX, p. 940, &c., and what is there said in regard to the appointment of pontiffs applies equally to all the other colleges. The *leges annales*, which fixed the age at which persons became eligible to the different magistracies, had no reference to priestly offices; and on the whole it seems that the *pubertas* was regarded as the time after which a person might be appointed to a *sacerdotium*. (Liv. xlii. 28; *Plut. 776. Græc.* 4.)

All priests had some external distinction, as the apex, *tutulus*, or *galerus*, the *toga prætexta*, as well as honorary seats in the theatres, circuses and amphitheatres. They appear however to have been obliged to pay taxes like all other citizens, but seem occasionally to have tried to obtain exemption. See the case related in Livy, xxxiii. 42.

Two interesting questions yet remain to be answered: first whether the priests at Rome were paid for their services, and secondly whether they instructed the young, or the people in general, in the principles of their religion. As regards the first question, we read that in the time of Romulus lands were assigned to each temple and college of priests (Dionys. ii. 7), and when Festus (*s. v. Oscum.*) states that the Roman augurs had the enjoyment (*frui solebant*) of a district in the territory of Veii, we may infer that all priests had the use of the sacred lands belonging to their respective colleges or divinities. This supposition is strengthened by the fact that such was actually the case in the Roman colonies, where, besides the lots assigned to the *coloni*, pieces of land are mentioned which belonged to the colleges of priests, who made use of them by letting them out to farm. (Siculus Flaccus, *de condit. agror.* p. 23, ed. Goes.; Hyginus, *de Limit. Constit.* p. 205, ed. Goes.) It appears however that we must distinguish between such lands as were sacred to the gods themselves and could not be taken from them except by exauguration, and such as were merely given to the priests as possession and formed part of the *ager publicus*. Of the latter the state remained the owner, and might take them from the priests in any case of necessity. (Dion Cass. xliii. 47; *Oros.* v. 18; *Appian, de Bell. Mithr.* 22.) Besides the use of such sacred or public lands some priests also had a regular annual salary (*stipendium*), which was paid to them from the public treasury. This is expressly stated in regard to the Vestal virgins (Liv. i. 20), the augurs (Dionys. ii. 6), and the *curiones* (Fest. *s. v. Curionism*), and may therefore be supposed to have been the case with other priests also. The *pontifex maximus*, the *rex sacrorum*, and the Vestal virgins had moreover a *domus publica* as their place of residence. In the time of the emperors the income of the priests, especially of the Vestal virgins, was increased. (Suet. *Aug.* 31; *Tacit. Annal.* iv. 16.)

As regards the second question, we do not hear either in Greece or at Rome of any class of priests on whom it was incumbent to instruct the people respecting the nature and principles of religion. Of preaching there is not the slightest trace. Reli-

gion with the ancients was a thing which was handed down by tradition from father to son, and consisted in the proper performance of certain rites and ceremonies. It was respecting these external forms of worship alone that the pontiffs were obliged to give instructions to those who consulted them. [PONTIFEX.] [L.S.]

SACRA. This word in its widest sense expresses what we call divine worship. In ancient times the state as well as all its subdivisions had their own peculiar forms of worship, whence at Rome we find sacra of the whole Roman people, of the curies, gentes, families, and even of private individuals. All these sacra, however, were divided into two great classes, the public and private sacra (*sacra publica et privata*), that is, they were performed either on behalf of the whole nation and at the expense of the state, or on behalf of individuals, families, or gentes, which had also to defray their expenses. (Fest. s. v. *Publica sacra*; Liv. i. 20, x. 7; Plut. *Num.* 9; Cic. *de Harusp. Resp.* 7.) This division is ascribed to Numa. All sacra, publica as well as privata, were superintended and regulated by the pontiffs. We shall first speak of the sacra publica.

Sacra Publica. Among the sacra publica the Romans reckoned not only those which were performed on behalf of the whole Roman people, but also those performed on behalf of the great subdivisions of the people, viz. the tribes and the curiae, which Festus (l. c.) expresses: *pro montanis, pagis, curiis, sacellis*. (See Dionys. ii. 21, 23; Appian, *Hist. Rom.* viii. 138, *de Bell. Civ.* ii. 106; Plut. *Quaest. Rom.* 89.) The sacra pro montibus et pagis are undoubtedly the sacra montanalia and paganalia, which although not sacra of the whole Roman people, were yet publica. (Varro, *de Ling. Lat.* vi. 24, &c.; comp. Fest. s. v. *Septimontium*.) The sacella in the expression of Festus, *sacra pro sacellis*, appear only to indicate the places where some sacra publica were performed. (Götting, *Gesch. d. Röm. Staatsv.* p. 176.) What was common to all sacra publica, is that they were performed at the expense of certain public funds, which had to provide the money for victims, libations, incense, and for the building and maintenance of those places, where they were performed. (Fest. l. c.; Dionys. ii. 23; Liv. x. 23, xlii. 3.) The funds set apart for the sacra publica were in the keeping of the pontiffs, and the sacramentum formed a part of them. They were kept in the domus publica of the pontifex maximus, and were called *aerarium pontificum*. (Varro, *de Ling. Lat.* v. 180; Gruter, *Inscript.* 413. 8, 496. 6, 452. 6.) When these funds did not suffice, the state treasury supplied the deficiency. (Fest. s. v. *Sacramentum*.) In the solemnization of the sacra publica the senate and the whole people took part. (Plut. *Num.* 2.) This circumstance however is not what constitutes their character as sacra publica, for the sacra popularia (Fest. s. v. *Popul. sacr.*) in which the whole people took part, might nevertheless be sacra privata, if the expenses were not defrayed out of the public funds, but by one or more individuals, or by magistrates. The pontiffs in conducting the sacra publica were assisted by the epulones. [EPULONES.]

Sacra privata embraced, as we have stated, those which were performed on behalf of a gens, a family, or an individual. The characteristic by which they were distinguished from the sacra

publica, is that they were made at the expense of those persons or person on whose behalf they were performed. Respecting the sacra of a gens, called *sacra gentilia*, see *GENS*, p. 568, b. The sacra connected with certain families were, like those of a gens, performed regularly at fixed times, and descended as an inheritance from father to son. As they were always connected with expenses, and were also troublesome in other respects, such an inheritance was regarded as a burden rather than anything else. (Macrob. *Sat.* i. 16.) They may generally have consisted in sacrifices to the Penates, but also to other divinities. They had usually been vowed by some member of a family on some particular occasion, and then continued for ever in that family, the welfare of which was thought to depend upon their regular and proper performance. Besides these periodical sacra of a family there were others, the performance of which must have depended upon the discretion of the heads of families, such as those on the birthday, or on the death of a member of a family. Savigny (*Zeitschrift*, vol. ii. p. 3) denies the existence of sacra familiarum.

An individual might perform sacra at any time, and whenever he thought it necessary; but if he vowed such sacra before the pontiffs and wished that they should be continued after his death, his heirs inherited with his property the obligation to perform them, and the pontiffs had to watch that they were performed duly and at their proper time. (Fest. s. v. *Sacer mons*; Cic. *pro Dom.* 51; comp. *ad Att.* xii. 19, &c.) Such an obligation was in later times evaded in various ways.

Among the sacra privata were reckoned also the sacra municipalia, that is, such sacra as a community or town had been accustomed to perform before it had received the Roman franchise. After this event, the Roman pontiffs took care that they were continued in the same manner as before. (Fest. s. v. *Municipalia sacra*; comp. Ambrosch, *Stud. u. Aendert.* p. 215.)

(See Götting, p. 175, &c.; Walter, *Gesch. d. Röm. Rechts*, p. 178; Hartung, *Die Relig. d. Röm.* vol. i. p. 226, &c.; comp. SACRIFICIUM.) [L.S.]

SACRAMENTUM. [JUSJURANDUM; VINDICTAE.]

SACRARIUM was, according to the definition of Ulpian (Dig. 1. tit. 8. a. 9. § 2), any place in which sacred things were deposited and kept, whether this place was a part of a temple or of a private house. (Comp. Cic. *de Verr.* iv. 2, *pro Milon.* 31; Suet. *Tib.* 51.) A sacrum therefore was that part of every house in which the images of the penates were kept. Respecting the sacrum of the lares see *JANARIUM*. Public sacra at Rome were: one attached to the temple of the Capitoline Jupiter, in which the *tenae* or chariots for public processions were kept (Suet. *Vesp.* 5; Grat. *Falisc.* 534); the place of the Salii in which the ancilia and the lituus of Romulus were kept (Val. *Max.* i. 8. 11; Serv. *ad Aen.* vii. 603), and others. In the time of the emperors, the name sacrum was sometimes applied to a place in which a statue of an emperor was erected. (Tacit. *Annal.* ii. 41; Stat. *Silv.* v. l. 240.) Livy (i. 21) uses it as a name for a sacred retired place in general. [L.S.]

SACRIFICIUM (*ἱερίον*). Sacrifices or offerings formed the chief part of the worship of the ancients. They were partly signs of gratitude, partly a means of propitiating the gods, and partly

also intended to induce the deity to bestow some favour upon the sacrificer, or upon those on whose behalf the sacrifice was offered. Sacrifices in a wider sense would also embrace the *Donaria*; in a narrower sense sacrificia were things offered to the gods, which merely afforded momentary gratification, which were burnt upon their altars, or were believed to be consumed by the gods. We shall divide all sacrifices into two great divisions, bloody sacrifices and unbloody sacrifices, and, where it is necessary, consider Greek and Roman sacrifices separately.

Bloody sacrifices. As regards sacrifices in the earliest times, the ancients themselves sometimes imagined that unbloody sacrifices, chiefly offerings of fruit, had been customary long before offerings of fruit were introduced among them. (Plat. *de Leg.* vi. p. 782; Paus. viii. 2. § 1, i. 26. § 6; Macrob. *Sat.* i. 10, &c.) It cannot indeed be denied, that sacrifices of fruit, cakes, libations, and the like existed in very early times; but bloody sacrifices, and more than this, human sacrifices, are very frequently mentioned in early story; in fact the mythology of Greece is full of instances of human sacrifices being offered and of their pleasing the gods. Wachsmuth (*Hell. Alt.* ii. p. 549, &c. 2d edit.) has given a list of the most celebrated instances. It may be said that none of them has come down to us with any degree of historical evidence; but surely the spirit which gave origin to those legends is sufficient to prove that human sacrifices had nothing repulsive to the ancients, and must have existed to some extent. In the historical times of Greece we find various customs in the worship of several gods, and in several parts of Greece, which can only be accounted for by supposing that they were introduced as substitutes for human sacrifices. In other cases where civilisation had shown less of its softening influences, human sacrifices remained customary throughout the historical periods of Greece, and down to the time of the emperors. Thus in the worship of Zeus Lycaeus in Arcadia, where human sacrifices were said to have been introduced by Lycaon (Paus. viii. 2. § 1), they appear to have continued till the time of the Roman emperors. (Theophrast. *op. Porphy.* *de Abst.* ii. 27; Plut. *Quaest. Gr.* 39.) In Leucas a person was every year at the festival of Apollo thrown from a rock into the sea (Strab. x. p. 452); and Themistocles before the battle of Salamis is said to have sacrificed three Persians to Dionysius. (Plut. *Them.* 13, *Arist.* 11, *Pelop.* 21.) Respecting an annual sacrifice of human beings at Athens, see *THARGELIA*. With these few exceptions however human sacrifices had ceased in the historical ages of Greece. Owing to the influences of civilisation, in many cases animals were substituted for human beings, in others a few drops of human blood were thought sufficient to propitiate the gods. (Paus. viii. 23. § 1, ix. 8. § 1.) The custom of sacrificing human life to the gods arose undoubtedly from the belief, which under different forms has manifested itself at all times and in all nations, that the nobler the sacrifice and the dearer to its possessor, the more pleasing it would be to the gods. Hence the frequent instances in Grecian story of persons sacrificing their own children, or of persons devoting themselves to the gods of the lower world. In later times, however, persons sacrificed to the gods were generally criminals who had been condemned to death, or such as had been taken prisoners in war.

That the Romans also believed human sacrifices to be pleasing to the gods, might be inferred from the story of Curtius and from the self-sacrifice of the Decii. The symbolic sacrifice of human figures made of rushes at the Lemuralia [*LEMURALIA*] also shows that in the early history of Italy human sacrifices were not uncommon. For another proof of this practice, see the article *VIR SACRUM*. One awful instance also is known, which belongs to the latest period of the Roman republic. When the soldiers of Julius Caesar attempted an insurrection at Rome, two of them were sacrificed to Mars in the Campus Martius by the pontifices and the flamen Martialis, and their heads were stuck up at the regia. (Dion Cass. xlii. 24.)

A second kind of bloody sacrifices were those of animals of various kinds, according to the nature and character of the divinity. The sacrifices of animals were the most common among the Greeks and Romans. The victim was called *leptior*, and in Latin *hostia* or *victima*. In the early times it appears to have been the general custom to burn the whole victim (*δολοκαυτεῖν*) upon the altars of the gods, and the same was in some cases also observed in later times (Xenoph. *Anab.* vii. 8. § 5), and more especially in sacrifices to the gods of the lower world, and such as were offered to atone for some crime that had been committed. (Apollon. Rhod. iii. 1030, 1209.) But as early as the time of Homer it was the almost general practice to burn only the legs (*μῆποι, μῆπια, μῆτρα*) enclosed in fat, and certain parts of the intestines, while the remaining parts of the victim were consumed by men at a festive meal. The gods delighted chiefly in the smoke arising from the burning victims, and the greater the number of victims, the more pleasing was the sacrifice. Hence it was not uncommon to offer a sacrifice of one hundred bulls (*ἑκατόμβη*) at once, though it must not be supposed that a hecatomb always signifies a sacrifice of a hundred bulls, for the name was used in a general way to designate any great sacrifice. Such great sacrifices were not less pleasing to men than to the gods, for in regard to the former they were in reality a donation of meat. Hence at Athens the partiality for such sacrifices rose to the highest degree. (Athen. i. p. 3; comp. Böckh, *Publ. Econ.* p. 211, &c.) Sparta, on the other hand, was less extravagant in sacrifices, and while in other Greek states it was necessary that a victim should be healthy, beautiful, and uninjured, the Spartans were not very scrupulous in this respect. (Plat. *Alcib.* ii. p. 149.) The animals which were sacrificed were mostly of the domestic kind, as bulls, cows, sheep, rams, lambs, goats, pigs, dogs, and horses; but fishes are also mentioned as pleasing to certain gods. (Athen. vii. p. 297.) Each god had his favourite animals which he liked best as sacrifices; but it may be considered as a general rule, that those animals which were sacred to a god were not sacrificed to him, though horses were sacrificed to Poseidon notwithstanding this usage. (Paus. viii. 7. § 2.) The head of the victim before it was killed was in most cases strewn with roasted barley meal (*ὀβλόχυντα* or *ὀβλόχυνται*) mixed with salt (*mola salsa*). The Athenians used for this purpose only barley grown in the Rharian plain. (Paus. i. 38. § 6.) The persons who offered the sacrifice wore generally garlands round their heads and sometimes also carried them in their hands, and before they touched anything belonging to the

sacrifice they washed their hands in water. The victim itself was likewise adorned with garlands, and its horns were sometimes gilt. Before the animal was killed, a bunch of hair was cut from its forehead, and thrown into the fire as *primitiae*: this preparatory rite was called *κατάρχεσθαι*. (Hom. *Il.* xix. 254, *Od.* xiv. 422; Herod. ii. 45, iv. 60; Eurip. *Iphig. Taur.* 40.) In the heroic ages the princes, as the high priests of their people, killed the victim; in later times this was done by the priests themselves. When the sacrifice was to be offered to the Olympic gods, the head of the animal was drawn heavenward (see the woodcut on the title page of this work: comp. Eustath. *ad Iliad.* i. 459); when to the gods of the lower world, to heroes, or to the dead, it was drawn downwards. While the flesh was burning upon the altar, wine and incense were thrown upon it (*Iliad.* i. 264, xi. 774, &c), and prayers and music accompanied the solemnity.

The most common animal sacrifices at Rome were the *suovetaurilia*, or *solitaurilia*, consisting of a pig, a sheep, and an ox. They were performed in all cases of a lustration, and the victims were carried around the thing to be lustrated, whether it was a city, a people, or a piece of land. [*Lustratio*.] The Greek *τριτρία*, which likewise consisted of an ox, a sheep and a pig, was the same sacrifice as the Roman *suovetaurilia*. (Callimach. *ap. Phot.* s. v. *Τριτρία*; Aristoph. *Plut.* 820.) The customs observed before and during the sacrifice of an animal were on the whole the same as those observed in Greece. (Virg. *Aen.* vi. 245; Serv. *ad Aen.* iv. 57; Fest. s. v. *Immolare*; Cato, *de Re Rust.* 134, 132.) But the victim was in most cases not killed by the priests who conducted the sacrifice, but by a person called *papa*, who struck the animal with a hammer before the knife was used. (Serv. *ad Aen.* xii. 120; Suet. *Calig.* 32.) The better parts of the intestines (*exta*) were strewn with barley meal, wine, and incense, and were burnt upon the altar. Those parts of the animal which were burnt were called *prosecta*, *proscitae*, or *oblegmina*. When a sacrifice was offered to gods of rivers or the sea, these parts were not burnt, but thrown into the water. (Cato, *de Re Rust.* 134; Macrob. *Sat.* ii. 2; Liv. xxix. 27; Virg. *Aen.* v. 774.) Respecting the use which the ancients made of sacrifices to learn the will of the gods, see *HARUSPEX* and *DIVINATIO*.

Unbloody sacrifices. Among these we may first mention the libations (*libationes*, *λοιβαί* or *σπονδαί*). We have seen above that bloody sacrifices were usually accompanied by libations, as wine was poured upon them. Libations always accompanied a sacrifice which was offered in concluding a treaty with a foreign nation, and that here they formed a prominent part of the solemnity, is clear from the fact that the treaty itself was called *σπονδαί*. But libations were also made independent of any other sacrifice, as in solemn prayers (*Iliad.* xvi. 233), and on many other occasions of public and private life, as before drinking at meals, and the like. Libations usually consisted of unmixed wine (*ἄσπονδος*, *merum*), but sometimes also of milk, honey, and other fluids, either pure or diluted with water. (Soph. *Oed. Col.* 159, 481; Plin. *H. N.* xiv. 19; Aeschyl. *Eum.* 107.) Incense was likewise an offering which usually accompanied bloody sacrifices, but it was also burned as an offering by itself. Real incense appears to have been used

only in later times (Plin. *H. N.* xiii. 1), but in tea-early times, and afterwards also, various kinds of fragrant wood, such as cedar, fig, vine, and myrtle-wood, were burnt upon the altars of the gods. (Suid. s. v. *Νηρόλια ξύλα*.)

A third class of unbloody sacrifices consisted of fruit and cakes. The former were mostly offered to the gods as *primitiae* or tithes of the harvest, and as a sign of gratitude. They were sometimes offered in their natural state, sometimes also adorned or prepared in various ways. Of this kind were the *εἰρεσιώγη*, an olive branch wound around with wool and hung with various kinds of fruits; the *χύτραι* or pots filled with cooked beans [*ΠΥΛΑΝΕΨΙΑ*]; the *κέρνον* or *κέρνα*, or dishes with fruit; the *δσχαί* or *δσχα* [*OSCHOPHORIA*]. Other instances may be found in the accounts of the various festivals. Cakes (*πέλανοι*, *πέμματα*, *πέπανα*, *libum*) were peculiar to the worship of certain deities, as to that of Apollo. They were either simple cakes of flour, sometimes also of wax, or they were made in the shape of some animal, and were then offered as symbolical sacrifices in the place of real animals, either because they could not easily be procured or were too expensive for the sacrificer. (Suid. s. v. *Βοῦς ἑξέδομος*; Serv. *ad Aen.* ii. 116.) This appearance instead of reality in sacrifices was also manifest on other occasions, for we find that sheep were sacrificed instead of stags, and were then called stags; and in the temple of Isis at Rome the priests used water of the river Tiber instead of Nile water, and called the former water of the Nile. (Fest. s. v. *Cervaria ovis*; Serv. *l. c.*)

See Wachsmuth, *Hellen. Alterthumsk.* vol. ii. pp. 548—559, 2d ed.; Hartung, *Die Religion der Römer*, vol. i. p. 160, &c. [L. S.]

SACRILEGIUM is the crime of stealing things consecrated to the gods, or things deposited in a consecrated place. (Quintil. vii. 3. § 21, &c.; Cic. *de Leg.* ii. 16; Liv. xlii. 3.) A lex Julia referred to in the Digest (48. tit. 13. s. 4) appears to have placed the crime of sacrilegium on an equality with *peculatus*. [*PECULATUS*.] Several of the imperial constitutions made death the punishment for a sacrilegus, which consisted according to circumstances either in being given up to wild beasts, in being burned alive, or hanged. (Dig. 48. tit. 13. s. 6.) Paulus says in general that a sacrilegus was punished with death, but he distinguishes between such persons who robbed the *sacra publica*, and such as robbed the *sacra privata*, and he is of opinion that the latter, though more than a common thief, yet deserves less punishment than the former. In a wider sense, sacrilegium was used by the Romans to designate any violation of religion (Corn. Nep. *Alcob.* 6), or of anything which should be treated with religious reverence. (Ovid. *Met.* xiv. 539, *Rem. Am.* 367, *Fast.* iii. 700.) Hence a law in the Codex (9. tit. 29. s. 1) states that any person is guilty of sacrilegium who neglects or violates the sanctity of the divine law. Another law (Cod. 9. tit. 29. s. 2) decreed that even a doubt as to whether a person appointed by an emperor to some office was worthy of this office, was to be regarded as a crime equal to sacrilegium. [L. S.]

SACRO'RUM DETESTATIO. [GENS, p. 568, b.]

SAECULA'RESLUDI. [*LUDI SAECULARES*.] *SAECULUM*. A *saeculum* was of a twofold

nature, that is, either civil or natural. The civil saeculum, according to the calculation of the Etruscans, which was adopted by the Romans, was a space of time containing 110 lunar years. The natural saeculum, upon the calculation of which the former was founded, expressed the longest term of human life, and its duration or length was ascertained according to the ritual books of the Etruscans, in the following manner: the life of a person, which lasted the longest of all those who were born on the day of the foundation of a town, constituted the first saeculum of that town; and the longest liver of all who were born at the time when the second saeculum began, again determined the duration of the second saeculum, and so on. (Censorin. *de Die Nat.* 17.) In the same manner that the Etruscans thus called the longest life of a man a saeculum, so they called the longest existence of a state, or the space of 1100 years, a saecular day; the longest existence of one human race, or the space of 8800 years, a saecular week, &c. (Plut. *Sulla*, 7; Niebuhr, *Hist. of Rome*, i. p. 137.) It was believed that the return of a new saeculum was marked by various wonders and signs, which were recorded in the history of the Etruscans. The return of each saeculum at Rome was announced by the pontiffs, who also made the necessary intercalations in such a manner, that at the commencement of a new saeculum the beginning of the ten months' year, of the twelve months' year, and of the solar year coincided. But in these arrangements the greatest arbitrariness and irregularity appears to have prevailed at Rome, as may be seen from the unequal intervals at which the *ludi saeculares* were celebrated. [LUDI SAECULARIA.] This also accounts for the various ways in which a saeculum was defined by the ancients: some believed that it contained thirty (Censorin. *l. c.*), and others that it contained a hundred years (Varro, *de Ling. Lat.* vi. 11; Fest. *s. v. Saeculares ludi*); the latter opinion appears to have been the most common in later times, so that saeculum answered to our century. (See Niebuhr, *Hist. of Rome*, i. p. 275, &c.) [L. S.]

SAGARI, the sellers or makers of the *saga* or soldiers' cloaks. [SAGUM.] They formed a collegium at Rome, and, like many of the other trade-corporations, worshipped the imperial family, as we see from inscriptions. (Dig. 14. tit. 4. a. 5. § 15; 17. tit. 2. a. 52. § 4; and the inscription in A. W. Zumpt, *De Augustalibus*, Berol. 1846, p. 17.)

SAGITTA (*διστός, ἰός*; Herod. *τόξεννα*), an arrow. The account of the arrows of Hercules (Hesiod, *Scut.* 130—135), enumerates and describes three parts, viz. the head or point, the shaft, and the feather.

I. The head was denominated *ἄρσις* (Herod. i. 215, iv. 81), whence the instrument, used to extract arrow-heads from the bodies of the wounded, was called *ἀρσιόθηρα*. [FORCEPS.] Great quantities of flint arrow heads are found in Celtic barrows throughout the north of Europe, in form exactly resembling those which are still used by the Indians of North America. (Hoare's *Anc. Willshire, South*, p. 183.) Nevertheless, the Scythians and Massagetae had them of bronze. (Herod. *l. cc.*) Mr. Dodwell found flint arrow-heads on the plain of Marathon, and concludes that they had belonged to the Persian army. (*Tour through Greece*, vol. ii. p. 159.) Those used by the Greeks were commonly bronze, as is expressed by the epithet

χαλκήρης, "fitted with bronze," which Homer applies to an arrow. (*Il.* xiii. 650, 662.) Another Homeric epithet, viz. "three-tongued" (*τριγλῶχιον*, *Il.* v. 393), is illustrated by the forms of the arrow-heads, all of bronze, which are represented in the annexed woodcut. That which lies horizontally

was found at Persepolis, and is drawn of the size of the original. The two smallest, one of which shows a rivet-hole at the side for fastening it to the shaft, are from the plain of Marathon. (Skelton, *Illustr. of Armour at Goodrich Court*, i. pl. 44.) The fourth specimen was also found in Attica. (Dodwell, *l. c.*) Some of the northern nations, who could not obtain iron, barbed their arrow-heads with bone. (Tacit. *Germ.* 46.)

The use of barbed (*aduncas, hamatas*), and poisoned arrows (*venenatas sagittas*) is always represented by the Greek and Roman authors as the characteristic of barbarous nations. It is attributed to the Sauromatae and Getae (Ovid. *Trist.* iii. 10. 63, 64, *de Ponto*, iv. 7. 11, 12); to the Servii (Arnoldi, *Chron. Slav.* 4. § 8) and Scythians (Plin. *H. N.* x. 53. s. 115), and to the Arabs (Pollux, i. 10) and Moors. (Hor. *Carm.* i. 22. 3.) When Ulysses wishes to have recourse to this insidious practice, he is obliged to travel north of the country of the Thesprotians (Hom. *Od.* i. 261—263); and the classical authors who mention it do so in terms of condemnation. (Hom. Plin. *l. cc.*; Aelian, *H. A.* v. 16.) The poison applied to the tips of arrows having been called *tosicum* (*τοξικόν*), on account of its connection with the use of the bow (Plin. *H. N.* xvi. 10. s. 20; Festus, *s. v.*; Dioscor. vi. 20), the signification of this term was afterwards extended to poisons in general. (Plaut. *Merc.* ii. 4. 4; Hor. *Epod.* xvii. 61; Propert. i. 5. 6.)

II. The excellence of the shaft consisted in being long and at the same time straight, and, if it was of light wood, in being well polished. (Hes. *Scut.* 133.) But it often consisted of a smooth cane or reed (*Arundo donax* or *phragmites*, Linn.), and on this account the whole arrow was called either *arundo* in the one case (Virg. *Aen.* iv. 69—73, v. 525; Ovid. *Met.* i. 471, viii. 382), or *calamus* in the other. (Virg. *Buc.* iii. 12, 13; Ovid. *Met.* vii. 778; Hor. *Carm.* i. 15. 17; Juv. xiii. 80.) In the Egyptian tombs reed-arrows have been found, varying from 34 to 22 inches in length. They show the slit (*γλῶφλις*, Hom. *Il.* iv. 122, *Od.* xxi. 419) cut in the reed for fixing it upon the string. (Wilkinson, *Man. and Cust. Ec.* vol. i. p. 309.)

III. The feathers are shown on ancient monuments of all kinds, and are indicated by the terms *ala* (Virg. *Aen.* ix. 578, xii. 319), *pennatae sagittae* (Prudentius, *Hamart.* 498), and *πτερόεντες διατοί* (Hom. *Il.* v. 171.) The arrows of Hercules are said to have been feathered from the wings of a black eagle. (Hea. l. c.)

Besides the use of arrows in the ordinary way, they were sometimes employed to carry fire. Julius Caesar attempted to set Antony's ships on fire by sending *βέλη πυρφόρα* from the bows of his archers. (Dion Cass. l. 34.) A head-dress of small arrows is said to have been worn by the Indians (Prudentius, l. c.), the Nubians and Egyptians, and other Oriental nations. (Claudian, *de Nupt. Honor.* 222, *de 3 Cons. Honor.* 21, *de Laud. Stil.* i. 254.)

In the Greek and Roman armies the *sagittarii*, more anciently called *argyritae*, i. e. archers, or bowmen (Festus, s. v.), formed an important part of the light-armed infantry. (Caesar, *Bell. Civ.* i. 81, iii. 44; Cic. *ad Fam.* xv. 4.) They belonged, for the most part, to the allies, and were principally Cretans. [ARCUS; CORYTUS; PHARETRA; TORMENTUM.] [J. Y.]

SAGMINA were the same as the *Verbenae*, namely, herbs torn up by their roots from within the inclosure of the Capitol, which were always carried by the Fetiales or ambassadors, when they went to a foreign people to demand restitution for wrongs committed against the Romans, or to make a treaty. [FETIALES.] They served to mark the sacred character of the ambassadors, and answered the same purpose as the Greek *κνέφεια*. (Plin. *H. N.* xxii. 2. s. 3; Liv. i. 24, xxx. 43; Dig. l. tit. 8. a. 8.) Pliny (l. c.) also says that *sagmina* were used in *remediis publicis*, by which we must understand expiations and lustrations. The word *Verbena* seems to have been applied to any kind of herb, or to the boughs and leaves of any kind of tree, gathered from a pure or sacred place. (Serv. *ad Virg. Aen.* xii. 120.)

According to Festus (s. v.), the *verbenae* were called *sagmina*, that is, pure herbs, because they were taken by the consul or the praetor from a sacred (*sancto*) place, to give to legati when setting out to make a treaty or declare war. He connects it with the words *sanctus* and *sancire*, and it is not at all impossible that it may contain the same root, which appears in a simpler form in *sac-er* (*sag-men*, *sa(n)-tus*): Marcian (Dig. l. c.) however makes a ridiculous mistake, when he derives *sanctus* from *sagmina*.

Müller (*ad Festum*, p. 320) thinks, that *samen-tum* is the same word as *sagmen*, although used respecting another thing by the Anagninenses. (M. Aurelius, in *Epist. ad Fronton.* iv. 4.)

SAGUM was the cloak worn by the Roman soldiers and inferior officers, in contradistinction to the Paludamentum of the general and superior officers. [PALUDAMENTUM.] It is used in opposition to the toga or garb of peace, and we accordingly find that when there was a war in Italy, all citizens put on the sagum even in the city, with the exception of those of consular rank (*saga sumere, ad saga ire, in sagis esse*, Cic. *Phil.* viii. 11, v. 12, xiv. 1): hence in the Social or Marsic war the sagum was worn for two years. (Liv. *Epit.* 72, 73; Vell. Pat. ii. 16.)

The sagum was open in the front, and usually fastened across the shoulders by a clasp, though not always (Trebell. Poll. *Trig. Tyrran.* 10): it

resembled in form the Paludamentum (see woodcut, p. 854), as we see from the specimens of it on the column of Trajan and other ancient monuments. It was thick and made of wool (Mart. xiv. 159), whence the name is sometimes given to the wool itself. (Varro, *L. L.* v. 167, ed. Müller.) The cloak worn by the general and superior officers is sometimes called *sagum* (*Punicum sagum*, Hor. *Ep.* ix. 28), but the diminutive *Sagulum* is more commonly used in such cases. (Compare Sil. Ital. iv. 519, xvii. 528; Liv. xxx. 17, xxvii. 19.)

The cloak worn by the northern nations of Europe is also called *sagum*: see woodcut, p. 213, where three Sarmatians are represented with *saga*, and compare PALLIUM, p. 852. The German *sagum* is mentioned by Tacitus (*Germ.* 17): that worn by the Gauls seems to have been a species of plaid (*versicolor sagulum*, Tac. *Hist.* ii. 20).

The outer garment worn by slaves and poor persons is also sometimes called *sagum*. (Columell. l. 8; compare Dig. 34. tit. 2. a. 23. § 2.)

SALAMINIA. [PARALUS.]

SALARIIUM, a salary. The ancients derive the word from *sal*, i. e. salt (Plin. *H. N.* xxxi. 41); the most necessary thing to support human life being thus mentioned as a representative for all others. Salarium therefore comprised all the provisions with which the Roman officers were supplied, as well as their pay in money. In the time of the republic the name *salarium* does not appear to have been used; it was Augustus who in order to place the governors of provinces and other military officers in a greater state of dependence, gave salaries to them or certain sums of money, to which afterwards various supplies in kind were added. (Suet. *Aug.* 36; Tacit. *Agrie.* 42; Treb. Poll. *Claud.* 14 and 15; Flav. Vopisc. *Prob.* 4.) Before the time of Augustus, the provincial magistrates had been provided in their provinces with everything they wanted, through the medium of redemptores (*πάροχοι*), who undertook, for a certain sum paid by the state, to provide the governors with all that was necessary to them. During the empire we find instances of the *salarium* being paid to a person who had obtained a province, but was nevertheless not allowed to govern it. In this case the *salarium* was a compensation for the honour and advantages which he might have derived from the actual government of a province, whence we can scarcely infer that the sum of 10,000 sesterces, which was offered on such an occasion (Dion Cass. lxxviii. 22), was the regular *salarium* for a proconsul.

Salaria were also given under the empire to other officers, as to military tribunes (Plin. *H. N.* xxxiv. 6; Juv. iii. 132), to assessores [ASSESSOR], to senators (Suet. *Nero.* 10), to the comites of the princes on his expeditions (Suet. *Tib.* 46), and others. Antoninus Pius fixed the salaries of all the rhetoricians and philosophers throughout the empire (Capitol. *Ant. Pius.* 11), and when persons did not fulfil their duties, he punished them by deducting from their salaries. (Capitol. *ibid.* 7.) Alexander Severus instituted fixed salaries for rhetoricians, grammarians, physicians, haruspices, mathematicians, mechanicians and architects (Lamprid. *Alex. Sev.* 44); but to how much these salaries amounted we are not informed. Respecting the pay which certain classes of priests received, see SACERDOS.

[L. S.]

SALIENTES. [Fons, p. 544, b.]

SA'LII were priests of Mars Gradivus, and are said to have been instituted by Numa. They were twelve in number, chosen from the patricians even in the latest times, and formed an ecclesiastical corporation. (Liv. i. 20; Dionys. ii. 70; Cic. *Rep.* ii. 14; *lecta juvenus patricia*, Lucan, ix. 478.) They had the care of the twelve Ancilia, which were kept in the temple of Mars on the Palatine hill, whence those priests were sometimes called Salii Palatini to distinguish them from the other Salii mentioned below. The distinguishing dress of the Salii was an embroidered tunic bound with a brazen belt, the trabes, and the Apex, also worn by the Flamines. [APXX.] Each had a sword by his side, and in his right hand a spear or staff. (Dionys. l. c.)

The festival of Mars was celebrated by the Salii on the 1st of March and for several successive days; on which occasion they were accustomed to go through the city in their official dress carrying the ancilia in their left hands or suspended from their shoulders, and at the same time singing and dancing. In the dance they struck the shields with rods so as to keep time with their voices and with the movements of the dance. (Liv. l. c.; Dionys. l. c.; Hor. *Carm.* i. 36. l, iv. l. 28). From their dancing Ovid, apparently with correctness, derives their name (*Fast.* iii. 387). The songs or hymns, which they sang on this occasion (*Salaria carmina*, Hor. *Ep.* ii. l. 86; Tac. *Ann.* ii. 83), were called *Asamenta*, *Assamenta*, or *Azamenta*, of which the etymology is uncertain. Götting (*Gesch. der Röm. Staatsv.* p. 192) thinks they were so called because they were sung without any musical accompaniment, *assa voce*; but this etymology is opposed to the express statement of Dionysius (iii. 32). Some idea of the subject of these songs may be obtained from a passage in Virgil (*Aen.* viii. 286), and a small fragment of them is preserved by Varro (*L. L.* vii. 26, ed. Müller). In later times they were scarcely understood even by the priests themselves. (Varro, *L. L.* vii. 2; Hor. *Ep.* ii. l. 86; Quintil. i. 6. p. 54, Bipont.) The praises of Mamurius Veturius formed the principal subject of these songs, though who Mamurius Veturius was, the ancients themselves were not agreed upon. (Varro, *L. L.* vi. 45.) He is generally said to be the armourer, who made eleven ancilia like the one that was sent from heaven in the reign of Numa. (*Festus*, s. v. *Mam. Vet.*; Dionys. ii. 71; Ovid. *Fast.* iii. 384), but some modern writers suppose it to be merely another name of Mars. Besides, however, the praises of Mamurius, the verses, which the Salii sang, appear to have contained a kind of theogony, in which the praises of all the celestial deities were celebrated, with the exception of Venus. (Macrob. *Sat.* i. 12.) The verses in honour of each god were called by the respective names of each, as Januli, Junonii, Minervii. (*Festus*, s. v. *Asamenta*.) Divine honour was paid to some of the emperors by inserting their names in the songs of the Salii. This honour was first bestowed upon Augustus (Monum. Ancyra.), and afterwards upon Germanicus (Tac. *Ann.* ii. 83); and when Verus died, his name was inserted in the song of the Salii by command of M. Antoninus. (Capitol. *M. Ant. Phil.* 21.)

At the conclusion of the festival the Salii were accustomed to partake of a splendid entertainment in the temple of Mars, which was proverbial for

its excellence. (Suet. *Claud.* 38; Cic. *ad Att.* v. 9; Hor. *Carm.* i. 37.) The members of the collegium were elected by co-optation. We read of the dignities of praesul, vates, and magister in the collegium. (Capitol. *Ibid.* 4.)

The shape of the ancile is exhibited in the annexed cut, taken from an ancient gem in the Florentine cabinet, which illustrates the accounts of the ancient writers that its form was oval, but with the two sides receding inwards with an even curvature, and so as to make it broader at the ends than in the middle. The persons engaged in carrying these ancilia on their shoulders, suspended from a pole, are probably servants of the Salii; and the representation agrees exactly with the statement of Dionysius (ii. 70) *τέλαρας ἀνηρέται ἡρημέταις ἀπὸ καθόντων κομίζουσι*. At the top of the cut is represented one of the rods with which the Salii were accustomed to beat the shield in their dance, as already described. (Gruter, *Inscr. p. cccclxiv.* note 3.)

Tullus Hostilius established another collegium of Salii in fulfilment of a vow which he made in a war with the Sabines. These Salii were also twelve in number, chosen from the patricians, and appeared to have been dedicated to the service of Quirinus. They were called the Salii Collini, Agonales or Agonenenses. (Liv. i. 27; Dionys. ii. 70, iii. 32; Varro, *L. L.* vi. 14.) Niebuhr (*Hist. of Rome*, vol. iii. p. 351) supposes, that the oldest and most illustrious college, the Palatine Salii, were chosen originally from the oldest tribe, the Ramnes, and the one instituted by Tullus Hostilius or the Quirinalian from the Tities alone: a third college for the Luceres was never established. (Compare Hartung, *Die Religion der Römer*, vol. ii. p. 163.)

SALI'NAE (ἀλαί, ἀλοήγιον), a salt-work. (Varro, *de L. Lat.* viii. 25, ed. Spengel.) Although the ancients were well acquainted with rock-salt (Herod. iv. 181—185; *ἀλας ὀρυκτοί*, i. e. "fossil salt," Arrian, *Expedit. Alex.* iii. 4. pp. 161, 162, ed. Blan.), and although they obtained salt likewise from certain inland lakes (Herod. vii. 30) and from natural springs or brine-pits (Cic. *Nat. Deor.* ii. 53; Plin. *H. N.* xxxi. 7. s. 39—42), and found no small quantity on certain shores where it was congealed by the heat of the sun without human labour (*ἀλας ἀνθρώπων*, Herod. iv. 53; Plin. l. c.), yet they obtained by far the greatest quantity by the management of works constructed on the sea-shore, where it was naturally adapted for the purpose by being so low and

flat as to be easily overflowed by the sea (*maritimae areas salinarum*, Col. *de Re Rust.* ii. 2), or even to be a brackish marsh (*ἀλμυκίς*) or a marine pool (*λιμνοθάλαττα*, Strabo, iv. 1. § 6, vii. 4. § 7; Caesar, *Bell. Civ.* ii. 37). In order to aid the aatural evaporation, shallow rectangular ponds (*multifidi lacus*) were dug, divided from one another by earthen walls. The sea-water was admitted through canals, which were opened for the purpose, and closed again by sluices. [CATARACTA.] The water was more and more strongly impregnated with salt as it flowed from one pond to another. (Rutilii, *Itin.* i. 475—490.) When reduced to brine (*coacto humore*), it was called by the Greeks *ἄλμη*, by the Latins *salugo* or *salisugo*, and by the Spaniards *muria*. (Plin. l. c.) In this state it was used by the Egyptians to pickle fish (Herod. ii. 77), and by the Romans to preserve olives, cheese, and flesh likewise. (Cato, *de Re Rust.* 7, 88, 105; Hor. *Sat.* ii. 8. 53.) From *muria*, which seems to be a corruption of *ἄλμυρος*, "briny," the victuals cured in it were called *salsa muritica*. (Plaut. *Poen.* i. 2. 32, 39.) As the brine which was left in the ponds crystallized, a man entrusted with the care of them, and therefore called *salinator* (*ἁλουργός*), raked out the salt so that it lay in heaps (*τumulí*) upon the ground to drain. (Manilius, v. *prope fin.*; Nicander, *Alex.* 518, 519.) In Attica (Steph. Byz.), in Britain (Ptol.), and elsewhere, several places, in consequence of the works established in them, obtained the name of *Ἀλαί* or *Salinae*.

Throughout the Roman empire the salt-works were commonly public property, and were let by the government to the highest bidder. The first salt-works are said to have been established by Ancus Marcius at Ostia. (Liv. i. 33; Plin. *H. N.* xxxi. 41.) The publicani who farmed these works appear to have sold the salt, one of the most necessary of all commodities, at a very high price, whence the censors M. Livius and C. Claudius (a. c. 204) fixed the price at which those who took the lease of them were obliged to sell the salt to the people. At Rome the modius was according to this regulation sold for a sextans, while in other parts of Italy the price was higher and varied. (Liv. xxix. 37.) The salt-works in Italy and in the provinces were very numerous; in conquered countries however they were sometimes left in the possession of their former owners (persons or towns) who had to pay to Rome only a fixed rent, but most of them were farmed by the publicani. (Burmman, *Vestigal. Pop. Rom.* p. 90, &c.) [J. Y.]

SALINUM, *dim.* SALILLUM, a salt-cellar. Among the poor a shell served for a salt-cellar (Hor. *Sat.* i. 3. 14; Schol. *ad loc.*); but all who were raised above poverty had one of silver, which descended from father to son (Hor. *Carm.* ii. 16. 13, 14), and was accompanied by a silver plate, which was used together with the salt-cellar in the domestic sacrifices. (Pers. iii. 24, 25.) [PATERA.] These two articles of silver were alone compatible with the simplicity of Roman manners in the early times of the republic. (Plin. *H. N.* xxxiii. 12. a. 54; Val. Max. iv. 4. § 3; Catull. xxiii. 19.) The salt-cellar was no doubt placed in the middle of the table, to which it communicated a sacred character, the meal partaking of the nature of a sacrifice. [Focus; MENSA.] These circumstances, together with the religious reverence paid to salt and the habitual comparison of it to wit and vi-

vacity, explain the metaphor by which the soul of a man is called his *salillum*. (Plaut. *Trin.* ii. 4. 90, 91.) [J. Y.]

SALTA'TIO (*ὄρχησις*, *ὄρχηστὺς*), dancing. The dancing of the Greeks as well as of the Romans had very little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements and attitudes certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements, however, were accompanied by music; but the terms *ὄρχησις* and *saltatio* were used in so much wider a sense than our word dancing, that they were applied to designate gestures, even when the body did not move at all. (Ovid. *Art. Am.* i. 595, ii. 305; *saltare solis oculis*, Apul. *Met.* x. p. 251, ed. Bip.; comp. Grote, *Hist. of Greece*, vol. iv. p. 114.)

We find dancing prevalent among the Greeks from the earliest times. It is frequently mentioned in the Homeric poems: the suitors of Penelope delight themselves with music and dancing (*Od.* i. 152, 421, xviii. 304); and Ulysses is entertained at the court of Alcinoüs with the exhibitions of very skilful dancers, the rapid movements of whose feet excite his admiration. (*Od.* viii. 265.) Skilful dancers were at all times highly prized by the Greeks: we read of some who were presented with golden crowns, and had statues erected to their honour, and their memory celebrated by inscriptions. (Plut. *de Pyth. Ora.* 8; Anthol. *Plan.* iv. n. 283, &c.)

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and accordingly the names of no less than 200 different dances have come down to us. (Meursius, *Orchestra.*; Athen. xiv. pp. 627—630; Pollux, iv. 95—111; Liban. *ὕπερ τῶν ὀρχ.*) It would be inconsistent with the nature of this work to give a description of all that are known: only the most important can be mentioned, and such as will give some idea of the dancing of the ancients.

Dancing was originally closely connected with religion: Plato (*Leg.* vii. pp. 798, 799) thought that all dancing should be based on religion, as it was, he says, among the Egyptians. The dances of the Chorus at Sparta and in other Doric states were intimately connected with the worship of Apollo, as has been shown at length elsewhere [CHORUS; HYPOCHERMA]; and in all the public festivals, which were so numerous among the Greeks, dancing formed a very prominent part. All the religious dances, with the exception of the Bacchic and the Corybantian, were very simple, and consisted of gentle movements of the body with various turnings and windings around the altar: such a dance was the *γέρανος*, which Theseus is said to have performed at Delos on his return from Crete. (Plut. *Thes.* 21.) The Dionysiac or Bacchic and the Corybantian were of a very different nature. In the former the life and adventures of the god were represented by mimetic dancing [DIONYSIA]: the dance called *Βαρυχὴ* by Lucian (*de Salt.* 79), was a Satyric dance and chiefly prevailed in Ionia and Pontus; the most illustrious men in the state danced in it, representing Titans, Corybantians, Satyrs, and husbands; and the spectators were so delighted with the exhibition, that they remained sitting the

whole day to witness it, forgetful of everything else. The Corybantian was of a very wild character: it was chiefly danced in Phrygia and in Crete; the dancers were armed, struck their swords against their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute. (Lucian, *lb.* 8; Strab. x. p. 473;

Plat. *Crit.* p. 54.) The preceding woodcut from the Museo Pio Clementino (vol. iv. pl. 2) is supposed to represent a Corybantian dance. Respecting the dances in the theatre, see CHORUS.

Dancing was applied to gymnastic purposes and to training for war, especially in the Doric states, and was believed to have contributed very much to the success of the Dorians in war, as it enabled them to perform their evolutions simultaneously and in order. Hence the poet Socrates (Athen. xiv. p. 629. f.) says,

οἱ δὲ χοροὶ κάλλιστα θεοῦς τιμῶσιν, ἄριστοι ἐν πολέμῳ.

There were various dances in early times, which served as a preparation for war: hence Homer (*Il.* xi. 49, xii. 77) calls the Hoplites *πυλῆες*, a war-dance having been called *πύλῆς* by the Cretans. (Müller, *Dor.* iii. 12. § 10.) Of such dances the most celebrated was the Pyrrhic (ἡ Πυρρική), of which the *πύλῆς* was probably only another name: this Plato (*Leg.* vii. p. 815) takes as the representative of all war dances. The invention of this dance is placed in the mythical age, and is usually assigned to one Pyrrhicos, but most of the accounts agree in assigning it a Cretan or Spartan origin; though others refer it to Pyrrhus or Neoptolemus, the son of Achilles, apparently misled by the name, for it was undoubtedly of Doric origin. (Athen. xiv. p. 630, e; Strab. x. p. 466; Plat. *Leg.* p. 796; Lucian, *lb.* 9.) It was danced to the sound of the flute, and its time was very quick and light, as is shown by the name of the Pyrrhic foot (πύρρην), which must be connected with this dance: and from the same source came also the Proceleusmatic (πρόκυμα) or challenging foot. (Müller, *Hist. of the Literat. of Greece*, p. 161.) The Pyrrhic dance was performed in different ways at various times and in various countries, for it was by no means confined to the Doric states. Plato (*Leg.* vii. p. 815) describes it as representing by rapid movements of the body the way in which missiles and blows from weapons were avoided, and also the mode in which the enemy were attacked. In the non-Doric states it was probably not practised as a training for war, but only as a mimetic dance: thus we read of its being danced by women to entertain a company. (Xen. *Anab.* vi. 1. § 12.) It was also performed at Athens at the greater and lesser Panathenaea by Ephebi, who were called Pyrrhichists (Πυρρῆχισταί) and were trained at the expense of the Chorus. (Schol. ad *Aristoph. Nub.* 988; *Lysias*, ἄπολ.

δερροδοκ. p. 698, Reiske.) In the mountainous parts of Thessaly and Macedon dances are performed at the present day by men armed with muskets and swords. (Dodwell, *Tour through Greece*, vol. ii. pp. 21, 22.)

The following woodcut, taken from Sir W. Hamilton's vases (ed. Tischbein, vol. i. pl. 60), represents three Pyrrhichists, two of whom with shield and sword are engaged in the dance, while the third is standing with a sword. Above them is a female balancing herself on the head of one, and apparently in the act of performing a somerset; she no doubt is taking part in the dance, and performing a very artistic kind of *κυβίστησις* or tumbling, for the Greek performances of this kind surpass any thing we can imagine in modern times. Her danger is increased by the person below, who holds a sword pointing towards her. A female spectator sitting looks on astonished at the exhibition.

The Pyrrhic dance was introduced in the public games at Rome by Julius Caesar, when it was danced by the children of the leading men in Asia and Bithynia. (Suet. *Jul. Caes.* 39.) It seems to have been much liked by the Romans; it was exhibited both by Caligula and Nero (Dion Cass. ix. 7; Suet. *Ner.* 12), and also frequently by Hadrian. (Spartian. *Had.* 19.) Athenaeus (xiv. p. 631, a) says that the Pyrrhic dance was still practised in his time (the third century A. D.) at Sparta, where it was danced by boys from the age of fifteen, but that in other places it had become a species of Dionysiac dance, in which the history of Dionysus was represented, and where the dancers instead of arms carried the thyrsus and torches.

Another important gymnastic dance was performed at the festival of *γυμνοπαῖδα* at Sparta in commemoration of the battle at Thyrea, where the chief object according to Müller (*Dor.* iv. 6. § 8) was to represent gymnastic exercises and dancing in intimate union: respecting the dance at this festival, see GYMNOPÆDIA.

There were other dances, besides the Pyrrhic, in which the performers had arms, but these seem to have been entirely mimetic, and not practised with any view to training for war. Such was the *Kapwala* peculiar to the Aenianians and Magnetes, which was performed by two armed men in the following manner: one lays down his arms, sows the ground, and ploughs with a yoke of oxen, frequently looking around as if afraid; then comes a robber, whom as soon as the other sees, he snatches up his arms and fights with him for the oxen. All

these movements are rhythmical, accompanied by the flute. At last the robber binds the man and drives away the oxen, but sometimes the husband-man conquers. (Xen. *Anab.* vi. 1. §§ 7, 8; Athen. i. pp. 15, f, 16, a; Maxim. Tyr. *Diss.* xxviii. 4.) Similar dances by persons with arms are mentioned by Xenophon on the same occasion. These dances were frequently performed at banquets for the entertainment of the guests (Athen. iv. p. 155, b.). At banquets likewise the *κυσιστηγῆρες* or tumblers were frequently introduced. These tumblers, in the course of their dance, flung themselves on their heads and alighted again on their feet (*ἔσκεν οἱ κυσιστηγῆρες καὶ εἰς ὀρθὸν τὰ σκέλη περιφερόμενοι κυσιστῶσι κύκλῳ*, Plato, *Symp.* c. 16, p. 190). We read of *κυσιστηγῆρες* as early as the time of Homer. (*Il.* xviii. 605, *Od.* iv. 18.) They were also accustomed to make their somerset over knives or swords, which was called *κυσιστῶν εἰς μάχαιρας*. (Plato, *Euthyd.* c. 55, p. 294; Xen. *Mem.* i. 3. § 9, *Symp.* ii. 14; Athen. iv. p. 129, d; Pollux, iii. 134.) The way in which this feat was performed is described by Xenophon, who says (*Symp.* ii. 11) that a circle was made quite full of upright swords, and that the dancer *εἰς ταῦτα ἐκνέσσεια τε καὶ ἐφεκνέσσεια ὄρετ' αὐτῶν*; and it is well illustrated by the following cut taken from the *Museo Borbonico*, vol. vii. tav. 58. (Becker, *Charikles*, vol. i. p. 499, vol. ii. p. 287.) We learn from Tacitus (*German.* 24) that the German youths also used to dance among swords and spears pointed at them.

Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature. (Macrob. *Sat.* ii. 10; Plaut. *Stich.* v. 2. 11.) The dancers seem to have frequently represented Bacchanals: many such dancers occur in the paintings found at Herculaneum and Pompeii in a variety of graceful attitudes. (See *Museo Borbonico*, vol. vii. tav. 34—40, vol. ix. tav. 17, vol. x. tav. 5, 6, 54.)

Among the dances performed without arms one of the most important was the *ἴσμιος*, which was danced at Sparta by youths and maidens together; the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Lucian (*de Salt.* 12) says that it was similar to the dance performed at the *Gymnopaedia*. (Compare Müller, *Dor.* iv. 6. § 5.) Another common dance at Sparta was the *Bibasis* (*Βίβασις*), which was much practised both by men and women. The dance consisted in springing rapidly from the

ground, and striking the feet behind; a feat of which a Spartan woman in Aristophanes (*Lyssistr.* 28) prides herself (*γυμναζομαι γὰρ καὶ ποτὶ πύργῳ ἄλλομαι*). The number of successful strokes was counted, and the most skilful received prizes. We are told by a verse which has been preserved by Pollux (iv. 102), that a Laconian girl had danced the *bibasis* a thousand times, which was more than had ever been done before. (Müller, *Dorians*, iv. 6. § 8.)

In many of the Greek states the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasures and enjoyment of men at their symposia. These dancers always belonged to the *hetærae*. Xenophon (*Symp.* ix. 2—7) describes a mimetic dance which was represented at a symposium, where Socrates was present. It was performed by a maiden and a youth, belonging to a Syracusan, who is called the *ὄρχηστροδιδάσκαλος*, and represented the loves of Dionysus and Ariadne.

Respecting the dancers on the tight-rope see *FUNAMBULUS*.

Dancing was common among the Romans in ancient times in connection with religious festivals and rites, and was practised according to Servius (*ad Virg. Ecl.* v. 73), because the ancients thought that no part of the body should be free from the influence of religion. The dances of the *Salii*, which were performed by men of patrician families, are spoken of elsewhere. [*SALII*.] Dionysius (vii. 72) mentions a dance with arms at the *Ludi Magni*, which, according to his usual plan of referring all old Roman usages to a Greek origin, he calls the *Pyrrhic*. There was another old Roman dance of a military nature, called *Bellicrepa Saltatio*, which is said to have been instituted by Romulus, after he had carried off the Sabine virgins, in order that a like misfortune might not befall his state. (Festus, s. v.) Dancing, however, was not performed by any Roman citizen except in connection with religion; and it is only in reference to such dancing that we are to understand the statements, that the ancient Romans did not consider dancing disgraceful, and that not only freemen, but the sons of senators and noble matrons practised it. (Quintil. *Inst. Orat.* i. 11. § 18; Macrob. *Sat.* ii. 10.) In the later times of the republic we know that it was considered highly disgraceful for a freeman to dance: Cicero reproaches Cato for calling Murena a dancer (*saltator*), and adds "nemo fere saltat sobrius, nisi forte insanit." (*Pro Murena*. 6; compare in *Pison*. 10.)

The mimetic dances of the Romans, which were carried to such perfection under the empire, are described under *PANTOMIMUS*. (Meursius, *Orchestra*; Bürette, *de la Danse des Anciens*; Krause, *Gymnastik und Agon. d. Hell.* p. 807, &c.)

SALVIANUM INTERDICTUM. [*INTERDICTUM*.]

SALUTATO'RES, the name given in the later times of the republic and under the empire to a class of men who obtained their living by visiting the houses of the wealthy early in the morning to pay their respects to them (*salutare*), and to accompany them when they went abroad. This arose from the visits which the clients were accustomed to pay to their patrons, and degenerated in later times into the above-mentioned practice. Such persons seem to have obtained a good living among the great number of wealthy and vain persons at

Rome, who were gratified by this attention. (*Mercenarius Saluator*, Colum. *Præf.* i.; Martial, x. 74; Becker, *Gallus*, vol. i. p. 146.) [SPORTULA.]

SAMBUCA (σαμβύκη, or σαβύκη, Arcadius *de Accont.* p. 107), a harp. The preceding Latin and Greek names are with good reason represented by Bochart, Vossius, and other critics, to be the same with the Hebrew סַבְכָּה (sabeca), which occurs in Daniel (iii. 5, 7, 10). The performances of *sambucistrias* (σαμβυκιστρία) were only known to the early Romans as luxuries brought over from Asia. (Plaut. *Stich.* ii. 3. 57; Liv. xxxix. 6.) The Athenians considered them as an exotic refinement (Philemon, p. 370, ed. Meineke); and the Rhodian women who played on the harp at the marriage-feast of Caranus in Macedonia, clothed in very thin tunics, were introduced with a view to give to the entertainment the highest degree of splendour. Some Greek authors expressly attributed the invention of this instrument to the Syrians or Phoenicians. (Athen. iv. p. 175, d.) The opinion of those who ascribed it to the Lyric poet, Ibycus, can only authorize the conclusion, that he had the merit of inventing some modification of it, the instrument as improved by him being called ἱβύκινον. (Athen. l. c.; Suidas, s. v. ἱβύκινον: ἱβύκος: Σαμβύκαι.) Strabo, moreover, represents σαμβύκη as a "barbarous" name (x. 3. § 17).

The sambuca is several times mentioned in conjunction with the small triangular harp (τρίγωνον), which it resembled in the principles of its construction, though it was much larger and more complicated. The *trigonum*, a representation of which from the Museum at Naples is given in the annexed woodcut, was held like the lyre in the hands of the performer (Spon, *Misc. Erud. Ant.* p. 21), whereas the harp was sometimes considerably higher than the stature of the performer, and was placed upon the ground. The harp of the Parthians and Troglodytae had only four strings. (Athen. xiv. p. 633, f.) Those which are painted on the walls of Egyptian tombs (see Denon, Wilkinson, &c.) have from 4 to 38. One of them, taken from Bruce's travels, is here introduced. From the allusions to this instrument in Vitruvius (vi. 1) we find that the longest string was called the "proslambanomenon," the next "hypate," the shortest but one "paranete," and the shortest, which had consequently the highest tone, was called "nete." [See *MUSICA*, p. 775.] Under the Roman Emperors the harp appears to have

come into more general use (Pers. v. 95; Spartian. *Hadr.* 26), and was played by men (σαμβυκιστᾶν) as well as women. (Athen. iv. p. 182, e.)

Sambuca was also the name of a military engine, used to scale the walls and towers of besieged cities. It was called by this name on account of its general resemblance to the form of the harp. Accordingly, we may conceive an idea of its construction by turning to the woodcut and supposing a mast or upright pole to be elevated in the place of the longest strings, and to have at its summit an apparatus of pulleys, from which ropes proceed in the direction of the top of the harp. We must suppose a strong ladder, 4 feet wide, and guarded at the sides with palisades, to occupy the place of the sounding-board, and to be capable of being lowered or raised at pleasure by means of the ropes and pulleys. At the siege of Syracuse Marcellus had engines of this description fixed upon vessels, which the rowers moved up to the walls so that the soldiers might enter the city by ascending the ladders. (Polyb. viii. 5; Plut. *Mar.* p. 558, ed. Steph.; Athen. xiv. p. 634, b; Onosand. *Strat.* 42; Vitruv. x. 16. § 9; Festus, s. v. *Sambuca*; Athen. *de Mach.* *op. Math.* *Vet.* p. 7.) When an inland city was beleaguered, the *Sambuca* was mounted upon wheels. (Bito, *op. Math.* *Vet.* pp. 110, 111; Veget. iv. 21.) [J. Y.]

SAMNITES. [GLADIATORES, p. 576, a.]

SANDAL'LIUM (σανδάλιον or σάνδαλον), a kind of shoe worn only by women. In the Homeric age however it was not confined to either sex, and consisted of a wooden sole fastened to the foot with thongs. (Hom. *Hymn. in Merc.* 79, 83, 139.) In later times the sandalium must be distinguished from the ὑπόδημα, which was a simple sole bound under the foot (Pollux, viii. 84, with Kühn's emendation), whereas the sandalium, also called βλάβτια or βλάβτην, was a sole with a piece of leather covering the toes, so that it formed the transition from the ὑπόδημα to real shoes. The piece of leather under the toes was called ὑγρόν or ὑγρόν. (Aristoph. *Lyssistr.* 390, with the Schol.; Hesych. s. v. *Zuryós*; Pollux, vii. 81; Phot. *Lex.* p. 54, ed. Dobr.) The σανδάλια ἔγγυα in Strabo (vi. p. 259) are however not sandalia without the ὑγρόν, but, as Becker (*Charikles*, ii. p. 367, &c.) justly remarks, sandalia which did not belong to one another, or did not form a pair, and one of which was larger or higher than the other. The ὑγρόν was frequently adorned with costly embroidery and gold (Cephasodor. *op. Poll.* vii. 87; Clem. Alex. *Paedog.* ii. 11), and appears to have been one of the most luxurious articles of female dress. (Aelian, *V. H.* i. 18.) The small cover of the toes however was not sufficient to fasten the sandalium to the foot, wherefore thongs likewise beautifully adorned were attached to it. (Pollux, vii. 92.) Although sandalia, as we have stated, were in Greece and subsequently at Rome also worn by women only, yet there are traces that at least in the East they were also worn by men. (Herod. ii. 91; St. Mark, vi. 9.)

The Roman ladies, to whom this ornament of the foot was introduced from Greece, wore sandalia which appear to have been no less beautiful and costly than those worn by the Greeks and the Oriental nations. (Tarpilius, *op. Nom.* v. 24; Terent. *Eunuch.* v. 7. 4.) [L. S.]

SANDAPILA. [FUNUS, p. 559, a.]

SARCOPHAGUS. [FUNUS, p. 559, b.]

SAR'CVLUM (*a sarriendo*, Varro, *de L. Lat.* v. 31, *σκαλίσ, σκαλιστήριον*), a hoe, chiefly used in weeding gardens, cornfields, and vineyards. (Hor. *Carm.* i. l. 11; Ovid. *Met.* xi. 36, *Fast.* i. 699, iv. 930; Plant. *Truc.* ii. 2. 21; Cato, *de Re Rust.* 10; Columella, x. 21; Pallad. i. 43.) It was also sometimes used to cover the seed when sown (Columella, ii. 11), and in mountainous countries it served instead of a plough. (Plin. *H. N.* xviii. 19. s. 49.) Directions for using it to clear the surface of the ground (*σκαλλειν*, Herod. ii. 14; *σκαλεύειν*, Schol. in *Theocrit.* x. 14) are given by Palladius (*de Re Rust.* ii. 9). [J. Y.]

SARISSA. [*EXERCITUS*, p. 488, a.]

SARRA'CUM, a kind of common cart or waggon, which was used by the country-people of Italy for conveying the produce of their fields, trees, and the like from one place to another. (Vitruv. x. 1; Juv. iii. 254.) Its name as well as the fact that it was used by several barbarous nations, shows that it was introduced from them into Italy. (Sidon. *Epist.* iv. 18; Amm. Marc. xxxi. 2.) That persons also sometimes rode in a sarra-cum, is clear from a passage of Cicero quoted by Quintilian (viii. 3. § 21), who even regards the word sarra-cum as low and vulgar. Capitolinus (*Anton. Philos.* 13) states, that during a plague the mortality at Rome was so great, that it was found necessary to carry the dead bodies out of the city upon the common sarra-ca. Several of the barbarous nations with which the Romans came in contact used these waggons also in war, and placed them around their camps as a fortification (Sisenna, *ap. Non.* iii. 35), and the Scythians used them in their wanderings, and spent almost their whole lives upon them with their wives and children, whence Ammianus compares such a caravan of sarra-ca with all that was conveyed upon them to a wandering city. The Romans appear to have used the word sarra-cum as synonymous with *plaustrum*, and Juvenal (v. 22) goes even so far as to apply it to the constellation of stars which was generally called *plaustrum*. (Scheffer, *de Re Veticul.* ii. 31.) [L. S.]

SARTA'GO (*σάρταγον*), was a sort of pan which was used in the Roman kitchens for a variety of purposes, such as roasting, melting fat or butter, cooking, &c. (Plin. *H. N.* xvi. 22; Juv. x. 63.) Frequently also dishes consisting of a variety of ingredients seem to have been prepared in such a sartago, as Persius (i. 79) speaks of a *sartago loquendi*, that is, of a mixture of proper and improper expressions. Some commentators on this passage, and perhaps with more justice, understand the sartago loquendi as a mode of speaking in which hissing sounds are employed, similar to the noise produced when meat is fried in a pan. [L. S.]

SATISDA'TIO. [*ACTIO*.]

SAT'URA, or in the softened form **SATIRA**, is the name of a species of poetry, which we call satire. In the history of Roman literature we have to distinguish two different kinds of satires, viz. the early *satura*, and the later *satira* which received its perfect development from the poet C. Lucilius (148—103 B. C.). Both species of poetry, however, are altogether peculiar to the Romans. The literal meaning of *satura*, the root of which is *sat*, comes nearest to what the French call *pot-pourri*, or to the Latin *farrago*, a mixture of all sorts of things. The name was accordingly applied by the Romans in many ways, but always to

things consisting of various parts or ingredients, e. g. *lanx satura*, an offering consisting of various fruits, such as were offered at harvest festivals and to Ceres (Acron, *ad Horat. Sat.* i. 1; Diomed. iii. p. 483, ed. Putsch.); *lanx per saturam lata*, a law which contained several distinct regulations at once. (Fest. s. v. *Satura*.) It would appear from the etymology of the word, that the earliest Roman *satura*, of which we otherwise scarcely know anything, must have treated in one work on a variety of subjects just as they occurred to the writer, and perhaps, as was the case with the satires of Varro, half in prose and half in verse, or in verses of different metre. Another feature of the earliest *satura*, as we learn from the celebrated passage in Livy (vii. 2.), is that it was scenic, that is, an improvisatory and irregular kind of dramatic performance, of the same class as the *versus Fescennini*. [*FESCENNINA*.] When Livius Andronicus introduced the regular drama at Rome, the people, on account of their fondness for such extempore jokes and raileries, still continued to keep up their former amusements, and it is not improbable that the exodia of later times were the old *saturae* merely under another name. [*EXODIA*.]

Ennius and Pacuvius are mentioned as the first writers of satires, but we are entirely unable to judge whether their works were dramatic like the *satura* of old, or whether they resembled the satires of Lucilius and Horace. At any rate, however, neither Ennius nor Pacuvius can have made any great improvement in this species of poetry, as Quintilian (x. 1. § 93) does not mention either of them, and describes C. Lucilius as the first great writer of satires. It is Lucilius who is universally regarded by the ancients as the inventor of the new kind of *satira*, which resembled on the whole that species of poetry which is in modern times designated by the same name, and which was no longer scenic or dramatic. The character of this new *satira* was afterwards emphatically called *character Lucilianus*. (Varro, *de Re Rust.* iii. 2.) These new satires were written in hexameters which metre was subsequently adopted by all the other satirists, as Horace, Persius, and Juvenal who followed the path opened by Lucilius. Their character was essentially ethical or practical, and as the stage at Rome was not so free as at Athens, the satires of the former had a similar object to that of the ancient comedy at the latter place. The poets in their satires attacked not only the follies and vices of mankind in general, but also of such living and distinguished individuals as had any influence upon their contemporaries. Such a species of poetry must necessarily be subject to great modifications, arising partly from the character of the time in which the poet lives, and partly from the personal character and temperament of the poet himself, and it is from these circumstances that we have to explain the differences between the satires of Lucilius, Horace, Persius, and Juvenal.

After Lucilius had already by his own example established the artistic principles of satire, Terentius Varro in his youth wrote a kind of satires, which were neither like the old *satura* nor like the *satira* of Lucilius. They consisted of a mixture of verse and prose, and of verses of different metres, but were not scenic like the old *saturae*. They were altogether of a peculiar character, and were therefore called *satirae Varronianae*, or *Me-*

nippeæ or Cynicæ, the latter because he was said to have imitated the works of the Cynic philosopher Menippus. (Gellius, ii. 18.)

(See Casaubon, *de Satyrica Græcorum Poësi et Romanorum Satira*, libri ii. Hælas 1774, with notes by Rambach.) [L. S.]

SATURNALIA, the festival of Saturnus, to whom the inhabitants of Latium attributed the introduction of agriculture and the arts of civilized life. Falling towards the end of December, at the season when the agricultural labours of the year were fully completed, it was celebrated in ancient times by the rustic population as a sort of joyous harvest-home, and in every age was viewed by all classes of the community as a period of absolute relaxation and unrestrained merriment. During its continuance no public business could be transacted, the law courts were closed, the schools kept holiday, to commence a war was impious, to punish a malefactor involved pollution. (Macrob. *Sat.* i. 10. 16; Martial, i. 86; Suet. *Aug.* 32; Plin. *Ep.* viii. 7.) Special indulgences were granted to the slaves of each domestic establishment; they were relieved from all ordinary toils, were permitted to wear the *pileus* the badge of freedom, were granted full freedom of speech, partook of a banquet attired in the clothes of their masters, and were waited upon by them at table. (Macrob. *Sat.* i. 7; Dion Cass. ix. 19; Hor. *Sat.* ii. 7. 5; Martial, xi. 6, xiv. 1; Athen. xiv. 44.)

All ranks devoted themselves to feasting and mirth, presents were interchanged among friends, *cœci* or wax tapers being the common offering of the more humble to their superiors, and crowds thronged the streets, shouting *Io Saturnalia* (this was termed *clamare Saturnalia*), while sacrifices were offered with uncovered head, from a conviction that no ill-omened sight would interrupt the rites of such a happy day. (Catull. 14; Senec. *Ep.* 18; Suet. *Aug.* 75; Martial, v. 18, 19, vii. 53, xiv. 1; Plin. *Ep.* iv. 9; Macrob. *Sat.* i. 8, 10; Serv. ad *Virg. Aen.* iii. 407.)

Many of the peculiar customs exhibited a remarkable resemblance to the sports of our own Christmas and of the Italian Carnival. Thus on the Saturnalia public gambling was allowed by the aediles (Martial, v. 84, xiv. 1, xi. 6), just as in the days of our ancestors the most rigid were wont to countenance card-playing on Christmas-eve; the whole population threw off the toga, wore a loose gown, called *synthesis*, and walked about with the *pileus* on their heads (Martial, xiv. 141, vi. 24, xiv. 1, xi. 6; Senec. *Ep.* 18), which reminds us of the dominoes, the peaked cape, and other disguises worn by masques and mummers; the *cœci* were probably employed as the *moccoli* now are on the last night of the Carnival; and lastly, one of the amusements in private society was the election of a mock king (Tacit. *Aen.* xiii. 15; Arrian, *Diss. Epictet.* i. 25; Lucian. *Saturn.* 4), which at once calls to recollection the characteristic ceremony of Twelfth-night.

Saturnus being an ancient national god of Latium, the institution of the Saturnalia is lost in the most remote antiquity. In one legend it was ascribed to Janus, who, after the sudden disappearance of his guest and benefactor from the abodes of men, reared an altar to him, as a deity, in the forum, and ordained annual sacrifices; in another, as related by Varro, it was attributed to the wandering Pelasgi, upon their first settlement in Italy,

and Hercules, on his return from Spain, was said to have reformed the worship, and abolished the practice of immolating human victims; while a third tradition represented certain followers of the last named hero, whom he had left behind on his return to Greece, as the authors of the Saturnalia. (Macrob. *Sat.* i. 7.) Records approaching more nearly to history referred the erection of temples and altars, and the first celebration of the festival, to epochs comparatively recent, to the reign of Tatius (Dionys. ii. 50), of Tullus Hostilius (Dionys. iii. 32; Macrob. *Sat.* i. 8), of Tarquinius Superbus (Dionys. vi. 1; Macrob. *l. c.*), to the consulship of A. Sempronius and M. Minucius, a. c. 497, or to that of T. Larcus in the preceding year. (Dionys. vi. 1; Liv. ii. 21.) These conflicting statements may be easily reconciled, by supposing that the appointed ceremonies were in these rude ages neglected from time to time, or corrupted, and again at different periods revived, purified extended, and performed with fresh splendour and greater regularity. (Compare Liv. xxiii. 1. *ad fin.*)

During the republic, although the whole month of December was considered as dedicated to Saturn (Macrob. i. 7), only one day, the xiv. Kal. Jan. was set apart for the sacred rites of the divinity: when the month was lengthened by the addition of two days upon the adoption of the Julian Calendar, the Saturnalia fell on the xvi. Kal. Jan., which gave rise to confusion and mistakes among the more ignorant portion of the people. To obviate this inconvenience, and allay all religious scruples, Augustus enacted that three whole days, the 17th, 18th, and 19th of December, should in all time coming be hallowed, thus embracing both the old and new style. (Macrob. i. 10.) A fourth day was added, we know not when or by whom, and a fifth, with the title *Jovennalis*, by Caligula (Dion Cass. lix. 6; Sueton. *Cal.* 17), an arrangement which, after it had fallen into disuse for some years, was restored and confirmed by Claudius. (Dion Cass. lx. 2.)

But although, strictly speaking, one day only, during the republic, was consecrated to religious observances, the festivities were spread over a much longer space. Thus while Livy speaks of the first day of the Saturnalia (*Saturnalius primis*, Liv. xxx. 36), Cicero mentions the second and third (*secundis Saturnaliibus*, *ad Att.* xv. 32; *Saturnaliibus tertiis*, *ad Att.* v. 20); and it would seem that the merry-making lasted during seven days, for Novius, the writer of Atellanæ, employed the expression *septem Saturnalia*, a phrase copied in later times by Memmius (Macrob. i. 10), and even Martial speaks of *Saturni septem dies* (xiv. 72), although in many other passages he alludes to the five days observed in accordance with the edicts of Caligula and Claudius (ii. 89, xiv. 79, 141). In reality, under the empire, three different festivals were celebrated during the period of seven days. First came the *Saturnalia* proper, commencing on xvi. Kal. Dec., followed by the *Opalia*, anciently coincident with the Saturnalia (Macrob. i. 10), on xiv. Kal. Jan.; these two together lasted for five days, and the sixth and seventh were occupied with the *Sigillaria*, so called from little earthenware figures (*sigilla, ocella*) exposed for sale at this season, and given as toys to children. [W. R.]

SCALÆ (κλίμαξ), a ladder. The general con-

struction and use of ladders was the same among the ancients as in modern times, and therefore requires no explanation, with the exception of those used in besieging a fortified place and in making an assault upon it. The ladders were erected against the walls (*admoere, ponere, apponere, or erigere sculas*), and the besiegers ascended them under showers of darts and stones thrown upon them by the besieged. (Sallust. *Jug.* 6, 64; Caes. *de Bell. Civ.* i. 28, 63; Tacit. *Hist.* iv. 29, &c.; Veget. *de Re Milit.* iv. 21; Polyb. ix. 18.) Some of these ladders were formed like our common ones; others consisted of several parts (*κλίμακες πηκταί or διαλυταί*) which might be put together so as to form one large ladder, and were taken to pieces when they were not used. Sometimes also they were made of ropes or leather with large iron hooks at the top, by which they were fastened to the walls to be ascended. The ladders made wholly of leather consisted of tubes sowed up airtight, and when they were wanted, these tubes were filled with air. (Heron, c. 2.) Heron also mentions a ladder which was constructed in such a manner, that it might be erected with a man standing on the top, whose object was to observe what was going on in the besieged town. (Heron, c. 12.) Others again were provided at the top with a small bridge, which might be let down upon the wall. (Heron, 19.) In ships small ladders or steps were likewise used for the purpose of ascending into or descending from them. (Virg. *Aen.* x. 654; Heron, c. 11.)

In the houses of the Romans the name *Scalae* was applied to the stairs or staircase, leading from the lower to the upper parts of a house. The steps were either of wood or stone, and, as in modern times, fixed on one side in the wall. (Vitruv. ix. 1. § 7, &c.) It appears that the staircases in Roman houses were as dark as those of old houses in modern times, for it is very often mentioned, that a person concealed himself *in scalis* or *in scalarum tenebris* (Cic. *pro Mil.* 15, *Philipp.* ii. 9; Horat. *Epist.* ii. 2. 15), and passages like these need not be interpreted, as some commentators have done, by the supposition that *in scalis* is the same as *sub scalis*. The Roman houses had two kinds of staircases: the one were the common *scalae*, which were open on one side; the others were called *scalae Graecae* or *κλίμακες*, which were closed on both sides. Massurius Sabinus (*ap. Gell.* x. 15. § 29) states, that the *Flaminica* was not allowed to ascend higher than three steps on a common scale, but that she might make use of a climax like every other person, as here she was concealed when going up. (Serr. *ad Aen.* iv. 664.) [L. S.]

SCALPTURA or SCULPTURA. There are two different forms of this word both in Greek and Latin, viz. *sculpo, sculptura, and sculpo, sculptura* (in Greek γλῦψω and γλύψω), and there is much doubt respecting their precise meaning. The original meaning, common to them, is undoubtedly the cutting figures out of a solid material. The general opinion is, that both *sculpo* and *sculpo*, with their derivatives, signify the same thing, only different in degree of perfection, so that *sculptura* would signify a coarse or rude, *sculptura* an elaborate and perfect engraving. This opinion is chiefly based upon the following passages: Horat. *Sat.* ii. 3. 22; Ovid, *Met.* x. 248; Vitruv. iv. 6. (Compare the commentators on Suet. *Gall.* 10.) Others again believe, that *sculpo* (γλῦψω) signifies to cut

figures into the material (*intaglio*), and *sculpo* (γλῦψω) to produce raised figures, as in *cameo*. But it is very doubtful whether the ancients themselves made or observed such a distinction. From the passages in which the words occur, both in Greek and Latin writers, it seems that, in their widest sense, they were used, almost indifferently, for what we call *sculpture*, in its various forms, in wood, marble, ivory, or other materials, more particularly for reliefs, for *carving*, that is, the execution of small works by cutting, and for *engraving precious stones*; but, of these senses, the last was the most specific and usual; the first, in which modern writers use the word *sculpture*, was the most unusual. [STATUARIA.] (See the Greek and Latin Lexicons.)

It may be expedient, however, in accordance with the above distinction to divide the art into two departments: 1. the art of cutting figures into the material (*intaglio*), which was chiefly applied to producing seals and matrices for the mints; and 2. the art of producing raised figures (*cameos*), which served for the most part as ornaments.

The former of these two branches was much more extensively practised among the ancients than in modern times, which arose chiefly from the general custom of every free man wearing a seal-ring. [ANNULUS.] The first engravings in metal or stone, which served as seals, were simple and rude signs without any meaning, sometimes merely consisting of a round or square hole. (Meyer, *Kunstgeschichte*, i. 10.) In the second stage of the art, certain symbolical or conventional forms, as in the worship of the gods, were introduced, until at last, about the age of Pheidias and Praxiteles, this, like the other branches of the fine arts, had completed its free and unrestrained career of development, and was carried to such a degree of perfection that, in the beauty of design as well as of execution, the works of the ancients remain unrivalled down to the present day. But few of the names of the artists, who excelled in this art, have come down to us. Some *intaglio*s, as well as *cameos*, have a name engraved upon them, but it is in many cases more probable that such are the names of the owners than of the artists. The first artist who is mentioned as an engraver of stones is Theodorus, the son of Telecles, the Samian, who engraved the stone in the ring of Polycrates. (Herod. iii. 41.) The most celebrated among them was Pyrgoteles, who engraved the seal-rings for Alexander the Great. (Winckelmann, vi. p. 107, &c.; see the articles in the *Dict. of Biog.*) The art continued for a long time after Pyrgoteles in a very high state of perfection, and it appears to have been applied about this period to ornamental works. For several of the successors of Alexander and other wealthy persons adopted the custom, which was and is still very prevalent in the East, of adorning their gold and silver vessels, craters, candelabra, and the like, with precious stones on which raised figures (*cameos*) were worked. (Ath. xi. p. 781; Cic. *c. Verr.* ii. 4. 27, &c.) Among the same class of ornamental works we may reckon such vessels and paterae as consisted of one stone, upon which there was in many cases a whole series of raised figures of the most exquisite workmanship. (Appian. *Mithrid.* 115; Cic. *l. c.*; Plin. *H. N.* xxxvii. 3.) The art was in a particularly flourishing state at Rome under Augustus and his successors, in the hands of Diono-

rides and other artists, many of whose works are still preserved. Respecting the various precious and other stones which the ancient artists used in these works, see Müller, *Archäol.* § 313.

As regards the technical part of the art of working in precious stones, we only know the following particulars. The stone was first polished by the *politor*, and received either a plane or convex surface; the latter was especially preferred, when the stone was intended to serve as a seal. The *sculptor* himself used iron or steel instruments moistened with oil, and sometimes also a diamond framed in iron. These metal instruments were either sharp and pointed, or round. The ancients understood the use of diamond dust in this work. (Plin. *H. N.* xxxvii. 76; Müller, *Arch.* § 314. 2.) The stones which were destined to be framed in rings, as well as those which were to be inlaid in gold or silver vessels, then passed from the hands of the *sculptor* into those of the goldsmith (*annularius, compositor*).

Numerous specimens of intaglios and cameos are still preserved in the various museums of Europe, and are described in numerous works. For the literature of the subject, and an account of these gems and their engravers, see Winckelmann, *Gesch. d. Kunst*, and other works; Müller, *Archäol.* § 315, &c.; and Raoul-Rochette, *Lettre à M. Schorn*, 2d ed. [L. S.]

SCALPTURATUM. [DOMUS, p. 431, a.]

SCAMNUM, *dim.* SCABELLUM, a step which was placed before the beds of the ancients in order to assist persons in getting into them, as some were very high: others which were lower required also lower steps, which were called *scabella*. (Varro, *de Ling. Lat.* v. 168; Isidor. xx. 11; Ovid, *Art. Am.* ii. 211.) A scamnum was sometimes also used as a foot-stool. (Ovid, *Art. Am.* i. 162.) A scamnum extended in length becomes a bench, and in this sense the word is frequently used. The early Romans, before couches were introduced among them, used to sit upon benches (*scamna*) before the hearth when they took their meals. (Ovid, *Fast.* vi. 305.) The benches in ships were also sometimes called scamna. In the technical language of the agrimensores a scamnum was a field which was broader than it was long, and one that was longer than broad was called *striga*. (Varri Auctor. Rei Agr. pp. 46, 125, 198, ed. Goes.) In the language of the Roman peasantry a scamnum was a large clod of earth which had not been broken by the plough. (Colum. ii. 2.) [L. S.]

SCAPHA. [NAVIS, p. 786, a.]

SCAPHEPHORIA. [HYDRIAPHORIA.]

SCENA. [THEATRUM.]

SCEPTRUM is a latinised form of the Greek *σκήπτρον*, which originally denoted a simple staff or walking-stick. (Hom. *Il.* xviii. 416; Aeschyl. *Agam.* 74; Herod. i. 195.) The corresponding Latin term is *scipio*, springing from the same root and having the same signification, but of less frequent occurrence.

As the staff was used not merely to support the steps of the aged and infirm, but as a weapon of defence and assault, the privilege of habitually carrying it became emblematic of station and authority. The straight staves which are held by two of the four sitting figures in the woodcut at p. 98, while a third holds the curved staff, or *lituus*, indicate no less than their attitude and position, that they are exercising judicial functions. In ancient

authors the sceptre is represented as belonging more especially to kings, princes, and leaders of tribes (Hom. *Il.* ii. 186, 199, 265, 268, 279, xviii. 557, *Od.* ii. 37, 80, iii. 412): but it is also borne by judges (Hom. *Od.* xi. 568), by heralds (*Il.* iii. 218, vii. 277, xviii. 505), and by priests and seers. (Hom. *Il.* i. 15, *Od.* xi. 91; Aeschyl. *Agam.* 1236.) It was more especially characteristic of Asiatic manners, so that among the Persians whole classes of those who held high rank and were invested with authority, including eunuchs, were distinguished as the sceptre-bearing classes (of *σκηπτροῦχοι*, Xen. *Cyr.* vii. 3. § 17, viii. 1. § 38, 3. § 15). The sceptre descended from father to son (Hom. *Il.* ii. 46, 100—109), and might be committed to any one in order to express the transfer of authority. (Herod. vii. 52.) Those who bore the sceptre swore by it (Hom. *Il.* i. 234—239), solemnly taking it in the right hand and raising it towards heaven. (Hom. *Il.* vii. 412, x. 321, 328.)

The original wooden staff, in consequence of its application to the uses now described, received a

variety of ornaments or emblems. It early became a truncheon, pierced with golden or silver studs. (*Il.* i. 246, ii. 46.) It was enriched with gems (Ovid, *Met.* iii. 264), and made of precious metals or of ivory (i. 178, *Fast.* vi. 38.) The annexed woodcut, taken from one of Sir Wm. Hamilton's fictile vases, and representing Aeneas followed by Ascanius and carrying off his father Anchises, who holds the sceptre in his right hand, shows its form as worn by kings. The ivory sceptre (*eburneus scipio*, Val. Max. iv. 4. § 5) of the kings of Rome, which descended to the consuls, was surmounted by an eagle. (Virg. *Aen.* xi. 238; Serv. *ad loc.*; Juv. x. 43; Isid. *Orig.* xviii. 2.) [INSIGNE.] Jupiter and Juno, as sovereigns of the gods, were represented with a sceptre. (Ovid, *ll. cc.*) [J. Y.]

SCHOENUS (ὁ ἡ, σχοῦνος), literally, a rope of rushes, an Egyptian and Persian itinerary and land measure (Herod. i. 66). Its length is stated by Herodotus (ii. 6, 9) at 60 stadia, or 2 parasangs; by Eratosthenes at 40 stadia, and by others at 32 or 30. (Plin. *H. N.* v. 9. s. 10, xii. 14. s. 30.) Strabo and Pliny both state that the schoenus varied in different parts of Egypt and Persia (Strabo, p. 803; Plin. *H. N.* vi. 26. s. 30; comp. Athen. iii. p. 122, a.) [P. S.]

SCRIBAE. The Scribae at Rome were public notaries or clerks, in the pay of the state. They were chiefly employed in making up the public accounts, copying out laws, and recording the proceedings of the different functionaries of the state. The phrase *scriptum fucere* (Liv. ix. 46; Gellius, vi. 9) was used to denote their occupation. Being very numerous, they were divided into companies or classes (*decuriae*), and were assigned by lot to different magistrates, whence they were named Quæstorii, Aedilicii, or Prætorii, from the officers of state to whom they were attached. (Cic. *Verr.* iii. 79, c. Cat. iv. 7, *pro Cluent.* 45; Plin. *H. N.* xxvi. l. a. 3.) We also read of a Navalis Scriba, whose occupation was of a very inferior order. (Festus, s. v. *Navalis*.) The appointment to the office of a scriba seems to have been either made on the nomination of the magistrate, or purchased. Thus Livy (xl. 29) tells us that a scriba was appointed by a quæstor: and we meet with the phrase *decuriam emere* to "purchase a company," i. e. to buy a clerk's place. Horace, for instance, bought for himself a "patent place as clerk in the treasury" (*scriptum quæstorium comparavi*, Tate's *Horace*, ed. i. p. 58). In Cicero's time, indeed, it seems that any one might become a scriba or public clerk, by purchase (Cic. *Verr.* iii. 79), and consequently, as freedmen and their sons were eligible, and constituted a great portion of the public clerks at Rome (Tacit. *Ann.* xiii. 27), the office was not highly esteemed, though frequently held by ingenui or freeborn citizens. Cicero (*l. c.*) however informs us that the Scribae formed a respectable class of men, but he thinks it necessary to assign a reason for calling them such, as if he were conscious that he was combating a popular prejudice. Very few instances are recorded of the Scribae being raised to the higher dignities of the state: Cn. Flavius, the scribe of Ap. Claudius, was raised to the office of curule aedile in gratitude for his making public the various forms of actions, which had previously been the exclusive property of the patricians (ACTIO), but the returning officer refused to acquiesce in his election till he had given up his books (*tabulas posuit*) and left his profession. (Gellius, *l. c.*) The private secretaries of individuals were called LIBRARI, and sometimes Scribae ab epistolis. In ancient times, as Festus (*s. v.*) informs us, scriba was used for a poet. (Ernesti, *Clavis Ciceron.* s. v.; Gütting, *Gesch. der Röm. Staatsverf.* p. 374.) [R. W.]

SCRINIUM. [CAPSA.]

SCRIPULUM. [SCRUPULUM.]

SCRIPTA DUODECIM. [LATRUNCULI.]

SCRIPTURA was that part of the revenue of the Roman republic which was derived from letting out those portions of the ager publicus which were not or could not be taken into cultivation as pasture land. (Fest. s. v. *Saltum*.) The name for such parts of the ager publicus was: *pascua publica*, *saltus*, or *silvae*. They were let by the censors to the publicani, like all other vectigalia; and the persons who sent their cattle to graze on such public pastures had to pay a certain tax or duty to the publicani, which of course varied according to the number and quality of the cattle which they

kept upon them. To how much this duty amounted is nowhere stated, but the revenue which the state derived from it appears to have been very considerable. The publicani had to keep the lists of the persons who sent their cattle upon the public pastures, together with the number and quality of the cattle. From this registering (*scribere*) the duty itself was called *scriptura*, the public pasture land *ager scripturarius* (Fest. s. v. *Scripturarius ager*), and the publicani or their agents who raised the tax, *scripturarii*. Cattle, not registered by the publicani, were called *pecudes inscriptas*, and those who sent such cattle upon the public pasture were punished according to the *lex censoria* (Varro, *de Re Rust.* ii. 1), and the cattle was taken by the publicani and forfeited. (Plaut. *Trucul.* i. 2. 42, &c.) The *lex Thoria* (Appian, *de Bell. Civ.* i. 27; Cic. *Brut.* 36) did away with the *scriptura* in Italy, where the public pastures were very numerous and extensive, especially in Apulia (Varro, *de Re Rust.* l. c.; Liv. xxxix. 29), and the lands themselves were now sold or distributed. In the provinces, where the public pastures were also let out in the same manner (Cic. *c. Verr.* ii. 2, 3, *pro Leg. Man.* 6, *ad Fam.* xiii. 65; Plin. *H. N.* xix. 15), the practice continued until the time of the empire; but afterwards the *scriptura* is no longer mentioned. (Compare Niebuhr, *Hist. of Rome*, vol. iii. p. 15, &c.; Burmann, *Vectig. Pop. Rom.* c. 4.) [L. S.]

SCRUPULUM, or more properly SCRIPULUM or SCRIPTUM (γράμμα), the smallest denomination of weight among the Romans. It was the 24th part of the UNCLIA, or the 288th of the LIBRA, and therefore about 18 grains English, which is about the average weight of the scrupular aurei still in existence. [AURUM.]

As a square measure, it was the smallest division of the Jugerum, which contained 288 scrupula. [JUGERUM.] Pliny (*H. N.* ii. 7) uses the word to denote small divisions of a degree. It was in fact to be applicable, according to the use of the As and its parts, to the 288th part of any unit.

Though the scrupulum was the smallest weight in common use, we find divisions of it sometimes mentioned, as the *obolus* = $\frac{1}{2}$ of a scruple, the *semitobolus* = $\frac{1}{4}$ of an obolus, and the *siliqua* = $\frac{1}{8}$ of an obolus, = $\frac{1}{4}$ of a scruple, which is thus shown to have been originally the weight of a certain number of seeds. (Priscian. *de Pond.* v. 8—13:—

"Semitoboli duplum est obolus, quem pondere duplo

Gramma vocant, scriplum nostri dixere priores.

Semina sex alii siliquis latitantia curvis

Attribuunt scriplo, lentive grana bis octo,

Aut totidem apeltas numerant, tristesse lupinos

Bis duo.") [P. S.]

SCULPTURA. [SCALPTURA.]

SCUTICA. [FLAGRUM.]

SCUTUM (*Σcutēs*), the Roman shield, worn by the heavy-armed infantry, instead of being round like the Greek CLIPRUS, was adapted to the form of the human body, by being made either oval or of the shape of a door (*θύρα*) which it also resembled in being made of wood or wicker-work, and from which consequently its Greek name was derived. Two of its forms are shown in the woodcut at p. 711. That which is here exhibited is also of frequent occurrence, and is given on the same authority: in this case the shield is curved

so as in part to encircle the body. The terms *clipeus* and *scutum* are often confounded; but that they properly denoted different kinds of shields is manifest from the passages of several ancient writers. (Liv. viii. 8; Plut. *Rom.* 21; Diod. *Eclog.* xxiii. 3.) In like manner Plutarch distinguishes the Roman *scutæ* from the Greek *ἀσπίς* in his life of T. Fla-

minius (p. 688, ed. Steph.) In *Eph.* vi. 16 St. Paul uses the term *scutæ* rather than *ἀσπίς* or *σκαῖς*, because he is describing the equipment of a Roman soldier. These Roman shields are called *scuta longa*. (Virg. *Aen.* viii. 662; Ovid. *Fast.* vi. 393; *Scutæ* ἐπιμήκεις, Joseph. *Ant. Jud.* viii. 7. § 2.) Polybius (vi. 21) says their dimensions were 4 feet by 2½. The shield was held on the left arm by means of a handle, and covered the left shoulder. [Comp. EXERCITIUS, p. 496, b.] [J. Y.]

SCYRIA DIKE (σκυρία δίκη) is thus explained by Pollux: Σκυρίαν δίκην ὀνομάζουσιν οἱ κωμωδοδιδάσκαλοι τὴν τραχίαν· οἱ γὰρ φυγοδιούντες ἐκλήπτοντο εἰς Σκύρον ἢ εἰς Ἀἴμνον ἀπορημεῖν. By *τραχία δίκη* is meant one beset with difficulties, in which the plaintiff had to encounter every sort of trickery and evasion on the part of the defendant. On the appointed day of trial both parties were required to be present in court, and if either of them did not appear, judgment was pronounced against him, unless he had some good excuse to offer, such as illness or inevitable absence abroad. Cause was shown by some friend on his behalf, supported by an affidavit called *ὕμνωστος*, in answer to which the opponent was allowed to put in a counter affidavit (*ἀντιὕμνωστος*), and the court decided whether the excuse was valid. It seems to have become a practice with persons who wished to put off or shirk a trial, to pretend that they had gone to some island in the Aegean sea, either on business or on the public service; and the isles of Scyrus (one of the Cyclades), Lemnos, and Imbros were particularly selected for that purpose. Shambers of this kind were therefore nicknamed Lemnians and Imbrians. (Pollux, viii. 60, 81; Kühn, *ad loc.*; Suidas, s. v. Σκυρίαν δίκην; Hesych. s. v. Ἰμβριος; Steph. *Thesaur.* 8484. c. s. v. Σκύρος; Demosth. c. *Olympiod.* 1174; Meier, *Att. Proc.* p. 696.) [C. R. K.]

SCYTALE (σκύταλη) is the name applied to a secret mode of writing by which the Spartan ephors communicated with their kings and generals when abroad. (Plut. *Lyсанд.* 19; Schol. *ad Thucyd.* i. 131; Suidas, s. v.) When a king or general

left Sparta, the ephors gave to him a staff of a definite length and thickness, and retained for themselves another of precisely the same size. When they had any communication to make to him, they cut the material upon which they intended to write into the shape of a narrow riband, wound it round their staff, and then wrote upon it the message which they had to send to him. When the strip of writing material was taken from the staff, nothing but single or broken letters appeared, and in this state the strip was sent to the general, who after having wound it around his staff, was able to read the communication. This rude and imperfect mode of sending a secret message must have come down from early times, although no instance of it is recorded previous to the time of Pausanias. (Corn. Nep. *Paus.* 3.) In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns. (Xenoph. *Hell.* v. 2. § 37.) [L. S.]

SCYTHAE (Σκύθαι). [DEMOSTEN.]

SECE'SPITA, an instrument used by the Roman priests in killing the victims at sacrifices. (Suet. *Tyb.* 25.) According to the definition of Antistius Labeo, preserved by Festus (p. 348, ed. Müller) and Servius (*ad Virg. Aen.* iv. 262), it was a long iron knife (*culler*) with an ivory handle, used by the Flamines, Flaminicae Virgines, and Pontifices. Paulus, however, in his epitome of Festus (p. 336) says that some think it to be an axe (*securis*), others a *dolabra*, and others again a knife (*culler*). On Roman coins representing sacrificial emblems we see an axe, which modern writers call a *secespita*, though we do not know on what authority, except the doubtful statement of Paulus. See the annexed coin of the Sulpicia gens, the obverse of which is supposed to represent a culter, a simpuvium, and a secespita.

SECRETA RIUM. [AUDITORIUM.]

SECTIO. "Those are called *Sectores* who buy property *publicæ*." (Gaius, iv. 146; Festus, s. v. *Sectores*.) Property was said to be sold *publicæ* (*venire publicæ*), when a man's property was sold by the state in consequence of a condemnation and for the purpose of repayment to the State of such sums of money as the condemned person had improperly appropriated; or in consequence of a prescription. (Liv. xxxviii. 60; Cic. *in Verr.* i. 20.) Such a sale of all a man's property was a *Sectio* (Cic. *pro Roscio Amer.* 36, 43, &c.); and sometimes the things sold were called *Sectio*. (Tacit. *Hist.* i. 90.) The sale was effected by the Praetor giving to the Quaestors the *Bonorum Possessio*, in reference to which the phrase "*bona publicæ possideri*" is used. The property was sold *sub hasta* and the sale transferred Quiritarian ownership, to which Gaius probably alludes in a mutilated passage (iii. 80; compare Varro, *de Re Rust.* ii. 10. s. 4; Tacit. *Hist.* i. 20). The *Sector* was intitled to the *Interdictum Sectorium* for the purpose of obtaining possession of the property (Gaius, iv. 146); but he took the property with all its liabilities. An hereditas that had fallen to the *Fiscus*

was sold in this way, and the Sector acquired the hereditatis petitio. [PRÆDA.] [G. L.]
SECTOR. [SECTIO.]

SECTORIUM INTERDICTUM. [INTERDICTUM; SECTIO.]

SECURIS, *dim.* SECURICULA (ἀξίον, *we-lexus*), an axe or hatchet. The axe was either made with a single edge, or with a blade or head on each side of the haft, the latter kind being denominated *bipennis* (ῥελέκους διστόμος, or ἀμφιστόμος, Agathias, *Hist.* ii. 5. pp. 73, 74). As the axe was not only an instrument of constant use in the hands of the carpenter and the husbandman, but was moreover one of the earliest weapons of attack (Hom. *Il.* xv. 711; Suet. *Gallus*, 18), a constituent portion of the Roman fasces, and a part of the apparatus when animals were slain in sacrifice, we find it continually recurring under a great variety of forms upon coins, gems, and bas-reliefs. In the woodcut to the article *SCRPTUM*, the young Ascanius holds a battle-axe in his hand. Also real axe-heads, both of stone and metal, are to be seen in many collections of antiquities. Besides being made of bronze and iron, and more rarely of silver (Virg. *Aen.* v. 307; Wilkinson, *Man. and Cust. of Egypt.* vol. i. p. 324), axe-heads have from the earliest times and among all nations been made of stone. They are often found in sepulchral tumuli, and are arranged in our museums together with chisels, both of stone and of bronze, under the name of *celts* [DOLABRA].

The prevalent use of the axe on the field of battle was generally characteristic of the Asiatic nations (Curt. iii. 4), whose troops are therefore called *securigeros catervæ*. (Val. Flacc. *Argon.* v. 138.) As usual, we find the Asiatic custom propagating itself over the north of Europe. The bipennis and the spear were the chief weapons of the Franks. (Agathias, *l. c.*) [J. Y.]

SECUTORES. [GLADIATORES, p. 576, a.]

SEISACHTHEIA (σεισάχθεια), a disburdening ordinance, was the first and preliminary step in the legislation of Solon. (Plut. *Sol.* 15; Diog. Laërt. i. 45.) The real nature of this measure was a subject of doubt even among the ancients themselves, for while some state that Solon thereby cancelled all debts, others describe it as a mere reduction of the rate of interest. But from the various accounts in Plutarch and the grammarians it seems to be clear that the *σεισάχθεια* consisted of four distinct measures. The first of these was the reduction of the rate of interest, and if this was, as it appears, retrospective, it would naturally in many cases wipe off a considerable part of the debt. The second part of the measure consisted in lowering the standard of the silver coinage, that is, Solon made 73 old drachmas to be worth 100 new ones; so that the debtor, in paying off his debt, gained rather more than one fourth. Böckh (*Publ. Econ.* p. 16) supposes that it was Solon's intention to lower the standard of the coinage only by one fourth, that is, to make 75 old drachmas equal to 100 new ones, but that the new coin proved to be lighter than he had expected. The third part consisted in the release of mortgaged lands from their incumbrances and the restoration of them to their owners as full property. How this was effected is not clear. Lastly, Solon abolished the law which gave to the creditor a right to the person of his insolvent debtor, and he restored to their full liberty those who had been

enslaved for debt. For further information on this measure, see *Dict. of Biogr. art. Solon*.

This great measure, when carried into effect, gave general satisfaction, for it conferred the greatest benefits upon the poor, without depriving the rich of too much, and the Athenians expressed their thankfulness by a public sacrifice, which they called *σεισάχθεια*, and by appointing Solon to legislate for them with unlimited power. (Plut. *Sol.* 16; compare Suidas, Hesych. *Etym. Mag.* s. v.; Cic. *de Re Publ.* ii. 34; Wachsmuth, *Hellen. Alt.* vol. i. p. 472.) [L. S.]

SELIQUASTRUM. [SELLA, No. IV.]

SELLA. The general term for a seat or chair of any description. The varieties most deserving of notice are:—

I. SELLA CURULIS, the chair of state. *Curulis* is derived by the ancient writers from *curvus* (Aul. Gell. iii. 18; Festus, s. v. *Curulus*; Servius, *ad Virg. Aen.* xi. 334; Isidor. xx. 11. § 11); but it is more probably connected with *curvus*. The *sella curulis* is said to have been used at Rome from a very remote period as an emblem of kingly power (hence *curuli regia sella adornavit*, Liv. i. 20), having been imported, along with various other insignia of royalty, from Etruria (Liv. i. 8), according to one account by Tullus Hostilius (Macrob. *Sat.* i. 6); according to another by the elder Tarquinius (Flor. i. 5); while Silius names Vetuloniæ as the city from which it was immediately derived (viii. 487). Under the republic the right of sitting upon this chair belonged to the consuls, prætors, curule aediles, and censors (Liv. ii. 54, vii. 1, ix. 46, x. 7, xl. 45; Aul. Gell. vi. 9, &c.); to the Flamen Dialis (Liv. i. 20, xxvii. 8) [FLAMEN]; to the dictator, and to those whom he deputed to act under himself, as the *magister equitum*, since he might be said to comprehend all magistracies within himself. (Dion Cass. xliii. 48; Liv. ii. 31; Festus, s. v. *Sellæ curulis*.) After the downfall of the constitution it was assigned to the emperors also, or to their statues in their absence (Tacit. *Ann.* xv. 29, *Hist.* ii. 59; Servius, *l. c.*); to the Augustales (Tacit. *Ann.* ii. 83), and, perhaps, to the præfectus urbi. (Spanheim, *de Præst. et Usu Numism.* x. 3. § 1.) It was displayed upon all great public occasions, especially in the circus and theatre (Liv. ii. 31; Suet. *Octav.* 43; Dion Cass. lviii. 4), sometimes, even after the death of the person to whom it belonged, a mark of special honour, bestowed on Marcellus, Germanicus, and Pertinax (Dion Cass. liii. 30, lxxiv. 4; Tacit. *Ann.* ii. 83, and Comm. of Lips.; Spanheim, x. 2. § 1); and it was the seat of the prætor when he administered justice. (Cic. *Verr.* ii. 38; Val. Max. iii. 5. § 1; Tacit. *Ann.* i. 75; Martial, xi. 98. 18.) In the provinces it was assumed by inferior magistrates, when they exercised proconsular or propraetorian authority, as we infer from its appearing along with fasces on a coin of the Gens Pupia, struck at Nicæa in Bithynia, and bearing the name AVAOC ΠΟΤΙΥΙΟC TAMIAC. We find it occasionally exhibited on the medals of foreign monarchs likewise, on those of Ariobarzanes II. of Cappadocia, for it was the practice of the Romans to present a curule chair, an ivory sceptre, a toga prætexta, and such like ornaments, as tokens of respect and confidence to those rulers whose friendship they desired to cultivate. (Liv. xxx. 11, xlii. 14; Polyb. *Exc. Leg.* cxxi.; Cic. *ad Fam.* xv. 2; Spanheim, *Ibid.* x. 4.)

The *sella curulis* appears from the first to have been ornamented with ivory, and this is commonly indicated by such expressions as *curule ebur*; *Numidae sculptile dentis opus*; and *ελεφαντίνος δίφρος* (Hor. *Ep.* i. 6. 53; Ovid. *ex Pont.* iv. 9. 27); at a later period it was overlaid with gold, and consequently we find *δίφρους ἐπιχρυσούς*, *δρόνους καταχρυσούς*, *τὸν δίφρον τὸν κεχρυσωμένον*, recurring constantly in Dion Cassius, who frequently, however, employs the simple form *δίφροι ἄρχικοί*. In shape it long remained extremely plain, closely resembling a common folding (*plicatilis*) camp stool with crooked legs. These last gave rise to the name *ἀγκυλόπους δίφρος*, found in Plutarch (*Marius*, 5); they strongly remind us of elephants' teeth, which they may have been intended to imitate, and the emperor Aurelian proposed to construct one in which each foot was to consist of an enormous tusk entire. (Vopiscus, *Firm.* 3.)

The form of the *sella curulis*, as it is commonly represented upon the denarii of the Roman families, is given in p. 520. In the following cut are represented two pair of bronze legs, belonging to *sellae curules*, preserved in the museum at Naples (*Museo Borbonico*, vol. vi. tav. 28); and a *sella curulis*, copied from the Vatican collection.

II. **BISELLIUM.** The word is found in no classical author except Varro (*L. L.* v. 128, ed. Müller), according to whom it means a seat large enough to contain two persons. We learn from various inscriptions that the right of using a seat of this kind, upon public occasions, was granted as a mark

of honour to distinguished persons by the magistrates and people in provincial towns. There are examples of this in an inscription found at Pisa, which called forth the long, learned, rambling dissertation of Chimentelli (Graev. *Thes. Antiq. Rom.* vol. vii. p. 2030), and in two others found at Pompeii. (Orell. *Inscr.* n. 4048, 4044.) In another inscription we have **BISELLIATUS HONOR** (Orell. 4043); in another (Orell. 4055), containing the roll of an incorporation of carpenters, one of the office-bearers is styled **COLLEGI BISELLEARIUS**. (Compare Orell. 4046, 4047.)

Two bronze bisella were discovered at Pompeii, and thus all uncertainty with regard to the form of the seat has been removed. One of these is engraved above. (*Mus. Borbon.* vol. ii. tav. 31.)

III. **SELLA GEMATORIA** (Suet. *Ner.* 26, *Vitell.* 16; Amm. Marc. xxix. 2) or **FERTORIA** (Caelius Aurelianus. i. 5, ii. 1), a sedan used both in town and country (Tacit. *Ann.* xiv. 4; Suet. *Claud.* 25), by men (Tacit. *Hist.* i. 35, iii. 85; Juven. vii. 141; Martial. ix. 23), as well as by women. (Tacit. *Ann.* xiv. 4; Juv. i. 124, vi. 532; hence *muliebris sella*, Suet. *Otho*, 6.) It is expressly distinguished from the **LECTICA** (Suet. *Claud.* 25; Martial. x. 10, xi. 98; Senec. *brev. vit.* 12), a portable bed or sofa, in which the person carried lay in a recumbent position, while the *sella* was a portable chair in which the occupant sat upright, but they are sometimes confounded, as by Martial (iv. 51). It differed from the *cathedra* also, but in what the difference consisted it is not easy to determine. [CATHEDRA.] The *sella* was sometimes entirely open, as we infer from the account given by Tacitus of the death of Galba (*Hist.* i. 35, &c.), but more frequently shut in. (Juven. i. 126; Suet. *Ner.* 26, *Vitell.* 16, *Otho*, 6.) Dion Cassius (ix. 2) pretends that Claudius first employed the covered *sella*, but in this he is contradicted by Suetonius (*Octav.* 53), and by himself (xvii. 23, lvi. 43). It appears, however, not to have been introduced until long after the *lectica* was common, since we scarcely, if ever, find any allusion to it until the period of the empire. The *sellae* were made sometimes of plain leather, and sometimes ornamented with bone, ivory, silver (Lamprid. *Elagab.* 4), or gold (Claud. *Honor. Cons.* iv. 583), according to the rank or fortune of the proprietor. They were furnished with a pillow to support the head and neck (*cervical*, Juv. vi. 532, and Schol.), when made roomy the epithet *laxa* was applied (Senec. *de Const.* 14), when smaller than usual they were termed *sellulae* (Tacit. *Hist.* iii. 85); the motion was so easy that one might study without inconvenience (Plin. *Ep.* iii. 5), while at the same time it afforded healthful exercise. (Senec. *Brev. vit.* 12; Galen. *de Tuend. Val.* vi. 4; Caelius Aurelianus. l. c.)

IV. **SELLAE** of different kinds are mentioned incidentally in ancient writers, accompanied by epithets which serve to point out generally the purposes for which they were intended. Thus we read of *sellae balneariae*, *sellae tomoriorae*, *sellae obstetriciae*, *sellae familiariae* v. *portusae*, and many others. Both Varro (*L. L.* v. 128) and Festus (s. v.) have preserved the word *seliquastrum*. The former classes it along with *sedes*, *sedile*, *solum*, *sellae*, the latter calls them "*sedilia antiqui generis*," and Arnobius includes them among common articles of furniture. No hint, however, is given by any of these authorities which could lead us to

conjecture the shape, nor is any additional light thrown upon the question by Hyginus, who tells us, when describing the constellations, that Cassiopeia is seated "in *siliqua*stro."

Of chairs in ordinary use for domestic purposes, a great variety, many displaying great taste, have been discovered in excavations or are seen represented in ancient frescoes. The first cut annexed represents a bronze one from the Museum at

Naples (*Mus. Borb.* vol. vi. tav. 28): the second, two chairs, of which the one on the right hand is in the Vatican and the other is taken from a painting at Pompeii. (*Mus. Borb.* vol. xii. tav. 3.) A chair of a very beautiful form is given in the *Mus. Borb.* vol. viii. tav. 20.

V. SELLAE EQUESTRES. [EPHIPPUM.] [W.R.] SEMATA (*σχυατα*). [FUNUS, p. 556, a.] SEMBELLA. [DENARIUS.] SEMENTIVAE FERIAE. [FERIA, p. 530, a.] SEMIS, SEMISSIS. [AS, p. 140, b.] SEMUNCIA. [UNCIA.] SEMUNCIA RIUM FUNUS. [FUNUS, p. 527, b.]

SENATUS. In all the republics of antiquity the government was divided between a senate and a popular assembly; and in cases where a king stood at the head of affairs, as at Sparta, the king had little more than the executive. A senate in the early times was always regarded as an assembly of elders, which is in fact the meaning of the Roman *senatus* as of the Spartan *γερουσία*, and its members were elected from among the nobles of the nation. The number of senators in the ancient republics always bore a distinct relation to the number of tribes of which the nation was composed. [BOULÉ, GERUSIA.] Hence in the earliest times, when Rome consisted of only one tribe, its senate consisted of one hundred members (*senatores* or *patres*; compare PATRICII), and when the Sabine tribe or the Tities became united with the Latin tribe or the Ramnes, the number of senators was increased to two hundred. (Dionys. ii. 47; Plut. *Rom.* 20.) This number was again augmented by one hundred, when the third tribe

or the Luceres became incorporated with the Roman state. Dionysius (iii. 67) and Livy (i. 35) place this last event in the reign of Tarquinius Priscus; Cicero (*de Re Publ.* ii. 20), who agrees with the two historians on this point, states that Tarquinius doubled the number of senators, according to which we ought to suppose that before Tarquinius the senate consisted only of 150 members. This difference however may be accounted for by the supposition, that at the time of Tarquinius Priscus a number of seats in the senate had become vacant, which he filled up at the same time that he added 100 Luceres to the senate, or else that Cicero regarded the Luceres, in opposition to the two other tribes, as a second or a new half of the nation, and thus incorrectly considered their senators likewise as the second or new half of that body. The new senators added by Tarquinius Priscus were distinguished from those belonging to the two older tribes by the appellation *patres minorum gentium*, as previously those who represented the Tities had been distinguished, by the same name, from those who represented the Ramnes. (Dionys. ii. 57.) Servius Tullius did not make any change in the composition of the senate; but under Tarquinius Superbus their number is said to have become very much diminished, as this tyrant put many to death and sent others into exile. This account however appears to be greatly exaggerated, and it is a probable supposition of Niebuhr (*Hist. of Rome*, i. p. 526), that several vacancies in the senate arose from many of the senators accompanying the tyrant into his exile. The vacancies which had thus arisen were filled up immediately after the establishment of the republic, by L. Junius Brutus, as some writers state (Liv. ii. 1), or, according to Dionysius (v. 13), by Brutus and Valerius Publicola, and according to Plutarch (*Publ.* 11) and Festus (*s. v. Qui patres*) by Valerius Publicola alone. All however agree that the persons who were on this occasion made senators were noble plebeians of equestrian rank. Dionysius states, that the noblest of the plebeians were first raised to the rank of patricians, and that then the new senators were taken from among them. But this appears to be incompatible with the name by which they were designated. Had they been made patricians, they would have been *patres* like the others, whereas now the new senators are said to have been distinguished from the old ones by the name of *conscripti*. (Liv. ii. 1; Fest. *s. v. Conscripti* and *adlecti*.) Hence the customary mode of addressing the whole senate henceforth always was: *patres conscripti*, that is, *patres et conscripti*. There is a statement that the number of these new senators was 164 (Plut. *Publ.* 11; Fest. *s. v. Qui patres*); but this, as Niebuhr has justly remarked, is a fabrication, perhaps of Valerius of Antium, which is contradicted by all subsequent history.

Henceforth the number of 300 senators appears to have remained unaltered for several centuries. (Liv. *Epit.* 60.) C. Sempronius Gracchus was the first who attempted to make a change, but in what this consisted is not certain. In the epitome of Livy it is expressly stated, that he intended to add 600 equites to the number of 300 senators, which would have made a senate of 900 members, and would have given a great preponderance to the equites. This appears to be an absurdity. (Götting, *Gesch. d. Röm. Staatsv.* p. 437.) Plutarch (*C.*

Gracch. 5, &c.) states, that Gracchus added to the senate 300 equites, whom he was allowed to select from the whole body of equites, and that he transferred the judicia to this new senate of 600. This account seems to be founded upon a confusion of the *lex judiciaria* of C. Gracchus with the later one of Livius Drusus (Walter, *Geach. d. Röm. Rechts*, p. 214), and all the other writers who mention the *lex judiciaria* of C. Gracchus do not allude to any change or increase in the number of senators, but merely state that he transferred the judicia from the senate to the equites, who remained in their possession till the tribuneship of Livius Drusus. The latter proposed, that as the senate consisted of 300, an equal number of equites should be elected (*ἀποκριθῆναι*) into the senate, and that in future the judices should be taken from this senate of 600. (Appian. *B. C.* i. 35; Aurel. Vict. *de Vir. Illust.* 66; Liv. *Epit.* 71.) After the death of Livius Drusus, however, this law was abolished by the senate itself, on whose behalf it had been proposed, and the senate now again consisted of 300 members. During the civil war between Marius and Sulla many vacancies must have occurred in the senate. Sulla in his dictatorship not only filled up these vacancies, but increased the number of senators. All we know of this increase with certainty is, that he caused about 300 of the most distinguished equites to be elected into the senate (Appian. *B. C.* i. 100), but the real increase which he made to the number of senators is not mentioned anywhere. It appears, however, henceforth to have consisted of between five and six hundred. (Cic. *ad Att.* i. 14.) Julius Caesar augmented the number to 900, and raised to this dignity even common soldiers, freedmen, and peregrini. (Dion Cass. xliii. 47; Suet. *Caes.* 80.) This arbitrariness in electing unworthy persons into the senate, and of extending its number at random, was imitated after the death of Caesar, for on one occasion there were more than one thousand senators. (Suet. *Aug.* 35.) Augustus cleared the senate of the unworthy members, who were contemptuously called by the people *Orcini senatores*, reduced its number to 600 (Dion Cass. liv. 14), and ordained that a list of the senators should always be exhibited to public inspection. (Dion Cass. iv. 3.) During the first centuries of the empire, this number appears, on the whole, to have remained the same; but as everything depended upon the will of the emperor, we can scarcely expect to find a regular and fixed number of them. (Dion Cass. liii. 17.) During the latter period of the empire their number was again very much diminished.

With respect to the eligibility of persons for the senate, as well as to the manner in which they were elected, we must distinguish between the several periods of Roman history. It was formerly a common opinion, founded upon Livy (i. 8) and Festus (*s. v. Praetoriti senatores*), which has in modern times found new supporters in Huuske and Rubino, that in the early period of Roman history the kings appointed the members of the senate at their own discretion. Niebuhr and others after him have attempted to show that the populus of Rome was the real sovereign, that all the powers which the kings possessed were delegated to them by the populus, and that the senate was an assembly formed on the principle of representation, so that it represented the populus, and that its members were elected by the populus.

Dionysius (ii. 14) also states that the senators were elected by the populus, but the manner in which he describes the election is erroneous, for he believes that the three tribes were already united when the senate consisted of only one hundred members, and that the senators were elected by the curiae. Niebuhr (i. p. 338) thinks, that each gens sent its decurio, who was its alderman, to represent it in the senate; Götting (p. 161, comp. p. 62) on the other hand believes, with somewhat more probability, that each decury (the *δεδκς* of Dionysius), which contained either a part of one or parts of several smaller gentes, had to appoint one old man by whom it was represented in the senate, and a younger one as eques. This supposition removes the difficulty respecting the decurio, which has been pointed out by Walter (*Geach. d. Röm. Rechts*, p. 23. n. 12); for the decurio was the commander of a division of the army, and as such could not well have been of the age of a senator. As, according to this theory, each decury or gens appointed one senator, each cury was represented by ten, each tribe by one hundred, and the whole populus by three hundred senators, all of whom held their dignity for life. But this theory cannot be accepted, for we must either set nearly all the ancient authorities at defiance, or we must acquiesce in the old opinion that the king appointed the senators. The plebeians as such were not represented in the senate, for the instances in which plebeians are mentioned as being made senators, as in the reign of Tarquinius Priscus and after the abolition of the kingly power, cannot be regarded in any other light than mere momentary measures, which the government was obliged to adopt for several reasons, and without any intention to appoint representatives of the plebes. (Niebuhr, i. p. 526, &c.) The numbers of such plebeian senators at any rate must have been much smaller than they are stated by our authorities, for there is no instance of any plebeian senator on record until the year 439 a.c., when Spurius Maelius is mentioned as senator. The senate itself appears to have had some influence upon the election of new members, inasmuch as it might raise objections against a person elected. (Dionys. vii. 55.) The whole senate was divided into decuries, each of which corresponded to a curia. When the senate consisted of only one hundred members, there were accordingly only ten decuries of senators; and ten senators, one being taken from each decury, formed the *decem primi* who represented the ten curiae. When subsequently the representatives of the two other tribes were admitted into the senate, the *Ramnes* with their *decem primi* retained for a time their superiority over the two other tribes (Dionys. ii. 58, iii. 1; Plut. *Num.* 3), and gave their votes first. (Dionys. vi. 84.) The first among the *decem primi* was the *princeps senatus*, who was appointed by the king (Dionys. ii. 12; Lyd. *de Mens.* i. 19), and was at the same time *custos urbis*. [*PRÆFECTUS URBI.*] Respecting the age at which a person might be elected into the senate during the kingly period, we know no more than what is indicated by the name senator itself, that is, that they were persons of advanced age. (Comp. Becker, *Röm. Alterth.* vol. ii. pt. ii. p. 385, &c.)

On the establishment of the republic the election of senators passed from the hands of the

kings into those of the magistrates, the consuls, consular tribunes, and subsequently the censors. (Liv. ii. 1; Fest. s. v. *Præteriti senatores*.) But the power of electing senators possessed by the republican magistrates was by no means an arbitrary power, for the senators were always taken from among those who were equites, or whom the people had previously invested with a magistracy, so that in reality the people themselves always nominated the candidates for the senate. From the year 487 B. C. the princeps senatus was no longer appointed for life, but became a magistrate appointed by the curies, and the patres minorum gentium were likewise eligible to this dignity. (Niebuhr, ii. p. 119.) It moreover appears, that all the curule magistrates from the quaestors upwards had by virtue of their office a seat in the senate, which they retained after the year of their office was over, and it was from these ex-magistrates that the vacancies occurring in the senate were generally filled up.

After the institution of the censorship, the censors alone had the right to elect new members into the senate from among the ex-magistrates, and to exclude such as they deemed unworthy. (Zonar. vii. 19; compare Cic. *de Leg.* iii. 12.) [CENSOR.] The exclusion was effected by simply passing over the names and not entering them into the lists of senators, whence such men were called *præteriti senatores*. (Fest. s. v.) On one extraordinary occasion the eldest among the ex-censors was invested with dictatorial power to elect new members into the senate. (Liv. xxiii. 22.) The censors were thus, on the one hand, confined in their elections to such persons as had already received the confidence of the people, and on the other, they were expressly directed by the lex *Ovinia tribunicia* to elect "ex omni ordine optimum quemque *curiatim*." (Fest. l. c.) This obscure lex *Ovinia* is referred by Niebuhr (i. p. 527) to the time anterior to the admission of the conscripti into the senate, but it evidently belongs to a much later period, and was meant to be a guidance to the censors, as he himself afterwards acknowledged (ii. p. 408, n. 855; compare Walter, p. 100, n. 68). The *ordo* mentioned in this lex is the *ordo senatorius*, i. e. men who were eligible for the senate from the office they had held. (Liv. xxii. 49.) The expression *curiatim* is very difficult to explain; some believe that it refers to the fact that the new senators were only appointed with the sanction of the senate itself (Dionys. vii. 55; Cic. *Philipp.* v. 17), and in the presence of the lictors, who represented the curies.

From the time that the curule magistrates had the right to take their seats in the senate, we must distinguish between two classes of senators, viz. real senators, or such as had been regularly raised to their dignity by the magistrates or the censors, and such as had, by virtue of the office which they held or had held, a right to take their seats in the senate and to speak (*sententiam dicere, jus sententiæ*), but not to vote. (Gellius, iii. 18; Fest. s. v. *Senatores*.) To this *ordo senatorius* also belonged the pontifex maximus and the flamen dialis. The whole of these senators had, as we have stated, no right to vote, but when the others had voted, they might step over or join the one or the other party, whence they were called *senatores pedarii*, an appellation which had in former times been applied to those juniors who were not consulars. (Gell. l. c.; com-

pare Niebuhr, ii. p. 114; Walter, p. 144, and more especially Becker, l. c. p. 431, &c.; F. Hofmann, *Der Röm. Senat*, p. 19, &c.) A singular irregularity in electing members of the senate was committed by Appius Claudius Caecus, who elected into the senate sons of freedmen (Liv. ix. 29, 46; Aur. Vict. *de Vir. Illust.* 34); but this conduct was declared illegal, and had no further consequences.

When at length all the state offices had become equally accessible to the plebeians and the patricians, and when the majority of offices were held by the former, their number in the senate naturally increased in proportion. The senate had gradually become an assembly representing the people, as formerly it had represented the populus, and down to the last century of the republic the senatorial dignity was only regarded as one conferred by the people. (Cic. *pro Sect. 65, de Leg.* iii. 12, c. *Verr.* iv. 11, *pro Cluent.* 56.) But notwithstanding this apparently popular character of the senate, it was never a popular or democratic assembly, for now its members belonged to the nobles, who were as aristocratic as the patricians. [NOBILES.] The office of princeps senatus, which had become independent of that of praetor urbanus, was now given by the censors, and at first always to the eldest among the ex-censors (Liv. xxvii. 11), but afterwards to any other senator whom they thought most worthy, and unless there was any charge to be made against him, he was re-elected at the next lustrum. This distinction, however, great as it was, afforded neither power nor advantages (Zonar. vii. 19), and did not even confer the privilege of presiding at the meetings of the senate, which only belonged to those magistrates who had the right to convoke the senate. (Gell. xiv. 7; Cic. *de Leg.* iii. 4.)

It has been supposed by Niebuhr (iii. p. 406), that a senatorial census existed at Rome at the commencement of the second Punic war, but the words of Livy (xxiv. 11) on which this supposition is founded seem to be too vague to admit of such an inference. Göstling (p. 346) infers from Cicero (*ad Fam.* xiii. 5), that Caesar was the first who instituted a senatorial census, but the passage of Cicero is still more inconclusive than that of Livy, and we may safely take it for granted that during the whole of the republican period no such census existed (Plin. *H. N.* xiv. 1), although senators naturally always belonged to the wealthiest classes. The institution of a census for senators belongs altogether to the time of the empire. Augustus first fixed it at 400,000 sesterces, afterwards increased it to double this sum, and at last even to 1,200,000 sesterces. Those senators whose property did not amount to this sum, received grants from the emperor to make it up. (Suet. *Aug.* 41; Dion Cass. liv. 17, 26, 30, lv. 13.) Subsequently it seems to have become customary to remove from the senate those who had lost their property through their own prodigality and vices, if they did not quit it of their own accord. (Tacit. *Annal.* ii. 48, xii. 82; Suet. *Tib.* 47.) Augustus also, after having cleared the senate of unworthy members, introduced a new and reanimating element into it by admitting men from the municipia, the colonies, and even from the provinces. (Tacit. *Annal.* iii. 55, xi. 25; Suet. *Vesp.* 9.) When an inhabitant of a province was honoured in this manner, the province was said to receive the *jus*

senatus. Provincials who were made senators of course went to reside at Rome, and with the exception of such as belonged to Sicily or to Gallia Narbonensis, they were not allowed to visit their native countries without a special permission of the emperor. (Tacit. *Annal.* xii. 23; Dion Cass. lii. 46, lx. 25.) In order to make Rome or Italy their new home, the provincial candidates for the senate were subsequently always expected to acquire landed property in Italy. (Plin. *Epist.* vi. 19.) On the whole, however, the equites remained during the first centuries of the empire the *seminarium senatus*, which they had also been in the latter period of the republic.

As regards the age at which a person might become a senator, we have no express statement for the time of the republic, although it appears to have been fixed by some custom or law, as the *aetas senatoria* is frequently mentioned, especially during the latter period of the republic. But we may by induction discover the probable age. We know that according to the *lex annalis* of the tribune Villius, the age fixed for the quaestorship was 31. (Orelli, *Onom. Tull.* vol. iii. p. 133.) Now as it might happen that a quaestor was made a senator immediately after the expiration of his office, we may presume that the earliest age at which a man could become a senator was 32. Augustus at last fixed the senatorial age at 25 (Dion Cass. lii. 20), which appears to have remained unaltered throughout the time of the empire.

No senator was allowed to carry on any mercantile business. About the commencement of the second Punic war, some senators appear to have violated this law or custom, and in order to prevent its recurrence a law was passed with the vehement opposition of the senate, that none of its members should be permitted to possess a ship of more than 300 amphorae in tonnage, as this was thought sufficiently large to convey to Rome the produce of their estates abroad. (Liv. xxi. 63.) It is clear however from Cicero (*a. Verr.* v. 18), that this law was frequently violated.

Regular meetings of the senate (*senatus legitimus*) took place during the republic, and probably during the kingly period also, on the calends, nones, and ides of every month (Cic. *ad Q. Frat.* ii. 13); extraordinary meetings (*senatus indictus*) might be convoked on any other day, with the exception of those which were *atri*, and those on which *comitia* were held. (Cic. *ad Q. Frat.* ii. 2.) The right of convoking the senate during the kingly period belonged to the king, or to his vicegerent, the *custos urbis*. (Dionys. ii. 8; *PRAEFECTUS URBI*.) This right was during the republic transferred to the *curule magistrates*, and at last to the tribunes also. Under the empire the consuls, praetors, and tribunes continued to enjoy the same privilege (Dion Cass. lvi. 47, lix. 24; Tacit. *Hist.* iv. 39), although the emperors also had it. (Dion Cass. liii. 1, liv. 3.) If a senator did not appear on a day of meeting, he was liable to a fine for which a pledge was taken (*pignoris coemptio*) until it was paid. (Gellius, xiv. 7; Liv. iii. 28; Cic. *de Leg.* iii. 4, *Philipp.* i. 5; Plut. *Cic.* 43.) Under the empire the penalty for not appearing without sufficient reason was increased. (Dion Cass. liv. 18, lv. 3, lx. 11.) Towards the end of the republic it was decreed, that during the whole month of February the senate should give audience to foreign ambassadors on all days on which the senate could law-

fully meet, and that no other matters should be discussed until these affairs were settled. (Cic. *ad Q. Frat.* ii. 13, *ad Fam.* i. 4.)

The places where the meetings of the senate were held (*curiae, senacula*) were always inaugurated by the augurs. [TEMPLUM.] The most ancient place was the Curia Hostilia, in which alone originally a *senatusconsultum* could be made. Afterwards however several temples were used for this purpose, such as the temple of Concordia, a place near the temple of Bellona [LEGATUS], and one near the porta Capena. (Fest. s. v. *Senacula*; Varro, *de Ling. Lat.* v. 155, 156.) Under the emperors the senate also met in other places: under Caesar the curia Julia, a building of immense splendour, was commenced; but subsequently meetings of the senate were not unfrequently held in the house of a consul.

When in the earliest times the king or the *custos urbis*, after consulting the pleasure of the gods by auspices, had convoked the senate (*senatum edicere, convocare*), he opened the session with the words: "Quod bonum, faustum, felix fortunatumque sit populo Romano Quiritibus," and then laid before the assembly (*referre, relatio*) what he had to propose. The president then called upon the members to discuss the matter, and when the discussion was over, every member gave his vote. The majority of votes always decided a question. The majority was ascertained either by *numeratio* or by *discessio*, that is, the president either counted the votes (Fest. s. v. *Numeratio*), or the members who voted on the same side joined together, and thus separated from those who voted otherwise. This latter method of voting appears in later times to have been the usual one, and, according to Capito (*ap. Gell.* xiv. 7), the only legitimate method. [SENATUSCONSULTUM.]

The subjects laid before the senate partly belonged to the internal affairs of the state, partly to legislation, and partly to finance; and no measure could be brought before the populus without having previously been discussed and prepared by the senate. The senate was thus the medium through which all affairs of the whole government had to pass: it considered and discussed whatever measures the king thought proper to introduce, and had, on the other hand, a perfect control over the assembly of the populus, which could only accept or reject what the senate brought before it. When a king died, the royal dignity, until a successor was elected, was transferred to the *decem primi* (Liv. i. 17), each of whom in rotation held this dignity for five days. The candidate for the royal power was first decided upon by the interreges, who then proposed him to the whole senate, and if the senate agreed with the election, the *interrex* of the day, at the command of the senate, proposed the candidate to the *comitia* and took their votes respecting him. (Dionys. ii. 58, iii. 36, iv. 40, 80; comp. Walter, p. 25, n. 28.) The will of the gods was then consulted by the augurs, and when the gods too sanctioned the election (Liv. i. 18), a second meeting of the populus was held, in which the augurs announced the sanction of the gods. Hereupon the king was invested with the powers belonging to his office.

Under the republic the right of convoking the senate was at first only possessed by the dictators, praetors or consuls, interreges, and the *praefectus urbi*, who also, like the kings of former times, laid

before the senate the subjects for deliberation. The power of the senate was at first the same as under the kings, if not greater: it had the general care of the public welfare, the superintendence of all matters of religion, the management of all affairs with foreign nations; it commanded the levies of troops, regulated the taxes and duties, and had in short the supreme control of all the revenue and expenditure. The order in which the senators spoke and voted was determined by their rank as belonging to the *maiores* or *minores*. (Cic. *de Re Publ.* ii. 20; Dionys. vi. 69, vii. 47.) This distinction of rank however appears to have ceased after the decemvirate, and even under the decemvirate we have instances of the senators speaking without any regular order. (Dionys. vi. 4, 16, 19, 21; Liv. iii. 39, 41.) It is also probable that after the decemvirate vacancies in the senate were generally filled with *ex-magistrates*, which had now become more practicable as the number of magistrates had been increased. The tribunes of the people likewise obtained access to the deliberations of the senate (Liv. iii. 69, vi. 1); but they had no seats in it yet, but sat before the opened doors of the curia. (Val. Max. ii. 2. § 7.) The senate had at first had the right to propose to the *comitia* the candidates for magistracies, but this right was now lost: the *comitia centuriata* had become quite free in regard to elections and were no longer dependent upon the proposal of the senate. The *curies* only still possessed the right to sanction the election; but in the year B. C. 299 they were compelled to sanction any election of magistrates which the *comitia* might make, before it took place (Cic. *Brut.* 14; Aurel. Vict. *de Vir. Illustr.* 33), and this soon after became law by the *lex Maenia*. (Orelli, *Onom. Tull.* vol. iii. p. 215.) When at last the *curies* no longer assembled for this empty show of power, the senate stepped into their place, and henceforth in elections, and soon after also in matters of legislation the senate had previously to sanction whatever the *comitia* might decide. (Liv. i. 17.) After the *lex Hortensia* a decree of the *comitia tributa* became law even without the sanction of the senate. The original state of things had thus gradually become reversed, and the senate had lost very important branches of its power, which had all been gained by the *comitia tributa*. [TRIBUNUS PLÉBIS.] In its relation to the *comitia centuriata*, however, the ancient rules were still in force, as laws, declarations of war, conclusions of peace, treaties, &c. were brought before them and decided by them on the proposal of the senate. (Walter, p. 132.)

The powers of the senate after both orders were placed upon a perfect equality may be thus briefly summed up. The senate continued to have the supreme superintendence in all matters of religion (Gellius, xiv. 7); it determined upon the manner in which a war was to be conducted, what legions were to be placed at the disposal of a commander, and whether new ones were to be levied; it decreed into what provinces the consuls and praetors were to be sent [PROVINCIA], and whose imperium was to be prolonged. The commissioners who were generally sent out to settle the administration of a newly conquered country, were always appointed by the senate. (Liv. xlv. 17; Appian. *de Reb. Hist.* 99, *de Reb. Pun.* 135; Sallust. *Jug.* 16.) All embassies for the conclusion of peace or treaties with foreign states were sent out by the senate,

and such ambassadors were generally senators themselves and ten in number. (Polyb. vi. 13; Liv. *passim*.) The senate alone carried on the negotiations with foreign ambassadors (Polyb. l. c.; Cic. *c. Vatin.* 15), and received the complaints of subject or allied nations, who always regarded the senate as their common protector. (Liv. xxix. 16, xxxix. 3, xlii. 14, xliii. 2; Polyb. l. c.) By virtue of this office of protector it also settled all disputes which might arise among the municipia and colonies of Italy (Dionys. ii. 1; Liv. ix. 20; Varro, *de Re Rust.* iii. 2; Cic. *ad Att.* iv. 15, *de Off.* i. 10), and punished all heavy crimes committed in Italy, which might endanger the public peace and security. (Polyb. l. c.) Even in Rome itself the judges to whom the praetor referred important cases, both public and private, were taken from among the senators (Polyb. vi. 17), and in extraordinary cases the senate appointed special commissions to investigate them (Liv. xxxviii. 54, xxxix. 14, xl. 37, 44, &c.); but such a commission, if the case in question was a capital offence committed by a citizen, required the sanction of the people. (Polyb. vi. 16; Liv. xxvi. 33, &c.) When the republic was in danger the senate might confer unlimited power upon the magistrates by the formula, "*videant consules, ne quid reipublicae detrimenti capiat*" (Sallust. *Cat.* 29; Caes. *B. C.* i. 5, 7), which was equivalent to a declaration of martial law within the city. This general care for the internal and external welfare of the republic included, as before, the right to dispose over the finances requisite for these purposes. Hence all the revenue and expenditure of the republic were under the direct administration of the senate, and the censors and quaestors were only its ministers or agents. [CENSOR; QUÆSTOR.] All the expenses necessary for the maintenance of the armies required the sanction of the senate, before anything could be done, and it might even prevent the triumph of a returning general, by refusing to assign the money necessary for it. (Polyb. vi. 15.) There are, however, instances of a general triumphing without the consent of the senate. (Liv. iii. 63, vii. 17, ix. 37.)

How many members were required to be present in order to constitute a legal meeting is uncertain, though it appears that there existed some regulations on this point (Liv. xxxviii. 44, xxxix. 4; Cic. *ad Fam.* viii. 5; Fest. *s. v. Numera*), and there is one instance on record, in which at least one hundred senators were required to be present. (Liv. xxxix. 18.) The presiding magistrate opened the business, and as the senators sat in the following order,—*princeps senatus*, *consulares*, *censorii*, *praetorii*, *aedilicii*, *tribunicii*, *quaestorii*,—it is natural to suppose, that they were asked their opinion and voted in the same order. (*Suo loco sententiam dicere*, Cic. *Philipp.* v. 17, xiii. 13, &c., *ad Att.* xii. 21.) Towards the end of the republic the order in which the question was put to the senators, appears to have depended upon the discretion of the presiding consul (Varro, *ap. Gell.* xiv. 7), who called upon each member by pronouncing his name (*nominatim*, Cic. *c. Verr.* iv. 64), but he usually began with the *princeps senatus* (Cic. *pro Sext.* 32), or if consules designati were present, with them. (Sallust. *Cat.* 50; Appian, *B. C.* ii. 5.) The consul generally observed all the year round the same order in which he had commenced on the first of January. (Suet. *Caes.* 21.) A

senator when called upon to speak might do so at full length, and even introduce subjects not directly connected with the point at issue. (Cic. *de Leg.* iii. 18; Gellius, iv. 10; Tacit. *Annal.* ii. 38, xiii. 39; compare Cic. *Philipp.* vii.) It depended upon the president which of the opinions expressed he would put to the vote, and which he would pass over. (Polyb. xxxiii. 1; Cic. *ad Fam.* i. 2, x. 12; Caes. *B. C.* i. 2.) Those men who were not yet real senators, but had only a seat in the senate on account of the office they held, or had held, had no right to vote (Gellius, xiii. 8.) When a *Senatusconsultum* was passed, the consuls ordered it to be written down by a clerk in the presence of some senators, especially of those who had been most interested in it or most active in bringing it about. (Polyb. vi. 12; Cic. *de Orat.* iii. 2, *ad Fam.* viii. 8.) [SENATUMCONSULTUM.] A meeting of the senate was not allowed to be held before sunrise or to be prolonged after sunset (Varro, *ap. Gell. l. c.*): on extraordinary emergencies, however, this regulation was set aside. (Dionys. iii. 17; Macrobi. *Sat.* i. 4.)

During the latter part of the republic the senate was degraded in various ways by Sulla, Caesar, and others, and on many occasions it was only an instrument in the hands of the men in power. In this way it became prepared for the despotic government of the emperors, when it was altogether the creature and obedient instrument of the princeps. The emperor himself was generally also princeps senatus (Dion Cass. liii. 1, lvii. 8, lxxiii. 5), and had the power of convoking both ordinary and extraordinary meetings (Dion Cass. liv. 3; Lex de imperio Vespas.), although the consuls, praetors, and tribunes, continued to have the same right. (Tacit. *Hist.* iv. 39; Dion Cass. lvi. 47, lix. 24, lx. 16, &c.) The ordinary meetings according to a regulation of Augustus were held twice in every month. (Suet. *Aug.* 35; Dion Cass. lv. 3.) A full assembly required the presence of at least 400 members, but Augustus himself afterwards modified this rule according to the difference and importance of the subjects which might be brought under discussion. (Dion Cass. liv. 35, lv. 3.) At a later period we find that seventy or even fewer senators constituted an assembly. (Lamprid. *Al. Sever.* 16.) The regular president in the assembly was a consul, or the emperor himself, if he was invested with the consulship. (Plin. *Epist.* ii. 11, *Panegyrr.* 76.) At extraordinary meetings, the person who convoked the senate was at the same time its president. The emperor, however, even when he did not preside, had by virtue of his office of tribune, the right to introduce any subject for discussion, and to make the senate decide upon it. (Dion Cass. liii. 32; Lex de imperio Vespas.) At a later period this right was expressly and in proper form conferred upon the emperor under the name of *jus relationis*, and accordingly as he obtained the right to introduce three or more subjects, the *jus* was called *jus tertiae, quartae, quintae, &c. relationis*. (Vopisc. *Prob.* 12; J. Capitol. *Pertin.* 5, *M. Antonin.* 6; Lamprid. *Al. Sev.* 1.) The emperor introduced his proposals to the senate in writing (*oratio, libellus, epistola principis*), which was read in the senate by one of his quaestors. (Dion Cass. liv. 25, lx. 2; Suet. *Aug.* 65, 74, 6; Tacit. *Annal.* xvi. 27; Dig. i. tit. 13. s. 1. §§ 2 and 4.) [ORATIONES PRINCIPUM.] The praetors, that they might not be inferior to the tribunes, likewise

received the *jus relationis*. (Dion Cass. lv. 3.) The mode of conducting the business, and the order in which the senators were called upon to vote, remained on the whole the same as under the republic (Plin. *Epist.* viii. 14, ix. 13); but when magistrates were to be elected, the senate, as in former times the comitia, gave their votes in secret with little tablets. (Plin. *Epist.* iii. 20, xi. 5.) The transactions of the senate were from the time of Caesar registered by clerks appointed for the purpose, under the superintendence of a senator. (Suet. *Caes.* 20, *Aug.* 36; Tacit. *Annal.* v. 4, &c.; Spart. *Hadrian.* 3; Dion Cass. lxxviii. 22.) In cases which required secrecy (*senatusconsultum tacitum*), the senators themselves officiated as clerks. (Capitol. *Gord.* 20.)

As the Roman emperor concentrated in his own person all the powers which had formerly been possessed by the several magistrates, and without limitation or responsibility, it is clear that the senate in its administrative powers was dependent upon the emperor, who might avail himself of its counsels or not, just as he pleased. In the reign of Tiberius the election of magistrates was transferred from the people to the senate (Vell. Pat. ii. 124; Tacit. *Annal.* i. 15; Plin. *Epist.* iii. 20, vi. 19), which, however, was enjoined to take especial notice of those candidates who were recommended to it by the emperor. This regulation remained, with a short interruption in the reign of Caligula, down to the third century, when we find that the princeps alone exercised the right of appointing magistrates. (Dig. 48. tit. 14. s. 1.) At the demise of an emperor the senate had the right to appoint his successor, in case no one had been nominated by the emperor himself; but the senate had in very rare cases an opportunity to exercise this right, as it was usurped by the soldiers. The aerarium at first still continued nominally to be under the control of the senate (Dion Cass. liii. 16, 22), but the emperors gradually took it under their own exclusive management (Dion Cass. lxxi. 33; Vopisc. *Aurel.* 9, 12, 20), and the senate retained nothing but the administration of the funds of the city (*arca publica*), which were distinct both from the aerarium and from the fiscus (Vopisc. *Aurel.* 20, 45), and the right of giving its opinion upon cases connected with the fiscal law. (Dig. 49. tit. 14. s. 15 and 42.) Its right of coining money was limited by Augustus to copper coins, and ceased altogether in the reign of Gallienus. (Eckhel, *D. N. Proleg.* c. 13.) Augustus ordained that no accusations should any longer be brought before the comitia (Dion Cass. lvi. 40), and instead of them he raised the senate to a high court of justice, upon which he conferred the right of taking cognizance of capital offences committed by senators (Dion Cass. lii. 31, &c.; Suet. *Calig.* 2; Tacit. *Annal.* xiii. 44; Capitol. *M. Antonin.* 10), of crimes against the state and the person of the emperors (Dion Cass. lii. 15, 17, 22, lx. 16, lxxvi. 8; Suet. *Aug.* 66; Tacit. *Annal.* iii. 49, &c.), and of crimes committed by the provincial magistrates in the administration of their provinces. The senate might also receive appeals from other courts (Suet. *Nero.* 17; Tacit. *Annal.* xiv. 28; Capitol. *M. Antonin.* 10; Vopisc. *Prob.* 13), whereas, at least from the time of Hadrian, there was no appeal from a sentence of the senate. (Dion Cass. lix. 18; Dig. 49. tit. 2. s. 1. § 2.) The princeps sometimes referred cases which were not contained

in the above categories, or which he might have decided himself, to the senate, or requested its co-operation. (Suet. *Claud.* 14, 15, *Nero*, 15, *Domit.* 8, &c.) Respectins the provinces of the senate see *PROVINCIA*.

When Constantinople was made the second capital of the empire, Constantine instituted also a second senate in this city (Sozomen, ii. 2; *Excerpt. de gest. Const.* 30), upon which Julian conferred all the privileges of the senate of Rome. (Zosim. iii. 11; Liban. *Orat. ad Theodos.* ii. p. 383, ed. Morell.) Both these senates were still sometimes consulted by the emperors in an oratio upon matters of legislation (Cod. Theod. 6. tit. 2. a. 14; Symmach. *Epist.* x. 2. 28; Cod. i. tit. 14. a. 3); the senate of Constantinople retained its share in legislation down to the ninth century. (Nov. Leon. 76.) Each senate also continued to be a high court of justice to which the emperor referred important criminal cases. (Amm. Marc. xxviii. 1. 23; Symmach. *Epist.* iv. 5; Zosim. v. 11, 38.) Capital offences committed by senators, however, no longer came under their jurisdiction, but either under that of the governors of provinces, or of the prefects of the two cities. (Walter, p. 367, &c.) Civil cases of senators likewise belonged to the forum of the praefectus urbi. (Cod. 3. tit. 24. a. 3; Symmach. *Epist.* x. 69.) The senatorial dignity was now obtained by descent (Cod. Theod. 6. tit. 2. a. 2; 12. tit. 1. a. 58; Cassiodor. *Varior.* iii. 6), and by having held certain offices at the court, or it was granted as an especial favour by the emperor on the proposal of the senate. (Cod. Theod. i. c.; Symmach. *Epist.* x. 25. 118.) To be made a senator was indeed one of the greatest honours that could be conferred, and was more valued than in the times of the republic; but its burdens were very heavy, for not only had the senators to give public games (Symmach. *Epist.* x. 25. 28), to make magnificent presents to the emperors (Cod. Theod. 6. tit. 2. a. 5), and in times of need extraordinary donations to the people (Zosim. v. 41; Symmach. *Ep.* vi. 14, 26, vii. 68), but in addition they had to pay a peculiar tax upon their landed property, which was called *folles* or *gleba*. (Zosim. ii. 32; Cod. Theod. 6. tit. 2; Symmach. *Epist.* iv. 61.) A senator who had no landed property was taxed at two folles. (Cod. Theod. 6. tit. 2. a. 2, 6. tit. 4. a. 21.) It was therefore only the wealthiest persons of the empire, no matter to what part of it they belonged, that could aspire to the dignity of senator. A list of them, together with an account of their property, was laid before the emperor every three months by the prefect of the city. (Symmach. x. 66, &c.) Down to the time of Justinian the consuls were the presidents of the senate, but from this time the praefectus urbi always presided. (Cod. Theod. 6. tit. 6. s. 1; Nov. Instit. 62.)

It now remains to mention some of the distinctions and privileges enjoyed by Roman senators: 1. The tunica with a broad purple stripe (*latus clavus*) in front, which was woven in it, and not as is commonly believed sewed upon it. (Acron. *ad Horat. Sat.* i. 5. 35; compare i. 6. 28; Quintil. xi. 3.) 2. A kind of short boot with the letter C on the front of the foot. (Juv. vii. 192; Cic. *Phil.* xiii. 13.) This C is generally supposed to mean *centum*, and to refer to the original number of 100 (*centum*) senators. 3. The right of sitting in the orchestra in the theatres and amphitheatres. This

distinction was first procured for the senators by Scipio Africanus Major, 194 B.C. (Liv. xxxiv. 54; Cic. *pro Cluent.* 47.) The same honour was granted to the senators in the reign of Claudius at the games in the circus. (Suet. *Claud.* 21; Dion Cass. lx. 7.) 4. On a certain day in the year a sacrifice was offered to Jupiter in the capitol, and on this occasion the senators alone had a feast in the capitol; the right was called the *jus publice epulandi*. (Gellius, xii. 8; Suet. *Aug.* 35.) 5. The *jus liberae legationis*. [*LEGATUS, sub finem.*] [L. S.]

SENATUSCONSULTUM. In his enumeration of the formal parts of the Jus Civile, Cicero includes *Senatusconsulta*. (*Top.* 5.) Numerous *Leges* properly so called were enacted in the reign of Augustus, and *Leges*, properly so called, were made even after his time. [*LEX.*] It was under Augustus however that the *Senatusconsulta* began to take the place of *Leges* properly so called, a change which is also indicated by the fact that until his time the *Senatusconsulta* were not designated either by the names of the Consuls or by any other personal name, so far as we have evidence. But from that time we find the *Senatusconsulta* designated either by the name of the Consuls, as *Apronianum*, *Silanianum*, or from the name of the Caesar, as *Claudianum*, *Neronianum*; or they are designated as made "*auctore*" or "*ex auctoritate Hadriani*," &c., or "*ad orationem Hadriani*," &c. The name of the *Senatusconsultum Macedonianum* is an exception, as will afterwards appear.

Many *Senatusconsulta* were enacted in the Republican period, and some of them were laws in the proper sense of the term, though some modern writers have denied this position. But the opinion of those who deny the legislative power of the Senate during the Republican period is opposed by facts. An attempt has sometimes been made to support it by a passage of Tacitus ("*tum primum e campo Comitum ad patres translata sunt.*" *Ann.* i. 15), a passage which only refers to the elections. It is difficult however to determine how far the legislative power of the Senate extended. A recent writer (Walter, *Geschichte des Röm. Rechts*, 437, 1st ed.) observes "that the *Senatusconsulta* were an important source of law for matters which concerned administration, the maintenance of Religion, the suspension or repeal of laws in the case of urgent public necessity, the rights of the Aerarium and the Publicani, the treatment of the Italians and the Provincials." (Liv. xxvi. 34, xxxix. 3, xli. 9.) The following are instances of *Senatusconsulta* under the Republic: a *Senatusconsultum* "*ne quis in urbe sepeliretur*;" the *Senatusconsultum de Bacchanalibus* hereafter more particularly mentioned; a *Senatusconsultum de Libertinorum tribu* (Liv. xlv. 15); a *Senatusconsultum de Macedonia* (Liv. xlv. 18); a *Senatusconsultum de Sumbitis* at the Megalenses ludi (Gell. ii. 24); a *Senatusconsultum* "*ne homo immolaretur*;" (Plin. *H. N.* xxx. 1); a *Senatusconsultum de provinciis Quaestoris*; a *Senatusconsultum* made M. Tullio Cicerone referente to the effect, "*ut legationum liberarum tempus annum esset*;" various *Senatusconsulta* de collegiis dissolvendis; an old *Senatusconsultum*, "*Senatusconsultum vetus ne liceret Africanas (bestias) in Italiam advehere*," which was so far repealed by a Plebiscitum proposed by Cn. Aufidius, Tribunes Plebis, that the importation for the pur-

pose of the Cirenseæ was made legal (Plin. *H. N.* viii. 17); an old *Senatusconsultum* by which "quæstio (*seruorum*) in caput domini prohibebatur" (Tacit. *Ann.* ii. 30), a rule of law which Cicero (*pro Milon.* 22) refers to *Mores* as its foundation. From these instances of *Senatusconsulta* made in the Republican period we may collect in a general way the kind of matters to which this form of legislation applied. The constitution of the Senate was such as to gradually bring within the sphere of its legislation all matters that pertained to religion, police, administration, provincial matters, and all foreign relations. And it seems that the power of the Senate had so far increased at the time of the accession of Augustus that it was no great change to make it the only legislating body. Pomponius (Dig. 1. tit. 2. s. 2), though his historical evidence must be received with caution, states the matter in a way which is generally consistent with what we otherwise know of the progress of Senatorial legislation: "As the plebs found it difficult to assemble, &c., it was a matter of necessity that the administration of the State came to the Senate: thus the Senate began to act, and whatever the Senate had determined (*constituit*) was observed (*observabatur*), and a law so made is called *Senatusconsultum*."

A *Senatusconsultum* was so named because the *Canal* (*qui retulit*) was said "Senatum consulere": "Marcus L. F. S. Postumius L. F. Cos Senatvm Consoluerunt." (*Senatusconsultum de Bacchanalibus*.) In the *Senatusconsultum De Philosophis et De Rhetoribus* (Gell. xv. 11), the *Praetor* "consuluit." In the enacting part of a *Lex* the *Populus* was said "jubere," and in a *Plebiscitum* "scire:" in a *Senatusconsultum* the Senate was said "censere": "De Bacchanalibus, &c., its exdecidendvm censere." (S. C. de Bacch.) In the *Senatusconsulta* of the time of Augustus cited by Frontinus (*de Aqueductibus Romae*, ii.), the phrase which follows "censere" is sometimes "placere huic ordini." In Tacitus the verb "censere" is also applied to the person who made the motion for a *Senatusconsultum*. (*Ann.* iv. 20.) Sometimes the term "arbitrari" is used (Dig. 16. tit. 1. s. 2); and Gaius (i. 4), writing under the Antonines applies to the *Senatus* the terms which originally denoted the legislative power of the *Populus*: "Senatus jubet atque constituit; idque legis vicem optinet, quamvis fuit quæsitum." "Habere senatum" is to hold a meeting of the senate. When Cn. Pompeius was elected consul for the first time, his friend M. Varro wrote for his use a treatise "de Senatu habendo consulendoque." A *Senatusconsultum* made before the rising or after the setting of the sun was not valid. (Gellius, xiv. 7.)

The mode in which the legislation of the Senate was conducted in the Imperial period is explained in the article *ORATIONES PRINCIPUM*.

Certain forms were observed in drawing up a *Senatusconsultum*, of which there is an example in Cicero (*ad Fam.* viii. 8): "S. C. Auctoritates (for this is the right reading) Pridie. Kal. Octob. in Aede Apolliniæ, scribendo adfuerunt L. Domitius Cn. Filius Ahenobarbus, &c. Quod M. Marcellus Consul V. F. (*verba fecit*) de prov. Cons. D. E. R. I. C. (*de ea re ita censuerunt Ut, &c.*)" The preamble of the *Senatusconsultum* de Bacchanalibus is similar, but the names of the consuls come at the beginning and the word is "consoluerunt;" the

date and place are also given; and the names of those qui scribendo adfuerunt (S. C. ARF. in the Inscription). The names of the persons who were witnesses to the drawing up of the *Senatusconsultum* were called the "auctoritates," and these auctoritates were cited as evidence of the fact of the persons named in them having been present at the drawing up of the S. C. ("id quod in auctoritatibus præscriptis extat," Cic. *de Or.* iii. 2); from which passage, and from another (Cic. *ad Fam.* v. 2; "illud S. C. ea præscriptione est") in which Cicero refers to his name being found among the auctoritates of a S. C. as a proof of his friendship to the person whom the S. C. concerned, it is certain that "præscribo" in its various forms is the proper reading in these *Senatusconsulta*. (Compare the similar use of *Præscriptio* in Roman Pleadings [*PRÆSCRIPTIO*].) There can be no doubt that certain persons were required to be present "scribendo," but others might assist if they chose, and a person in this way might testify his regard for another on behalf of whom or with reference to whom the S. C. was made. ("Cato autem et scribendo adfuit," &c. Cic. *ad Att.* vii. 1.) Besides the phrase "scribendo adesse," there are "esse ad scribendum" (Cic. *ad Att.* i. 19), and "poni ad scribendum" (as to which see the curious passage in Cicero, *ad Fam.* ix. 15). When a S. C. was made on the motion of a person, it was said to be made "in sententiam ejus." If the S. C. was carried, it was written on tablets and placed in the *Aerarium*: the S. C. de Bacchanalibus provides that it shall be cut on a bronze tablet, but this was for the purpose of its being put up in a public place where it could be read (*ubi facillime gnosceri potuit*).

The *Senatusconsulta* were originally intrusted to the care of the tribunes and the aediles, but in the time of Augustus the quæstors had the care of them. (Dion Cass. lv. 36, and the note of Reimarus.) Under the later emperors the *Senatusconsulta* "quæ ad principes pertinebant," were preserved in "libri elephantini." (Vopiscus, *Tacitus*, c. 8.)

A measure which was proposed as a *Senatusconsultum* might be stopped by the *Intercessio* of the Tribunes, and provision was sometimes made for further proceeding in such case: "si quis huic *senatusconsulto* intercesserit senatus placere auctoritatem perscribi (præscribi) et de ea re ad senatum populumque referri." (Cic. *ad Fam.* viii. 8.) This explains one meaning of *Senatus auctoritas*, which is a *Senatusconsultum* which has been proposed and not carried, and of which a record was kept with the "auctoritates eorum qui scribendo adfuerunt." In one passage Cicero calls a S. C. which had failed owing to an *Intercessio*, an *Auctoritas* (*ad Fam.* i. 7). One meaning of *Auctoritas* in fact is a S. C. proposed, but not yet carried; and this agrees with Livy (iv. 57): "Si quis intercedat Sto, auctoritate se fore contentum." If *Senatus auctoritas* occasionally appears to be used as equivalent to *Senatusconsultum*, it is an improper use of the word, but one which presents no difficulty if we consider that the names which denote a thing in its two stages are apt to be confounded in popular language, as with us the words *Bill* and *Act*. In its general and original sense *Senatus Auctoritas* is any measure to which a majority of the Senate has assented. (See the note of P. Manutius on Cic. *ad Fam.* v. 2.)

The proper enacting word in the *Senatusconsulta* is "censeo," but the word "decerno" was also used in ordinary language to express the enacting of a *Senatusconsultum*. (Cic. *ad Fam.* viii. 8; *Senatus decrevit ut dec. ad Att.* i. 19.) But a *Senatusconsultum*, which was a law in the proper sense of the term, is not called a *Decretum*, which was a rule made by the Senate as to some matter which was strictly within its competence. The words *Decretum* and *Senatusconsultum* are often used indiscriminately and with little precision. (Gell. ii. 24.) (See Aelius Gallus, *apud Festum*, s. v. *Senatus Decretum*, and *DECRETUM*.)

The forms of the *Senatusconsulta* are the best evidence of their character. The following are some of the principal *Senatusconsulta* which are preserved: the *Senatusconsultum de Tiburtibus*, printed by Gruter and others, which is "undoubtedly the oldest of all Roman documents" (Niebuhr, *Rom. Hist.* vol. iii. p. 264, note 66); the *Senatusconsultum de Bacchanalibus*; the *Senatusconsultum* in the Letter of Cicero already referred to; Cic. *Philipp.* v. 13; Gellius, xv. 11; the six *Senatusconsulta* about the Roman Aqueducts in the second book of Frontinus de *Aqueductibus*; the *Senatusconsultum* about the Aphrodisienses (Tacit. *Ann.* iii. 62; Tacit. Oberlin. ii. 835); the oration of Claudius (Tacit. *Ann.* xi. 24; Tacit. Oberlin. ii. 806); the various *Senatusconsulta* preserved in the Digest, which are mentioned in a subsequent part of this article. See also the *Senatusconsultum* printed in Sigonius, "De Antiquo Jure Provinciarum," i. 288; and the *Scutum* by which the name Augustus was given to the month Sextilis. (Macrob. *Saturnal.* i. 12.)

The following list of *Senatusconsulta* contains perhaps all of them which are distinguished by the name of a consul or other distinctive name. Numerous *Senatusconsulta* under the Empire are referred to in the Latin writers, for which we find no distinctive name, though it is probable that all of them had a title like the *Leges*, but many of them being of little importance were not much referred to or cited, and thus their names were forgotten. Tacitus, for instance, often speaks of S. C. without giving their names, and in some cases we are able to affix the titles from other authorities. Many of the Imperial *Senatusconsulta* were merely amendments of *Leges*; but they were laws in the proper sense of the word.

Some of the *Senatusconsulta* of the Republican period were laws, as already observed, but others were only determinations of the Senate, which became *Leges* by being carried in the *comitia*. Such S. C. were really only *autoritates*. One instance of this kind occurred on the occasion of the trial of Clodius for violating the mysteries of the Bona Dea. A rogatio on the subject of the trial was proposed to the *Comitia ex Senatusconsulto* (Cic. *ad Att.* i. 14); which is also spoken of as the *Auctoritas* of the Senate, and as "quod ab *Senatu Constitutum*" (the words of Gaius, i. 4).

APRONIANUM, probably enacted in the time of Hadrian, empowered all *Civitates* which were within the Roman Imperium to take a *fideicommissa hereditas*. This *Senatusconsultum* is cited by Ulpian (*Frag.* tit. 22) without the name, but it appears from comparing Ulpian with the Digest (36. tit. 1. s. 26) to be the *Senatusconsultum Apronianum*. A *Senatusconsultum* also allowed *Civitates* or *Municipia*, which were legally con-

sidered as *Universitates*, to be appointed *heredes* by their *liberti* or *libertae*. Ulpian speaks of this *Senatusconsultum* in the passage referred to, immediately before he speaks of that *Senatusconsultum* which we know to be the *Apronianum*, and it appears probable that the two *Senatusconsulta* were the same, for their objects were similar and they are mentioned together without any indication of their being different. This last mentioned provision is also mentioned in the Digest (38. tit. 3) as being contained in a *Senatusconsultum* which was posterior to the *Trebellianum*, but the name is not given in the Digest. Under this provision a *Municipium* could obtain the *Bonorum Possessio*. Bachius (*Historia Jurisprudentiae Romanae*) assigns this *Senatusconsultum* to the reign of Trajan. But it appears to belong to the time of Hadrian, and to be the same S. C. which allowed *Civitates* to take a legacy. (Ulp. *Frag.* tit. 24.)

ARTICULIANUM gave the *Præses* of a Province jurisdiction in the case of *fideicommissa libertas*, even when the *heres* did not belong to the Province. The *heres* could be compelled to give the *libertas* which was the subject of the *fideicommissum*. (MANUMISSIO; Dig. 40. tit. 5. s. 44, 51.) This *Senatusconsultum* was enacted A. D. 101, in which year Sex. Articuleius Paetus was consul.

DE BACCHANALIBUS. This *Senatusconsultum*, which is sometimes called *Marcianum*, was passed in the year A. C. 186. The terms of it are stated generally by Livy (xxxix. 18), and may be compared with the original *Senatusconsultum* which is printed in the edition of Livy by Drakenborch, and in that by J. Clericus, Amsterdam, 1710. There is a dissertation on this *Senatusconsultum* by Bynkershoek (*De Cultu Religionis Peregrinae apud Veteres Romanos*, Op. i. 412), who has printed the *Senatusconsultum* and commented upon it at some length. The provisions of this *Senatusconsultum* are stated generally under DIONYSIA, p. 414, b. There is no ancient authority, as it appears, for the name *Marcianum*, which has been given to it from the name of one of the Consuls who proposed it, and in accordance with the usual titles of S. C. in the Imperial period. This *Scutum* was found in A. D. 1640, in a village in Calabria, and is said to be now at Vienna. (*Senatusconsulti De Bacchanalibus, &c. Explicatio, auctore Matthæo Aegyptio*, Neapol. 1729.)

CALVITIANUM. (Ulpian, *Frag.* tit. xvi.; JULIA ET PAPIA POPPÆA LEX, p. 692, b.)

CLAUDIANUM passed in the time of the Emperor Claudius, reduced a free woman to the condition of a slave (*ancilla*) if she cohabited with the slave of another person, after the master had given her notice that he would not permit it. But if a woman, who was a Roman citizen, cohabited with a slave with the consent of the slave's master, she might by agreement with the master remain free and yet any child born from this cohabitation would be a slave; for the *Senatusconsultum* made valid any agreement between the free woman and the slave's master, and by such agreement the woman was relieved from the penalty of the *Senatusconsultum*. But Hadrian, being moved thereto by a consideration of the hardship of the case and the incongruity of this rule of law (*inæquum juris*), restored the old rule of the *Jus Gentium*, according to which the woman continuing free was the mother of a free child.

A difficulty arose on the interpretation of this *Senatusconsultum* for which the words of the law had not provided. If a woman, who was a Roman citizen, was with child, and became an ancilla pursuant to the *Senatusconsultum* in consequence of cohabiting with a slave contrary to the master's wish, the condition of the child was a disputed matter: some contended that if the woman had become pregnant in a legal marriage, the child was a Roman citizen, but if she had become pregnant by illicit cohabitation, the child was the property of the person who had become the master of the mother. [SERVUS (ROMAN).]

There is an apparent ambiguity in a passage of Gaius (i. 86) in which he says, "but that rule of the same Lex is still in force, by which the issue of a free woman and another man's slave is a slave, if the mother knew that the man with whom she cohabited, was a slave." The Lex of which he speaks, is the Lex Aelia Sentia. The exception in the *Senatusconsultum* of Claudius applied to the case of a compact between a free woman and the master of the slave, which compact implies that the woman must know the condition of the slave, and therefore according to the terms of the Lex the issue would be slaves. But Gaius says (i. 84) that under this *Senatusconsultum* the woman might by agreement continue free and yet give birth to a slave; for the *Senatusconsultum* gave validity to the compact between the woman and the master of the slave. At first sight it appears as if the *Senatusconsultum* produced exactly the same effect as the Lex with respect to the condition of the child. But this is explained by referring to the chief provision of the *Senatusconsultum*, which was that cohabitation with a slave "invito et denuntiante domino" reduced the woman to a servile condition, and it was a legal consequence of this change of condition that the issue of her cohabitation must be a slave. The Lex Aelia Sentia had already declared the condition of children born of the union of a free woman and a slave to be servile. The *Senatusconsultum* added to the penalty of the Lex by making the mother a slave also, unless she cohabited with the consent of the master, and thus resulted that "inelegantia juris" by which a free mother could escape the penalty of the *Senatusconsultum* by her agreement and yet her child must be a slave pursuant to the Lex. Hadrian removed this inelegantia by declaring that if the mother notwithstanding the cohabitation escaped from the penalties of the *Senatusconsultum* by virtue of her compact, the child also should have the benefit of the agreement. The *Senatusconsultum* only reduced the cohabiting woman to a servile state when she cohabited with a man's slave "invito et denuntiante domino": if she cohabited with him, knowing him to be a slave, without the knowledge of the master, there could be no denuntiatio, and this case, it appears, was not affected by the *Senatusconsultum*, for Gaius observes, as above stated (i. 86), that the Lex had still effect and the offspring of such cohabitation was a slave. The fact of this clause of the Lex remaining in force after the enacting of the *Senatusconsultum*, appears to be an instance of the strict interpretation which the Roman Jurists applied to positive enactments; for the *Senatusconsultum* of Hadrian as stated by Gaius only applied to the case of a contract between the master's slave and the woman, and therefore its terms did

not comprehend a case of cohabitation when there was no compact. Besides this if a free woman cohabited with a man's slave either without the knowledge of the master or with his knowledge, but without the "denuntiatio," it seems that this was considered as if the woman simply indulged in promiscuous intercourse (*vulgo concepti*), and the mother being free, the child also was free by the Jus Gentium till the Lex attempted to restrain such intercourse by working on the parental affections of the mother, and the *Senatusconsultum* by a direct penalty on herself. There was a "juris inelegantia" in a free woman giving birth to a slave, but this was not regarded by Hadrian, who was struck by the inelegantia of a woman by compact being able to evade the penalty of the *Senatusconsultum* while her child was still subject to the penalty of the Lex.

This *Senatusconsultum* was passed A. D. 52, and is mentioned by Tacitus, but the terms in which he expresses himself do not contain the true meaning of the *Senatusconsultum*, and in one respect, "sin consensisset dominus, pro libertis haberentur," they differ materially from the text of Gaius, unless the reading "libertis" should be "liberia." (See the notes on Tacitus, Ann. xii. 53, ed. Oberlin.) It appears however from a passage in Paulus (S. R. iv. tit. 10), that a woman, in some cases which are not mentioned by him, was reduced to the condition of a liberta by the *Senatusconsultum*; a circumstance which confirms the accuracy of the text of Tacitus, but also shows how very imperfectly he has stated the *Senatusconsultum*. Suetonius (Vesp. 11) attributes the *Senatusconsultum* to the reign of Vespasian, and expresses its effect in terms still more general and incorrect than those of Tacitus. Such instances show how little we can rely on the Roman historians for exact information as to legislation.

It appears from Paulus that the provisions of this *Senatusconsultum* are stated very imperfectly even by Gaius, and that they applied to a great number of cases of cohabitation between free women, whether Ingenuae or Libertinae, and slaves.

This *Senatusconsultum* was entirely repealed by a Constitution of Justinian. Some writers refer the words "ea lege" (Gaius, i. 85) to the *Senatusconsultum* Claudianum, and they must consequently refer the words "ejusdem legis" (Gaius, i. 86) also to this *Senatusconsultum*; but the word "lex" in neither case appears to refer to the *Senatusconsultum*, but to the Lex Aelia Sentia.

(Gaius, i. 84, 86, 91, 160; Ulp. Frag. tit. xi.; Cod. 7. tit. 24; Paulus, S. R. ii. tit. 21.)

There were several other *Senatusconsulta* Claudiana, of which there is a short notice in Jo. Augusti Bachii Historia Jurisprudentiae Romanae.

DASUMIANUM, passed in the reign of Trajan, related to Fideicommissa libertas. (Dig. 40. tit. 5. s. 51.) See Rudorff, Zeitschrift, &c. vol. xii. p. 307, Das Testament des Dasumius.

HADRIANI SENATUSCONSULTA. Numerous *senatusconsulta* were passed in the reign of Hadrian, but there does not appear to be any which is called Hadrianum. Many *Senatusconsulta* of this reign are referred to by Gaius as "*Senatusconsulta auctore Hadriano facta*," i. 47, &c., of which there is a list in the Index to Gaius. The *Senatusconsulta* made in the reign of Hadrian are enumerated by Bachius, and some of them are noticed here under their proper designations.

JUNCIANUM, passed in the reign of Commodus, related to Fideicommissa Libertas. (Dig. 40. tit. 5. s. 28, 51.) This Senatusconsultum is preserved in one of the passages of the Digest referred to.

JUNIUM, passed in the time of Domitian, in the tenth consulship of Domitian, and in the consulship of Ap. Junius Sabinus, A. D. 84, had for its object to prevent collusion between a master and his slave, by which the slave should be made to appear to be as a free man. The person who discovered the collusion obtained the slave as his property. (Dig. 40. tit. 16.)

JUVENTIANUM is the name given by modern jurists to the Senatusconsultum, which is preserved in the Digest (5. tit. 3. s. 20. § 6). The Senatusconsultum is placed under the title "De Hereditatis Petitione."

LARGIANUM, passed in the first year of the Emperor Claudius, A. D. 42, gave to the children of a Manumissor, if they were not exheredated by name, a right to the bona of Latini in preference to Extranei heredes. (PATRONUS; Gaius, iii. 63—71; Inst. 3. tit. 7. s. 4; Cod. 7. tit. 6.)

LIBONIANUM, passed in the reign of Tiberius, in the consulship of T. Statilius Taurus and L. Scribonius Libo, A. D. 16, contained various provisions, one of which was to the effect that if a man wrote a will for another, every thing which he wrote in his own favour was void: accordingly he could not make himself a tutor (Dig. 26. tit. 2. s. 29), nor heres or legatarius (Dig. 34. tit. 8). This Senatusconsultum contained other provisions, and it appears to have been an extension of the Lex Cornelia de Falsis. [FALSUM.] See also *Coll. Leg. M. & R.* viii. 7.

MACEDONIANUM, enacted A. D. 46, provided that any loan of money to a filiusfamilias could not be recovered even after the death of the father. The Senatusconsultum took its name from Macedo, a notorious usurer, as appears from the terms of the Senatusconsultum which is preserved (Dig. 14. tit. 6). Theophilus (*Paraphr. Inst.*) states incorrectly that the Senatusconsultum took its name from a filiusfamilias. The provision of the Senatusconsultum is cited by Tacitus (*Ann.* xi. 18), but in such terms as might lead to ambiguity in the interpretation of the law. Suetonius (*Vesp.* 11) attributes this Senatusconsultum to the time of Vespasian; but he states its provisions in less ambiguous terms than Tacitus.

MEMMIANUM. This name is sometimes given to the Senatusconsultum, passed in the time of Nero, the terms of which are preserved by Tacitus (*Ann.* xv. 19): "ne simulata adoptio in ulla parte muneris publici juvaret, ac ne usurpandis quidem hereditatibus prodesset." The object of this Senatusconsultum was to prevent the evasion of the Lex Julia et Papia Poppaea. It is sometimes referred to the consulship of C. Memmius Regulus and Virginius Rufus A. D. 63, but it appears to belong to the preceding year. See Dig. 31. s. 51, and 53. tit. 1. s. 76.

NERONIANUM de Legatis, the provisions of which are stated in the article LEGATUM. (Gaius, ii. 157, 198, 212, 218, 220; Ulp. *Frag.* xxiv.)

NERONIANUM, also called **PISONIANUM**, from being enacted in the consulship of Nero and L. Calpurnius Piso, A. D. 57. It contained various provisions: "Ut si quis a suis servis interfectus esset, si quoque, qui testamento manumissi sub eodem tecto mansissent, inter servos supplicia pen-

derent" (Tacit. *Ann.* xiii. 32): "Ut occisa uxore etiam de familia viri quaestio habeatur, idemque ut juxta uxoris familiam observetur, si vir dicatur occisus" (Paulus, *S. R.* iii. tit. 5, who gives in substance also the provision mentioned by Tacitus, but adds: "Sed et hi torquentur, qui cum occiso in itinere fuerint"): "Ut, si poenae obnoxius servus venisset, quandoque in eum animadversum esset, venditor pretium praestaret." (Dig. 29. tit. 5. s. 8.)

ORPHITIANUM enacted in the time of M. Aurelius (Capitol. *in vita*, 11) that the legitima hereditas of a mother who had not been in manu, might come to her sons to the exclusion of the consanguinei and other agnati. The name Orphitianum is supplied by Paulus (*S. R.* iv. tit. 10), and the Digest (38. tit. 17); the enactment was made in the consulship of V. Rufus and C. Orphitus. (Inst. 3. tit. 4.)

Paulus (iv. tit. 14) speaks of rules relating to manumission being included in a Senatusconsultum Orphitianum. [HERES.] This Senatusconsultum was made in the joint reign of M. Aurelius and Commodus. (Imp. Anton. et Commodi orationes in senatu recitatae, Ulp. *Frag.* tit. xxvi.) See ORATIONES PRINCIPUM.

PEGASIANUM was enacted in the reign of Vespasian, Pegasus and Fusio being Consules (Suffecti?) in the year of the enactment. (Inst. ii. tit. 23; Gaius, ii. 254, &c.) The provisions of this Senatusconsultum are stated under FIDEICOMMISSA and LEGATUM. This Senatusconsultum, or another of the same name, modified a provision of the Lex Aelia Sentia as to a Latinus becoming a Romanus. (Gaius, i. 31.)

PERNICIANUM, which may be the correct form instead of Pernicianum, was enacted in the time of Tiberius A. D. 34, and was an amendment of the Lex Julia et Papia Poppaea. (Compare LEX JULIA ET PAP. POP.; Ulp. *Frag.* tit. xvi; Sueton. *Claud.* 23.)

PISONIANUM. [NERONIANUM.]

PLANCIANUM, of uncertain date, is by some writers assigned to the time of Vespasian. The Lex Julia Papia et Poppaea apparently contained a provision by which a fideicommissum was forfeited to the Fiscus, if a heres or legatarius engaged himself by a written instrument or any other secret mode to pay or give the fideicommissum to a person who was legally incapable of taking it. (Dig. 30. s. 103; 34. tit. 9. s. 10, 18; 49. tit. 14. s. 3.) Such a Fideicommissum was called Tacitum, and when made in the way described was said to be "in fraudem legis," designed to evade the law. If it was made openly (*palam*), this was no fraud, and though the fideicommissum might be invalid on account of the incapacity of the fideicommissarius to take, the penalty of the lex did not apply. It does not appear certain whether this provision as to the confiscation was contained in the original Lex or added by some subsequent Senatusconsultum. However this may be, the fiduciarius still retained his Quarta. But a Senatusconsultum mentioned by Ulpian (*Frag.* tit. xxv. s. 17) enacted that if a man undertook to perform a tacitum fideicommissum, he lost the Quadrans or Quarta [FIDEICOMMISSUM], nor could he claim what was Caducum under the Testaments, which as a general rule he could claim if he had children. [LEGATUM; BONA CADUCA.] This Senatusconsultum, it appears from an extract in the Digest (38. tit. 2.

SENATUSCONSULTUM.

a. 59), was the Plancianum, or Plantianum, for the reading is doubtful; and in this passage it is stated that the Fourth, which the Fideiarius was not allowed to retain, was claimed for the Fiscus by a Rescript of Antoninus Pius. The penalty for the fraud only applied to that part of the property to which the fraud extended, and if the heres was heres in a larger share of the hereditas than the share to which the fraud extended, he had the benefit of the Falcidia for that part to which the fraud did not extend, which is thus expressed by Papinian (Dig. 34. tit. 9. a. 11), "sed si major modus institutionis quam fraudis fuerit quod ad Falcidiam attinet, de superfluo quarta retinebitur." The history of legislation on the subject of Tacita fideicommissa is not altogether free from some doubt.

PLAUTIANUM. [PLANCIANUM.]

RUBRIANUM, enacted in the time of Trajan, in the consulship of Rubrius Gallus and Q. Coelius Hispano (probably consules suffecti) A. D. 101, related to fideicommissa libertas. Its terms are given in the Digest (40. tit. 8. s. 26): "Si hi a quibus libertatem praestari oportet evocati a Praetore adesse noluissent, Si causa cognita Praetor pronuntiasset libertatem his deberi, eodem jure statum servari ac si directo manumissi essent." Compare Plin. Ep. iv. 9, ad Ursum with the passage in the Digest.

SABINIANUM, of uncertain date, but apparently after the time of Antoninus Pius. It related to the rights of one of three brothers who had been adopted, to a portion of the hereditas contra tabulas testamenti. (Cod. 8. tit. 48. s. 10; Inst. 3. tit. 1.)

SILANIANUM, probably passed in the time of Augustus in the consulship of P. Cornelius Dolabella and C. Junius Silanus A. D. 10, contained various enactments. It gave freedom to a slave who discovered the murderer of his master. If a master was murdered, all the slaves who were under the roof at the time, if the murder was committed under a roof, or who were with him in any place at the time of the murder, were put to the torture, and, if they had not done their best to defend him, were put to death. Tacitus (Ann. xiv. 42) refers to this provision of the Senatusconsultum, and he uses the phrase "veteris ex more." Lipsius (note on this passage) refers to Cicero (ad Fam. iv. 12). Servi Impuberes were excepted from this provision of the Senatusconsultum. (Dig. 29. tit. 5. s. 14.) The heres who took possession of the hereditas of a murdered person before the proper inquiry was made, forfeited the hereditas, which fell to the Fiscus: the rule was the same whether being heres ex testamento he opened the will (*tabulas testamenti*) before the inquiry was made, or whether being heres ab intestato, he took possession of the hereditas (*adiit hereditatem*) or obtained the Bonorum Possessio; he was also subjected to a heavy pecuniary penalty. A Senatusconsultum passed in the consulship of Taurus and Lepidus A. D. 11, enacted that the penalty for opening the will of a murdered person could not be inflicted after five years, except it was a case of parricide to which this temporis praescriptio did not apply. (Paulus, S. R. iii. tit. 5; Dig. 29. tit. 5; Cod. 6. tit. 35.)

TERTULLIANUM is stated in the Institutes of Justinian (3. tit. 5) to have been enacted in the time of Hadrian, in the consulship of Tertullus and Sacerdos; but some critics, notwithstanding this,

SENATUSCONSULTUM. 1027

would refer it to the time of Antoninus Pius. This Senatusconsultum empowered a mother, whether Ingenua or Libertina, to take the Legitima hereditas of an intestate son; the Ingenua, if she was or had been the mother of three children; the Libertina, if she was or had been the mother of four children. They could also take, though they neither were nor had been mothers, if they had obtained the Jus Liberorum by Imperial favour. Several persons however took precedence of the mother; the sui heredes of the son, those who were called to the Bonorum Possessio as sui heredes, the father, and the frater consanguineus. If there was a soror consanguinea, she shared with her mother. The Senatusconsultum Orphitianum gave the children a claim to the hereditas of the mother.

(Ulp. Frag. tit. xxvi.; Paulus, S. R. iv. tit. 9; Dig. 38. tit. 17.)

TREBELLIANUM, enacted in the time of Nero in the consulship of L. Annaeus Seneca and Trebellius Maximus A. D. 62, related to Fideicommissae hereditates.

(FIDEICOMMISSUM; Gaius, ii. 251, 253; Dig. 36. tit. 1; Paulus, S. R. iv. tit. 2.)

TURPILIANUM, enacted in the time of Nero in the consulship of Caesonius Paetus and Petronius Turpillus A. D. 61, was against praevicatio or the collusive desisting from prosecuting a criminal charge. The occasion of this Senatusconsultum and the terms of it are stated by Tacitus (Ann. xiv. 14): "qui talem operam emptitasset, vendidisset, perinde poena teneretur ac publico judicio calumniae condemnaretur." The definition of a praevicator is given in the Digest (48. tit. 16. s. 1. *Ad Senatusconsultum Turpilianum*).

VELLEIANUM rendered void all intercessiones by women, whether they were on behalf of males or females. This Senatusconsultum was enacted in the consulship of Marcus Silanus and Velleius Tutor, as appears from the preamble of the Senatusconsultum (Dig. 16. tit. 1), and it appears most probably to have been passed in the reign of Claudius from the words of Ulpian in his comment upon it. The name of Velleius Tutor does not occur in the Fasti Consulares, and he may be a consul suffectus. The name of M. Silanus occurs as consul in the reign of Claudius, and the colleague of Valerius Asiaticus, A. D. 46. (Dion Cass. lx. 27.)

[INTERCESSIO.] In the year A. D. 19, according to the Fasti a M. Silanus was also consul; his colleague according to the Fasti was L. Norbanus Balbus, and this agrees with Tacitus (Ann. ii. 59).

VITRASIANUM is assigned to the reign of Vespasian, but the time is very uncertain. It related to Fideicommissa Libertas. (Dig. 40. tit. 5. s. 30.)

VOLUSIANUM, enacted in the reign of Nero in the consulship of Q. Volusius Saturninus and P. Cornelius Scipio, A. D. 56. It contained a provision against pulling down a domus or villa for the sake of profit; but the object of this law seems rather obscure: it is referred to, without the name being given, in the Digest (18. tit. 1. s. 52. *Senatus consultum*, &c.). Tacitus (Ann. xiii. 28) mentions a Senatusconsultum in this consulship which limited the power of the Aediles: "quantum curules, quantum plebei pignoris caperent, vel poenae irrogarent." A Senatusconsultum Volusianum (if the name is right) enacted that persons should be liable to the penalties of the Lex Julia de vi privata,

who joined in the suit of another person with the bargain that they should share whatever was acquired by the condemnation. (Dig. 48. tit. 7. s. 6.) [G. L.]

SENIO'RES. [COMITIA, p. 333.]

SEPTA. [COMITIA, p. 336, b.]

SEPTEMVIRI EPULO'NES. [EPULONES.]

SEPTIMATRUS. [QUINQUATRUS.]

SEPTIMONTIUM, a Roman festival which was held in the month of December. It lasted only for one day (*dies Septimontium, dies Septimontialis*). According to Festus (s. v. *Septimontium*), the festival was the same as the Agonalia; but Scaliger in his note on this passage has shown from Varro (*de Ling. Lat.* vi. 24) and from Tertullian (*de Idolol.* 10), that the Septimontium must have been held on one of the last days of December, whereas the Agonalia took place on the tenth of this month. The day of the Septimontium was a *dies feriatius* for the montani, or the inhabitants of the seven ancient hills or rather districts of Rome, who offered on this day sacrifices to the gods in their respective districts. These *sacra* (*sacra pro montibus*, Fest. s. v. *Publica sacra*) were, like the paganalia, not *sacra publica*, but *privata*. (Varro, *l. c.*; compare *SACRA*.) They were believed to have been instituted to commemorate the enclosure of the seven hills of Rome within the walls of the city, but must certainly be referred to a time when the Capitoline, Quirinal, and Viminal were not yet incorporated with Rome. (Compare Columella, ii. 10; Suet. *Domit.* 4; Plut. *Quest. Rom.* 68; Niebuhr, *Hist. of Rome*, vol. i. p. 389, &c.) [L. S.]

SEPTUNX. [As, p. 140, b.]

SEPULCRUM. [FUNUS, p. 560, b.]

SEQUESTRES. [AMARUUS.]

SERA. [JANUA, p. 626, b.]

SERICUM (*σινικόν*), silk, also called *bombycinum*. The first ancient author who affords any evidence respecting the use of silk, is Aristotle (*H. A.* v. 19). After a description, partially correct, of the metamorphoses of the silkworm (*bombyx*, Martial, viii. 33), he intimates that the produce of the cocoons was wound upon bobbins by women for the purpose of being woven, and that Pamphile, daughter of Platae, was said to have first woven silk in Coa. This statement authorizes the conclusion, that raw silk was brought from the interior of Asia and manufactured in Coa as early as the fourth century B. C. From this island it appears that the Roman ladies obtained their most splendid garments [COA VESTIS], so that the later poets of the Augustan age, Tibullus (ii. 4), Propertius (i. 2, ii. 1, iv. 2, iv. 5), Horace (*Carm.* iv. 13. 13, *Sat.* i. 2. 101), and Ovid (*Art. Amat.* ii. 296), adorn their verses with allusions to these elegant textures, which were remarkably thin, sometimes of a fine purple dye (Hor. *l. c.*), and variegated with transverse stripes of gold. (Tibull. ii. 6.) About this time the Parthian conquests opened a way for the transport into Italy of all the most valuable productions of central Asia, which was the supposed territory of the Sere. The appearance of the silken flags attached to the gilt standards of the Parthians in the battle fought in 54 B. C. (Florus, iii. 11), must have been a very striking sight for the army of Crassus.

The inquiries of the Romans respecting the nature of this beautiful manufacture led to a very general opinion that silk in its natural state was a

thin fleece found on trees. (Virg. *Georg.* ii. 121; Petron. 119; Seneca, *Hippol.* 386; Festus Avienus, 936; Sil. Ital. *Pun.* vi. 4, xiv. 664, xvii. 596.) An author, nearly contemporary with those of the Augustan age already quoted (Dionysius Periegetes, 755), celebrates not only the extreme fineness and the high value, but also the flowered texture of these productions. The circumstances now stated sufficiently account for the fact, that after the Augustan age we find no further mention of Coan, but only of *Seric* webs. The rage for the latter increased more and more. Even men aspired to be adorned with silk, and hence the senate early in the reign of Tiberius enacted "Ne vestis Serica viros foedaret." (Tac. *Ann.* ii. 33; Dion Cass. lvii. 15; Suidas, s. v. *Τιβερίος*.)

In the succeeding reigns, we find the most vigorous measures adopted by those emperors who were characterized by severity of manners, to restrict the use of silk, whilst Caligula and others, notorious for luxury and excess, not only encouraged it in the female sex, but delighted to display it in public on their own persons. (Suet. *Calig.* 52; Dion Cass. lix. 12; see also Joseph. *B. J.* vii. 5. § 4.) Shawls and scarves, interwoven with gold and brought from the remotest East, were accumulated in the wardrobe of the Empress during successive reigns (Martial, xi. 9), until in the year 176 Antoninus, the philosopher, in consequence of the exhausted state of his treasury, sold them by public auction in the Forum of Trajan with the rest of the imperial ornaments. (Capitol. *in vita*, 17.) At this period we find that the silken texture, besides being mixed with gold (*χρυσόμαστος, χρυσόσφηνος*), was adorned with embroidery, this part of the work being executed either in Egypt or Asia Minor. (Nilotis, *Maecenia*, *acus*, Lucan, x. 141; Seneca, *Herc. Oet.* 664.) The Christian authors from Clemens Alexandrinus (*Paedag.* ii. 10) and Tertullian (*de Pallio*, 4) downwards discourage or condemn the use of silk. Plutarch also dissuades the virtuous and prudent wife from wearing it (*Conf. Praec.* p. 550, vol. vi. ed. Reiske), although it is probable that ribands for dressing the hair (Martial, xiv. 24) were not uncommon, since these goods (*Serica*) were procurable in the vicus Tuscus at Rome (xi. 27). Silk thread was also imported and used for various purposes. (Galen, *Περὶ Διάγν.* vol. vi. p. 533, ed. Chartier.)

Although Commodus in some degree replenished the palace with valuable and curious effects, including those of silk (Capitol. *Pertin.* 8), this article soon afterwards again became very rare, so that few writers of the third century make mention of it. When finely manufactured, it sold for its weight in gold, on which account Aurelian would not allow his empress to have even a single shawl of purple silk (*pallio blatteo serico*, Vopisc. *Aurel.* 45). The use of silk with a warp of linen or wool, called *tramoserica* and *subserica*, as distinguished from *holoserica*, was permitted under many restrictions. About the end, however, of the third century, silk, especially when woven with a warp of inferior value, began to be much more generally worn both by men and women; and the consequence was that, in order to confine the enjoyment of this luxury more entirely to the imperial family and court, private persons were forbidden to engage in the manufacture, and gold and silken bor-

lers (*paragaudae*) were allowed to be made only in the imperial gynaeceae. [PARAGAUDA.]

The production of raw silk (*μέραξα*) in Europe was first attempted under Justinian, A. D. 530. The eggs of the silk worm were conveyed to Byzantium in the hollow stem of a plant from "Serinda," which was probably Khotan in Little Bucharía, by some monks, who had learnt the method of hatching and rearing them. The worms were fed with the leaf of the Black or Common Mulberry (*συνδμυρος*. Procop. *B. Goth.* iv. 17; Glycas, *Ann.* iv. p. 209; Zonar. *Ann.* xiv. p. 69, ed. Du Cange; Phot. *Bibl.* p. 80, ed. Roth.). The cultivation both of this species and of the White Mulberry, the breeding of silk-worms, and the manufacture of their produce, having been long confined to Greece, were at length in the twelfth century transported into Sicily, and thence extended over the south of Europe. (Otto Frisingen, *Hist. Imp. Freder.* i. 33; Man. Comnenus, ii. 8.) The progress of this important branch of industry was however greatly impeded even in Greece both by sumptuary laws restricting the use of silk except in the church service or in the dress and ornaments of the court, and also by fines and prohibitions against private silk-mills, and by other attempts to regulate the price both of the raw and manufactured article. It was at one time determined that the business should be carried on solely by the imperial treasurer. Peter Barsames, probably a Phoenician, held the office, and conducted himself in the most oppressive manner, so that the silk trade was ruined both in Byzantium and at Tyre and Berytus, whilst Justinian, the empress Theodora, and their treasurer amassed great wealth by the monopoly. (Procop. *Hist. Arcan.* 25.) The silks woven in Europe previously to the thirteenth century were in general plain in their pattern. Many of those produced by the industry and taste of the Seres, i. e. the silk manufacturers of the interior of Asia, were highly elaborate, and appear to have been very similar in their patterns and style of ornament to the Persian shawls of modern times. [J. Y.]

SERRA, *dim.* SERRULA (*serrula*), a saw. It was made of iron (*ferrea*, Non. Marc. p. 223, ed. Merceri; *de ferro lamina*, Isid. *Orig.* xix. 19; Virg. *Georg.* i. 143). The form of the larger saw used for cutting timber is seen in the annexed woodcut, which is taken from a miniature in the celebrated Dioscorides written at the beginning of the sixth century. (Montfaucon, *Pal. Graec.* p. 203.) It is of the kind which we call the frame-saw, because it is fixed in a rectangular frame. It was held by a workman (*serrarius*, Sen. *Epist.* 57) at each end. The line was used to mark the timber in order to guide the saw (Sen. *Epist.* 90); and its movement was facilitated by driving wedges with a hammer between the planks (*tenues tabulae*) or rafters (*trabes*). (Corippus, *de Laud. Just.* iv. 45—48.) A similar representation of the use of the frame-saw is given in a painting found at Herculaneum, the operators being winged genii, as in this woodcut (*Ant. d'Ercol.* i. tav. 34); but in a bas-relief published by Micali (*Ital. av. il Dom. dei Rom.* tav. 49) the two sawyers wear tunics girt round the waist like that of the ship-builder in the woodcut at p. 141. The woodcut here introduced also shows the blade of the saw detached from its frame, with a ring at each end for fixing it in the frame, and exhibited on a funeral monument published by Gruter. On each side of the

last-mentioned figure is represented a hand-saw adapted to be used by a single person. That on the left is from the same funeral monument as the blade of the frame-saw: that on the right is the figure of an ancient Egyptian saw preserved in the British Museum. These saws (*serrulae manus-briatae*) were used to divide the smaller objects. Some of them, called *lupi*, had a particular shape, by which they were adapted for amputating the branches of trees. (Pallad. *de Re Rust.* i. 43.)

St. Jerome (in *Is.* xviii. 27) seems clearly to allude to the circular saw, which was probably used, as at present, in cutting veneers (*laminae praetennes*, Plin. *H. N.* xvi. 43. s. 84). We have also intimations of the use of the centre-bit, and we find that even in the time of Cicero (*pro Cluent.* 64) it was employed by thieves.

Pliny (*H. N.* xxxvi. 22. s. 44) mentions the use of the saw in the ancient Belgium for cutting white building-stone: some of the oolitic and cretaceous rocks are still treated in the same manner both in that part of the continent and in the south of England. In this case Pliny must be understood to speak of a proper or toothed saw. The saw without teeth was then used, just as it is now, by the workers in marble, and the place of teeth was supplied, according to the hardness of the stone, either by emery or by various kinds of sand of inferior hardness. (Plin. *H. N.* xxxvi. 6. s. 9.) In this manner the ancient artificers were able to cut slabs of the hardest rocks, which consequently were adapted to receive the highest polish, such as granite, porphyry, lapis-lazuli, and amethyst. [MOLA; PARIES.]

The saw is an instrument of high antiquity, its invention being attributed either to Daedalus (Plin. *H. N.* vii. 56; Sen. *Epist.* 90), or to his nephew Perdix (Hygin. *Fab.* 274; Ovid. *Met.* viii. 246) [CIRCINUS], also called Talos, who, having found the jaw of a serpent and divided a piece of wood with it, was led to imitate the teeth in iron. (Diod. Sic. iv. 76; Apollodor. iii. 15.) In a bas-relief published by Winckelmann (*Mon. Ined.* ii. fig. 94), Daedalus is represented holding a saw approaching very closely in form to the Egyptian saw above delineated. [J. Y.]

SERRA'TI NUMMI. [DENARIUS, p. 394, a.]

SERTA, used only in the plural (*σέρτα*, *στέφανωμα*), a festoon or garland. The art of weaving wreaths [CORONA], garlands, and festoons, employed a distinct class of persons (*coronarii* and *coronariae*; *στεφανηφόροι*, Theophrast. *H. P.* vi. 8. § 1; Plin. *H. N.* xxi. 2. s. 3, or *στεφανοπλάκοι*), who endeavoured to combine all the most beautiful varieties of leaves, of flowers,

and of fruits, so as to blend their forms, colours, and accents (Virg. *Copa*, 14, 35) in the most agreeable manner. The annexed woodcut taken from a sarcophagus at Rome (Millin, *Gal. Myth.* ii. 100), shows a festoon adapted to be suspended by means of the fillets at both ends. Its extremities are skilfully encased in acanthus-leaves: its body consists apparently of laurel or bay, together with a profusion of fruits, such as apples, pears, pomegranates, bunches of grapes, and fir-cones. At Athens there was a market, called στεφανωλόκιον

for the manufacture and sale of this class of productions, the work being principally performed by women and girls. (Aristoph. *Theam* 455.)

When a priest was preparing a sacrifice, he often appeared with a festoon intended to be placed on the door of the temple (*fésta fronde*, Virg. *Aen.* ii. 249; *varis sertis*, iv. 202; Juv. xii. 84; Lucan, ii. 354), on the front of the altar (Virg. *Aen.* i. 417) or upon the head of the victim. Thus in the *Iliad* (i. 14, 28), Chryses besides the gilded sceptre which denoted his office and authority carries a garland in honour of Apollo, which was probably wound about the sceptre. (See also Aristoph. *Av.* 894, *Pas.* 948; Callim. *Hymn. in Cer.* 45.) The act here described is seen in the annexed woodcut, which is taken from a bas-relief in the collection of antiques at Ince-Blundell, and represents a priestess carrying in her two hands a festoon to suspend upon the circular temple which is seen in the distance. As the festoons remained on the

temples long after their freshness had departed, they became very combustible. The temple of Juno at Argos was destroyed in consequence of

their being set on fire. (Thuc. iv. 133. § 2; Pana. ii. 17. § 7.) The garlands on funeral monuments hung there for a year, and were then renewed. (Tibull. ii. 4. 48, 7. 32; Propert. iii. 16. 23.) The funeral pile was also decorated in a similar manner, but with an appropriate choice of plants and flowers. (Virg. *Aen.* iv. 506.)

Festoons were placed upon the door-posts of private houses in token of joy and affection (Tibull. i. 2. 14) more especially on occasion of a wedding. (Lucan, ii. 354.) They were hung about a palace in compliment to the wealthy possessor (*insertato coronis atria*, Prudent. in *Symon.* ii. 726): and on occasions of general rejoicing the streets of a city were sometimes enlivened with these splendid and tasteful decorations. (Martial, vi. 79. 8.)

The smaller garlands or crowns, which were worn by persons on the head or round the neck, are sometimes called *serta*. (Tibull. i. 7. 52.) The fashion of wearing such garlands suspended from the neck, was adopted by the early Christians. (Min. Felix, 38.) [J. Y.]

SERVIANA ACTIO. [PIGNUS.]

SERVITUS. [SERVUS.]

SERVITUDES. The owner of a thing can use it in all ways consistent with his ownership, and he can prevent others from using it in any way that is inconsistent with his full enjoyment of it as owner. If the owner's power over the thing is limited either way, that is, if his enjoyment of it is subject to the condition of not doing certain acts in order that some other person may have the benefit of such forbearance, or to the condition of allowing others to do certain acts, which limit his complete enjoyment of a thing, the thing is said "servire" to be subject to a "servitus." Hence when a thing was sold as "optima maxima," this was legally understood to mean that it was warranted free from Servitudes. (Dig. 50. tit. 16. s. 90. 169; compare Cic. *de Leg. Agr.* iii. 2.) The existence of a Servitus must be proved: the presumption is that the ground is free (*liber*) till it is shown to be servient. Servitudes are also included in the terms "Jura," and "Jura in Re," and these terms are opposed to Dominium or complete ownership. He who exercises a Servitus therefore has not the *animus domini*, not even in the case of usufructus, for the *Usufructuarius* is never recognized as owner in the Roman Law. The technical word for ownership, when the usufructus is deducted from it, is *Proprietas*.

A man can only have a right to a servitus in another person's property; and a servitus can only be in a corporeal thing. Viewed with respect to the owner of the thing, a Servitus either consists in his being restrained from doing certain acts to his property, which otherwise he might do (*servitus quas in non faciendo consistit*; *Servitus negativa*); or it consists in his being bound to allow some other person to do something to the property, which such person might otherwise be prevented from doing (*servitus quas in patiando consistit*; *Servitus affirmativa*). A Servitus never consists in the owner of the servient property being obliged to do any act to his property, though he may be under an obligatio to do acts which are necessary towards the enjoyment of the Servitus. (Dig. 8. tit. 1. s. 15; Puchta, *Inst.* i. § 252, note a.)

There were two classes of Servitudes. Either they had for their subject a definite person, who could exercise the right, in which case they were

called Personal, *Personarum*; and they ceased with the death of the person: the expression "*personalis servitus*" was used. (Dig. 34. tit. 3. s. 8. § 3.) Or they had for their subject another piece of property, as a house or land, and the person who exercised the *Servitus* exercised it in respect of his right to the house or land, which was its subject. *Servitudes* of the latter kind were called *Praedial*, *Servitudes Praediorum* or *Rerum*, or *Jura Praediorum* (Gaius, ii. 17. 29; Dig. 8. tit. 1. s. 1); and with reference to their special kinds, *Jura aquarum*, &c. (Cic. *pro Caecina*. 26.)

The exercise of Personal *Servitudes*, of which *Usus* and *Usufructus* were the principal, was always connected with the natural possession of the thing; and consequently the *Quasi Possessio* of such *Servitudes* had a close resemblance to *Possessio*. [*Possessio*.] *Servitudes* of this class consisted solely "in *patiendo*."

Praedial servitudes consisted both "in *patiendo*," and "in *non faciendo*." Those which consisted "in *patiendo*" comprised either such acts as a person might do, by virtue of the *Servitus*, which acts had only mediately a reference to another piece of land, as in the case of a *Jus Itineris*; or such acts as a man might do, with immediate reference to another piece of land, as *Jus tigni immittendi*, and the like. Those which consisted "in *non faciendo*" on the part of the owner were acts which another possessor of a piece of land could require the owner of the servient property not to do, but which except for the *servitus*, the owner might do.

Personal *servitudes* were *Usus*, *Usufructus*, *Habitatio*, and *Operae servorum et Animalium*.

Habitatio or the right of living in another person's house resembled the *usufructus* or *usus aedium*. But it was not lost as *usufructus* and *usus* were, by *capitis diminutio* or neglect to exercise the right. Also, it consisted in the right to inhabit some definite part of a house only, and not the whole; the *habitatio* could be sold or let. If it was a *donatio inter vivos*, it could be set aside by the *heredes* of the giver. (Dig. 7. tit. 8. *De Usu et Habitatione*; Dig. 39. tit. 5. s. 27, 32; Inst. 2. tit. 5.)

Operae servorum et animalium consisted in a man having a right to the use and services of another person's slave or beast, so long as the slave or beast lived. The *servitus* continued after the death of the person entitled to it, and was not lost by a *capitis diminutio* nor by neglect to exercise it. This is called by Gaius (ii. 32) "the *Usufructus hominum et ceterorum animalium*."

Praedial Servitudes imply the existence of two contiguous pieces of land (*praedia*), one of which owes a *servitus* to the other (*servitutem debet, praedium, fundus serviens*); and the *servitus* is said to be due (*debetur*) from the one to the other. The name of *praedium dominans* which is now often used to designate the *praedium* to which the *servitus* is due, is a modern invention. It is of the nature of a *Servitus* to be an advantage to the land to which it belongs: it must be something that in some way increases its value. It must also be a thing that is permanently to the advantage of the dominant *praedium*; for it is said "*omnes servitudes praediorum perpetuas causas habere debent*" (Paulus, Dig. 8. tit. 2. s. 8), which means there is a continuous adaptation of the servient to the use of the dominant tenement. The *Servitus* is con-

sidered as belonging to the dominant *praedium* in such a sense that it cannot be alienated without the *praedium* nor pledged nor let.

Praedial Servitudes were either *Praediorum Urbanorum* or *Rusticorum*. But the word *Servitus* has a double meaning, according as we view it as a right or a duty. The *Servitus* of a *Praedium Rusticum* or *Urbanum* is, in the former sense, the *servitus* which belongs to a particular *Praedium*, as a right: in the latter sense it is the *servitus* which some particular *Praedium* owes, as a duty. When the two *Praedia* are contemplated together in their mutual relations of right and duty, the word *Servitus* expresses the whole relation. *Servitudes Urbanae* are those which are for the advantage of an edifice as such, whether the advantage is derived from another building or simply a piece of land; *Rusticae* are those which are for the advantage of a piece of ground, as such, and mainly for the benefit of agriculture. "*Urbanum praedium non locus facit, sed materia*." (Ulp. Dig. 50. tit. 16. s. 198.)

The following are the principal *Servitudes Urbanae*:—1. *Oneris ferendi*, or the right which a man has to use the edifice or wall of his neighbour to support his own edifice. The owner of the servient property was consequently bound to keep it in repair so that it should be adequate to discharge its duty. (Dig. 8. tit. 5. s. 6.) 2. *Tigni immittendi*, or the right of planting a beam in or upon a neighbour's wall. 3. *Projeiendi*, or the right of adding something to a man's edifice, though it shall project into the open space which is above his neighbour's grounds. 4. *Stillicidii, or fluminis recipiendi* or *immittendi*. This *servitus* was either a right which a man had for the rain water to run from his house upon and through his neighbour's premises, or a right to draw such water from his neighbour's premises to his own. The technical meaning of *Stillicidium* is rain in drops; when collected in a flowing body it is *Flumen*. (Varro, *de Ling. Lat.* v. 27, ed. Müller; Cic. *de Or.* i. 38.) 5. *Altius non tollendi*, or the duty which a man owed not to build his house higher than its present elevation, or the duty of the owner of a piece of land not to raise his edifice above a certain height, in order that the owner of some other house might have the advantage of such forbearance. If a man was released from this duty by his neighbour, he obtained a new right, which was the *Jus altius tollendi*. In like manner, a man whose ground was released from the *Servitus Stillicidii*, was said to have the *servitus stillicidii non recipiendi*. This was not strictly accurate language, for if a *servitus* is defined to be some limitation of the usual rights of ownership, a recovery of these rights or a release from the duties which is implied by the possession of these rights by another, merely gives the complete exercise of ownership and so destroys all notion of a *Servitus*. Still such was the language of the Roman Jurists, and accordingly we find enumerated among the *Urbanae Servitudes* (Dig. 8. tit. 2. s. 2), "*Stillicidium avertendi in tectum vel arcem vicini aut non avertendi*." 6. *Servitus ne Luminibus, and ne Prospectui officiatur*, or the duty which a man owes to his neighbour's land not to obstruct his light or his prospect (see Gaius, ii. 31; Cic. *de Or.* i. 39); and *Servitus Luminum* or *Prospectus*, or the duty of a man to allow his neighbour to make openings into his premises, as in a common wall for instance

to get light or a prospect. It was a *Servitus* the object of which was to procure light, whereas the *ne officiat* was to prevent the destroying of light. (Dig. 8. tit. 2. s. 4. 40.) But there are different opinions as to the meaning of *Servitus Luminum*. 7. *Servitus Stercolinii*, or the right of placing dung against a neighbour's wall, &c. 8. *Servitus fumi immittendi*, or the right of sending one's smoke through a neighbour's chimney. 9. *Servitus cloacae*, or the right to a drain or sewer from a man's land or house through a neighbour's land or house.

The following are the principal *Servitutes Rusticae*:—1. *Servitus Itineris*, or the right to a foot-path through another man's ground or to ride through on horseback or in a sella or lectica, for a man in such cases was said *ire* and not *agere*. Viewed with reference to the person who exercised the right, this *Servitus* was properly called *Jus eundi*. (Gaius. iv. 3.) 2. *Actus* or *Agendi*, or the right of driving a beast or carriage through another man's land. 3. *Viae* or the right *eundi et agendi et ambulandi*. *Via* of course included the other two *Servitutes*; and it was distinguished from them by its width, which was defined by the Twelve Tables. (Dig. 8. tit. 3. s. 8.) The width of an *Iter* or *Actus* might be a matter of evidence, and if it was not determined, it was settled by an arbiter. If the width of a *Via* was not determined, its width was taken to be the legal width (*latitudo legitima*). In the work *De Colonia*, attributed to Frontinus, the phrase "*iter populo debetur* or *non debetur*" frequently occurs. When "*iter debetur*" occurs, the width of the *iter* is given in feet. It seems that in the assignment of the lands in these instances, the lands were made "*servire populo*," for the purposes of a road. 4. *Servitus pascendi* or the right of a man in respect of the ground to which his cattle are attached, to pasture them on another's ground. 5. *Servitus aquaeductus* or *ducendi aquam per fundum alienum*. There were also other *Servitutes* as *Aquae haustus*, *Pecoris ad aquam appulsa*, *Calce coquendae*, and *Arenae fodiendae*. If a *Publicus locus* or a *Via publica* intervened, no *servitus aquaeductus* could be imposed, but it was necessary to apply to the *Princeps* for permission to form an *aqueductus* across a public road. The intervention of a *Sacer* et *religiosus locus* was an obstacle to imposing an *Itineris servitus*, for no *Servitus* could be due to any person on ground which was *sacer* or *religiosus*.

A *Servitus Negativa* could be acquired by mere contract; and it seems the better opinion that a *Servitus Affirmativa* could be so acquired, and that quasi *possessio*, at least in the later periods, was not necessary in order to establish the *Jus Servitutis*, but only to give a right to the *Publiciana* in *rem actio*. (Gaius, ii. 30, 31; Savigny, *Das Recht des Besitzes*.) The phrases "*aquae jus constituere*," "*servitutem fundo imponere*," occur (Cic. *ad Quint.* iii. 1. c. 2). According to Gaius, *Servitutes Urbanae* could only be transferred by the *In jure cessio*: *Servitutes Rusticae* could be transferred by *Mancipatio* also. (Gaius, ii. 29.)

A *Servitus* might be established by Testament (*Servitus Legata*, Dig. 33. tit. 3), and the right to it was acquired when the "*dies legati cecit*" [*LEGATUM*]; but tradition was necessary in order to give a right to the *Publiciana* in *rem actio*. A *Servitus* could be established by the decision of a *judex* in the *Judicium Familiae eriscundae*, Com-

muni dividundo, and in a case where the *Judex* adjudicated the *Proprietas* to one and the *Usufructus* to another (Dig. 7. tit. 1. s. 6). *Servitutes* could also be acquired by the *Praescriptio longi temporis*. (Cod. 7. tit. 33. s. 12.) An obscure and corrupt passage of Cicero (*ad Att.* xv. 26) seems to allude to the possibility of acquiring a right to a *Servitus* by use; as to which a *Lex Scribonia* made a change. [*LEX SCRIBONIA*.] Quasi *servitutes* were sometimes simply founded on positive enactments, which limited the owner of a property in its enjoyment (Nov. 22. c. 46. s. 2); and others were considered as "*velut jure impositae*" (Dig. 39. tit. 3. s. 1. § 23; and Dig. 43. tit. 27, *De Arboribus Cuedendis*.)

A *Servitus* might be released (*remitti*) to the owner of the *Fundus serviens* (Dig. 8. tit. 1. s. 14); or it might be surrendered by allowing the owner of the *Fundus Serviens* to do certain acts upon it, which were inconsistent with the continuance of the *Servitus*. (Dig. 8. tit. 6. s. 8.) If both the dominant and the servient land came to belong to one owner, the *Servitutes* were extinguished; there was a *Confusio*. (Dig. 8. tit. 6. s. 1.) If the separate owners of two separate estates, jointly acquired an estate which was servient to the two separate estates, the *Servitutes* were not extinguished; but they were extinguished if the joint owners of a dominant estate, jointly acquired the servient estate. (Dig. 8. tit. 3. s. 27.) A *usufructus* was extinguished when the *Usufructarius* acquired the *Proprietas* of the thing. A *Servitus* was extinguished by the extinction of the object, but if the servient object was restored, the *servitus* was also restored. (Dig. 8. tit. 2. s. 20; tit. 6. s. 14.) A *servitus* was extinguished by the extinction of the subject, as in the case of a *Personal Servitude* with the death of the person who was intitled to it; and in the case of *Prædial Servitudes* with the destruction of the dominant subject, but they were revived with its revival: for instance, if a building to which a *servitude* belonged, was pulled down in order to be rebuilt, and if it was rebuilt in the same form, the *servitude* revived (Paulus, Dig. 8. tit. 2. s. 20. § 2; Moore v. Rawson, 3 B. & Cr. 332). A *Servitus* might be extinguished by not using it. There is a case in the Digest (8. tit. 3. s. 35) of the *servitus* of a spring, the use of which had been interrupted by the temporary failure of the spring, and a rescript of Augustus on the matter. According to the old law, *Usufructus* and *Usus* were lost, through not exercising the right, in two years in the case of things immovable, and in one year in the case of things moveable. In Justinian's legislation *Usufructus* and *Usus* were only lost by not exercising the right, when there had been a *Usucapio libertatis* on the part of the owner of the thing or the ownership had been acquired by *Usucapion*. (Cod. 3. tit. 33. s. 16. § 1, and tit. 34. s. 13.)

Servitutes might be the subjects of *Actiones* in *rem*. (Dig. 7. tit. 6; 8. tit. 5.) An *Actio Confessoria* or *Vindicatio Servitutis* had for its object the establishing the right to a *Servitus*, and it could only be brought by the owner of the dominant land, when it was due to land. The object of the action was the establishment of the right, damages, and security against future disturbance in the exercise of the right; and the action might be not only against the owner of the *servient*

thing, but against any person who impeded the exercise of the right. The plaintiff had of course to prove his title to the *Servitus*. The *Actio Negatoria* or *Vindicatio libertatis*, might be brought by the owner of the property against any person who claimed a *Servitus* in it. The object was to establish the freedom of the property from the *servitus*, for damages, and for security to the owner against future disturbance in the exercise of his ownership. The plaintiff had of course to prove his ownership and the defendant to prove his title to the *Servitus*. (Gaius, iv. 3; Dig. 8. tit. 5.)

In the case of Personal *Servitudes*, the Interdicts were just the same as in the case of proper Possession; the Interdict which was applied in the case of proper Possession, was here applied as a *Utile Interdictum*. (*Frag. Vat.* 90, as emended by Savigny.)

In the case of *Prædial Servitudes*, we must first consider the Positive. In the first class, the acquisition of the *Juris Quasi Possessio* is effected by an act which is done simply as an exercise of the Right, independent of any other right. The interference with the exercise of the right was prevented by Interdicts applicable to the several cases. A person who was disturbed in exercising a *Jus Itineris*, *Actus*, *Vias* by any person whatever, whether the owner of the servient land or any other person, had a right to the Interdict: the object of this Interdict was protection against the disturbance, and compensation: its effect was exactly like that of the Interdict *Uti possidetis*. Another Interdict applied to the same objects as the preceding Interdict, but its object was to protect the person intitled to the *servitute* from being disturbed by the owner while he was putting the way or road in a condition fit for use.

There were various other Interdicts as in the case of the *Jus aquæ quotidianæ vel æstivæ ducendæ* (Dig. 43. tit. 20); in the case of the repair of water passages (43. tit. 21, *de riotis*); in the case of the *Jus aquæ hauriendæ* (43. tit. 22).

The second class of Positive *Servitudes* consists in the exercise of the *servitute* in connection with the possession of another piece of property. The Interdicts applicable to this case are explained under the third class, that of Negative *Servitudes*.

In the case of Negative *Servitudes* there are only two modes in which the *Juris quasi Possessio* can be acquired: 1, when the owner of the servient property attempts to do some act, which the owner of the dominant property considers inconsistent with his *Servitus*, and is prevented; 2, by any legal act which is capable of transferring the *Jus Servitutis*. The possession is lost when the owner of the servient property does an act which is contrary to the Right. The Possession of the *Servitudes* of the second and third class was protected by the Interdict *Uti possidetis*. There was a special interdict about sewers (*De Cloacis*, Dig. 43. tit. 23).

It has been stated that *Quasi-servitudes* were sometimes founded on positive enactments. These were not *Servitudes* properly so called, for they were limitations of the exercise of ownership made for the public benefit. The only cases of the limitation of the exercise of ownership by positive enactment, which are mentioned in the Pandect, are reducible to three principal classes. The first class comprehends the limitation of ownership on religious grounds. To this class belongs *Finis*, or

a space of five feet in width between adjoining estates, which it was not permitted to cultivate. This intermediate space was sacred and it was used by the owners of the adjoining lands for sacrifice. To this class also belongs the rule, that if a man had buried a dead body on the land of another without his consent, he could not as a general rule be compelled to remove the body, but he was bound to make recompence. (Dig. 11. tit. 7. a. 2. 7, 8.) The second class comprehends rules relating to police. According to the Twelve Tables every owner of land in the city was required to leave a space of two feet and a half vacant all round any edifice that he erected: this was called *legitimum spatium*, *legitimus modus*. Consequently between two adjoining houses there must be a vacant space of five feet. This law was no doubt often neglected, for after the fire in Nero's reign (*Tacit. Ann.* xv. 43), it was forbidden to build houses with a common wall (*communio parietum*); and the old *legitimum spatium* was again required to be observed; and it is referred to in a rescript of Antoninus and Verus. (Dig. 8. tit. 2. a. 14.) This class also comprehends rules as to the height and form of buildings. Augustus (*Sueton. Octav.* 89) fixed the height at seventy feet; Nero also after the great fire made some regulations with the view of limiting the height of houses. Trajan fixed the greatest height at sixty feet. These regulations were general, and had no reference to the convenience of persons who possessed adjoining houses: they had therefore no relation at all to the *Servitudes altius tollendi* and *non tollendi* as some writers suppose. The rule of the Twelve Tables which forbade the removing a "*tignum furtivum aedibus vel vineis junctum*," had for its object the preventing of accidents. (Dig. 47. tit. 3.) Another rule declared that the owners of lands which were adjoining to public aqueducts should permit materials to be taken from their lands for these public purposes, but should receive a proper compensation. The Twelve Tables forbade the burning or interring of a dead body in the city; and this rule was enforced by a *Lex Duilia*. In the time of Antoninus Pius this rule prevailed both in Rome and other cities.

The third class of limitations had for its object the promotion of Agriculture. It comprised the rules relating to *AQUA PLUVIA*, and to the *Tignum Junctum* in the case of a vineyard; and it gave a man permission to go on his neighbour's premises to gather the fruits which had fallen thereon from his trees; with this limitation that he could only go every third day. (Dig. 43. tit. 28, *De Glanæ legenda*.) The Twelve Tables enacted that if a neighbour's tree hung over into another person's land, that person might trim it to the height of fifteen feet from the ground (*quindæ pedes altius eam subductor*). The rule was a limitation of ownership, but not a limitation of the ownership of the tree-owner: it was a limitation of the ownership of the land-owner; for it allowed his neighbour's tree to overhang his ground, provided there were no branches less than fifteen feet from the ground.

With these exceptions, some of which were of great antiquity, ownership in Roman Law must be considered as unlimited. These limitations also had no reference to the convenience of individuals who had adjoining houses or lands. With respect to neighbours the law allowed them to regulate their

mutual interests as they pleased, and accordingly a man could agree to allow a neighbour to derive a certain benefit from his land which their proximity rendered desirable to him, or he could agree to abstain from certain acts on his land for the benefit of his neighbour's land. The law gave force to these agreements under the name of *Servitutes*, and assimilated the benefits of them to the right of ownership by attaching to them a right of action like that which an owner enjoyed.

This view of the limitation of ownership among the Romans by positive enactment is from a valuable essay by Dirksen, *Ueber die gesetzlichen beschränkungen des Eigenthums*, *dc. Zeitschrift*, vol. ii. (Gaius, ii. 28—33; Inst. 2. tit. 3—5; Dig. 7 and 8; Cod. 3. tit. 33, 34.)

This sketch may be completed by reference to the following works and the authorities quoted in them: Mackeldey, *Lehrbuch*, &c. 12th ed.; Mühlenthal, *Doctrina Pandectarum*, p. 268, &c.; Savigny, *Das Recht des Besizes, Juris Quasi Possessio*, p. 525, 5th ed.; *Von der Bestellung der Servituten durch simple Vertrag und Stipulation*, von Hase, Rhein. Mus. für Jurisprudenz, *Erster Jahrgang*; *Von dem Verhältniss des Eigenthums zu den Servituten*, von Puchta, Rhein. Mus. *Erst. Jahrg.*; Scheurl, *Bemerkungen zur lehre von den Servituten*, *Zeitschrift*, &c., xii. p. 237; Puchta, *Inst.* ii. § 252. [G. L.]

SERVUS (ΓΡΕΚΚ). The Greek δούλος, like the Latin *servus*, corresponds to the usual meaning of our word slave. Slavery existed almost throughout the whole of Greece; and Aristotle (*Polit.* i. 3) says that a complete household is that which consists of slaves and freemen (*οἰκία δὲ τέλειος ἐκ δούλων καὶ ἐλευθέρων*), and he defines a slave to be a living working-tool and possession. (Ὁ δούλος ἐμψυχον ὄργανον, *Ethic. Nicom.* viii. 13; ὁ δούλος κτήμα τι ἐμψυχον, *Polit.* i. 4.) None of the Greek philosophers ever seem to have objected to slavery as a thing morally wrong; Plato in his perfect state only desires that no Greeks should be made slaves by Greeks (*de Rep.* v. p. 469), and Aristotle defends the justice of the institution on the ground of a diversity of race, and divides mankind into the free (*ἐλευθέροι*) and those who are slaves by nature (*οἱ φύσει δούλοι*); under the latter description he appears to have regarded all barbarians in the Greek sense of the word, and therefore considers their slavery justifiable.

In the most ancient times there are said to have been no slaves in Greece (Herod. vi. 137; Pherecrat. *op. Athen.* vi. p. 263, b), but we find them in the Homeric poems, though by no means so generally as in later times. They are usually prisoners taken in war (*δοριόλαστοι*), who serve their conquerors; but we also read as well of the purchase and sale of slaves (*Od.* xv. 483). They were however at that time mostly confined to the houses of the wealthy.

There were two kinds of slavery among the Greeks. One species arose when the inhabitants of a country were subdued by an invading tribe and reduced to the condition of serfs or bondsmen: they lived upon and cultivated the land which their masters had appropriated to themselves, and paid them a certain rent. They also attended their masters in war. They could not be sold out of the country or separated from their families, and could acquire property. Such were the Helots of Sparta (*Ἡελότες*), the Penestæ of Thessaly [*Πενεσ-*

ταί], the Bithynians at Byzantium, the Callieyrii at Syracuse, the Mariandyni at Heraclea in Pontus, the Aphamiotæ in Crete. [Cosmi.] The other species of slavery consisted of domestic slaves acquired by purchase (*ἀργυρόνητοι* or *χρυσόνητοι*, see Isocr. *Platae.* p. 300, ed. Steph.), who were entirely the property of their masters, and could be disposed of like any other goods and chattels: these were the δούλοι properly so called, and were the kind of slaves that existed at Athens and Corinth. In commercial cities slaves were very numerous, as they performed the work of the artisans and manufacturers of modern towns. In poorer republics, which had little or no capital, and which subsisted wholly by agriculture, they would be few: thus in Phocis and Locris there are said to have been originally no domestic slaves. (Athen. vi. p. 264, c; Clinton, *F. H.* vol. ii. pp. 411, 412.) The majority of slaves was purchased; few comparatively were born in the family of the master, partly because the number of female slaves was very small in comparison with the male, and partly because the cohabitation of slaves was discouraged, as it was considered cheaper to purchase than to rear slaves. A slave born in the house of a master was called *οἰκότροφ*, in contradistinction to one purchased, who was called *οἰκίτης*. (Ammon. and Suid. s. v.) If both the father and mother were slaves, the offspring was called *ἀμφιδούλος* (Eustath. *ad Od.* ii. 290): if the parents were *οἰκότροι*, the offspring was called *οἰκότροπῆλος*. (Pollux. iii. 76.)

It was a recognized rule of Greek national law that the persons of those who were taken prisoners in war became the property of the conqueror (Xen. *Cyr.* vii. 5. § 73), but it was the practice for Greeks to give liberty to those of their own nation on payment of a ransom. Consequently almost all slaves in Greece, with the exception of the serfs above-mentioned, were barbarians. It appears to follow from a passage in Timæus (*op. Athen.* vi. p. 265, b) that the Chians were the first who carried on the slave trade, where the slaves were more numerous than in any other place, except Sparta, that is in comparison with the free inhabitants. (Thuc. viii. 40.) In the early ages of Greece, a great number of slaves was obtained by pirates, who kidnapped persons on the coasts, but the chief supply seems to have come from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where the parents frequently sold their children. (Herod. v. 6.)

At Athens, as well as in other states, there was a regular slave market, called the *κύκλος* (Harporat. s. v.), because the slaves stood round in a circle. They were also sometimes sold by auction, and appear then to have been placed on a stone called the *πρᾶτη λίθος* (Pollux, iii. 78), as is also done when slaves are sold in the United States of North America: the same was also the practice in Rome, whence the phrase *homo de lapide emtus*. [Auctio.] The slave market at Athens seems to have been held on certain fixed days, usually the last day of the month (the *ἐνθὲν καὶ νέα* or *νομήνια*, Aristoph. *Equit.* 43, with Schol.). The price of slaves naturally differed according to their age, strength, and acquirements. "Some slaves," says Xenophon (*Mem.* ii. 5. § 2) "are well worth two minas, others hardly half a mina; some sell for

five minas and others even for ten; and Nicias the son of Niceratus is said to have given no less than a talent for an overseer in the mines." Böckh (*Publ. Econ. of Athens*, p. 67, &c., 2d ed.) has collected many particulars respecting the price of slaves; he calculates the value of a common mining slave at from 125 to 150 drachmas. The knowledge of any art had a great influence upon the value of a slave. Of the thirty-two or thirty-three sword-cutlers who belonged to the father of Demosthenes, some were worth five, some six, and the lowest more than three minas; and his twenty couch-makers together were worth 40 minas (*in Aphob. i.* p. 816). Considerable sums were paid for courtesans and female players on the cithara; twenty and thirty minas were common prices for such (*Ter. Adolph. iii.* 1. 37, *iii.* 2. 15, *iv.* 7. 24; *Phorm.* *iii.* 3. 24); Neaera was sold for thirty minas. (*Demosth. c. Neaer.* p. 1354. 16.)

The number of slaves was very great in Athens. According to the census made when Demetrius Phalereus was archon (B.C. 309), there are said to have been 21,000 free citizens, 10,000 Metics, and 400,000 slaves in Attica (*Ctesicles, ap. Athen.* *vi.* p. 272, c); according to which the slave population is so immensely large in proportion to the free, that some writers have rejected the account altogether (*Niebuhr, Hist. of Rome*, vol. ii. note 143), and others have supposed a corruption in the numbers and that for 400,000 we ought to read 40,000. (*Hume, Essays*, vol. i. p. 443.) Böckh and Clinton (*F.H. ii.* p. 391), however, remark with some justice, that in computing the citizens and metics the object was to ascertain their political and military strength, and hence the census of only males of full age was taken; while in enumerating slaves, which were property, it would be necessary to compute all the individuals who composed that property. Böckh takes the proportion of free inhabitants to slaves as nearly one to four in Attica, Clinton as rather more than three to one; but whatever may be thought of these calculations, the main fact, that the slave population in Attica was much larger than the free, is incontrovertible: during the occupation of Decelea by the Lacedaemonians, more than 20,000 Athenian slaves escaped to this place. (*Thuc. vii.* 27.) In Corinth and Aegina their number was equally large: according to Timaeus, Corinth had 460,000, and according to Aristotle Aegina 470,000 slaves (*Athen. l. c.*), but these large numbers, especially in relation to Aegina, must be understood only of the early times, before Athens had obtained possession of the commerce of Greece.

At Athens even the poorest citizen had a slave for the care of his household (*Aristoph. Plut. init.*), and in every moderate establishment many were employed for all possible occupations, as bakers, cooks, tailors, &c. The number possessed by one person was never so great as at Rome during the later times of the republic and under the empire, but it was still very considerable. Plato (*de Rep. ix.* p. 578) expressly remarks, that some persons had fifty slaves and even more. This was about the number which the father of Demosthenes possessed (*in Aphob. i.* p. 823); Lysias and Polemarchus had 120 (*Lys. in Eratosth.* p. 395), Philémonides had 300, Hipponicus 600, and Nicias 1000 slaves in the mines alone. (*Xen. de Vect. iv.* 14, 15.) It must be borne in mind, when we read of one person possessing so large a number of

slaves, that they were employed in various workshops, mines, or manufactories: the number which a person kept to attend to his own private wants or those of his household, was probably never very large. And this constitutes one great distinction between Greek and Roman slaves, that the labour of the former was regarded as the means by which an owner might obtain profit for the outlay of his capital in the purchase of the slaves, while the latter were chiefly employed in ministering to the wants of their master and his family, and in gratifying his luxury and vanity. Thus Athenaeus (*vi.* p. 272, e) remarks, that many of the Romans possess 10,000 or 20,000 slaves and even more, but not, he adds, for the sake of bringing in a revenue, as the wealthy Nicias.

Slaves either worked on their masters' account or their own (in the latter case they paid their masters a certain sum a day); or they were let out by their master on hire either for the mines or any other kind of labour, or as hired servants for wages (*δροσφοδ*). The rowers on board the ships were usually slaves (*Isocrat. de Pace*, p. 163, ed. Steph.); it is remarked as an unusual circumstance, that the seamen of the Paralos were freemen. (*Thuc. viii.* 73.) These slaves either belonged to the state or to private persons, who let them out to the state on payment of a certain sum. It appears that a considerable number of persons kept large gangs of slaves merely for the purpose of letting out, and found this a profitable mode of investing their capital. Great numbers were required for the mines, and in most cases the mine-lessees would be obliged to hire some, as they would not have sufficient capital to purchase as many as they wanted. We learn from a fragment of Hyperides preserved by Suidas (*s. v. Ἀρεφφίστατο*), that there were at one time as many as 150,000 slaves, who worked in the mines and were employed in country labour. Generally none but inferior slaves were confined in these mines: they worked in chains, and numbers died from the effects of the unwholesome atmosphere. (Böckh, *On the Silver Mines of Laurion*.) We cannot calculate with accuracy what was the usual rate of profit which a slave-proprietor obtained. The thirty-two or thirty-three sword-cutlers belonging to the father of Demosthenes produced annually a net profit of 30 minas, their purchase value being 190 minas, and the twenty couch-makers a profit of 12 minas, their purchase value being 40 minas. (*Demosth. in Aphob. i.* p. 816.) The leather-workers of Timarchus produced to their masters two, the overseers three, oboli a day (*Aeschin. in Tim.* p. 118): Nicias paid an obolus a day for each mining slave which he hired. (*Xen. Vect. iv.* 14.) The rate of profit upon the purchase-money of the slaves was naturally high, as their value was destroyed by age, and those who died had to be replaced by fresh purchases. The proprietor was also exposed to the great danger of their running away, when it became necessary to pursue them and offer rewards for their recapture (*σώματα*, *Xen. Mem. ii.* 10. § 1, 2; *Plat. Protag.* p. 310). Antigones of Rhodes was the first that established an insurance of slaves. For a yearly contribution of eight drachmas for each slave that was in the army, he undertook to make good the value of the slave at the time of his running away. (*Pseudo-Arist. Oecon. c.* 35.) Slaves that worked in the fields were under an overseer (*ἐπίτροπος*), to whom the

whole management of the estate was frequently entrusted, while the master resided in the city; the household slaves were under a steward (*ταμίης*), the female slaves under a stewardess (*ταμίς*). (Xen. *Oecon.* xii. 2, ix. 11.)

The Athenian slaves did not, like the Helots of Sparta and the Penestae of Thessaly, serve in the armies; the battles of Marathon and Arginusae, when the Athenians armed their slaves (Pausan. i. 32. § 3; Schol. ad *Aristoph. Ran.* 33), were exceptions to the general rule.

The rights of possession with regard to slaves differed in no respect from any other property; they could be given or taken as pledges. (Dem. in *Pantaen.* p. 967, in *Aphob.* p. 821, in *Onetor.* i. p. 871.) The condition, however, of Greek slaves was upon the whole better than that of Roman ones, with the exception perhaps of Sparta, where, according to Plutarch (*Lyc.* 28), it was the best place in the world to be a freeman, and the worst to be a slave (*ἐν Λακεδαιμονίᾳ καὶ τὸν ἐλεύθερον μάλιστα ἐλεύθερον εἶναι, καὶ τὸν δούλον μάλιστα δούλον*). At Athens especially the slaves seem to have been allowed a degree of liberty and indulgence, which was never granted to them at Rome. (Compare Plut. de *Garrul.* 18; Xenoph. de *Rep. Ath.* i. 12.) On the reception of a new slave into a house at Athens, it was the custom to scatter sweetmeats (*καταχύσματα*), as was done in the case of a newly married pair. (Aristoph. *Plut.* 768, with Schol.; Demosth. in *Steph.* p. 1123. 29; Pollux, iii. 77; Hesych. and Suidas, s. v. *Καταχύσματα*.)

The life and person of a slave were also protected by the law: a person who struck or maltreated a slave was liable to an action (*ἔδρεως γραφή*, Dem. in *Mid.* p. 529; Aeschin. in *Tim.* p. 41; Xen. de *Rep. Ath.* i. 10; Athen. vi. p. 267, f; Meier, *Att. Proc.* p. 322, &c.); a slave too could not be put to death without legal sentence. (Eurip. *Hecub.* 287, 288; Antiph. de *caed. Herod.* p. 728.) He could even take shelter from the cruelty of his master in the temple of Theseus, and there claim the privilege of being sold by him (*πρᾶσιν αἰρεῖσθαι*, Plut. *Thes.* 36; Pollux, vii. 13; Meier, *Att. Proc.* p. 403, &c.). The person of a slave, however, was not considered so sacred as that of a freeman: his offences were punished with corporal chastisement, which was the last mode of punishment inflicted on a freeman (Dem. in *Timocr.* p. 752); he was not believed upon his oath, and his evidence in courts of justice was always taken with torture.

Notwithstanding the generally mild treatment of slaves in Greece, their insurrection was not unfrequent (Plat. *Leg.* vi. p. 777): but these insurrections in Attica were usually confined to the mining slaves, who were treated with more severity than the others. On one occasion they murdered their guards, took possession of the fortifications of Sunium, and from this point ravaged the country for a considerable time. (Athen. vi. p. 272, f.)

Slaves were sometimes manumitted at Athens, though not so frequently as at Rome; but it seems doubtful whether a master was ever obliged to liberate a slave against his will for a certain sum of money, as some writers have concluded from a passage of Plautus. (*Casin.* ii. 5. 7.) Those who were manumitted (*ἀπελεύθεροι*) did not become citizens, as they did at Rome, but passed into the condition of Metics. They were obliged to honour their

former master as their patron (*προστάτης*), and to fulfil certain duties towards him, the neglect of which rendered them liable to the *δικὴ ἀποστασίου*, by which they might again be sold into slavery. [LIBERTUS, p. 705, a; APOSTATZOU DIKE.]

Respecting the public slaves at Athens, see DEMOSII.

It appears that there was a tax upon slaves at Athens (Xen. de *Vect.* iv. 25), which Böckh (*Publ. Econ.* pp. 331, 332, 2d ed.) supposes was three oboli a year for each slave.

Besides the authorities quoted in the course of this article, the reader may refer to Petrus, *Leg. Att.* ii. 6. p. 254, &c.; Reitermeier, *Gesch. der Sklaverei in Griechenland*, Berl. 1789; Limburg-Brouwer, *Histoire de la Civilisation des Grecs*, vol. iii. p. 267, &c.; Götting, *de Notione Servitutis apud Aristotelem*, Jen. 1821; Hermann, *Lehrbuch der griech. Staatsalt.* § 114; and especially Becker, *Charikles*, vol. ii. p. 20, &c.

SERVUS (ROMAN). SE/RVITUS. "Servitus est constitutio juris gentium qua quis dominio alieno contra naturam subicitur." (Florent. Dig. l. tit. 5. s. 4.) Gaius also considers the potestas of a master over a slave as "juris gentium" (i. 52). The Romans viewed Liberty as a Natural State, and Slavery as a condition which was contrary to the Natural State. The mutual relation of Slave and Master among the Romans was expressed by the terms *Servus* and *Dominus*; and the power and interest which the dominus had over and in the slave was expressed by *Dominium*. The term *Dominium* or ownership, with reference to a slave, pointed to the slave merely as a thing or object of ownership, and a slave as one of the *Res Mancipi* was classed with other objects of ownership. The word *Potestas* was also applied to the master's power over his slave, and the same word was used to express the father's power over his children. The boundaries between the *Patria* and *Dominica Potestas* were originally very narrow, but the child had certain legal capacities which were altogether wanting to the condition of the slave. The master had no *Potestas* over the slave, if he had merely a "nudum jus Quiritium in servo": it was necessary that the slave should be his *In bonis* at least. (Gaius, i. 54.)

According to the strict principles of the Roman Law, it was a consequence of the relation of Master and Slave that the Master could treat the Slave as he pleased: he could sell him, punish him, and put him to death. Positive morality however and the social intercourse that must always subsist between a master and the slaves, who are immediately about him, ameliorated the condition of slavery. Still we read of acts of great cruelty committed by masters in the later Republican and earlier Imperial periods, and the *Lex Petronia* was enacted in order to protect the slave. The original power of life and death over a slave, which Gaius considers to be a part of the *Jus Gentium*, was limited by a constitution of Antoninus, which enacted that if a man put his slave to death without sufficient reason (*sine causa*), he was liable to the same penalty as if he had killed another man's slave. The Constitution applied to Roman citizens and to all who were under the *Imperium Romanum*. (Gaius, i. 52, &c.) The same Constitution also prohibited the cruel treatment of slaves by their masters, by enacting that

if the cruelty of the master was intolerable, he might be compelled to sell the slave; and the slave was empowered to make his complaint to the proper authority. (Senec. *de Benef.* iii. 22.) A Constitution of Claudius enacted that if a man exposed his slaves, who were infirm, they should become free; and the Constitution also declared that if they were put to death, the act should be murder. (Sueton. *Claud.* 25.) It was also enacted (Cod. 3. tit. 38. s. 11) that in sales or division of property, slaves, such as husband and wife, parents and children, brothers and sisters, should not be separated.

A slave could not contract a marriage. His cohabitation with a woman was *Contubernium*; and no legal relation between him and his children was recognized. Still nearness of blood was considered an impediment to marriage after manumission: thus a manumitted slave could not marry his manumitted sister. (Dig. 23. tit. 2. s. 14.)

A slave could have no property. He was not incapable of acquiring property, but his acquisitions belonged to his master; which Gaius considers to be a rule of the *Jus Gentium* (i. 52). A slave could acquire for his master by *Mancipatio*, *Traditio*, *Stipulatio*, or in any other way. In this capacity of the slave to take, though he could not keep, his condition was assimilated to that of a *filiusfamilias*, and he was regarded as a person. If one person had a *Nudum Jus Quiritium* in a slave, and he was another's *In bonis*, his acquisitions belonged to the person whose he was *In bonis*. If a man *bona fide* possessed another man's slave or a free person, he only acquired through the slave in two cases: he was entitled to all that the slave acquired out of or by means of the property of the possessor (*ex re eius*); and he was entitled to all that the slave acquired by his own labour (*ex operis sui*); the law was the same with respect to a slave of whom a man had the *Usufructus* only. All other acquisitions of such slaves or free persons belonged to their owner or to themselves, according as they were slaves or free men. (Ulp. *Frag.* tit. 19.) If a slave was appointed heres, he could only accept the hereditas with the consent of his master, and he acquired the hereditas for his master: in the same way, the slave acquired a legacy for his master. (Gaius, ii. 87, &c.)

A master could also acquire *Possessio* through his slave, and thus have a commencement of *Usucapion* (Gaius, ii. 89); but the owner must have the possession of the slave in order that he might acquire possession through him, and consequently a man could not acquire possession by means of a pignorat slave. [*PIGNUS*.] A *bonae fidei* possessor, that is, one who believed the slave to be his own, could acquire possession through him in such cases as he could acquire property; consequently a pledgee could not acquire possession through a pignorat slave, though he had the possession of him *bona fide*, for this *bona fides* was not that which is meant in the phrase *bonae fidei* possessor. The *Usufructuarius* acquired possession through the slave in the same cases in which the *bonae fidei* possessor acquired it. (Savigny, *Das Recht des Besitzes*, p. 314, ed. 5.)

Slaves were not only employed in the usual domestic offices and in the labours of the field, but also as factors or agents for their masters in the management of business [*INSTITORIA ACTIO*, &c.], and as mechanics, artisans, and in every

branch of industry. It may easily be conceived that under these circumstances, especially as they were often intrusted with property to a large amount, there must have arisen a practice of allowing the slave to consider part of his gains as his own: this was his *Peculium*, a term also applicable to such acquisitions of a *filiusfamilias* as his father allowed him to consider as his own. [*PATRIA POTESTAS*.] According to strict law, the *Peculium* was the property of the master, but according to usage it was considered to be the property of the slave. Sometimes it was agreed between master and slave, that the slave should purchase his freedom with his *Peculium* when it amounted to a certain sum. (Tacit. *Ann.* xiv. 42, and the note of Lipsius.) If a slave was manumitted by the owner in his lifetime, the *Peculium* was considered to be given together with *Libertas*, unless it was expressly retained. (Dig. 15. tit. 1. s. 53, *de Peculio*.) Transactions of borrowing and lending could take place between the master and slave with respect to the *Peculium*, though no right of action arose on either side out of such dealings, conformably to a general principle of Roman Law. (Gaius, iv. 78.) If after the slave's manumission, the master paid him a debt which had arisen in the manner above mentioned, he could not recover it. (Dig. 12. tit. 6. s. 64.) In case of the claim of creditors on the slave's *Peculium*, the debt of the slave to the master was first taken into the account, and deducted from the *Peculium*. So far was the law modified, that in the case of *naturales obligationes*, as the Romans called them, between master and slave, a *fidejussor* could be bound for a slave; and he could also be bound, if the creditor was an extraneous.

A *naturalis obligatio* might result from the dealings of a slave with other persons than his master; but the master was not at all affected by such dealings. The master was only bound by the acts and dealings of the slave, when the slave was employed as his agent or instrument, in which case the master might be liable to an *Actio EXERCITORIA* or *INSTITORIA*. (Gaius, iv. 71.) There was of course an *actio* against the master, when the slave acted by his orders. [*JUSSU, QUON, &c.*] If a slave or *filiusfamilias* traded with his *peculium* with the knowledge of the dominus or father, the *peculium* and all that was produced by it were divisible among the creditors and master or father in due proportions (*pro rata portione*), and if any of the creditors complained of getting less than his share, he had a *tributoria actio* against the master or father, to whom the law gave the power of distribution among the creditors. (Gaius, iv. 72, &c.) The master was not liable for anything beyond the amount of the *peculium*, and his own demand was payable first. (Dig. 14. tit. 4. *de Tributoria Actione*.) Sometimes a slave would have another slave under him, who had a *peculium* with respect to the first slave, just as the first slave had a *peculium* with respect to his master. On this practice was founded the distinction between *Servi Ordinarii* and *Vicarii*. (Dig. 15. tit. 1. s. 17.) These subordinate *peculia* were however legally considered as included in the principal *peculium*. In the case of a slave dying, being sold or manumitted, the Edict required that any action in respect of the *Peculium* must be brought within a year. (Dig. 15. tit. 2. s. 1, which contains the words of the Edict.) If a slave or *filiusfamilias* had carried on dealings

without the knowledge and consent of his master or father, there might be an action against the master or father in respect of such dealings, so far as it could be proved that he had derived advantage from them. This was called the *Actio de in rem verso* (Dig. 15. tit. 3), and it was in fact the same actio as that *De Peculio*. That was said "in rem patris dominive versum," which turned out for his advantage. For instance if a slave borrowed ten *sestertia* and paid them to the master's creditors, the master was bound to pay the loan, and the lender had an actio against him *De in rem verso*. If the slave paid any part of the borrowed sum to his master's creditors, the master was liable to the lender for the amount so applied, and if the slave had wasted the other part, the master was bound to make that good to the amount of the slave's *peculium*; but still with this provision, that the amount of the slave's *peculium* could only be ascertained by first deducting from it what he owed to the master. The case was the same with the *peculium* of a son and a slave. Thus, as Gaius observes (iv. 73), the *Actio De peculio* and *De in rem verso* was one actio, but contained two condemnations.

It is a consequence of the relation of Slave and Master, that the Master acquired no rights against the slave in consequence of his Delicts. Other persons might obtain rights against a slave in consequence of his delicts, but their right could not be prosecuted by action until the slave was manumitted. (Gaius, iv. 77.) They had however a right of action against the slave's master for damages, and if the master would not pay the damages, he must give up the slave. [NOXA.] The slave was protected against injury from other persons. If the slave was killed, the master might either prosecute the killer for a capital offence, or sue for damages under the *Lex Aquilia*. (Gaius, iii. 213.) [AQUILLIA LEX; INJURIA.] The master had also a *praetoria actio in duplum* against those who corrupted his slave (*servus, serva*) and led him into bad practices (Dig. 11. tit. 3. a. 1. where the words of the Edict are given): the *in duplum* was to twice the amount of the estimated damage. He had also an action against a person who committed *stuprum* with his female slave. (Dig. 47. tit. 10. a. 25.)

A runaway slave (*fugitivus*) could not lawfully be received or harboured; to conceal him was *Furtum*. The master was entitled to pursue him wherever he pleased; and it was the duty of all authorities to give him aid in recovering the slave. It was the object of various laws to check the running away of slaves in every way, and accordingly a runaway slave could not legally be an object of sale. A class of persons called *Fugitivarii* made it their business to recover runaway slaves. The rights of the master over the slave were in no way affected by his running away. (Dig. 11. tit. 4. *De fugitivis*: there was a *Lex Fabia* on this subject, and apparently two *Senatusconsulta* at least; see also Varro, *de Re Rust.* iii. 14; Florus, iii. 19, and the note in Duker's edition.)

A person was a slave either *Jure Gentium* or *Jure Civili*. A person was born a slave *Jure Gentium* whose mother was a slave when she gave him birth (Gaius, i. 82); for it was a legal principle that the condition of those who were not begotten in *Justae Nuptiae* was to be reckoned from the moment of the birth. A slave born in the

master's house was *Verna*. But it was also a principle of Roman Law that the status of a person who was begotten in *Justae Nuptiae* was reckoned from the time of conception. At a later period the rule of law was established, that though a woman at the time of the birth might be a slave, still her child was free, if the mother had been free at any time reckoning backwards from the time of the birth to the time of the conception. (Paulus, *S. R.* ii. tit. 24; Dig. 1. tit. 5. a. 5.) There were various cases of children the offspring of a free parent and a slave as to which positive law provided whether the children should be free or slaves. (Gaius, i. 83, &c.) [SENATUSCONSULTUM CLAUDIANUM.]

A person became a slave by capture in war, also *Jure Gentium*. [PRÆDA.] Captives in war were sold as belonging to the *Aerarium* or distributed among the soldiers by lot. (Walter, *Geschichte* &c. p. 50. note 35, 1st ed.) In reference to the practice of selling prisoners with a crown on their heads, we find the expression "sub corona venire, vendere." (Gell. vii. 4; Liv. v. 22; Caesar, *B. G.* iii. 16.)

A free person might become a slave in various ways in consequence of positive law, *Jure Civili*. This was the case with *Incensii* [CAPUT], and those who evaded military service. (Cic. *pro Cæcina*, 34.) In certain cases, a man became a slave, if he allowed himself to be sold as a slave in order to defraud the purchaser; and a free woman who cohabited with a slave might be reduced to the same condition. [SENATUSCONSULTUM CLAUDIANUM.] Under the empire the rule was established that persons condemned to death, to the mines, and to fight with wild beasts, lost their freedom, and their property was confiscated, whence, concludes Gaius, it appears that they lose the *Testamenti factio*. (Dig. 28. tit. 1. a. 8.) But this was not the earlier law. A person so condemned, though he lost his freedom, had no master, and consequently the hereditates and legacies which were left to him, were simply void; for such a person was "poenae servus, non Caesaris." (Dig. 34. tit. 8. a. 3.) A man never lost his freedom by *usucapion*. (Gaius, ii. 48.) According to the old law a manifest *fur* was liable to a *capitalis poena* and was addicted (*addicbatur*) to the person whose property he had stolen; but it was doubted whether the effect of the *addictio* was to make him a *servus* or to put him in the condition of an *adjudicatus*. (Gaius, iii. 189.)

By a *Constitutio* or *Senatusconsultum* of Claudius (Sueton. *Claud.* 25) a freedman who misconducted himself towards his patron, was reduced to his former state of slavery. But this was not the rule of law in the time of Nero. (Tacit. *Ann.* xiii. 27; see the notes of Ernesti and Lipsius on this passage: and PATRONUS, LIBERTUS.)

The State of Slavery was terminated by *MANUMISSIO*. It was also terminated by various positive enactments, either by way of reward to the slave or punishment to the master. The *SENATUSCONSULTUM SILANIANUM* is an example of the former; and various subsequent Constitutions gave freedom to slaves who discovered the perpetrators of certain crimes. (Cod. Theod. tit. 21. a. 2.) Liberty might also be acquired by the *Præscriptio Temporis*. After the establishment of Christianity, it might be acquired subject to certain limitations by becoming a monk or a spiritual person (Nov. 5. a. 9. and 123. c. 17. 35); but if the person left his

monastery for a secular life, or rambled about in the towns or the country, he might be reduced to his former servile condition.

There were slaves that belonged to the state and were called *Servi Publici* (Plaut. *Capit.* ii. 2. 85) : they had the testamenti *factio* to the amount of one half of their property (Ulp. *Frag.* tit. 20), from which circumstance it appears that they were viewed in a light somewhat different from the slaves of private persons.

In times of revolution under the Republic, it was not unusual to proclaim the liberty of slaves to induce them to join in revolt (Plut. *Mar.* c. 41, 42) ; but these were irregular proceedings, and neither justifiable nor examples for imitation. Lord Dunmore, the last British Governor of Virginia, at the commencement of the American Revolution, followed this bad example. [G. L.]

The preceding account treats of the legal condition of slaves in relation to their masters. It remains to give an account of the history of slavery among the Romans, of the sale and value of slaves, of the different classes into which they were divided, and of their general treatment.

Slaves existed at Rome in the earliest times of which we have any record ; but they do not appear to have been numerous under the kings and in the earliest ages of the republic. The different trades and the mechanical arts were chiefly carried on by the clientes of the patricians, and the small farms in the country were cultivated for the most part by the labours of the proprietor and of his own family. But as the territories of the Roman state were extended, the patricians obtained possession of large estates out of the *ager publicus*, since it was the practice of the Romans to deprive a conquered people of part of their land. These estates probably required a larger number of hands for their cultivation than could readily be obtained among the free population, and since the freemen were constantly liable to be called away from their work to serve in the armies, the lands began to be cultivated almost entirely by slave labour. (Compare Liv. vi. 12.) Through war and commerce slaves could easily be obtained, and at a cheap rate, and their number soon became so great, that the poorer class of freemen was thrown almost entirely out of employment. This state of things was one of the chief arguments used by Licinius and the Gracchi for limiting the quantity of public land which a person might possess (Appian, *B. C.* i. 7, 9, 10) ; and we know that there was a provision in the Licinian Rogations that a certain number of freemen should be employed on every estate. (Appian, *B. C.* i. 8.) This regulation, however, was probably of little avail : the lands still continued to be almost entirely cultivated by slaves, although in the latest times of the republic we find that Julius Caesar attempted to remedy this state of things to some extent by enacting, that of those persons who attended to cattle a third should always be freemen. (Suet. *Jul.* 42.) In Sicily, which supplied Rome with so great a quantity of corn, the number of agricultural slaves was immense : the oppressions to which they were exposed drove them twice to open rebellion, and their numbers enabled them to defy for a time the Roman power. The first of these Servile wars began in a. c. 134 and ended in a. c. 132, and the second commenced in a. c. 102 and lasted almost four years.

Long however after it had become the custom to employ large gangs of slaves in the cultivation of the land, the number of those who served as personal attendants still continued to be small. Persons in good circumstances seem usually to have had only one to wait upon them (Plin. *H. N.* xxxiii. 1. a. 6), who was generally called by the name of his master with the word *por* (that is, *puer*) affixed to it, as *Caipor*, *Lucipor*, *Marcipor*, *Pubtipor*, *Quintipor*, &c. ; and hence Quintilian (i. 4. § 26) says, long before whose time luxury had augmented the number of personal attendants, that such names no longer existed. Cato, when he went to Spain as consul, took only three slaves with him. (Apul. *Apol.* p. 430, ed. Ouden.) But during the latter times of the republic and under the empire the number of domestic slaves greatly increased, and in every family of importance there were separate slaves to attend to all the necessities of domestic life. It was considered a reproach to a man not to keep a considerable number of slaves. Thus Cicero, in describing the meanness of Piso's housekeeping, says " *Idem coquus, idem atrienis : pistor domi nullus*" (in *Pis.* 27). The first question asked respecting a person's fortune was " *Quot pascit servos ?*" (Juv. iii. 141). Horace (*Sat.* i. 3. 12) seems to speak of ten slaves as the lowest number which a person in tolerable circumstances ought to keep, and he ridicules the praetor Tullius for being attended by no more than five slaves in going from his Tiburtine villa to Rome. (*Sat.* i. 6. 107.) The immense number of prisoners taken in the constant wars of the republic, and the increase of wealth and luxury augmented the number of slaves to a prodigious extent. The statement of Athenæus (vi. p. 272, e), that very many Romans possessed 10,000 and 20,000 slaves and even more, is probably an exaggeration, but a freedman under Augustus, who had lost much property in the civil wars, left at his death as many as 4,116. (Plin. *H. N.* xxxiii. 10. a. 47.) Two hundred was no uncommon number for one person to keep (Hor. *Sat.* i. 3. 11), and Augustus permitted even a person that was exiled to take twenty slaves or freedmen with him. (Dion Cass. lvi. 27.) The mechanical arts, which were formerly in the hands of the *Clientes*, were now entirely exercised by slaves (Cic. *de Off.* i. 42) : a natural growth of things, for where slaves perform certain duties or practise certain arts, such duties or arts will be thought degrading to a freedman. It must not be forgotten that the games of the amphitheatre required an immense number of slaves trained for the purpose. [GLADIATORS.] Like the slaves in Sicily, the gladiators in Italy rose in a. c. 73 against their oppressors, and under the able generalship of Spartacus, defeated a Roman consular army, and were not subdued till a. c. 71, when 60,000 of them are said to have fallen in battle. (Liv. *Epid.* 97.)

Under the empire various enactments, mentioned above (p. 1036, a), were made to restrain the cruelty of masters towards their slaves ; but the spread of Christianity tended most to ameliorate their condition, though the possession of them was for a long time by no means condemned as contrary to Christian justice. The Christian writers, however, inculcate the duty of acting towards them as we would be acted by (Clem. Alex. *Paedagog.* iii. 12), but down to the age of Theodosius wealthy persons still continued to keep as many as two or

three thousand. (Chrysost. vol. vii. p. 633.) Justinian did much to promote the ultimate extinction of slavery; but the number of slaves was again increased by the invasion of the barbarians from the north, who not only brought with them their own slaves who were chiefly Sclavi or Slavonians (whence our word *Slave*), but also reduced many of the inhabitants of the conquered provinces to the condition of slaves. But all the various classes of slaves became merged in course of time into the *Adscripti Glebae* or *serfs* of the middle ages.

The chief sources from which the Romans obtained slaves have been pointed out above. Under the republic one of the chief supplies was prisoners taken in war, who were sold by the *quaestores* (Plaut. *Cypt.* Prol. 34, and i. 2. 1, 2) with a crown on their heads (see above, p. 1038, b), and usually on the spot where they were taken, as the care of a large number of captives was inconvenient. Consequently slave-dealers generally accompanied an army, and frequently after a great battle had been gained many thousands were sold at once, when the slave-dealers obtained them for a mere nothing. In the camp of Lucullus on one occasion slaves were sold for four drachmae each. The slave trade was also carried on to a great extent, and after the fall of Corinth and Carthage Delos was the chief mart for this traffic. When the Cilician pirates had possession of the Mediterranean as many as 10,000 slaves are said to have been imported and sold there in one day. (Strab. xiv. p. 668.) A large number came from Thrace and the countries in the north of Europe, but the chief supply was from Africa, and more especially Asia, whence we frequently read of Phrygians, Lycians, Cappadocians, &c. as slaves.

The trade of slave-dealers (*mangones*) was considered disreputable, and expressly distinguished from that of merchants (*mangones non mercatores, sed venaliciarum appellabantur*, Dig. 50. tit. 16. s. 207; Plaut. *Trin.* ii. 2. 51); but it was very lucrative, and great fortunes were frequently realized from it. The slave-dealer Thoranius, who lived in the time of Augustus, was a well-known character. (Suet. *Aug.* 69; Macrobi. *Sat.* ii. 4; Plin. *H. N.* vii. 12. s. 10.) Martial (viii. 13) mentions another celebrated slave-dealer in his time of the name of Gargilianus.

Slaves were usually sold by auction at Rome. They were placed either on a raised stone (hence *de lapide emtus*, Cic. in *Pis.* 15; Plaut. *Bacch.* iv. 7. 17), or a raised platform (*catasta*, Tibull. ii. 3. 60; Persius, vi. 77, Casaubon, *ad loc.*), so that every one might see and handle them, even if they did not wish to purchase them. Purchasers usually took care to have them stripped naked (Senec. *Ep.* 80; Suet. *Aug.* 69), for slave-dealers had recourse to as many tricks to conceal personal defects as the horse-jockeys of modern times: sometimes purchasers called in the advice of medical men. (Claudian, in *Eutrop.* i. 35, 36.) Slaves of great beauty and rarity were not exhibited to public gaze in the common slave-market, but were shown to purchasers in private (*arceana tabulata catastae*, Mart. ix. 60). Newly imported slaves had their feet whitened with chalk (Plin. *H. N.* xxxv. 17. s. 58; Ovid. *Am.* i. 8. 64), and those that came from the East had their ears bored (Juv. i. 104), which we know was a sign of slavery among many Eastern nations. The slave-market, like all other

markets, was under the jurisdiction of the *aediles*, who made many regulations by edicts respecting the sale of slaves. The character of the slave was set forth in a scroll (*titulus*) hanging round his neck, which was a warranty to the purchaser (Gell. iv. 2; Propert. iv. 5. 51): the vendor was bound to announce fairly all his defects (Dig. 21. tit. 1. s. 1; Hor. *Sat.* ii. 3. 284), and if he gave a false account had to take him back within six months from the time of his sale (Dig. 21. tit. 1. s. 19. § 6), or make up to the purchaser what the latter had lost through obtaining an inferior kind of slave to what had been warranted. (Dig. 19. tit. 1. s. 13. § 4; Cic. *de Off.* iii. 16, 17, 23.) The vendor might however use general terms of commendation without being bound to make them good. (Dig. 18. tit. 1. s. 43; 21. tit. 1. s. 19.) The chief points which the vendor had to warrant, was the health of the slave, especially freedom from epilepsy, and that he had not a tendency to thievery, running away, or committing suicide. (Cic. *de Off.* iii. 17.) The nation of a slave was considered important, and had to be set forth by the vendor. (Dig. 21. tit. 1. s. 31. § 21.) Slaves sold without any warranty wore at the time of sale a cap (*pilleus*) upon their head. (Gell. vii. 4.) Slaves newly imported were generally preferred for common work; those who had served long were considered artful (*vetustiores*, Ter. *Heaut.* v. 1. 16); and the pertness and impudence of those born in their master's house (*vernae*, see above, p. 1038) were proverbial. (*Vernae proaces*, Hor. *Sat.* ii. 6. 66; Mart. i. 42, x. 3.)

The value of slaves depended of course upon their qualifications; but under the empire the increase of luxury and the corruption of morals led purchasers to pay immense sums for beautiful slaves, or such as ministered to the caprice or whim of the purchaser. Eunuchs always fetched a very high price (Plin. *H. N.* vii. 39. s. 40), and Martial (iii. 62, xi. 70) speaks of beautiful boys who sold for as much as 100,000 or 200,000 sesterces each (885*l.* 8*s.* 4*d.* and 1770*l.* 16*s.* 0*d.*). A morio or fool sometimes sold for 20,000 sesterces. (Mart. viii. 13.) Slaves who possessed a knowledge of any art which might bring in profit to their owners, also sold for a large sum. Thus literary men and doctors frequently fetched a high price (Suet. *de Ill. Gram.*; Plin. *H. N.* vii. 39. s. 40), and also slaves fitted for the stage, as we see from Cicero's speech on behalf of Q. Roscius. Female slaves who might bring in gain to their masters by prostitution were also dear: sometimes 60 minae were paid for a girl of this kind. (Plaut. *Perz.* iv. 4. 113.) Five hundred drachmae (perhaps at that time about 18*l.*) seem to have been a fair price for a good ordinary slave in the time of Horace. (*Sat.* ii. 7. 43.) In the fourth century a slave capable of bearing arms was valued at 25 solidi or auri. [AURUM, p. 182, a.] (Cod. Theod. 7. tit. 13. s. 13.) In the time of Justinian the legal valuation of slaves was as follows: common slaves, both male and female, were valued at 20 solidi a piece, and under ten years of age at half that sum; if they were artificers, they were worth 30 solidi, if notarii 50, if medical men or midwives 60; eunuchs under ten years of age were worth 30 solidi, above that age 50, and if they were artificers also, as much as 70. (Cod. 6. tit. 44. s. 3.) Female slaves, unless possessed of personal attractions, were generally cheaper than male. Six hundred sesterces (about 5*l.*) were thought too

much for a slave girl of indifferent character in the time of Martial (vi. 66); and two aurei or solidi were not considered so low a price for a slave girl (*ancilla*) in the time of Hadrian as to occasion doubt of her having come honestly into the hands of the vendor. (Dig. 47. tit. 2. s. 76.) We have seen that in the time of Justinian the legal value of female slaves was equal to that of males; this may probably have arisen from the circumstance that the supply of slaves was not so abundant then as at earlier times, and that therefore recourse was had to propagation for keeping up the number of slaves. But under the republic and in the early times of the empire this was done to a very limited extent, as it was found cheaper to purchase than to breed slaves.

Slaves were divided into many various classes: the first division was into public or private. The former belonged to the state and public bodies, and their condition was preferable to that of the common slaves. They were less liable to be sold, and under less control than ordinary slaves: they also possessed the privilege of the *testamenti factio* to the amount of one half of their property (see above, p. 1039, a), which shows that they were regarded in a different light from other slaves. Scipio, therefore, on the taking of Nova Carthago, promised 2000 *artizans*, who had been taken prisoners and were consequently liable to be sold as common slaves, that they should become public slaves of the Roman people, with a hope of speedy manumission, if they assisted him in the war. (Liv. xxvi. 47.) Public slaves were employed to take care of the public buildings (compare Tacit. *Hist.* i. 43), and to attend upon magistrates and priests. Thus the Aediles and Quaestors had great numbers of public slaves at their command (Gell. xiii. 13), as had also the *Triumviri Nocturni*, who employed them to extinguish fires by night. (Dig. 1. tit. 15. s. 1.) They were also employed as lictors, jailors, executioners, watermen, &c. (Comp. Geasner, *De Servis Romanorum publicis*, Berlin, 1844.)

A body of slaves belonging to one person was called *familia*, but two were not considered sufficient to constitute a *familia*. (Dig. 50. tit. 16. s. 40.) Private slaves were divided into urban (*familia urbana*) and rustic (*familia rustica*); but the name of urban was given to those slaves who served in the villa or country residence as well as in the town house; so that the words urban and rustic rather characterized the nature of their occupations than the place where they served. (*Urbana familia et rustica non loco, sed genere distinguitur*, Dig. 50. tit. 16. s. 166.) The *familia urbana* could therefore accompany their master to his villa without being called *rustica* on account of their remaining in the country. When there was a large number of slaves in one house, they were frequently divided into *decuriae* (Petron. 47): but independent of this division they were arranged in certain classes, which held a higher or a lower rank according to the nature of their occupation. These classes are: *Ordinarii*, *Vulgares*, *Mediastini*, and *Quales-Quales* (Dig. 47. tit. 10. s. 15), but it is doubtful whether the *Literati* or literary slaves were included in any of these classes. Those called *Vicarii* are spoken of above (p. 1037, b).

Ordinarii seem to have been those slaves who had the superintendence of certain parts of the housekeeping. They were always chosen from those who had the confidence of their master, and

they generally had certain slaves under them. To this class the *actores*, *procuratores* and *dispensatores* belong, who occur in the *familia rustica* as well as the *familia urbana*, but in the former are almost the same as the *villici*. They were stewards or bailiffs. (Colum. i. 7, 8; Plin. *Ep.* iii. 19; Cic. *ad Att.* xi. 1; Suet. *Galb.* 12, *Vesp.* 22.) To the same class also belong the slaves who had the charge of the different stores, and who correspond to our housekeepers and butlers: they are called *cellarii*, *promi*, *condi*, *procuratores peni*, &c. [CELLA.]

Vulgares included the great body of slaves in a house who had to attend to any particular duty in the house, and to minister to the domestic wants of their master. As there were distinct slaves or a distinct slave for almost every department of household economy, as bakers (*pistores*), cooks (*coqui*), confectioners (*dulciarii*), picklers (*salmenarii*), &c. it is unnecessary to mention these more particularly. This class also included the porters (*Ostiarii*), the bed-chamber slaves [CUBICULARII], the litter-bearers (*lecticarii*) [LECTICA], and all personal attendants of any kind.

Mediastini. [MEDIASTINI.]

Quales-Quales are only mentioned in the Digest (l. c.), and appear to have been the lowest class of slaves, but in what respects they differed from the *Mediastini* is doubtful: Becker (*Gallus*, vol. i. p. 125) imagines they may have been a kind of slaves, *qualiquis conditione viventes*, which however does not give us any idea of their duties or occupations.

Literati, literary slaves, were used for various purposes by their masters, either as readers [ANAGNOSTAE], copyists or amanuenses [LIBRARI; AMANUENSIS], &c. Complete lists of all the duties performed by slaves are given in the works of Pignorius, Popma, and Blair, referred to at the close of this article.

The treatment of slaves of course varied greatly according to the disposition of their masters, but they appear upon the whole to have been treated with greater severity and cruelty than among the Athenians. Originally the master could use the slave as he pleased: under the republic the law does not seem to have protected the person or life of the slave at all, but the cruelty of masters was to some extent restrained under the empire, as has been stated above (p. 1036, b). The general treatment of slaves, however, was probably little affected by legislative enactments. In early times, when the number of slaves was small, they were treated with more indulgence, and more like members of the family: they joined their masters in offering up prayers and thanksgivings to the gods (Hor. *Ep.* ii. l. 142), and partook of their meals in common with their masters (Plut. *Coriol.* 24), though not at the same table with them, but upon benches (*subsellia*) placed at the foot of the lectus. But with the increase of numbers and of luxury among masters, the ancient simplicity of manners was changed: a certain quantity of food was allowed them (*dimensum* or *demensum*), which was granted to them either monthly (*mensurum*, Plaut. *Stich.* i. 2. 3), or daily (*diarium*, Hor. *Ep.* i. 14. 41; Mart. xi. 108). Their chief food was the corn, called *far*, of which either four or five modii were granted them a month (Donat. in *Tor. Phorm.* i. 1. 9; Sen. *Ep.* 80), or one Roman pound (*libra*) a day. (Hor. *Sat.* i. 5. 69.) They also obtained an allowance of salt and oil: Cato (*R. R.* 58) allowed his slaves a sextarius of oil a month and a modius of salt a

year. They also got a small quantity of wine with an additional allowance on the Saturnalia and Compitalia (Cato, *R. R.* 57), and sometimes fruit, but seldom vegetables. Butcher's meat seems to have been hardly ever given them.

Under the republic they were not allowed to serve in the army, though after the battle of Cannæ, when the state was in such imminent danger, 8000 slaves were purchased by the state for the army, and subsequently manumitted on account of their bravery. (Liv. xxii. 57, xxiv. 14—16.)

The offences of slaves were punished with severity and frequently the utmost barbarity. One of the mildest punishments was the removal from the familia urbana to the rustica, where they were obliged to work in chains or fetters. (Plaut. *Most.* i. 1 18; Ter. *Phorm.* ii. 1. 20.) They were frequently beaten with sticks or scourged with the whip (of which an account is given under FLAGRUM), but these were such every-day punishments, that many slaves ceased almost to care for them: thus Chrysalus says (Plaut. *Bacchid.* ii. 3. 131),

"Si illi sunt virgæ ruri, at mihi tergum est domi."

Runaway slaves (*fugitivi*) and thieves (*fures*) were branded on the forehead with a mark (*stigma*), whence they are said to be *notati* or *inscripti*. (Mart. viii. 75. 9.) Slaves were also punished by being hung up by their hands with weights suspended to their feet (Plaut. *Asin.* ii. 2. 37, 38), or by being sent to work in the Ergastulum or Pistrinum. [ERGASTULUM; MOLA.] The carrying of the furca was a very common mode of punishment. [FURCA.] The toilet of the Roman ladies was dreadful ordeal to the female slaves, who were often barbarously punished by their mistresses for the slightest mistake in the arrangement of the hair or a part of the dress. (Ovid. *Am.* i. 14. 15, *Ar. Am.* iii. 235; Mart. ii. 66; Juv. vi. 498, &c.)

Masters might work their slaves as many hours in the day as they pleased, but they usually allowed them holidays on the public festivals. At the festival of Saturnus in particular, special indulgences were granted to all slaves, of which an account is given under SATURNALIA.

There was no distinctive dress for slaves. It was once proposed in the senate to give slaves a distinctive costume, but it was rejected since it was considered dangerous to show them their number. (Sen. *de Clem.* i. 24.) Male slaves were not allowed to wear the toga or bulla, nor females the stola, but otherwise they were dressed nearly in the same way as poor people, in clothes of a dark colour (*pullati*) and slippers (*crepidæ*). (*Vestis servilis*, Cic. in *Pis.* 38.)

The rights of burial, however, were not denied to slaves, for as the Romans regarded slavery as an institution of society, death was considered to put an end to the distinction between slaves and free-men. Slaves were sometimes even buried with their masters, and we find funeral inscriptions addressed to the Dii Manes of slaves (*Dis Manibus*). It seems to have been considered a duty for a master to bury his slave, since we find that a person, who buried the slave of another, had a right of action against the master for the expenses of the funeral. (Dig. 11. tit. 7. s. 31.) In 1726 the burial vaults of the slaves belonging to Augustus and Livia were discovered near the Via Appia, where numerous inscriptions were found, which have been illustrated by Bianchini and Gori and give us considerable

information respecting the different classes of slaves and their various occupations. Other sepulchres of the same time have been also discovered in the neighbourhood of Rome.

(Pignorius, *de Servis et eorum apud Veteres Ministeriis*; Popma, *de Operis Servorum*; Blair, *An Enquiry into the State of Slavery amongst the Romans*, Edinburgh, 1833; Becker, *Gallus*, vol. i. p. 103, &c.)

SESCUNX. [As, p. 140, b.]

SESQUIPLA'RES and SESQUIPLA'RIL

[EXERCITUS, p. 509, a.]

SESTERTIUM, a place outside Rome, distant two Roman miles and a half (whence the name) from the Esquiline gate, where slaves and malefactors of the lowest class were put to death (Schol. ad Hor. *Epod.* 5; Plut. *Gall.* 28; in locum i. e. Sestertium) servilibus poenis sepositum, Tac. *Ann.* xv. 60).

SESTERTIUS, a Roman coin, which properly belonged to the silver coinage, in which it was one-fourth of the denarius, and therefore equal to $2\frac{1}{4}$ asses. Hence the name, which is an abbreviation of *semis tertius* (sc. *nummus*), the Roman mode of expressing $2\frac{1}{4}$. (Varro, *L. L.* v. 173, ed. Müller; Festus, s. v.; Plin. *H. N.* xxxiii. 3. s. 13.) The word *Nummus* is often expressed with *sestertius*, and often it stands alone, meaning *sestertius*.

Hence the symbol H S or I I S, which is used to designate the sestertius. It stands either for L L S (*Libra Libra et Semis*), or for I I S, the two I's merely forming the numeral two (sc. *asses or librae*), and the whole being in either case equivalent to *dispondius et semis*. (Priscian, *de Ponder.* p. 1347; Festus, p. 347, Müller.)

When the as was reduced to half an ounce, and the number of asses in the denarius was made sixteen instead of ten [As, DENARIUS], the sestertius was still $\frac{1}{4}$ of the denarius, and therefore contained no longer $2\frac{1}{4}$, but 4 asses. The old reckoning of 10 asses to the denarius was kept, however, in paying the troops. (Plin. xxxiii. 3. s. 13.) After this change the sestertius was coined in brass as well as in silver; the metal used for it was that called ORICHALCUM, which was much finer than the common AS, of which the asses were made (Plin. *H. N.* xxxiv. 2.)

The sum of 1000 sestertii was called *sestertium*. This was also denoted by the symbol H S, the obvious explanation of which is "I I S ($2\frac{1}{4}$) millia;" but Gronovius understands it as $2\frac{1}{4}$ pounds of silver (*sestertium pondus argenti*), which he considers to have been worth originally 1000 sestertii, and therefore to have represented this value ever after. (Poc. *Vet.* i. 4, 11.) The *sestertium* was always a sum of money, never a coin; the coin used in the payment of large sums was the denarius.

According to the value we have assigned to the DENARIUS, up to the time of Augustus, we have

	£	s.	d.	farth.
the sestertius	=	0	0	2 ½
the sestertium	=	8	17	1
after the reign of Augustus				
the sestertius	=	0	0	1 3 5
the sestertium	=	7	16	3

Taking the earlier value of the *sestertius*, and neglecting the half farthing, we have 1 *sestertius* = two-pence, 6 *sestertii* = 1 shilling, and 120 *sestertii* = 1l. sterling. Hence we get the following very convenient RULE: to convert *sestertii* into

pounds sterling divide by 120; and correct the result by adding to it the quotient obtained by dividing the original number by 1920: for $\frac{1}{5}$ of a farthing is $\frac{1}{1920}$ of a pound.

The sestertius was the denomination of money almost always used in reckoning considerable amounts. There are a very few examples of the use of the denarius for this purpose. The mode of reckoning was as follows:—

Sestertius = *sestertius nummus* = *nummus*.

Sums below 1000 *sestertii* were expressed by the numeral adjectives joined with either of these forms.

The sum of 1000 *sestertii* = *mille sestertii* = *M sestertium* (for *sestertiorum*) = *M nummi* = *M nummum* (for *nummorum*) = *M sestertii nummi* = *M sestertium nummum* = *sestertium*. These forms are used with the numeral adjectives below 1000, for sums between 1000 and 1,000,000 *sestertii*: sometimes *millia* is used instead of *sestertia*: sometimes both words are omitted: sometimes *nummum* or *sestertium* is added. For example, 600,000 *sestertii* = *sescenta sestertia* = *sescenta millia* = *sescenta* = *sescenta sestertia nummum*.

For sums of a thousand *sestertia* (i. e. a million *sestertii*) and upwards, the numeral adverbs in *ies* (*decies*, *undecies*, *vicies*, &c.) are used, with which the words *centena millia* (a hundred thousand) must be understood. With these adverbs the neuter singular *sestertium* is joined in the case required by the construction. (Nepos, *Att.* xiv. 2, gives *sestertio vicies* and *sestertio centies*.) Thus, *decies sestertium* = *decies centena millia sestertium* = *ten times a hundred thousand sestertii* = 1,000,000 *sestertii* = 1000 *sestertia*: *millies H S* = *millies centena millia sestertium* = a thousand times one hundred thousand *sestertii* = 100,000,000 *sestertii* = 100,000 *sestertia*. When an amount is described by more than one of these adverbs in *ies*, they must be added together if the larger numeral stands first, but multiplied when the smaller is first; care however being taken not to reckon the *centena millia* which is understood, more than once in the whole amount. Thus, Suetonius (*Octav.* 101) has *millies et quingentes* for 150,000 *sestertia*, i. e. 100,000,000 + 50,000,000 = 150,000,000 *sestertii*, and immediately after *quaterdecies millies* for 1,400,000 *sestertia*, i. e. $14 \times 100,000$ (= 1,400,000,000) *sestertii*. A variety was allowed in these forms: thus Cicero uses *decies et octingenta millia* for 1800 *sestertia*, i. e. 1,000,000 + 800,000 *sestertii*, and *quaterdecies* for 1400 *millies sestertia*, i. e. $14 \times 100,000$ *sestertii*. (*In Ver.* i. 39.)

When the numbers are written in cypher, it is often difficult to know whether *sestertii* or *sestertia* are meant. A distinction is sometimes made by a line placed over the numeral when *sestertia* are intended, or in other words, when the numeral is an adverb in *ies*. Thus:—

HS. M. C. = 1100 *sestertii*, but

HS. M. C. = HS *millies centies*

= 110,000 *sestertia* = 110,000,000 *sestertii*.

Wurm (p. 24) gives the following rule: When the numbers are divided into three classes by points, the right-hand division indicates units, the second thousands, the third hundreds of thousands. Thus, III. XII. DC. = 300,000 + 12,000 + 600 = 312,600 *sestertii*. But these distinctions are by no means strictly observed in the manuscripts.

Like other parts and multiples of the *as*, the

sestertius is applied to other kinds of magnitude, e. g. *pes sestertius* for 2½ feet.

It has been assumed throughout this article that the forms of *sestertium*, as a neuter singular, are genuine, a fact which may admit of doubt.

Sestercus is sometimes used as an English word. If so, it ought to be used only as the translation of *sestertius*, never of *sestertium*. [P. S.]

SEXATRUS. [QUINGUATRUS.]

SEXTANS. [As, p. 140, b.]

SEXTARIUS, a Roman dry and liquid measure, which may be considered one of the principal measures in the Roman system, and the connecting point between it and that of the Greeks, for it was equal to the *ξέστης* of the latter; and there can be little doubt that the *ξέστης* was not an original Greek measure, but that the word was introduced into the Greek system from the Roman, for the purpose of establishing a unit of agreement [QUADRANTAL.] It was one-sixth of the *congius*, and hence its name: in the Greek system it was one-sixth of the *chous*. It was divided, in the same manner as the *As*, into parts named *uncia*, *sextans*, *quadrans*, *triens*, *quincunx*, *semissis*, &c. The *uncia*, or twelfth part of the *sextarius*, was the *CYATHUS*; its *sextans* was therefore two *cyathi*, its *quadrans* three, its *triens* four, its *quincunx* five, &c. (Wurm, *de Pond.* &c. p. 118, comp. the Tables.) [P. S.]

SEXTULA, the sixth part of the *uncia*, was the smallest denomination of money in use among the Romans. (Varro, *L. L.* v. 171, ed. Müller.) It was also applied, like the *uncia*, to other kinds of magnitude. [UNCIA.] [P. S.]

SIBYLLINI LIBRI. These books are said to have been obtained in the reign of Tarquinius Priscus, or according to other accounts in that of Tarquinius Superbus, when a Sibyl (Σίβυλλα), or prophetic woman, presented herself before the king, and offered nine books for sale. Upon the king refusing to purchase them she went and burnt three, and then returned and demanded the same price for the remaining six as she had done for the nine. The king again refused to purchase them, whereupon she burnt three more and demanded the same sum for the remaining three, as she had done at first for the nine: the king's curiosity now became excited, so that he purchased the books, and then the Sibyl vanished. (Dionys. iv. 62; Varro, *op. Lactant.* i. 6; Gell. i. 19; Plin. *H. N.* xiii. 27: respecting the different Sibyls mentioned by ancient writers see DIVINATIO, p. 416, b.) These books were probably written in Greek, as the later ones undoubtedly were, and if so consequently came from a Greek source, though it is doubtful from what quarter: Niebuhr (*Hist. of Rome*, vol. i. p. 506) supposes them to have come from Ionia, but they were more probably derived from Cumae in Campania. (Göttling, *Gesch. der Röm. Staatsv.* p. 212.) They were kept in a stone chest under ground in the temple of Jupiter Capitolinus, under the custody of certain officers, at first only two in number, but afterwards increased successively to ten and fifteen, of whom an account is given under DECEMVIRI, p. 387, a. The public were not allowed to inspect the books, and they were only consulted by the officers, who had the charge of them, at the special command of the senate (*ad libros ire*,

Cic. *de Div.* i. 43; Liv. xxii. 57). They were consulted in the case of prodigies and calamities, but it is difficult to ascertain whether they contained predictions, or merely directions as to what was to be done for conciliating or appeasing the gods, in consequence of the mystery which enveloped them from the time that one of their keepers was put to death for divulging their secrets. (Dionys. *l.c.*; Valer. Max. i. 1. § 13.) Niebuhr remarks from the instances in Livy, that the original books were not consulted, as the Greek oracles were, for the purpose of getting light concerning future events; but to learn what worship was required by the gods, when they had manifested their wrath by national calamities or prodigies. Accordingly we find that the instruction they give is in the same spirit; prescribing what honour was to be paid to the deities already recognized, or what new ones were to be imported from abroad. They were probably written on palm-leaves (Serv. *ad Virg. Aen.* iii. 444, vi. 74), and it is not unlikely that the leaves of the Cumæan Sibyl described by Virgil were designed as an allusion to the form of the Sibylline books. Their nature being such, Niebuhr supposes that they were referred to in the same way as Eastern nations refer to the Koran and to Hafiz: they did not search for a passage and apply it, but probably only shuffled the palm leaves and then drew one.

When the temple of Jupiter Capitolinus was burnt in B. C. 82, the Sibylline books perished in the fire; and in order to restore them, ambassadors were sent to various towns in Italy, Greece, and Asia Minor, to make fresh collections, which on the rebuilding of the temple were deposited in the same place that the former had occupied. (Dionys. *l.c.*) But as a great many prophetic books, many of them pretending to be Sibylline oracles, had got into general circulation at Rome, Augustus commanded that all such books should be delivered up to the prætor urbanus by a certain day and burnt, and that in future none should be kept by any private person. More than 2000 prophetic books were thus delivered up and burnt, and those which were considered genuine and were in the custody of the state were deposited in two gilt cases at the base of the statue of Apollo, in the temple of that god on the Palatine, and were entrusted as before to the Quindecimviri. (Suet. *Aug.* 31; Tacit. *Ann.* vi. 12.) The writing of those belonging to the state had faded by time, and Augustus commanded the priests to write them over again. (Dion Cass. liv. 17.) A fresh examination of the Sibylline books was again made by Tiberius, and many rejected, which were considered spurious. (Dion Cass. lvii. 18.) A few years afterwards, also in the reign of Tiberius, it was proposed to add a new volume of Sibylline oracles to the received collection. (Tacit. *l.c.*)

The Christian writers frequently appeal to the Sibylline verses as containing prophecies of the Messiah; but these in most cases are clearly forgeries. A complete collection of Sibylline oracles was published by Gallæus, Amst. 1689: fragments of them have also been published by Mai, Milan 1817, and Struve, Regiomont. 1818. (Compare Heidbrede, *de Sibyllis Dissertat.*, Berol. 1835.)

The Sibylline books were also called *Fata Sibyllina* (Cic. *Cat.* iii. 4), and *Libri Fatales*. (Liv. v. 15, xxii. 57.) Those that were collected after

the burning of the temple on the Capitol, were undoubtedly written in Greek verses, and were acrostics (*ἀκροστιχίς*, Cic. *de Div.* ii. 54; Dionys. *l.c.*). Along with the Sibylline books were preserved under the guard of the same officers the books of the two prophetic brothers, the Marci (Serv. *ad Virg. Aen.* vi. 72; Cic. *de Div.* i. 40, ii. 55), the Etruscan prophecies of the nymph Bygones, and those of Albuna or Albunea of Tibur. (Lactant. i. 6.) Those of the Marci, which had not been placed there at the time of the battle of Cannæ, were written in Latin: a few remains of them have come down to us in Livy (xxv. 12) and Macrobius (*Sat.* i. 17). See Niebuhr, vol. i. p. 507; Götting, *Gesch. d. Röm. Staatsv.* p. 213; Hartung, *Die Religion d. Römer*, vol. i. p. 129, &c.

SICA, *dim.* SICILA, whence the English *sickle*, and SICILICULA (Plaut. *Rud.* iv. 4. 125), a curved dagger, adapted by its form to be concealed under the clothes, and therefore carried by robbers and murderers. [ACINACES.] (Cic. *Cat.* iii. 3.) Sica may be translated a *scimitar* to distinguish it from PUGIO, which denoted a dagger of the common kind. *Sciaris*, though properly meaning one who murdered with the sica, was applied to murderers in general. (Quintil. x. i. § 12.) Hence the forms *de sciaris* and *inter sciaris* were used in the criminal courts in reference to murder. Thus *judicium inter sciaris*, "a trial for murder" (Cic. *pro Rosc.* 5); *defendere inter sciaris*, "to defend against a charge of murder" (*Phil.* ii. 4). [J.Y.]

SICA'RIOUS. [SICA; LEX CORNELIA, p. 637.]

SICILICUS. [SCRUFULUM; UNCLIA.]

SIGILLARIA. [SATURNALIA.]

SIGMA. [MÆNSA.]

SIGNA MILITARIA (σημεία, σημαία), military ensigns or standards. The most ancient standard employed by the Romans is said to have been a handful of straw fixed to the top of a spear or pole. Hence the company of soldiers, belonging to it, was called *Manipulus*. [EXERCITUS, p. 500, b.] The bundle of hay or fern was soon succeeded by the figures of animals, of which Pliny (*H. N.* x. 4. s. 5) enumerates five, viz. the eagle, the wolf, the minotaur (Festus, s. v. *Minotaur*), the horse, and the boar. In the second consulship of Marius, B. C. 104, the four quadrupeds were entirely laid aside as standards, the eagle being alone retained. It was made of silver, or bronze, and with expanded wings, but was probably of a small size, since a standard-bearer (*signifer*) under Julius Caesar is said in circumstances of danger to have wrenched the eagle from its staff and concealed it in the folds of his girdle. (Flor. iv. 12.)

Under the later emperors the eagle was carried, as it had been for many centuries, with the legion, a legion being on that account sometimes called *aquila* (Hirt. *Bell. Hisp.* 39), and at the same time each cohort had for its own ensign the serpent or dragon (*draco*, δράκων), which was woven on a square piece of cloth (*scutillus anguis*, Sidon. Apoll. *Carm.* v. 409), elevated on a gilt staff, to which a cross-bar was adapted for the purpose (Themist. *Orat.* i. p. 1, xviii. p. 267, ed. Dindorf; Claudian, iv. *Cons. Honor.* 546; vi. *Cons. Honor.* 566), and carried by the *draconarius*. (Veget. *de Re Mil.* ii. 13; compare Tac. *Ann.* i. 18.)

Another figure used in the standards was a ball (*pila*), supposed to have been emblematic of the dominion of Rome over the world (Isid. *Orig.* xviii. 3); and for the same reason a bronze figure

of Victory was sometimes fixed at the top of the staff, as we see it sculptured, together with small statues of Mars, on the Column of Trajan and the Arch of Constantine. (See the next woodcut, and *Causens de Sig. in Grævii Thes.* vol. x. p. 2529.) Under the eagle or other emblem was often placed a head of the reigning emperor, which was to the army the object of idolatrous adoration. (Josephus, *B. J.* ii. 9. § 2; Suet. *Tiber.* 48, *Calig.* 14; Tac. *Ann.* i. 39, 41, iv. 62.) The name of the emperor, or of him who was acknowledged as emperor, was sometimes inscribed in the same situation. (Sueton. *Vespas.* 6.) The pole, used to carry the eagle, had at its lower extremity an iron point (*cuspis*) to fix it in the ground, and to enable the *aquilifer* in case of need to repel an attack. (Suet. *Jul.* 62.)

The minor divisions of a cohort, called *centuries*, had also each an ensign, inscribed with the number both of the cohort and of the century. By this provision, together with the diversities of the crests worn by the centurions [*GALERA*], every soldier was enabled with the greatest ease to take his place. (Veget. *l. c.*)

In the Arch of Constantine at Rome there are four sculptured panels near the top, which exhibit a great number of standards, and illustrate some of the forms here described. The annexed woodcut

is copied from two out of the four. The first panel represents Trajan giving a king to the Parthians: seven standards are held by the soldiers. The second, containing five standards, represents the performance of the sacrifice called *suovetaurilia*. (Bartoli, *Arch. Triumph.*)

When Constantine had embraced Christianity, a figure or emblem of Christ, woven in gold upon purple cloth, was substituted for the head of the emperor. This richly ornamented standard was called *labarum*. (Prudentius *cont. Symm.* i. 466, 488; Niceph. *H. E.* vii. 37.)

Since the movements of a body of troops and of every portion of it were regulated by the standards, all the evolutions, acts, and incidents of the Roman army were expressed by phrases derived from this circumstance. Thus *signa inferre* meant

to advance (Caesar, *B. G.* i. 25, ii. 25), *referre* to retreat, and *convertere* to face about; *efferre*, or *castris vellere*, to march out of the camp (Virg. *Georg.* i. 108); *ad signa convenire*, to re-assemble. (Caesar, *B. G.* vi. l. 37.) Notwithstanding some obscurity in the use of terms, it appears that, whilst the standard of the legion was properly called *aquila*, those of the cohorts were in a special sense of the term called *signa*, their bearers being *signiferi*, and that those of the manipuli or smaller divisions of the cohort were denominated *vesillia*, their bearers being *vesillarii*. Also those who fought in the first ranks of the legion before the standards of the legion and cohorts were called *antesignani*. (Caesar, *B. C.* i. 43, 44, 56.) A peculiar application of the term *vesillarii* is explained on p. 507, b.

In military stratagems it was sometimes necessary to conceal the standards. (Caesar, *B. G.* vii. 45.) Although the Romans commonly considered it a point of honour to preserve their standards, yet in some cases of extreme danger the leader himself threw them among the ranks of the enemy in order to divert their attention or to animate his own soldiers. (Florus, i. 11.) A wounded or dying standard-bearer delivered it, if possible, into the hands of his general (Florus, iv. 4), from whom he had received it (*signis acceptis*, Tac. *Ann.* i. 42). In time of peace the standards were kept in the *ARRARIUM* under the care of the *QUÆSTOR*.

We have little information respecting the standards of any other nation besides the Romans. The banners of the Parthians appear to have had a similar form to that of the Romans, but were more richly decorated with gold and silk. [*SERICUM*.] A golden eagle with expanded wings was the royal standard of Persia. (Xen. *Cyrop.* vii. l. § 4, *Anab.* i. 10. § 12.) The military ensigns of the Egyptians were very various. Their sacred animals were represented in them (Diod. i. 86), and in the paintings at Thebes we observe such objects as a king's name, a sacred boat, or some other emblem, applied to the same purpose. (Wilkinson, *Mans. and Cust.* vol. i. p. 294.) The Jewish army was probably marshalled by the aid of banners (*Ps.* xx. 5;

Cont. vi. 4 ; *Is.* xiii. 2) ; but not so the Greek, although the latter had a standard, the elevation of which served as a signal for joining battle, either by land (Polyaen. iii. 9. § 27 ; Corn. Nepos, xi. 2. § 2) or by sea. (Thucyd. i. 49.) A scarlet flag (*phoiniks*) was sometimes used for this purpose. (Polyaen. i. 48. § 2.) [J. Y.]

SIGNINUM OPUS. [DOMUS, p. 431, a.]

SIGNUM, a division of the Roman legion. [EXERCITUS, p. 501, a.]

SILENTIA'RII. [PRAEPOSITUS.]

SILICE'RNIIUM. [FUNUS, p. 562, a.]

SILIIQUA. [UNCIA.]

SIMPULUM or SIMPU'VIUM, was the name of a small cup used in sacrifices, by which libations of wine were offered to the gods. Festus says that it was not unlike the cyathus. (Festus, s. v. ; Varr. *L. L.* v. 124, ed. Müller ; Plin. *H. N.* xxxv. 12. a. 46 ; Juv. vi. 343 ; Cic. *de Rep.* vi. 2.) It often appears on Roman coins, as on the annexed coin of the Sestia gens, which represents on the obverse a tripod with a *secespita* on one side and a *simpulum* on the other. A *simpulum* also appears on the coin figured under *SECESPITA*.

There was a proverbial expression *excitare fluctus in simpulo*, "to make much ado about nothing" (Cic. *de Leg.* iii. 16).

SINDON. [PALLIUM, p. 851, b.]

SINGULA'RES. [EXERCITUS, p. 508, b.]

SIPARIUM, a piece of tapestry stretched on a frame, which rose before the stage of the theatre (Festus, s. v. ; Cic. *Prov. Cons.* 6 ; Juv. viii. 186), and consequently answered the purpose of the drop-scene with us, although, contrary to our practice, it was depressed when the play began, so as to go below the level of the stage (*aulaea premuntur*, Hor. *Epist.* ii. l. 189), and was raised again when the performance was concluded (*tolluntur*, Ovid. *Met.* iii. 111—114). From the last-cited passage we learn that human figures were represented upon it, whose feet appeared to rest upon the stage when this screen was drawn up. From a passage of Virgil (*Georg.* iii. 25) we further learn, that the figures were sometimes those of Britons woven in the canvass and raising their arms in the attitude of lifting up a purple curtain, so as to be introduced in the same manner as ATLANTES, PERSAE, and CARYATIDES.

In a more general sense *siparium* denoted any piece of cloth or canvass stretched upon a frame. (Quintil. vi. l. § 32.) [J. Y.]

SISTRUM (*σίστρον*), a mystical instrument of music, used by the ancient Egyptians in their ceremonies, and especially in the worship of Isis. (Ovid. *Met.* ix. 784, *Amor.* ii. 13. 11, iii. 9. 34, *de Ponto*, i. l. 38.) It was held in the right hand (see woodcut), and shaken, from which circumstance it derived its name (*aera repulsa manu*, Tibull. i. 3. 24). Its most common form is seen in the right-hand figure of the annexed woodcut, which represents an ancient sistrum formerly belonging to the library of St. Genovefa at Paris.

Plutarch (*de Is. et Osiride*) says, that the shaking of a circular *apsis* represented the elements within the earth, and that all things are contained, and that the sistrum was an emblem of truth.

pp. 119, 121, ed. Al. The bronze rattle (*asrum*) is a narrow plate curved through which passed a loud shrill sound. It was sometimes made of three together (*tertia*) make a sort of rude.

The introduction of the Christian aera made it an instrument. The "li" (Mart. xii. 29) are paintings found at P pp. 309—320), and a priest of Isis and a which are introduced. The use of the sistrum to collect tithes (Virg. *Aen.* viii. 696) sistrum is used in N sent day.

Sistrum, which is a Greek word with a Latin term for it being used for a child's rattle ix. 127.)

SITELLA. [SITONAE] SITONAE (*σιστρον*) SITOPHY'LAC officers, chosen by lot first three, afterwards ten were for the city business was partly corn ships, take account and see that the import partly to watch the and take care that the able, and none but used by the factors ; were much the same, and Metronomi with [SITOA.] Demosth.

books of the Sitophylaces (τὴν παρὰ τοῖς σιτοφύλαξι ἀπογραφὴν) to prove the quantity of corn imported from Pontus, which (he says) was equal to all that came from elsewhere, owing to the liberality of Leucon, king of the Bosphorus, who allowed corn to be exported from Theudasia to Athens free of duty. (Demosth. *c. Leptin.* 466, 467.) These books were probably kept by the five who acted for the Peiræceus, whose especial business it would be to inspect the cargoes that were unladen. (Harpocr. *s. v.* Σιτοφύλακες: Böckh, *Publ. Econ. of Athens*, p. 83, 2d ed.) [C. R. K.]

SITOS (σίτος), corn. The soil of Attica, though favourable to the production of figs, olives, and grapes, was not so favourable for corn; and the population being very considerable in the flourishing period of the Athenian republic, it was necessary to import corn for their subsistence. According to the calculation of Böckh, which does not materially differ from that of other writers, there were 135,000 freemen and 365,000 slaves residing in Attica. The country, which contained an area of 64,000 stadia, produced annually about two millions of medimni of corn, chiefly barley. The medimnus was about 1 bushel, 3 gallons, and 575 pints, or 48 Attic choinikes. A χοίνιξ was considered a fair daily allowance of meal (ἡμερησία τροφή) for a slave. The consumption of the whole population was three million medimni, and one-third therefore was imported. It came from the countries bordering on the Euxine Sea (Pontus, as it was called by the Greeks), and more especially from the Cimmerian Bosphorus and the Thracian Chersonese; also from Syria, Egypt, Libya, Cyprus, Rhodes, Sicily, and Euboea. The necessities of the Athenians made them exceedingly anxious to secure a plentiful supply, and every precaution was taken for that purpose by the government as well as by the legislator. Sunium was fortified, in order that the corn vessels (σιταγωγὰς ἀλάδεις) might come safely round the promontory. Ships of war were often employed to convoy the cargo (παρὰπέμπειν τὴν σίτον) beyond the reach of an enemy. (Dem. *de Coron.* 250, 251, *c. Polycl.* 1211.) When Pollia, the Lacedæmonian admiral, was stationed with his fleet off Aegina, the Athenians embarked in haste, under the command of Chabrias, and offered him battle, in order that the corn-ships, which had arrived as far as Geraestus in Euboea, might get into the Peiræceus. (Xenoph. *Hellen.* v. 4. § 61.) One of the principal objects of Philip in his attack on Byzantium was that, by taking that city he might command the entrance to the Euxine, and so have it in his power to distress the Athenians in the corn trade. Hence the great exertions made by Demosthenes to relieve the Byzantines, of the success of which he justly boasts (*de Coron.* 254, 307, 326).

The measures taken by the legislature to obtain supplies of corn may appear harsh, and their policy is at least doubtful, but they strongly evince the anxiety of the people on the subject. Exportation was entirely prohibited, nor was any Athenian or resident alien allowed to carry corn to any other place than Athens (σιτηγεῖν ἄλλοσε ἢ Ἀθήνας). Whoever did so, was punishable with death. (Dem. *c. Phorm.* 918; Lycurg. *c. Leocr.* 151, ed. Steph.) Of the corn brought into the Athenian port two-thirds was to be brought into the city and sold there. (Harpocr. *s. v.* Ἐπεμελητὴς ἐμπορίου.) No one might lend money on a ship that did not sail

with an express condition to bring a return cargo, part of it corn, to Athens. If any merchant, capitalist, or other person advanced money or entered into any agreement in contravention of these laws, not only was he liable to the penalty, but the agreement itself was null and void, nor could he recover any sum of money, or bring any action in respect thereof. (Dem. *c. Lacrit.* 941.) Information against the offenders was to be laid before the ἐπεμελητὰ τοῦ ἐμπορίου. (Meier, *Att. Proa* p. 87.) Strict regulations were made with respect to the sale of corn in the market. Conspiracies among the corn-dealers (σιτωπῶλαι) to buy up the corn (συνανείσθαι), or raise the price (συνιστάναι τὰς τιμὰς), were punished with death. They were not allowed to make a profit of more than one obol in the medimnus; and it was unlawful to buy more than fifty φορμοὶ at a time. It is not certain what the size of a φορμός was: Böckh supposes it to be about as much as a medimnus. These laws remind us of our own statutes against engrossing and regrating; but they appear to have been easily evaded by the corn-dealers. (See the speech of Lysias κατὰ τῶν σιτωπῶλῶν: Dem. *c. Dionysod.* 1285.) The sale of corn was placed under the supervision of a special board of officers called Σιτοφύλακες (σιτοφύλακες), while that of all other marketable commodities was superintended by the agoranomi. (Lys. *id.* 165, ed. Steph.) It was their business to see that meal and bread were of the proper quality, and sold at the legal weight and price. They were bound to detect the frauds of the factor and the baker, and (if we may believe Lysias) they sometimes suffered death for their want of vigilance. The mode of proceeding against them was by εἰσαγγελία before the senate. (Platner, *Proc. und Klag.* vol. ii. p. 149.)

Notwithstanding these careful provisions, scarcities (σιτοδείαι) frequently occurred at Athens, either from bad harvests, the misfortunes of war, or other accidental causes. The state then made great efforts to supply the wants of the people by importing large quantities of corn, and selling it at a low price. Public granaries were kept in the Odeum, Pompeum, Long Porch, and naval storehouse near the sea. (Pollux, ix. 45; Dem. *c. Phorm.* 918.) Σιτοναε (σιτῶναι) were appointed to get in the supply and manage the sale. Demosthenes was appointed on one occasion to that office (*de Coron.* 310.) Persons called ἀποδέκται (ἀποδέκται) received the corn, measured it out, and distributed it in certain quantities. (Pollux, viii. 114.) Public-spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously. (Dem. *c. Phorm.* 918.) We read of the Athenian state receiving presents of corn from kings and princes. Thus Leucon, king of the Bosphorus, sent a large present, for which he had the honour of ἀτέλεια (exemption from customs-duties) conferred on him by a decree of the people. (Dem. *c. Leptin.* 467; see Isocr. *Τραπεζίτ.* 370, ed. Steph.) Psammetichus, an Egyptian prince, sent a present in Olymp. 83. 4, Demetrius in Olymp. 118. 2, Spartacus, king of the Bosphorus, a few years after. In later times, that made by the Roman Atticus is well known. On the whole of this subject the reader is referred to Böckh (*Publ. Econ. of Athens*, p. 77, &c., 2nd ed.), where also he will find the various prices of meal and bread at Athens, and other details, copiously explained. As to the duty

payable on the importation of corn, see ΠΕΝΤΕ-
COSTE.

Σίτος is strictly *wheat-flour*, ἀπρίτα *barley-flour*, πυρὶ *wheat*, κριθὰ *barley*, ἄρτος *wheat bread*, μῆσα *barley-bread*. Σίτος, however, is often applied to all kinds of corn, and even in a larger sense to provisions in general. [C. R. K.]

SITOU DIKE (σίτου δίκη). The marriage portion (προίξ) being intended as a provision for the wife, although it was paid to the husband by her father, brother, or other natural guardian (κύριος), if anything happened to sever the marriage contract, the husband or his representative was bound to repay it; or, if he failed to do so, he was liable to pay interest upon it at the rate of eighteen per cent. per annum (ἐπ' ἑννέα ὀβολοῖς τοκοφορεῖν). This was the law in case of a divorce (Demosth. c. Neær. 1362); and also when, after a contract of marriage, and after payment of the marriage portion, the intended husband refused to perform his engagement. (Demosth. c. Ἀφρόδ. 818.) Upon the death of the husband without children, the wife and her money went back to the natural guardian (Isæus, de Pyrr. her. 41, ed. Steph.); but if he died leaving children, she had the option of staying with them or going back to her κύριος. If she did the latter, the children (or their guardian, if they were under age) were bound to pay back the portion to the κύριος, or eighteen per cent. interest in the meantime. (Isæus, de Pyrr. her. 38, 46, ed. Steph.) And if she married again, her κύριος was bound in honour to give the same sum to her new husband. (Demosth. c. Παστ. de dote, 1010.) Upon the transfer of a woman from one husband to another, which was not uncommon, the προίξ was transferred with her. (Demosth. c. Οὐκ. 866.) A woman's fortune was usually secured by a mortgage of the husband's property; but whether this was so or not, her guardian, in any of the cases above mentioned, might bring an action against the party who unjustly withheld it; δίκη προίκου, to recover the principal, δίκη σίτου, for the interest. The interest was called σίτος (alimony or maintenance), because it was the income out of which the woman had to be maintained, αὐτὴ δεικνύμενα τροφῇ, ἡ δίδουμένη πρόσδοτος εἰς τροφήν ταῖς γυναῖξιν. (Harpoc. s. v. Σίτος: Pollux, viii. 33; Demosth. c. Ἀφρόδ. 839, 854.) The word σίτος is often used generally for provisions, just as we use the word *bread*. So in the law, which required the son of an ἐπίκλητος to maintain his mother when he came of age and took possession of her inheritance, the expression is τὸν σίτον μετρεῖν τῇ μητρὶ. (Demosth. c. Steph. 1135.) The allowance for rations given to soldiers was called σιτηρέσιον. (Böckh, *Publ. Econ. of Athens*, p. 272, 2d ed.) The δίκη σίτου was tried before the archon in the Odeum, the same building in which the corn granaries were kept, which makes it not improbable that in earlier times the defendant was called upon to pay the damages in *kind*, that is, in corn or some other sort of provisions; though it was soon found to be more convenient to commute this for a money payment. This cause, like the δίκη προίκου, seems to have belonged to the ἐμμενηοὶ δίκαι, as it was presumed that the woman could not wait long for the means of her daily subsistence. It was ἀτίμητος, for the damages were clearly liquidated, being a mere matter of calculation, when the payment of the marriage portion was proved. (Suidas, s. v. Ὀδῶν: Pollux, iii. 47, vi. 153, viii. 31, 33;

Meier, *Att. Proc.* pp. 43, 423—427; Platner, *Proc. und Klage*, vol. ii. p. 266.) [C. R. K.]

SITTÏBAE. [LIBER.]

SITÏULA, *dim.* SITELLA (σῖλλα), was probably a bucket or pail for drawing and carrying water (Plaut. *Amp.* ii. 2. 30), but was more usually applied to the vessel from which lots were drawn: *Sitella*, however, was more commonly used in this signification. (Plaut. *Cas.* ii. 5. 34, 43, ii. 6. 7, 11, Liv. xxv. 3, xli. 18.) It appears that the vessel was filled with water (as among the Greeks, whence the word σῖλλα), and that the lots (sortes) were made of wood; and as, though increasing in size below, it had a narrow neck, only one lot could come to the top of the water at the same time, when it was shaken. (*Situlam huc locum afferto cum aqua et sortes*, Plaut. *Cas.* ii. 4. 17; Cic. in *Verr.* ii. 51; Vopisc. *Prob.* 8.) The vessel used for drawing lots was also called *urna* or *orca* as well as *Situla* or *Sitella*. (Cic. in *Vatin.* 14; Val. Max. vi. 3. § 4; Virg. *Aen.* vi. 431, &c.; Lucian, v. 394, with Schol.; compare Pers. iii. 48.)

It is important to understand the true meaning of *Sitella*, since almost all modern writers have supposed that the name of *Sitella* or *Cista* was given indifferently to the ballot-box, into which those who voted in the comitia and courts of justice cast their tabellæ: but Wunder (*Codex Erfurtensis*, p. clviii. &c.) has proved, that the opinion of Manutius (*de Comitibus Romanis*, c. 15, p. 527, ed. Graev.) is correct, who maintained that the *Sitella* was the urn, from which the names of the tribes or centuries were drawn out by lot, so that each might have its proper place in voting and that the *Cista* was the box into which the tabellæ were cast. [CISTA.] The form of the *Sitella* is preserved on a coin of the Cassia gens, which is represented in the annexed cut. 

SOCCUS, *dim.* SOCCULUS, was nearly if not altogether equivalent in meaning to CREPIDA, and denoted a slipper or low shoe, which did not fit closely, and was not fastened by any tie. (Isid. *Orig.* xix. 33.) Shoes of this description were worn, more especially among the Greeks together with the PALLIUM, both by men and by women. But those appropriated to the female sex were finer and more ornamented (Plin. *H. N.* ix. 35. s. 56; *Soccus muliebris*, Suet. *Calig.* 52, *Vitell.* 2), although those worn by men were likewise in some instances richly adorned according to the taste and means of the wearer. (Plaut. *Bacch.* ii. 3. 98.)

For the reasons mentioned under the articles *BAXA* and *CREPIDA* the *Soccus* was worn by comic actors (Hor. *Ars Poët.* 80, 90), and was in this respect opposed to the *CORHURNUS*. (Mart. viii. 3. 13; Plin. *Epist.* ix. 7.) The preceding woodcut is taken from an ancient painting of a buffoon [*MIMUS*], who is dancing in loose yellow slippers (*luteum soccum*, Catull. *Epithal.* Jul. 10). This was one of their most common colours. (De L'Aulnaye, *Salt. Théat.* pl. iv.) [SOLEA.] [J. Y.]

SOCIETAS. *Societas* is classed by Gaius (iii. 135) and in the Institutions of Justinian among those obligations which arise *Consensu*. When several persons unite for a common purpose, which is legal, and contribute the necessary means, such a union is *Societas*, and the persons are *Socii*. (Dig. 17. tit. 2. s. 57.) The contract of *Societas* might either be made in words or by the acts of the parties, or by the consent of the parties signified through third persons: it required no particular form of agreement. A *Societas* might be formed either for the sake of gain to arise from the dealings and labour of the *Socii* (*quæstus*), or not. *Societas* for the purpose of *quæstus* corresponds to the English Partnership. A *Societas* might be formed which should comprise all the property of the *Socii* (*societas omnium bonorum*); in which case as soon as the *Societas* was formed, all the property of all the *Socii* immediately became common (*res quas cœventum sunt continuo communicantur*). But the *Societas* might be limited to a part of the property of the *Socii* or to a single thing, as the buying and selling of slaves, or to carrying on trade in a particular thing in a particular place. (Cic. *pro P. Quintio*, c. 3.) The communion of property in a *Societas* might also be limited to the use of the things. A *Societas* might be formed either *in perpetuum*, that is, so long as the parties lived, or *ad tempus* or *in tempore* or *sub conditione*. (Dig. 17. tit. 2. s. 1.)

Each *Socius* was bound to contribute towards the objects of the *Societas* according to the terms of the contract. But it was not necessary that all the *Socii* should contribute money: one might supply money and another might supply labour (*opera*), and the profit might be divisible between them, for the labour of one might be as valuable as the money of the other. In the case of *Roscius* the actor, *Fannius* had a slave *Panurgus*, who by agreement between *Roscius* and *Fannius* was made their joint property (*communis*). *Roscius* paid nothing for his one half of the man, but he undertook to instruct him in his art. Apparently they became partners in the man in equal shares, for *Cicero* complains of the terms of the *Societas* on the part of *Roscius* whose instruction was worth much more than the price of the slave before he was taught his art. (Cic. *pro Q. Roscio Com.* 10.) The agreement between the *Socii* might also be, that one *Socius* should sustain no loss and should have a share of the gain, provided his labour was so valuable as to render it equitable for him to become a partner on such terms. If the shares of the *Socii* were not fixed by agreement they were considered to be equal. (Dig. 17. tit. 2. s. 29.) One partner might have two or more shares, and another might have only one, if their contributions to the *Societas* in money or in labour were in these proportions. If the agreement was merely as to the division of profit, it followed that the *Socii* must bear the losses in the same proportion. Each *Socius* was

answerable to the others for his conduct in the management of the business: he was bound to use *Diligentia* and was answerable for any loss through *Culpa*. The action which one *socius* had against another in respect of the contract of partnership, was an *actio directa* and called *Pro Socio* (*cui nom arbitrum pro socio adegeris Qu. Roscium, &c.*; Cic. *pro Q. Roscio Com.* 9). The action might be brought for any breach of the agreement of partnership, for an account and for a dissolution. A partner might transfer his interest to another person, but this transfer did not make that other person a partner, for consent of all parties was essential to a *Societas*: in fact such a transfer was a dissolution of the partnership, and the person to whom the transfer was made might have his action *De Communi dividundo*. But there might be the *pro socio actio* against the heirs of a *socius*, for though the heirs are not a *socius*, yet he succeeds to the interest of his testator or intestate in the partnership (*emolumento successor est*; Dig. 17. tit. 2. s. 63. § 8).

Each *socius* had a right of action in proportion to his interest against any person with whom any of the *socii* had contracted, if the *socii* had commissioned him to make the contract or had approved of the contract; or if it was an action arising from a delict. Thus in the case of *Roscium* and *Fannius*, they had severally sued a third person in respect of their several claims as partners, and yet *Fannius* still claimed the half of what *Roscium* had recovered in respect of his share in the partnership. (*Pro Q. Roscio Com.* 11, 17, 18.) In all other cases the person who made the contract could alone sue. All the *socii* could be sued if they had all joined in the contract with a third person, and each in proportion to his share. If one *socius* contracted on behalf of all, being commissioned to do so, all were liable to the full amount (*in solidum*). If a *socius* borrowed money, the other *socii* were in no case bound by his contract, unless the money had been brought into the common stock. In fact the dealings of one partner did not bind the other partners, except in such cases as they would be bound independent of the existence of the *Societas*. *Condemnatio* in an *Actio Pro Socio* was sometimes attended with *INFAMIA*.

A *Societas*, unless it was for a limited period, could be ended at the pleasure of any one of the *socii*: any member of the body could give notice of dissolution when he pleased (*renuntiare societati*), and therefore the *Societas* was dissolved (*solvitur*). But in the case of a *societas omnium bonorum*, if one *socius* had been appointed *heres*, he could not by giving notice of dissolution defraud his co-partners of their share of the *hereditas*. The death of a partner dissolved the *Societas*; and a *Capitis diminutio* was said to have the same effect. If the property of any one of the *socii* was sold either public (*bonorum publicatio*) or private, the *Societas* was dissolved. It was also dissolved when the purpose for which it was formed was accomplished; or the things in which there was a *Societas*, had ceased to exist; or by the lapse of the time for which it was formed.

If on the dissolution of a partnership there was no profit, but a loss to sustain, the loss was borne, as already stated, by the *socii* in proportion to their shares. If one man contributed money and another labour, and there was a loss, how was the loss borne? If the money and the labour were con-

sidered equivalent, it would seem to follow that until the partnership property were exhausted by the payment of the debts, there should be no pecuniary contribution by the person who supplied the labour. This principle is a consequence of what Gaius states that the capital of one and the labour of another might be considered equal, and the gain might be divided, and if there was a loss the loss must be divided in the same proportion.

Societates were formed for the purposes of farming the public revenues. [PUBLICAN.]

(Gaius, iii. 148—154; Dig. 17. tit. 2; Inst. 3. tit. 26; Cod. 4. tit. 37. Mühlenthal, *Doctrina Pandectarum*; Mackeldey, *Lehrbuch*, &c.; Hasse, *Die Culpæ des Röm. Rechts*, s. 46, 49.) [G. L.]

SO'CII (σὺμμαχοι). In the early times, when Rome formed equal alliances with any of the surrounding nations, these nations were called Socii. (Liv. ii. 53.) After the dissolution of the Latin league, when the name *Latini*, or *Nomen Latinum*, was artificially applied to a great number of Italians, few only of whom were real inhabitants of the old Latin towns, and the majority of whom had been made Latins by the will and the law of Rome, there necessarily arose a difference between these Latins and the Socii, and the expression *Socii Nomen Latinum* is one of the old *asynæta*, instead of *Socii et Nomen Latinum*. The Italian allies again must be distinguished from foreign allies. Of the latter we shall speak hereafter. The Italian allies consisted, for the most part, of such nations as had either been conquered by the Romans, or had come under their dominion by other circumstances. When such nations formed an alliance with Rome, they generally retained their own laws; or if at first they were not allowed this privilege, they afterwards received them back again. The condition of the Italian allies varied, and mainly depended upon the manner in which they had come under the Roman dominion (Liv. viii. 25, ix. 20); but in reality they were always dependent upon Rome. Niebuhr (*Hist. of Rome*, vol. iii. p. 616) considers that there were two main conditions of the Socii, analogous or equal to those of the provincials, that is, that they were either *federati* or *liberi* (*immunes*, Cic. *a. Verr.* iii. 6). The former were such as had formed an alliance with Rome, which was sworn to by both parties; the latter were those people to whom the senate had restored their autonomy after they were conquered, such as the Hernican towns. (Liv. ix. 43.) But the condition of each of these classes must again have been modified according to circumstances. The cases in which Rome had an equal alliance with nations or towns of Italy became gradually fewer in number; alliances of this kind existed indeed for a long time with Tibur, Praeneste, Naples, and others (Polyb. vi. 14; Liv. xliii. 2; Cic. *pro Balb.* 8); but these places were, nevertheless, in reality as dependent as the other Socii. It was only a few people, such as the Camertes and Heracleans, that maintained the rights of their equal alliance with Rome down to a very late time. (Liv. xxviii. 45; Plut. *Mar.* 28; Cic. *pro Balb.* 20, *pro Arch.* 4.) With these few exceptions, most of the Italians were either Socii (in the later sense) or Latini. During the latter period of the republic they had the connubium with Rome (Diodor. *Excerpt. Mai.* xxxvii. 6), but not the suffrage of the Latins. It sometimes happened, as in the case of the Macedonian Ones-

mus, that a foreign individual was honoured by the senate by being registered among the Italian Socii (*in sociorum formulam referre*), and in this case the senate provided him with a house and lands in some part of Italy. (Liv. xlv. 16.)

Although the allies had their own laws, the senate, in cases where it appeared conducive to the general welfare, might command them to submit to any ordinance it might issue, as in the case of the *Senatusconsultum de Bacchanalibus*. (Liv. xxxix. 14.) Many regulations also, which were part of the Roman law, especially such as related to usury, sureties, wills, and innumerable other things (Liv. xxxv. 7; Gaius, iii. 121, &c.; Cic. *pro Balb.* 8), were introduced among the Socii, and nominally received by them voluntarily. (Cic. *L. a.*; Gell. xvi. 13, xix. 8.) The Romans thus gradually united the Italians with themselves, by introducing their own laws among them; but as they did not grant to them the same civic rights the Socii ultimately demanded them arms in their hands.

Among the duties which the Italian Socii had to perform towards Rome the following are the principal ones: they had to send subsidies in troops, money, corn, ships, and other things, whenever Rome demanded them. (Liv. xxvi. 39, xxviii. 45, xxxv. 16, &c.) The number of troops requisite for completing or increasing the Roman armies was decreed every year by the senate (Liv. *passim*), and the consuls fixed the amount which each allied nation had to send, in proportion to its population capable of bearing arms, of which each nation was obliged to draw up accurate lists, called *formulae*. (Liv. xxxiv. 56; Polyb. ii. 23, &c.; Liv. xxii. 57, xxvii. 10.) The consul also appointed the place and time at which the troops of the Socii, each part under its own leader, had to meet him and his legions. (Polyb. vi. 21, 26; Liv. xxxiv. 56, xxxvi. 3, xli. 5.) The infantry of the allies in a consular army was usually more numerous than that of the Romans; the cavalry was generally three times the number of the Romans (Polyb. iii. 108, vi. 26, 30): but these numerical proportions were not always observed. (Polyb. ii. 24, iii. 72.) The consuls appointed twelve praefects as commanders of the Socii, and their power answered to that of the twelve military tribunes in the consular legions. (Polyb. vi. 26, 37.) These praefects, who were probably taken from the allies themselves, and not from the Romans, selected a third of the cavalry, and a fifth of the infantry of the Socii, who formed a select detachment for extraordinary cases, and who were called the *extraordinarii*. The remaining body of the Socii was then divided into two parts, called the right and the left wing. (Polyb. *L. c.*; Liv. xxxi. 21, xxxv. 5.) The infantry of the wings was, as usual, divided into cohorts, and the cavalry into *turmae*. In some cases also legions were formed of the Socii. (Liv. xxxvii. 39.) Pay and clothing were given to the allied troops by the states or towns to which they belonged, and which appointed quaestors or paymasters for this purpose (Polyb. vi. 21; Cic. *a. Verr.* v. 24); but Rome furnished them with provisions at the expense of the republic: the infantry received the same as the Roman infantry, but the cavalry only received two-thirds of what was given to the Roman cavalry. (Polyb. vi. 39; Cic. *pro Balb.* 20.) In the distribution of the spoil and of conquered lands they frequently received the same share as the Romans. (Liv. xl. 43, xli. 7, 13,

xlv. 43, xlii. 4.) The Socii were also sometimes sent out as colonists with the Romans. (Appian, *de Bell. Civ.* i. 24.) They were never allowed to take up arms of their own accord, and disputes among them were settled by the senate. Notwithstanding all this, the socii fell gradually under the arbitrary rule of the senate and the magistrates of Rome; and after the year B. C. 173, it even became customary for magistrates, when they travelled through Italy, to require the authorities of allied towns to pay homage to them, to provide them with a residence, and to furnish them with beasts of burden when they continued their journey. (Liv. xlii. 1.) Gellius (x. 3) mentions a number of other vexations, which the Roman magistrates inflicted upon the Socii, who could not venture to seek any redress against them. The only way for the allies to obtain protection against such arbitrary proceedings, was to enter into a kind of clientela with some influential and powerful Roman, as the Samnites were in the clientela of Fabricius Luscinus (Val. Max. iv. 3. § 6), and the senate, which was at all times regarded as the chief protector of the Socii, not only recognised such a relation of clientela between Socii and a Roman citizen, but even referred to such patrons cases for decision which otherwise it might have decided itself. (Dionys. ii. 11; Liv. ix. 20; Cic. *pro Sull.* 21.) Socii who revolted against Rome were frequently punished with the loss of their freedom, or of the honour of serving in the Roman armies. (Gell. l. c.; Appian, *de Bell. Hannib.* 61; Strab. v. p. 385, vi. p. 389; Fest. s. v. *Brutiani*.) Such punishments however varied according to circumstances. After repeated and fruitless attempts to obtain the full Roman franchise by legal means, the Italian allies broke out in open war against Rome, the result of which was that she was compelled to grant what she had before obstinately refused.

After the civitas had been obtained by all the Italians by the Lex Julia de Civitate, the relation of the Italian Socii to Rome ceased. But Rome had long before this event applied the name Socii to foreign nations also which were allied with Rome, though the meaning of the word in this case differed from that of the Socii Italici. Livy (xxxiv. 57; comp. xxxv. 46) distinguishes two principal kinds of alliances with foreign nations: 1. *foedus aequum*, such as might be concluded either after a war in which neither party had gained a decisive victory, or with a nation with which Rome had never been at war; 2. a *foedus iniquum*, when a foreign nation conquered by the Romans was obliged to enter the alliance on any terms proposed by the conquerors. In the latter case the foreign nation was subject to Rome, and obliged to comply with anything that Rome might demand. But all foreign Socii, whether they had an equal or unequal alliance, were obliged to send subsidies in troops when Rome demanded them; these troops, however, did not, like those of the Italian Socii, serve in the line, but were employed as light-armed soldiers, and were called *milites auxiliares*, *auxiliarii*, *auxilia*, or sometimes *auxilia externa*. (Polyb. ii. 32; Liv. xxi. 46, &c., xxii. 22, xxvii. 37, xxxv. 11, xlii. 29, 35.) Towards the end of the republic all the Roman allies, whether they were nations or kings, sank down to the condition of mere subjects or vassals of Rome, whose freedom and independence consisted in

nothing but a name. (Walter, *Geogr. d. Röm. Rechts*, p. 192, &c.; compare *FÖRDERER'S CIVILTÄTER*.) [L. S.]

SODALI'TIUM. [AMBITUS.]

SOLA'RIVM. [HOROLOGIVM, p. 616, b; DOMUS, p. 429, b.]

SO'LEA was the simplest kind of sandal [SANDALIUM], consisting of a sole with little more to fasten it to the foot than a strap across the instep. (Gellius, iii. 14, xiii. 21.) It was sometimes made of wood (Isid. *Orig.* xix. 33), and worn by rustics (καλοπέδιλα, Theocrit. xxv. 102, 103), resembling probably the wooden sandals which now form part of the dress of the Capuchins. The solea, as worn by the upper classes, was adapted chiefly for wearing in the house, so that when a man went out to dinner, he walked in shoes [CALCEUS], taking with him slippers [SOCCUS] or soleae, which he put on when he entered the house. Before reclining at table, these were taken away by a servant (see woodcut, p. 308; Plaut. *Truc.* ii. 4. 16; Ovid. *Ar. Am.* ii. 212; Mart. viii. 59. 14); consequently when dinner was over it was necessary to call for them. (Plaut. *Truc.* ii. 4. 12, *Most.* ii. 1. 37; Hor. *Sat.* ii. 8. 77.) But, according to the state of the roads or of the weather, the shoes or boots were again put on in order to return home, the soleae being carried, as before, under the arm. (Hor. *Epist.* i. 13. 15.) When circumstances were favourable, this change of the shoes for slippers or soleae was not considered necessary, the latter being worn in the streets. (Mart. xii. 88.)

Soleae lignae, soles or shoes of wood, were put on, under the authority of the Roman law, either for the purpose of torture, or perhaps merely to indicate the condition of a criminal, or to prevent his escape. (Cic. *Invent.* ii. 50, ad *Herenn.* i. 13.) In domestic life the sandal commonly worn by females was often used to chastise a husband and to bring him into subjection. (Menander, p. 68. 186, ed. Meineke: *solea objungere rubra*, Pers. v. 169; *sandalio*, Ter. *Eunuch.* v. 8. 4; Juv. vi. 516.)

Iron shoes (*soleae ferreae*) were put on the feet of mules (Catull. xvii. 26); but instead of this, Nero had his mules shod with silver (Sueton. *Nero*, 30), and his empress Poppaea her's with gold. (Plin. *H. N.* xxxiii. 11. s. 49.) [J. Y.]

SORTES, lots. It was a frequent practice among the Italian nations to endeavour to ascertain a knowledge of future events by drawing lots (*sortes*): in many of the ancient Italian temples the will of the gods was consulted in this way, as at Praeneste, Caere, &c. [ORACULUM, p. 843, a.] Respecting the meaning of Sors see Cic. *de Div.* ii. 41.

These sortes or lots were usually little tablets or counters, made of wood or other materials, and were commonly thrown into a sitella or urn, filled with water, as is explained under *STRULA*. The lots were sometimes thrown like dice. (Suet. *Tib.*

14.) The name of Sortes was in fact given to anything used to determine chances (compare Cic. *de Div.* i. 34), and was also applied to any verbal response of an oracle. (Cic. *de Div.* ii. 56; Virg. *Aen.* iv. 346, 377.) Various things were written upon the lots according to circumstances, as for instance the names of the persons using them, &c.: it seems to have been a favourite practice in later times to write the verses of illustrious poets upon little tablets, and to draw them out of the urn like other lots, the verses which a person thus obtained being supposed to be applicable to him: hence we read of *Sortes Virgilianae*, &c. (Lamprid. *Alex. Sever.* 14; Spartian. *Hadr.* 2.) It was also the practice to consult the poets in the same way as the Mohammedans do the Koran and Hafiz, and many Christians the Bible, namely, by opening the book at random and applying the first passage that struck the eye to a person's own immediate circumstances. (August. *Confess.* iv. 3.) This practice was very common among the early Christians, who substituted the Bible and the Psalter for Homer and Virgil: many councils repeatedly condemned these *Sortes Sanctorum*, as they were called. (Gibbon, *Decline and Fall*, c. xxxviii. note 51.) The Sibylline books were probably also consulted in this way. [SIBYLLINI LIBRI.] Those who foretold future events by lots were called *Sortilegi*. (Lucan, ix. 581.)

The *Sortes Conviviales* were tablets sealed up, which were sold at entertainments, and upon being opened or unsealed entitled the purchaser to things of very unequal value; they were therefore a kind of lottery. (Suet. *Octav.* 75; Lamprid. *Heliogab.* 22.)

SPECULUM (κατόπτρον, ἑσώπτερον, ἑσώπτερον), a mirror, a looking-glass. The use of mirrors is of very high antiquity (*Job*, xxxvii. 18; *Ecclus.* xxxviii. 8), but they are not mentioned by Homer, even when he describes in so circumstantial a manner the toilet of Hera. In the historical times of Greece they are frequently spoken of (*Xen. Cyr.* vii. 1. § 2; Eurip. *Medea*, 1161, *Orest.* 1112, &c.), and they were probably known in Greece long before, since every substance capable of receiving a fine polish would answer the purpose of a mirror. Thus basins were employed instead of mirrors (Artemiod. *Onesir.* iii. 30. p. 279, ed. Reiff), and also cups, the inside of which was sometimes so disposed, that the image of the person who drank from them was seen multiplied. (Plin. *H. N.* xxxiii. 9. s. 45; compare Vopisc. *Prob.* 4.)

The looking-glasses of the ancients were usually made of metal, at first of a composition of tin and copper, but afterwards more frequently of silver. (Plin. *l. c.*) Pliny says that silver mirrors were first made by Praxiteles in the time of Pompey the Great, but they are mentioned as early as that of Plantus. (*Most.* i. 3. 111.) Under the empire the use of silver mirrors was so common, that they began to be used even by maid servants (Plin. *H. N.* xxxiv. 17. s. 48): they are constantly mentioned in the Digest, when silver plate is spoken of

(33. tit. 6. s. 3; 34. tit. 2. s. 19. § 8). At first they were made of the purest silver, but metal of an inferior quality was afterwards employed. (Plin. *H. N.* xxxiii. 9. § 45.) Frequently too the polished silver plate was no doubt very alight, but the excellence of the mirror very much depended on the thickness of the plate, since the reflection was stronger in proportion as the plate was thicker. (Vitruv. vii. 3. p. 204, ed. Bip.) We find gold mirrors mentioned once or twice by ancient writers (Eurip. *Heccb.* 925; Senec. *Quaest. Nat.* i. 17; Aelian, *V. H.* xii. 58); but it is not impossible, as Beckmann has remarked, that the term golden rather refers to the frame or ornaments than to the mirror itself, as we speak of a gold watch, though the cases only may be of that metal.

Besides metals, the ancients also formed stones into mirrors, but these are mentioned so seldom that we may conclude they were intended for ornament rather than for use. Pliny (*H. N.* xxxvi. 26. s. 67) mentions the obsidian stone, or, as it is now called, the Icelandic agate, as particularly suitable for this purpose. Domitian is said to have had a gallery lined with *phænix*, which by its reflection showed every thing that was done behind his back (Suet. *Dom.* 14), by which Beckmann understands a calcareous or gypseous spar, or selenite, which is indeed capable of reflecting an image; but we cannot therefore conclude that the ancients formed mirrors of it. Mirrors were also made of rubies according to Pliny (*H. N.* xxxvii. 7. s. 25), who refers to Theophrastus for his authority, but he seems to have misunderstood the passage of Theophrastus (*de Lapid.* 61), and this stone is never found now sufficiently large to enable it to be made into a mirror. The emerald, it appears, also served Nero for a mirror. (Plin. *H. N.* xxxvii. 5. s. 16; Isidor. xvi. 7.)

The ancients seem to have had glass mirrors also like ours, which consist of a glass plate covered at the back with a thin leaf of metal. They were manufactured as early as the time of Pliny at the celebrated glass-houses of Sidon (Plin. *H. N.* xxxvi. 26. s. 66), but they must have been inferior to those of metal, since they never came into general use and are never mentioned by ancient writers among costly pieces of furniture, whereas metal mirrors frequently are. Pliny seems to allude to them in another passage (*H. N.* xxxiii. 9. s. 45), where he speaks of gold being applied behind a mirror, which we can understand, if we admit that Pliny was acquainted with glass mirrors.

Of mirrors made of a mixture of copper and tin, the best were manufactured at Brundisium. (Plin. *H. N.* xxxiii. 9. s. 45, xxxiv. 17. s. 48.) This mixture produces a white metal, which, unless preserved with great care, soon becomes so dim that it cannot be used until it has been previously cleaned and polished. For this reason a sponge with pounded pumice-stone was generally fastened to the ancient mirrors. (Plat. *Tymaeus*, p. 72, c; Vossius, *ad Catull.* p. 97.)

Looking-glasses were generally small and such as could be carried in the hand. Most of those which are preserved in our Museums are of this kind; they usually have a handle, and are of a round or oval shape. Their general form is shown in the woodcut annexed. (Caylus, *Recueil d'Antiquités*, vol. v. pl. 62.)

Instead of their being fixed so as to be hung against the wall or to stand upon the table or floor, they

were generally held by female slaves before their mistresses when dressing (Propert. iv. 7. 75, 76), which office was also performed sometimes by the lover, when admitted to the toilet of his mistress. (Ovid. *Ar. Am.* ii. 216.) On ancient vases we sometimes find female slaves represented holding up mirrors to their mistresses. (Tischbein, *Engrav. from ancient Vases*, vol. i. pl. 10.)

Looking-glasses, however, were also made of the length of a person's body (*specula totis paria corporibus*, Senec. *Quaest. Nat.* i. 17) : of which kind the mirror of Demosthenes must have been. (Quintil. *Inst. Or.* xi. 3. § 68.) They were fastened to the walls sometimes (*speculum parietis affixum*, Dig. 34. tit. 2. s. 19. § 8; Vitruv. ix. 6. (9.) p. 280. Bip.), though not generally. Suetonius in his life of Horace speaks of an apartment belonging to that poet, which was lined with mirrors (*speculatum cubiculum*), which expression, however, Lessing considers as contrary to the Latin idiom, and therefore regards the whole passage as a forgery. That there were, however, rooms ornamented in this way, is probable from Claudian's description of the chamber of Venus, which was covered over with mirrors, so that whichever way her eyes turned she could see her own image. (*Hymn. in Nupt. Honor. et Mar.* 106, &c.) We frequently find the mirror mentioned in connection with Venus (Athen. xv. p. 687, c.), but Minerva was supposed to make no use of it. (Callim. *Hymn. in Lavacr. Pallad.* 17.)

(Spanheim, *Obsev. in Callimachi Hymnum in lavacrum Palladis*, p. 547, Ultraj. 1697; Ménard, *Recherches sur les Miroirs des Anciens in l'Histoire de l'Académie des Inscri.* vol. xxiii. p. 140; Caylus, *Recueil d'Antiquités*, iii. p. 331, v. p. 173; Beckmann, *History of Inventions*, vol. iii. p. 164, transl.; Böttiger, *Sabina*, vol. i. pp. 133, 152, vol. ii. pp. 145, 169, *Griechischen Vasengemälden*, vol. iii. p. 46; Becker, *Gallus*, vol. i. p. 97, vol. ii. p. 111.)

SPI/CULUM. [HASTA, p. 589, a.]

SPINTER or SPINTHER. [ARMILLA.]

SPIRA (σπειρα), dim. SPIRULA (Servius in *Virg. Aen.* ii. 217), the base of a column.

This member did not exist in the Doric order of Greek architecture [COLUMNA], but was always present in the Ionic and Corinthian, and, besides the bases properly belonging to those orders, there

was one called the Attic, which may be regarded as a variety of the Ionic [ATTICURGAS]. The term occurs frequently in Vitruvius (iii. 3. § 2; 4. § 1, 5; 5. § 1—4, iv. 1. § 7, v. 9. § 4, ed. Schneider) and in Pliny (*H.N.* xxxvi. s. s. 4; 23. a. 56). They adopted it from the writings of Greek architects, whose works have perished. It is in fact the Greek term σπειρα, which was applied to this member of a column (Pollux, vii. 121) probably on account of its resemblance to a coil of rope. In ancient Greek inscriptions σπειρα denotes the base of Ionic and Corinthian pillars, being applied to those of the temples of Minerva Polias at Athens (C. O. Müller, *Min. Pol. Sacra*, pp. 35, 50; Böckh, *Corp. Inscr. Gr.* i. pp. 261—286), and of Jupiter at Labranda. (C. Fellows, *Exc. in Asia Minor*, pp. 262, 331.)

In the Tuscan and the Roman Doric the base consisted of a single torus (Festus, s. v. *Spira*), sometimes surmounted by an astragal. In the Ionic and Attic it commonly consisted of two tori (*torus superior* and *torus inferior*) divided by a scotia (τρόχιλος), and in the Corinthian of two tori divided by two scotiae. The upper torus was often fluted (βαθυστόμος), and surmounted by an astragal [ASTRAGALUS], as in the left-hand figure of the annexed woodcut, which shows the form of the base in the Ionic temple of Panops on the Iliassus. The right-hand figure in the same woodcut shows the corresponding part in the temple of Minerva Polias at Athens. In this the upper torus is wrought with a plaited ornament, perhaps designed to represent a rope or cable. In these two temples the spira rests not upon a plinth

(*plinthus*, πλινθος), but on a podium. In Ionic buildings of a later date it rests on a square plinth corresponding in its dimensions with the ABACUS. For other examples, see Mauch, *Architektonische Ordnungen*. [J. Y.]

SPI'THAME (σπιθαμή), a span, a Greek measure equal to 3-4ths of the foot. There was no proper Roman measure corresponding to it, but the later writers used *palmus* in this sense; the early writers express the Greek span properly by *doctrans*. [MENSURA, p. 751, b; PALMUS.] [P. S.]

SPO'LIA. Four words are commonly employed to denote booty taken in war, *Præda*, *Manubiae*, *Eremiae*, *Spolia*. Of these, *præda* bears the most comprehensive meaning, being used for plunder of every description. [PRÆDA.] *Manubiae* was the money which the quaestor realised from the sale of those objects which constituted *præda* (Gell. xiii. 24; Cic. *de Leg. Agr.* ii. 22.) The term *Eremiae* indicates any thing stripped from the person of a foe, while *Spolia*, properly speaking, ought to be confined to armour and weapons, although both words are applied loosely to trophies such as cha-

riots, standards, beaks of ships and the like, which might be preserved and displayed. (See Doederlein, *Lat. Syn.* vol. iv. p. 337; Ramshorn, *Lat. Syn.* p. 869; Habicht, *Syn. Handwörterbuch*, n. 758.)

In the heroic ages no victory was considered complete unless the conquerors could succeed in stripping the bodies of the slain, the spoils thus obtained being viewed (like scalps among the North American Indians) as the only unquestionable evidence of successful valour; and we find in Homer that when two champions came forward to contend in single combat, the manner in which the body and arms of the vanquished were to be disposed of formed the subject of a regular compact between the parties. (Hom. *Il.* vii. 75, &c., xxii. 254, &c.) Among the Romans, spoils taken in battle were considered the most honourable of all distinctions; to have twice stripped an enemy, in ancient times, entitled the soldier to promotion (Val. Max. ii. 7. § 14), and during the second Punic war, Fabius when filling up the numerous vacancies in the senate caused by the slaughter at Cannae and by other disastrous defeats, after having selected such as had borne some of the great offices of state, named those next "qui spolia ex hoste fixa domi haberent, aut civicam coronam accipissent" (Liv. xxiii. 23). Spoils collected on the battle field after an engagement, or found in a captured town were employed to decorate the temples of the gods, triumphal arches, porticoes, and other places of public resort, and sometimes in the hour of extreme need served to arm the people (Liv. xxii. 57, xxiv. 21, x. 47; Val. Max. viii. 6. § 1; Sil. Ital. x. 599), but those which were gained by individual prowess were considered the undoubted property of the successful combatant, and were exhibited in the most conspicuous part of his dwelling (Polyb. vi. 39), being hung up in the atrium, suspended from the door-posts, or arranged in the vestibulum, with appropriate inscriptions. (Liv. x. 7, xxxviii. 43; Cic. *Philipp.* ii. 28; Suet. *Nero*, 88; Virg. *Aen.* ii. 504, iii. 286, Tibull. i. l. 54; Propert. iii. 9. 26; Ovid. *Ar. Am.* ii. 743; Sil. Ital. vi. 446.) They were regarded as peculiarly sacred, so that even if the house was sold the new possessor was not permitted to remove them. (Plin. *H. N.* xxxv. 2.) A remarkable instance of this occurred in the "rostrata domus" of Pompey, which was decorated with the beaks of ships captured in his war against the pirates; this house passed into the hands of Antonius the triumvir (Cic. *Philipp.* i. c.), and was eventually inherited by the emperor Gordian, in whose time it appears to have still retained its ancient ornaments. (Capitolin. *Gordian.* 3.) But while on the one hand it was unlawful to remove spoils, so it was forbidden to replace or repair them when they had fallen down or become decayed through age (Plutarch, *Quaest. Rom.* 37), the object of this regulation being doubtless to guard against the frauds of false pretenders.

Of all spoils the most important were the *Spolia Opima*, a term applied to those only which the commander-in-chief of a Roman army stripped in a field of battle from the leader of the foe. (Liv. iv. 20.) Festus (s. v. *Opima*) gives the same definition as Livy, but adds "M. Varro ait opima spolia esse [etiam] si manipularis miles detraxerit dummodo duci hostium," a statement, if correctly quoted, directly at variance with the opinion generally received and acted upon. Thus when

M. Crassus, in the fifth consulship of Octavianus (n. c. 29), slew Deldo, king of the Bastarnae, he was not considered to have gained spolia opima because acting under the auspices of another (Dion Cass. li. 24; compare Val. Max. iii. 2. § 6), and Plutarch (*Marcell.* 8) expressly asserts that Roman history up to his own time afforded but three examples. The first were said to have been won by Romulus from Acro, king of the Caeninenses, the second by Aulus Cornelius Cossus from Lar Tolumnius king of the Veientes, the third by M. Claudius Marcellus from Viridomarus (or Βριτόμαρος as he is called by Plutarch), king of the Gaesatae. In all these cases, in accordance with the original institution, the spoils were dedicated to Jupiter Feretrius. The honours of spolia opima were voted to Julius Caesar during his fifth consulship (n. c. 44, the year of his death), but it was not even pretended that he had any legitimate claim to this distinction. (Dion Cass. xlii. 4.) (The question with regard to the true definition of spolia opima is discussed with great learning by Perizonius, *Animad. Hist.* c. 7.) [W. R.]

SPORTULA. In the days of Roman freedom clients were in the habit of testifying respect for their patron by thronging his atrium at an early hour, and escorting him to places of public resort when he went abroad. As an acknowledgment of these courtesies some of the number were usually invited to partake of the evening meal. After the extinction of liberty the presence of such guests, who had now lost all political importance, was soon regarded as an irksome restraint, while at the same time many of the noble and wealthy were unwilling to sacrifice the pompous display of a numerous body of retainers. Hence the practice was introduced under the empire of bestowing on each client, when he presented himself for his morning visit, a certain portion of food as a substitute and compensation for the occasional invitation to a regular supper (*coena recta*), and this dole, being carried off in a little basket provided for the purpose, received the name of *sportula*. Hence also it is termed by Greek writers on Roman affairs δειπνον ἀνδ στυπιδος, which however must not be confounded with the δειπνον ἀνδ στυπιδος of earlier authors, which was a sort of pic-nic. [CORNIA, p. 304, b.] For the sake of convenience it soon became common to give an equivalent in money, the sum established by general usage being a hundred quadrantes. (Juv. i. 120; Martial. x. 70, 75.) Martial indeed often speaks of this as a shabby pittance (*centum miselli quadrantes*, iii. 7, compare i. 60, iii. 14, x. 74), which, however, he did not scorn himself to accept (x. 75), but at the same time does not fail to sneer at an upstart who endeavoured to distinguish himself by a largess to a greater amount on his birthday (x. 28). The donation in money, however, did not entirely supersede the *sportula* given in kind, for we find in Juvenal a lively description of a great man's vestibule crowded with dependents, each attended by a slave bearing a portable kitchen to receive the viands and keep them hot while they were carried

home (iii. 249). If the sketches of the satirist are not too highly coloured, we must conclude that in his time great numbers of the lower orders derived their whole sustenance and the funds for ordinary expenditure exclusively from this source, while even the highborn did not scruple to increase their incomes by taking advantage of the ostentatious profusion of the rich and vain. (Juv. i. 95.) A regular roll was kept at each mansion of the persons, male and female, entitled to receive the allowance; the names were called over in order, the individuals were required to appear in person, and the almoner was ever on his guard to frustrate the roguery of false pretenders (Juv. l. c.), whence the proverb quoted by Tertullian (*c. Marcion*. iii. 16), *sportulam furunculus capiat*. The morning, as we have seen above (Juv. i. 128), was the usual period for these distributions, but they were sometimes made in the afternoon. (Martial. x. 70.)

Nero, imitating the custom of private persons, ordained that a sportula should be substituted for the public banquets (*publicas coenae*) given to the people on certain high solemnities; but this unpopular regulation was repealed by Domitian. (Suet. *Ner.* 16, *Dom.* 7; Martial. viii. 50.)

When the Emperor Claudius on one occasion resolved unexpectedly to entertain the populace with some games which were to last for a short time only, he styled the exhibition a *sportula*, and in the age of the younger Pliny the word was commonly employed to signify a gratuity, gift, or emolument of any description. (Plin. *Ep.* ii. 14, x. 118.)

(Compare a dissertation on the Sportula by Buttmann in the *Kritische Bibliothek* for 1821; see also Becker, *Gallus*, vol. i. p. 147.) [W. R.]

STABULARIUS. [RECEPTE ACTIO.]

STADIUM (*στάδιον* and *τὸ στάδιον*) 1. The foot-race course at Olympia and the other places in Greece where games were celebrated. It was originally intended for the foot-race, but the other contests which were added to the games from time to time [OLYMPIA] were also exhibited in the Stadium, except the horse-races, for which a place was set apart, of a similar form with the stadium, but larger: this was called the HIPPODROMUS (*ἵπποδρόμος*).

The stadium was an oblong area terminated at one end by a straight line, at the other by a semicircle having the breadth of the stadium for its base. Round this area were ranges of seats rising above one another in steps.

It was constructed in three different ways, according to the nature of the ground. The simplest form was that in which a place could be found which had by nature the required shape, as at Laodicea. Most commonly, however, a position was chosen on the side of a hill, and the stadium was formed on one side by the natural slope, on the other by a mound of earth (*γῆς χῶμα*), as at Olympia, Thebes, and Epidaurus. (Pausan. ii. 27. § 6, vi. 20. § 6, ix. 23. § 1.) Sometimes, however, the stadium was on level ground, and mounds of earth were cast up round it to form seats, and covered with stone or marble. We have two celebrated examples of this construction in the Pythian Stadium at Delphi and the Panathenaic at Athens. The former was originally constructed of Parnassian stone, and afterwards covered with Pentelic marble by Herodes Atticus (Paus. x. 32. § 1), who

adorned in the same manner the stadium at Athens, which had been originally constructed on the banks of the Ilissus by the orator Lycurgus. The marble covering, which took four years to complete, has now disappeared, but the area is still left, with some ruins of the masonry. (Paus. i. 19. § 7; Leake's *Topography of Athens*.)

The stadium sometimes formed a part of the buildings of the gymnasium [GYMNASIUM], at other times it was placed in its neighbourhood, and often, as at Athens, stood entirely by itself. That at Olympia was in the sacred grove called Altis.

The size of the Grecian stadia varied both in length and breadth; but this variety is in all probability to be understood of the size of the whole enclosure, not of the length of the part marked out for the race; the latter appears to have been fixed, while the former was naturally different, according to the accommodation to be provided for spectators, or the magnificence which the builder might wish to confer upon the structure. The fixed length of the course, between the pillars which marked the beginning and the end of the race, was 600 Greek feet. There was a tradition that Hercules measured it out originally by his own foot. It is not improbable that Pheidon, who claimed to be a descendant of Hercules, and who presided as agonothete at the Olympic games, may have fixed the length of the stadium according to the standard of measure which he established.

The accounts left by ancient writers of the arrangement of the parts of the stadium are scanty, but from a comparison of them with existing remains of stadia we may collect the following particulars.

At one end a straight wall shut in the area, and here were the entrances, the starting-place for the runners, and (at Olympia) an altar of Endymion. At the other end, at or near the centre of the semicircle, and at the fixed distance from the starting-place, was the goal, which was the termination of the simple foot-race, the runners in which were called *στάδιοδρομοί*: the race itself is called *στάδιον* and *δρόμος*: in the *διαυλος δρόμος* the racers turned round this and came back to the starting-place. The starting-place and goal had various names: the former was called *ἀφεσις*, *γραμμή*, *ὄσκληξ*, and *βαλῆις*: the latter *τέρμα*, *βατήρ*, *τέλος*, *καμπτήρ* and *νύσσα*. The term *γραμμή* is explained as the *line* along which the racers were placed before starting; *ὄσκληξ*, which means the *lash of a whip*, is supposed to have been a cord which was stretched in front of the racers to restrain their impatience, and which was let fall when the signal was given to start; the name *καμπτήρ* was applied to the goal because the runners in the *διαυλος* and *ὀδύλιχος* turned round it to complete their course. These terms are often applied indifferently to the starting-place and the goal; probably because the starting-place was also the end of all races, except the simple *στάδιον*. The starting-place and goal were each marked by a square pillar (*στήλαι*, *κίονες κυβοειδεῖς*), and half way between these was a third. On the first was inscribed the word *ἀρίστανε*, on the second *σπείδε*, on the third *κάμψον*. The *ὀδύλιχοδρόμοι* turned round both the extreme pillars till they had completed the number of stadia of which their course consisted, which appears to have been different on different occasions, for the length of the

στάγιος δρόμος is variously stated at 6, 7, 8, 12, 20, and 24 stadia. (Schol. ad Soph. Electr. 691.)

The semicircular end of the area, which was called σφενδοθή, and was not used in the races, was probably devoted to the other athletic sports. This σφενδοθή is still clearly seen in the Ephesian and Messenian stadia, in the latter of which it is surrounded by 16 rows of seats. The area of the stadium was surrounded by the seats for spectators, which were separated from it by a low wall or podium.

Opposite to the goal, on one side of the stadium, were the seats of the Hellanodicae, for whom there was a secret entrance into the stadium (κρυπτή ἐσόδος), and on the other side was an altar of white marble, on which the priestesses of Demeter Chamyne sat to view the games. The area was generally adorned with altars and statues.

Such was the general form and arrangement of the Greek stadium. After the Roman conquest of Greece the form of the stadium was often modified so as to resemble the amphitheatre by making both its ends semicircular, and by surrounding it with seats supported by vaulted masonry, as in the Roman amphitheatre. The Ephesian stadium still has such seats round a portion of it. A restoration of this stadium is given in the following woodcut, copied from Krause.

A is the boundary wall at the Aphesia, 77 feet deep, B C the sides, and D the semicircular end, of the same depth as A; F F the area, including the σφενδοθή; b b pieces of masonry jutting out into the area; e e the entrances; from o to p is the length of an Olympic stadium; from q to z the range of amphitheatrical seats mentioned above.

(Krause, *Die Gymnastik und Agnostik der Hellenen*, p. 131, § 14; Müller, *Archäol. der Kunst*, § 290; OLYMPIA.)

2. The word also signifies the chief Greek measure for itinerary distances, which was adopted by the Romans also, chiefly for nautical and astronomical measurements. It was equal to 600 Greek or 625 Roman feet, or to 125 Roman paces; and the Roman mile contained 8 stadia. (Herod. ii. 149; Plin. *H.N.* ii. 23. s. 21; Columell. *R.R.* v. 1; Strabo, vii. p. 497.) Hence the stadium contained 606 feet 9 inches English. (See the Table.) This standard prevailed throughout Greece, under the name of the Olympic stadium, so called because, as above stated, it was the exact length of the stadium or foot-race course at Olympia, measured between the pillars at the two extremities of the course. There were multiples of the measure, corresponding to the longer races; thus the *διπλως* was 2 στάδια, and the *στάγιος* 6 or more. (See above.) The *ισχυρόν* of 4 stadia we may presume to have been the length of one double course in the chariot race, which would give 2 stadia for the distance between the pillars in the hippodrome [HIPPODROMUS, p. 611, a]. In mathematical geography, the ordinary computation was 600 stadia to a degree of a great circle of the earth's surface. The important question, whether the stadium was a uniform measure throughout Greece, is fully discussed under *MENSURA*, p. 755. [P.S.]

STALAGMIA. [INAURIS.]

STATER (στατήρ), which means simply a standard (in this case both of weight and more particularly of money), was at first the name of the chief coin in the early Greek systems, namely, the *didrachm.* [NUMMUS, pp. 811, b, 812, a.] When gold began to be coined, the name was applied to the principal gold coin of Greece, which was also called *Chrysus* (χρυσός), and which in the majority of cases was conformed to the Attic standard, and therefore a stater commonly signifies a gold coin equal in weight to two Attic drachmas and in value to twenty; but there are also staters of the Euboic scale. The general subject of Greek gold money has been discussed under *AURUM*, where it is stated that the Greeks obtained their principal supply of gold from Asia. To the same quarter we must look for the origin of their gold money. The *Darius*, which came to them from Persia, has been already treated of. [DARICUS.] The stater is said to have been first coined in Lydia by Croesus. To this country, indeed, one tradition ascribes the origin both of gold and silver money (Herod. i. 94); but be this as it may, the stater of Croesus was the first gold coinage with which the Greeks were acquainted. (Herod. i. 84; Pollux, iii. 87, ix. 84.) Böckh (*Metrolog. Untersuch.* p. 129) asserts that these staters were undoubtedly formed of the pale gold or electrum which was washed down from Tmolus by the Pactolus, and which Sophocles speaks of as Sardinian electrum. (*Antig.* 1037.) [ELECTRUM.] There is, in the Hunterian collection (Plate 66. fig. 1), a very ancient coin of this pale gold, of an oval ball-like

shape, impressed with the figure of a man kneeling, holding a fish in his left hand, and in his right a knife hanging down, which Pinkerton takes for a coin of Croesus, but respecting which nothing more can be said with safety than that it is a very ancient specimen of Asiatic money. Its weight is 248½ English grains, or allowing for the loss of weight by wear, about that of the Attic tetradrachm, which was twice the weight of the stater. This, therefore would be a double stater. (Böckh, *l.c.*) At all events, in the absence of certain specimens of the Lydian stater and of an express statement of its value, we may suppose from the very silence of the Greek writers, that it did not differ materially from the stater which was afterwards current in Greece; and which was equal in weight to two drachmæ, and in value to twenty. (Hesych. *s. v.* *Χρυσός*: Pollux, iv. 173; Harpocration, *s. v.* *Δραχμός*.)

MACEDONIAN STATER. BRITISH MUSEUM.

The following were the principal Greek staters: 1. The Attic stater, which has been spoken of under AURUM. The weights of the coins there mentioned are 132·3, 132·7, 132·6, and 132·75 grains, the average of which is 132·5875 grains, which only falls short of the weight of the Attic didrachm by a little more than half a grain. [DRACHMA.] The gold of the Attic coins is remarkably pure.

2. The stater of Cyzicus was common in Greece, especially at Athens. We learn from Demosthenes (*in Phorm.* p. 914) that at a particular period (a little after *B. C.* 335) this stater passed on the Bosphorus for 28 Attic drachmæ, which, by a comparison with the then value of the daricus [DARICUS], would give for its weight about 180 grains. Several Cyzicene staters exist, but none of them come up to this weight. Hence we may conclude that the price of gold on the Bosphorus was at that time unusually high. Some of the existing coins give 160 grains, and others not more than 120, for the weight of the Cyzicene stater; but, allowing for debasement in the minting, and for subsequent wear, we may perhaps take 180 grains for about its true value, and if so, it belongs to the Euboic standard. Its value, calculated from the number of drachmæ it passed for, would be 11. 2s. 9d.

3. The Stater of Lampascus is mentioned in an Attic inscription of *B. C.* 434. Several gold coins of Lampascus are extant; they may be known by the impression of a sea-horse upon them. There are two in the British Museum of the weight of about 129 grains, which is just that of the daricus. The weights of the Lampascene staters are very unequal; and both Lampascus and Cyzicus appear to have had gold coins which were multiples of different standards. It is not improbable, that the Euboic and Attic standards existed together at these places.

4. The stater of Phocæa is mentioned by Thucydides (iv. 52) and Demosthenes (*in Boeot.* p. 1019) as in circulation in their times. Sestini

gives several of these, the largest of which, stamped with a Φ, weighs 255·42 English grains. This is a double stater, giving a single one of 127·71 grains, or 5 grains less than the Attic, and it seems to follow the standard of the daricus. Most of the others are thirds of the stater, and of a lighter comparative weight. There was also at Athens a Phocæan coin called *ἔκτρη*, and its half *ἡμιέκτρον*, and Hesychius (*s. v.* *ἔκτρη*) mentions the *ἔκτρη*, *τρίτρη*, and *τετράτρη*, as coins of gold or silver or copper. Respecting these coins, see HÆCΤÆ.

5. The stater of Macedonia was coined by Philip II. and Alexander the Great after the standard of the Attic didrachm, and of very fine gold. Under those princes it came into general circulation in Greece and throughout the Macedonian empire. The extant specimens of this coinage are very numerous.

Mr. Hussey gives the following report of an assay which was made for him of a stater of Alexander.

Silver	"	"	18 "
Alloy	"	"	0 "

The silver is an accidental admixture, or, if known to be present, was not allowed for, so that this coin may be reckoned at 133 grains of fine gold. Our sovereign, after deducting the alloy, contains 113·12 grains of fine gold. Therefore the Macedo-

nian stater = $\frac{113 \cdot 12}{133}$ of the English sovereign, or 11. 3s. 6d. 0·672 farthing. The average is however a little below this stater, but not more so than is due to wear. The stater of Philip was very recently current in Greece at the value of about 25 shillings. This standard was preserved, or very nearly so, under the later Macedonian kings, and was adopted by other states, as Epirus, Aetolia, Acarnania, and Syracuse.

Besides the staters noticed above, most of the cities of Ionia had gold coins, but their value is very doubtful. There are specimens in existence from Chios, Teos, Colophon, Smyrna, Ephesus, and many other places. Samos, Siphnus, Thasos, the Greek cities of Sicily, and Cyrene had gold money at an early period.

Pollux mentions a Corinthian stater as used in Sicily which he calls *δεκαλίντος στατήρ*, and makes equal to 10 Aeginetan obols. (Pollux, iv. 174, ix. 80.) The explanation of this statement is very difficult, and depends in a great measure on the disputed question whether the Corinthian money followed the Attic or the Aeginetan standard. [See NUMMUS, p. 812, a.]

In calculating the value of the stater in our money, the ratio of gold to silver must not be overlooked. Thus the stater of Alexander, which we have valued, according to the present worth of gold, at 11. 3s. 6d., passed for twenty drachmæ, which, according to the present value of silver, were worth only 16s. 3d. But the former gives the better idea of the worth of the stater, the difference arising from the greater value of silver in ancient times than now. [ARGENTUM.]

Besides the stater itself, there were, as appears from the above remarks, double staters, and the halves (*ἡμιχρυσοὺς*, *ἡμιστατήρες*), quarters, thirds, sixths, and twelfths of the stater. The coins of the last four denominations are, however, much less common than the single, double, and half staters.

The term *στατήρ*, in later times, was applied to

earth moistened with tears. (Hesiod. *Theogon.* 571, &c.; Stob. *Serm.* 1.) The name plastic art (ἡ πλαστική), by which the ancients sometimes designate the art of statuary, properly signifies to form or shape a thing of clay. But notwithstanding the great facility of making figures of clay, they are not often mentioned in the early ages of Greece, while in Italy the *Diï fictiles* (πῆλιναι θεοί) were very common from the earliest times. Clay figures, however, never fell into disuse entirely, and in later times we find not only statues of clay, but the pediments in small or rural temples frequently contained the most beautiful reliefs in clay, which were copies of the marble reliefs of larger temples. When Pliny (*H.N.* xxxv. 43) speaks of Rhoecus and Theodorus of Samos as the inventors of the *plastica*, he seems to labour under a mistake and to confound the art of working in clay with that of casting in metal, as in later times the latter of these two arts was commonly called *plastica*. Some ancient figures of clay are still preserved.

The second material was *wood*, and figures made of wood were called ξύλα, from ξέω, "polish" or "carve." Various kinds of wood were used in statuary; we find mention of oak, cedar, cypress, sycamore, pine, fig, box, and ebony. It was chiefly used for making images of the gods, and probably more on account of the facility of working in it, than for any other reason. It should, however, be remarked, that particular kinds of wood were used to make the images of particular deities: thus the statues of Dionysus, the god of figs, were made of fig-wood. The use of wood for statues of the gods continued to the latest times; but statues of men, as, for example, some of the victors in the public games, were likewise made of wood at a time when the Greeks were sufficiently acquainted with the art of working in stone and metal.

Stone was little used in statuary during the early ages of Greece, though it was not altogether unknown, as we may infer from the relief on the Lion-gate of Mycenæ. In Italy, where the soft peperino afforded an easy material for working, stone appears to have been used at an earlier period and more commonly than in Greece. But in the historical times the Greeks used all the principal varieties of marble for their statues; the most celebrated kinds of which were the marbles of Paros and of Mount Pentelicus, both of which were of a white colour. Different kinds of marble and of different colours were sometimes used in one and the same statue, in which case the work is called Poly lithic statuary.

Bronze (χαλκος, æs), *silver*, and *gold* were used profusely in the age of society described in the Homeric poems, which is a sufficient proof that works of art in these metals were not altogether unknown in those times. At that period, however, and long after, the works executed in metal were made by means of the hammer, and the different pieces were joined together by pins, rivets, cramps, or other mechanical fastenings, and, as the art advanced, by a kind of glue, cement, or solder. Iron came into use much later, and the art of casting both bronze and iron is ascribed to Rhoecus and to Theodorus of Samos. (Paus. x. 38. § 3.) [ÆS; METALLUM.]

Ivory came into use at a later period than any of the before-mentioned materials, and then was highly valued both for its beauty and rarity. In

its application to statuary, ivory was generally combined with gold, and was used for the parts representing the flesh. Winckelmann has calculated that about one hundred statues of this kind are mentioned by the ancients.

The history of ancient art, and of statuary in particular, may be divided into five periods.

I. *First Period, from the earliest times till about Ol. 50, or 580 B.C.*

The real history of the arts is preceded by a period of a purely mythical character, which tradition has peopled with divine artists and most extraordinary productions. Three kinds of artists, however, may be distinguished in this mythical period: the first consists of gods and daemons, such as Athena, Hephaestus, the Phrygian or Dardanian Dactyli, and the Cabiri. The second contains whole tribes of men distinguished from others by the mysterious possession of superior skill in the practice of the arts, such as the Telchines and the Lycian Cyclopes. The third consists of individuals who are indeed described as human beings, but yet are nothing more than personifications of particular branches of art, or the representatives of families of artists. Of the latter the most celebrated is *Daedalus*, whose name indicates nothing but a smith, or an artist in general, and who is himself the mythical ancestor of a numerous family of artists (*Daedalids*), which can be traced from the time of Homer to that of Plato, for even Socrates is said to have been a descendant of this family. It is, however, very probable that, in Homer, *Daedalus* is merely an epithet of the god Hephaestus. (See *Dict. of Biog.* s. v.) He was believed to be an Athenian, but Crete also claimed the honour of being his native country. The stories respecting him are more like allegorical accounts of the progress of the arts than anything else. He was principally renowned in antiquity for his ξύλα, and several parts of Greece, as Boeotia, Attica, Crete, and even Libya in later times, were believed to possess specimens of his workmanship. (Paus. vii. 5, ix. 40. § 2, i. 18. § 5; Scylax, p. 53, ed. Huda.) Numerous inventions also, especially of instruments used in carving wood, are ascribed to him. He is said to have made his statues walking, which appears to mean that before his time human figures were represented with their legs close together, and that in his statues the legs were separated, which was at once a great step forward, as it imparted greater life and activity to a figure. *Smilis* (from σμίλη, a carving-knife) exercised his art in Samos, Aegina, and other places, and some remarkable works were attributed to him. (Müller, *Aeginet.* p. 97.) *Endoeus* of Athens is called a disciple of Daedalus. Various works were attributed to him by the ancients. One among them was a colossal ξύλον of Athena Polias in a temple at Erythrae in Ionia. She was represented sitting upon a σπóρυς, holding a spindle in her hand, and with a πόλος on her head. Pausanias (vii. 5. § 4) saw this ξύλον himself. (See *Dict. of Biog.* s. v. *Daedalus*, *Endoeus*, *Smilis*.)

According to the popular traditions of Greece, there was no period in which the gods were not represented in some form or other, and there is no doubt that for a long time there existed no other statues in Greece, than those of the gods; a statue of a man appears for a long time to have been a thing unheard of in Greece. The earliest repre-

representations of the gods, however, were by no means regarded as the gods themselves or even as images of them, but only as symbols of their presence; and as the imagination of a pious primitive age does not require much to be reminded of the presence of the deity, the simplest symbols were sometimes sufficient to produce this effect. Hence we find that in many places the presence of a god was indicated by the simplest and most shapeless symbols, such as unhewn blocks of stone (*ἄθροι ἀργολ*, Paus. ix. 27. § 1, 35. § 1, vii. 22. § 3), and by simple pillars or pieces of wood. (Paus. vii. 22. § 3.; Clem. Alex. Strom. i. p. 418, and p. 348, ed. Sylburg; *DOCANA* and *DAEDALA*.) Many such symbolic representations of gods were held in the greatest esteem, even in the historical ages, as sacred inheritances of former times, and remained the conventional representations of the gods notwithstanding the progress which the arts had made. The general name for a representation of a god not consisting of such a rude symbol was *ἀγάλμα*. (Ruhnkens, *ad Tim.* p. 2.)

In the Homeric poems, although the shield of Achilles, the gold and silver dogs which kept watch at the palace of Alcinoüs, and other similar things may be pure fictions, there are sufficient traces of the existence of statues of the gods; but it would seem that, as the ideas of the gods were yet gigantic and undefined, the representations of several superhuman beings were more calculated to inspire awe than to display any artistic beauty. (*Il.* xi. 36, &c.; Hesiod, *Scut. Herc.* 144, 156, 248, &c.) This was however not always the case. Temples are mentioned in several places (*Il.* i. 39, vii. 83, &c.), and temples presuppose the existence of representations of the gods. A statue of Athena is mentioned at Ilion, upon whose knees the queen places a magnificent peplos. (*Il.* vi. 92; comp. 273.) The statue thus appears to have been in a sitting position like the statues of Athena among the Ionians in general. (Strab. xiii. p. 601.) The existence of a statue of Apollo must be inferred from *Iliad* i. 28, for the *στέμμα θεοῖο* can only mean the wreath or diadem with which his statue itself used to be adorned. This statue must moreover have been represented carrying a bow, for attributes like *ἀργυρότοξος* could have no meaning unless they referred to something existing and well-known. Other proofs of representations of the gods in human form may be found in *Iliad* ii. 478, &c. iii. 396, &c. These statues were undoubtedly all *ἑῶνα*, and, as we must infer from the expressions of Homer, were far more perfect than they are said to have been previously to the time of Daedalus. A work still extant, which is certainly as old as the time of Homer, if not much older, is the relief above the ancient gate of Mycenæ, representing two lions standing on their hind legs, with a sort of pillar between them. (Paus. ii. 16. § 4; Sir W. Gell, *Argol.* pl. 8—10; Götting in the *Rheinisch. Mus.* 1841. part 2: wood-cut under *MURUS*.) These facts justify us in supposing that, at the time of Homer, the Greeks, but more especially the Ionians of Asia Minor, had made great progress in sculpture. The Ionians appear to have been far in advance of the Greeks of the mother-country. The cause of this must probably be sought in the influence which some of the nations of western Asia, such as the Lydians, Lycians, and Phoenicians, had upon the Ionian colonists, for that these nations excelled the Greeks

in various branches of the arts is abundantly attested by numerous passages in the Homeric poems. We must not however attribute too much to this foreign influence, for there were many other causes at work besides, by which the Greek colonies, not only of Asia, but of Sicily and Italy also, were carried forward in advance of the mother-country. The ancient coins of the Italian Greeks too are much more beautiful and show more individuality than those of Greece proper; we also find that Learchus of Rhegium came to Sparta at a very early period, and formed there the earliest bronze statue of Zeus, which consisted of several pieces nailed together. (Paus. iii. 17. § 6.) About the same time, as some think, Gitiadas of Sparta made a bronze statue of Athena. (Paus. iii. 17. § 13.) There is, however, very great uncertainty respecting the true dates of these artists. (See *Dict. of Biog.* s. v. *Gitiadas*, *Learchus*.) Another great work in bronze belonging to this period is the colossal statue of Zeus which was dedicated at Olympia by Cypselus or Pericander of Corinth, and for which the wealthy Corinthians were obliged to sacrifice a considerable part of their property. (Strab. viii. pp. 353, 378; Phot. and Suid. s. v. *Κυψελῆδων*.) About 650 B. C. Myron of Sicyon dedicated two *Σάλαμας* of bronze at Olympia, which were still there in the days of Pausanias (vi. 13. § 2).

The time which elapsed between the composition of the Homeric poems and the beginning of the fifth century before our æra may be termed the age of discovery; for nearly all the inventions, upon the application of which the development of the arts is dependent, are assigned to this period, which may at the same time be regarded as the first historical period in the history of art. Glauco of Chios or Samos is said to have invented the art of soldering metal (*σίδηρον κάλλειν*, Herod. i. 25). The two artists most celebrated for their discoveries were the two brothers Telecles and Theodorus of Samos, about the time of Polycrates. The most important of their inventions was the art of casting figures of metal. It is a singular circumstance, that the very two artists to whom this invention is ascribed, are said to have made their studies in Egypt; and the curious story of the two brothers executing a *ξάραον* of the Pythian Apollo in such manner, that while Telecles made the one half of the statue at Delos, the other half was made by Theodorus at Ephesus, and that when the two halves were put together, they tallied as accurately as if the whole had been the work of one artist (Diodor. i. 98), has been thought to support the Egyptian tradition that these artists were greatly assisted in the exercise of their art by what they had learnt in Egypt. But, in the first place, the whole story has a very fabulous appearance, and even admitting that the artists, as the Egyptians asserted, had actually been in their country, nobody will on this ground maintain that they learnt their art there: the utmost they could have learnt might have been some mechanical processes: the art itself must be vindicated for the Greeks. In the second place, Telecles and Theodorus are called by Diodorus sons of Rhoecus, and Pausanias himself, who was unable to discover a bronze work of Theodorus, saw at Ephesus a bronze statue which was the work of Rhoecus (x. 38. § 3.) Hence we have reason to suppose that Telecles and Theodorus learnt at any rate the art of casting metal from

their father, and not in a foreign country. Respecting the various accounts of these two artists and the time at which they lived, see the *Dict. of Biog. s. vv.* Pliny (*H. N.* xxxv. 55) says, that Pasiteles called the art of modelling clay the mother of the art of casting figures in metal (*statuaria*), and this passage has been explained as if Pasiteles meant to say that in Samos the former of these arts had given rise to the latter. But this is manifestly wrong, for from the words which follow in the text of Pliny it is clear that the meaning is, that he never executed any work in metal, marble, &c. without previously taking a model in clay.

Statues of gods in baked clay, though in general more used for domestic and private than for public worship, continued to be made as before. Many specimens of small dimensions and of very rude workmanship have been discovered in Attic graves. (See Schol. *ad Aristoph. Av.* 436.) Ornaments and reliefs on houses, porticoes, and temples were likewise very commonly made of clay, especially at Corinth and in the Cerameicus. (Paus. i. 2. § 4, i. 3. § 1.)

Representations of the gods in marble are not mentioned in Homer, although they may have existed in his time, as well as statues of wood, which are likewise not expressly mentioned. Marble is found in the ancient *Thesaurus of Orchomenos*. Pliny (*H. N.* xxxvi. 4. a. 2) calculates that works in marble were executed by Malas in Chios at the beginning of the Olympiads; and about Ol. 50 (580 B. C.). Dipoeus and Scyllis were renowned for their works in marble. The most ancient specimen of a marble statue was seen by Pausanias (i. 43. § 7) in the market-place of Megara. The work consisted of two figures, Coroeus killing Poene. There are still extant some works in marble which may with certainty be ascribed to the period previous to Ol. 50.

Before we conclude our account of the works produced during this period, we have to mention the celebrated chest of Cypselus at Olympia, which Pausanias saw and described (iv. 17. § 2, &c.). It belonged perhaps to the year 733 B. C. The chest was made of cedar-wood, which was thought most durable. It was adorned on its four sides and on the cover with figures, partly in ivory, partly in gold, and partly in the cedar-wood itself, which represented various scenes taken from the stories of the heroic ages. Pausanias does not express his opinion as to their artistic merits, but the minuteness with which he describes them is a sufficient proof that he did not consider them as bad either in design or execution. Quatremère de Quincy has attempted (in his *Jupiter Olympien*) to restore this chest and its ornaments from the description of Pausanias; but the restoration is so egregiously bad, that an eye accustomed to the contemplation of genuine works of art shrinks from it with disgust.

During the whole of this period we scarcely hear of any statues except those of the gods, and although marble and bronze began to be extensively applied, yet wood was much more generally used for representations of the gods. These statues were painted (*PICTURA*, p. 905), and in most cases dressed in the most gorgeous attire. The general character of the statues produced in the earlier times of this period is on the whole the same as among other nations at such an early period. The

style in which they are executed is called the *archaic* or the *hieratic* style. The figures are stiff and clumsy, the countenances have little or no individuality, the eyes long and small, and the outer angles turned a little upwards, the mouth, which is likewise drawn upwards at the two corners, has a smiling appearance. The hair is carefully worked, but has a stiff wiry appearance, and hangs generally down in straight lines which are curled at the ends. The arms hang down the sides of the body, unless the figure carries something in its hands. The drapery is likewise stiff, and the folds are very symmetrical and worked with little regard to nature. As the arts during this period were chiefly employed in the service of religion, they could, notwithstanding the many mechanical discoveries of the time, make but slow progress towards the production of arts of sublimity or beauty, for in the representation of the gods for public worship ancient forms hallowed by time and custom were retained and repeated without the artist being allowed, even if he was able to do it, to depart from these forms or to introduce any material change. Art therefore could not make any great progress, until it was applied to purposes in which the artist's genius was not restrained by religious custom, and not bound to conventional forms. Religion, although the fostering mother of the arts in their infancy, became a tedious restraint when they grew up to manhood. But as soon as other spheres of action were opened, religion, in her turn, could not escape from the influence of the advancement of the arts, and the old conventional forms in many places gave way to works of real merit and genius. This great and important change took place about and after Ol. 50.

II. Second Period, from Ol. 50 to Ol. 75. (580—480 B. C.)

This period, although comprising no more than one century, developed all the elements which combined to make Grecian art what it became during the third and most flourishing period of its history. Greece now came into close contact with the nations of the East and with Egypt; commerce flourished at Corinth, Aegina, Samos, Miletus, Phocæa, and other places; gold became more abundant in Greece than it had been before, and the tyrants, who sprang up in several parts of Greece, surrounded themselves with splendour and magnificence, and acted as the patrons of art to palliate their own usurpation. But all these were only external influences, and could not have produced a nation of artists like the Greeks. Epic poetry had gradually created in the minds of the people more defined ideas of their gods and heroes, while philosophy began to make men look beyond what was conventional and traditional. The athletic and orchestric arts attained about Ol. 50 a high degree of perfection, and the circumstance that about the same time the gymnastic and athletic contests at the great public festivals began to be performed naked, directed the attention of the artists as well as of the public to nature, and rendered them familiar with the beautiful forms of the human body. But the imitation of nature was at first of a very hard and severe character, and the influence of conventional forms still acted in many cases as an obstacle.

The number of artists who flourished during this period is truly astonishing. It has been said that the close connection of father and son among

the artists ceased at this time, and that individual artists worked free and according to the dictates of their own genius. But this is going too far, for it still continued to be the common practice for a son to be instructed by his father, and although this relation is usually expressed by the term *μαθητής*, yet on statues we only meet with the term *υἱός*. But, along with these families of artists, schools now became more general, in which the arts were taught and cultivated according to certain principles which were or became traditionary in each school; the schools thus acquired something of the spirit of castes or corporations.

The Ionians of Asia Minor and the islanders of the Aegean, who had previously been in advance of the other Greeks in the exercise of the fine arts, had their last flourishing period from OL 55 to OL 63 (560—528 a.c.). But this short period must have been one of the greatest as well as one of the most active and productive of numerous costly works of art. The presents which Croesus sent to Delphi, and some of which were said to have been made by the Samian Theodorus, must have been executed at the beginning of these forty years. Our want of information respecting the Ionians must be ascribed to the circumstance that we have no Pausanias to take us through their cities, and to describe and explain the works of art with which they were adorned. It is owing to the same circumstance that we know so little of Rhodes, Lemnos, Naxos, and Cyprus, although we may take for granted that these flourishing islands did not by any means neglect the arts. Respecting Chios and Samos we possess more information. Works in metal were produced in high perfection in the latter island, in Aegina and Argos, while Chios gained the greatest reputation from its possessing the earliest great school of sculpture in marble, in which Bupalus and Anthernus were the most distinguished about OL 60. Their works were scattered over various parts of Greece, and their value may be inferred from the fact that Augustus adorned with them the pediment of the temple of Apollo on the Palatine. (Plin. *H. N.* xxxvi. 4.) These works must be supposed originally to have belonged to a Greek temple of the same god, and must certainly have been of superior beauty to the works discovered in the island of Aegina, otherwise Augustus would not have chosen them as ornaments for the Palatine temple. Sicyon also possessed a celebrated school of sculptors in marble, and about OL 50 Dipoenus and Scyllis, who had come from Crete, were at the head of it, and executed several marble statues of gods. (Plin. *l. c.*) In Aetolia, whither they withdrew for a time, and at Argos, there likewise existed works in marble by these artists. Disciples of them, such as Dorycleidas, Medon, and Theocles, were engaged at Sparta and in other places. (Paus. v. 17. § 1, vi. 19.) Respecting Magna Graecia and Sicily we know few particulars, though it appears that the arts here went on improving and continued to be in advance of the mother-country. The most celebrated artists in southern Italy were Dameas of Croton and Pythagoras of Rhegium. (See the lives of these artists in the *Dictionary of Biography*.)

In Greece itself Sicyon continued from early times to be the seat of a distinguished school of artists. Here Canachus and Aristocles flourished about OL 70 as statuaries in metal, though the former was also celebrated in the art of carving in

wood and in toreutic. Pliny (*H. N.* xxxvi. 4) calls Sicyon: *dis officinarum omnium metallorum patria*. Canachus, whose works Cicero (*Brut.* 18) calls more rigid and hard than was consistent with the truth of nature, was the most distinguished among the Sicyonian artists, and his skill found employment in other parts of Greece also. His most celebrated work was a colossal bronze statue of Apollo Phileus in the Didymaeon, the description of which may give us an idea of the character of temple-statues at this period. The whole figure was stiff, very muscular, and without any elegance. In his right hand, which was stretched out, the god held a fawn, and in the left, which was somewhat lower, a bow. The features of the countenance were hard and worked in the old hieratic style; the hair was divided and hung down like wire with little curls at the end. (Müller, *Archæol.* p. 64.)

In Aegina the arts appear likewise to have continued to flourish as before, and the most celebrated among its artists was Callon, about OL 66. (Paus. iii. 18. § 5, iv. 14. § 2.) Athens, which at this time rivalled Aegina in the fine arts, appears in a short space to have made great progress, for great artists as well as great works begin now to appear in the pages of Athenian history. This was in part owing to the influence of the Peisistratids. After the death of Peisistratus himself, the first quadriga of bronze was erected in front of the temple of Pallas. The most celebrated among the Athenian sculptors were Critias and Hegias or Hegesias, both distinguished for their works in bronze. The former of them made in OL 75 the statues of Harmodius and Aristogiton. (See the articles in the *Dict. of Biog.*)

Argos also distinguished itself, and it is a curious circumstance, that the greatest Attic artists with whom the third period opens, and who brought the Attic art to its culminating point, are disciples of the Argive Ageladas (about OL 66), which at once raises this city and her other artists, such as Aristomedon, Glaucus, Dionysius, and others to a greater importance than we might otherwise be inclined to attribute to them.

Among the numerous works produced during this period we shall first mention the representations of the gods (*ἄγαθματα*). In all the statues which were made for temples as objects of worship, the hieratic style was more or less conscientiously retained, and it is therefore not in these statues that we have to seek for proofs of the progress of art. They were for the most part, as of old, made of wood, and when an old statue was to be replaced by a new one, the latter was generally a faithful copy of the former. Thus the wooden statue of Demeter at Phigaleia with a horse's head, from which dragons and other monsters sprang forth, and which bore a dolphin and a dove in its hands, was imitated by Onatas in bronze after the wooden figure had been burnt. (Paus. viii. 42.) The same adherence to ancient forms of the gods was also visible in other cases; for when colonies were sent out the images of the gods of the mother-city were for the most part faithfully copied for the colony, and such copies were called *ἀφειδόμενα*. (Dionys. Hal. ii. 22, viii. 56; Strab. iv. p. 179.) The instances of the Apollo Phileus and of the Demeter of Onatas show that even in temple-statues wood began to give way to other and better materials. Besides bronze, marble also, and ivory and gold were now applied to statues of the gods,

and it was not very uncommon to form the body of a statue of wood, and to make its head, arms, and feet of stone (*ἀκρόλίσθοι*), or to cover the whole of such a wooden figure with ivory and gold. (Paus. ii. 4. § 1, vi. 25. § 4, &c., ii. 22. § 6; Eurip. *Troad.* 1081.) The latter method, which about this time became a distinct and much admired branch of statuary, was practised by Dorycleidae, Theocles, Medon, Canachus, Menaechnus, and others, and appears to have been introduced by Dipoenus and Scyllia. Quatremère de Quincy considered this kind of sculpture, which the moderns call chryselephantine sculpture, as a part of the art which the ancients called toreutic (*τορευτική*). There are few errors more surprising than this, and yet the opinion of the French critic has been repeated as if there could be no doubt about it. [ELEPHAS.]

From the statues of the gods erected for worship we must distinguish those statues which were dedicated in temples as *ἀναθηματα*, and which now became customary instead of craters, tripods, &c. But here too the change was not sudden, for the statues at first were frequently connected with tripods and similar ornaments. At Amyclae there were tripods made by Callon and Gitiadas with small statues of goddesses under them. (Paus. iii. 18.) In the execution of statues to be dedicated as *ἀναθηματα*, even though they were representations of gods, the artists were not only not bound to any traditional or conventional forms, but were, like the poets, allowed to make free use of mythological subjects, to add, to omit, or to modify the stories, so as to render them more adapted for their artistic purposes.

A third class of statues, which were erected during this period in great numbers, were those of the victors in the great national games and of other distinguished persons (*ἀνδριάντες*). The custom of erecting statues of the victors in public appears to have commenced about OL 58 (Paus. vi. 18. § 5); but these statues soon became extremely numerous, and many of them were executed by the first artists of the time. In some the influence of the hieratic style was visible, or they were even made in that style, as the statue of Mylon by Dameas. (Philostr. *Apoll. Tyam.* iv. 28; comp. Paus. iv. 28, vi. 14. § 2.) Although these statues were generally not portraits, for Pliny (*H.N.* xxxiv. 9) states that only those who had gained the victory thrice were allowed to have an iconic statue erected, yet they were destined to preserve the memory of the particular physical powers and the bodily development of the athletes, or even to show the peculiar skill or the peculiar stratagems by which an athlete had excelled and overcome his adversary, and thus afforded to the artists numerous opportunities of representing figures in a variety of attitudes and actions. (Paus. vi. 10. § 1, viii. 40; Schol. ad *Pind. Ol.* vii. init.; Xenoph. *Mem.* iii. 10. § 6.) Statues erected in public or dedicated in temples in honour of other distinguished persons are mentioned very rarely during this period, but they appear generally to have been portraits (*εἰκόνες, statues iconicae*). The earliest statues of this kind we know of are those of Cleobis and Biton of Argos, which were dedicated in the temple of Delphi about OL 50. (Herod. i. 31.) The first iconic statues of Harmodius and Aristogiton were made by Antenor in 509 B. C., and in 477 B. C. new statues of the same persons were made by Critias. It is allowed

on all hands that nothing contributed more to the advancement of statuary than the contests at the public games, as they not only rendered the artists familiar with the greatest variety of attitudes, and with the most beautifully developed forms of the bodies of the athletes, but also afforded to them numerous opportunities to represent in their works those same persons and attitudes which they had seen and admired. The widest field for study and exercise was thus opened to the artists.

We have seen that at a very early period of Grecian art attempts were made to adorn the outside of temples and other public buildings, but it was not till the period we are now describing that it became customary to adorn the pediments, friezes, and other parts of temples with reliefs or groups of statues of marble. We still possess two great works of this kind which are sufficient to show their general character during this period. 1. *The Selinuntine Marbles*, or the metopes of two temples on the acropolis of Selinus, in Sicily, which were discovered in 1823 by W. Harris and Sam. Angell, and are at present in the Museum of Palermo. Those belonging to the western temple appear to have been made at the beginning of this period, as they show a very great resemblance to the works in the hieratic style. The figures of the other or middle temple show indeed a considerable advancement of the art, but the execution is still hard and stiff; they may have possibly been executed a short time before OL 75. (See S. Angell and Th. Evans, *Sculptured Metopes discovered among the ruins of Selinus*, Lond. 1826; comp. ΜΕΤΟΡΑ.) 2. *The Aeginetan Marbles* were discovered in 1812 in the island of Aegina, and are now at Munich in the collection of the king of Bavaria. They consist of eleven statues, which adorned two pediments of a temple of Athena, and represent the goddess leading the Aeacids against Troy, and contain manifest allusions to the war of the Greeks with the Persians. Many small holes in the marble render it probable that originally several parts of these statues, perhaps the armour, were of bronze, and fixed to them with nails. The general character of these Aeginetan statues is a mixture of the archaic style and an anxious imitation of nature. The hair is wiry, and traces of paint are visible on all parts of the statues, with the exception of those representing the flesh. (See Edw. Lyon, *Outlines of the Egina Marbles*, 1829.)

Besides these a great number of works in bronze and marble of this period are still extant; they are partly round figures or statues and partly reliefs. (Müller, *Archäol.* p. 73, &c.) Some of the best specimens in marble relief, which seem to form the transition from this to the third period, are preserved in the British Museum. (See Combe, *Marbles of the Brit. Mus.* ii. pl. 6 and 7; *Specimens of Anc. Sculpture*, pl. 11.) It is not always easy to say whether a work made in the archaic style is really as old as the style indicates, as this style was never entirely abandoned, and was retained in temple-statues even under the Roman emperors.

III. Third Period from OL 75 to OL 111. (480—336 B. C.)

During this period Athens was the centre of the fine arts in Greece. The Persian wars awakened in the hearts of the people the feeling and the conviction of their own power, and the Greeks, who had at first only warded off the attacks of the bar-

barians, now felt strong enough to act on the offensive. The fall of the Spartan Pausanias raised Athens in 472 B. C. to the supremacy in the wars against Persia. Athens had now acquired a powerful navy, and the tributes of the allies, which amounted at different times from 460 to 1200 talents, and which from 462 B. C. were deposited in the treasury at Athens, raised the city to a height of power such as few cities have ever possessed. Only a small portion of these treasures was spent upon war; the rest was applied at first to the fortification of the city, and afterwards to the building of temples, porticoes, theatres, gymnasia, &c. Among them we need only mention the Theseum, the Parthenon, the Propylaea, the stone theatre, the Poecile, and the Odeum. After the wars with Persia Athens appears by no means exhausted or broken down, but refreshed and strengthened like nature after a heavy storm.

Statuary during this period went hand in hand with the other arts and with literature: it became emancipated from its ancient fetters, from the stiffness and conventional forms of former times. The free and noble spirit of the Athenian democracy showed its influence in all departments of literature and art, and among the latter statuary reached its culminating point in the sublime and mighty works of Pheidias. (See *Dict. of Biog. s. v. Pheidias*.) The democratical spirit did not however lead to any kind of extravagance in the arts: no vehement passions or actions were represented, and although the character of those works which belong to the latter half of this period differs very much from those of the former half, yet on the whole all show a calm dignity and an almost passionless tranquillity of mind, a feature so peculiar to all the great masterpieces of Grecian art. The Peloponnesian war and the calamities which accompanied it produced a change in the state of things; a new generation now stepped into the place of the heroic race which had partaken in or witnessed the memorable events of the Persian war. Sensuality and an indulgence of the passions became the prominent features in the character of the Athenian people; and the prevailing desire after pleasures and strong excitements could not fail to produce an injurious influence upon the arts also. In the works of art which were produced after the year 380 B. C. there was no longer that calm and sublime majesty which characterised the works of Pheidias and his more immediate followers, but the figures were more pathetic, and calculated to have a greater effect upon the senses of the beholders. The different stages of the arts during this period bear the most striking analogy with the three phases of tragedy as they lie before us in the works of the three great dramatists, Aeschylus, Sophocles, and Euripides.

Argos was, next to Athens, the most distinguished seat of the arts during this period, and the works of the Athenian and Argive artists spread over all Greece, and became the models for other Greek artists.

The development of statuary at Athens and Argos had been prepared by Calamis of Athens and Pythagoras of Rhegium, the former of whom, although not quite free from the hardness of the earlier style, yet produced a great variety of works, among which are mentioned representations of gods in a sublime style, graceful statues of women, and spirited horses, in which he was unrivalled. (Plin.

H. N. xxxiv. 19. § 11; Quintil. xii. 10. § 7; Cic. *Brut.* 18; Lucian, *Imag.* 6.) Pythagoras was distinguished for the perfection with which he expressed the muscles, veins, and hair in his athletic statues, for the beautiful proportions and the powerful expression of these statues which, as Pliny says, made the beholders feel the pains which the individuals represented were suffering. (Plin. *H. N.* xxxiv. 19. § 4; Paus. vi. 6. § 1; 13. § 4.) Several of his works are specified by Pausanias and Pliny. (See *Dict. of Biog. s. v.*) The career of Pheidias the Athenian begins about OI. 82. The genius of this artist was so great and so generally recognised, that all the great works which were executed in the age of Pericles were placed under his direction, and thus the whole host of artists who were at that time assembled at Athens were engaged in working out his designs and ideas. (Plut. *Peric.* 12.) He himself was chiefly engaged in executing the colossal works in ivory and gold, the expenses of which were supplied by the Greek states with the greatest liberality, and other works in bronze and marble. (For an account of the chryselephantine statues of Athens at Athens, and of Zeus at Olympia, and the other works of Pheidias, see the *Dict. of Biog. s. v.*) Pheidias was greatest in the representation of the gods, and especially in portraying the character of Athena, which he represented with various modifications, sometimes as a warlike goddess, and sometimes as the mild and graceful protectress of the arts. (Plin. *H. N.* xxxiv. 8. a. 19. § 1; Paus. i. 28. § 2; Lucian, *Imag.* 6.)

We do not read of many disciples of Pheidias, but the most distinguished among them were Agoracritus of Samos and Alcamenes of Athens. Both, though the latter with greater independence, applied their skill like their master to statues of the gods; both were especially renowned for the great beauty, softness, and calm majesty with which they represented goddesses, in the composition of which they rivalled each other. Some of the statues of Alcamenes were very highly valued in antiquity, especially his Hecate, Athena, Aphrodite in the gardens, Hephaestus, and also the groups in the pediment of the temple at Olympia. The most celebrated statue of Agoracritus was the Nemesis of Rhamnus, which had originally been intended as an Aphrodite to compete with that of Alcamenes, but was afterwards by the addition of the proper attributes consecrated as a Nemesis at Rhamnus.

We still possess a series of sculptured works in marble which were made by the school of Pheidias, and some of them undoubtedly by the great master himself. These works are:

1. Some parts of the eighteen sculptured metopes, together with the frieze of the small sides of the cells of the temple of Theseus. Ten of the metopes represent the exploits of Heracles, and the eight others those of Theseus. The figures in the frieze are manifestly gods, but their meaning is uncertain. All the figures are full of life and activity, and worked in the sublime style of the school of Pheidias. Some antiquarians value them even higher than the sculptures of the Parthenon. Casts of these figures are in the British Museum. (Compare Stuart, *Ant.* iii. chap. 1.)

2. A considerable number of the metopes of the Parthenon, which are all adorned with reliefs in marble, a great part of the frieze of the cells, some colossal figures, and a number of fragments of the

two pediments of this temple. The greater part of these works is now in the British Museum, where they are collected under the name of the Elgin Marbles. They have been described and commented upon so often, that they require no further mention here. (See *Dict. of Biog. s. v. Pheidias*.)

3. The marble reliefs of the temple of Nike Apteros belong indeed to a later age than that of Pheidias, but they are manifestly made in the spirit of his school. They represent with great liveliness and energy contests of Greeks with Persians, and of Greeks among themselves. These also are in the British Museum.

All these sculptures breathe on the whole the same sublime spirit, though it would seem that some, especially some figures of the metopes of the Parthenon, were executed by artists who had not emancipated themselves entirely from the influence of an earlier age. With this exception and some other slight defects, which are probably the consequences of the place which the sculptures occupied in the temples they adorned, we find everywhere a truth in the imitation of nature, which, without suppressing or omitting anything that is essential, and without any forced attempt to go beyond nature, produces the purest and sublimest beauty: these works show lively movements combined with calmness and ease, a natural dignity and grace united with unaffected simplicity; no striving after effect, or excitement of the passions. These sculptures alone afford us ample means to justify the ancient critics, who state that the *μεγαλειος* and *σεμνός*, or the grand and sublime, were the characteristic features of Pheidias and his school. (Demetr. *de Elocut.* 14; Dionys. Hal. *de Isocrat.* p. 542.) Pheidias was the Aeschylus of statuary, and it may be safely asserted that, although the art subsequently made certain progress in the execution of details, yet Pheidias and his school were never excelled by subsequent generations.

Besides the sculptures of the three temples mentioned above, there are also similar ornaments of other temples extant, which show the influence which the school of Pheidias must have exercised in various parts of Greece, though they were executed in a different style. Of these we need only mention two as the most important.

1. The Phigaleian marbles, which belonged to the temple of Apollo Epicurius, built about Ol. 86 by Ictinus. They were discovered in 1812, and consist of twenty-three plates of marble belonging to the inner frieze of the cella. They are now in the British Museum. The subjects represented in them are fights with centaurs and amazons, and one plate shows Apollo and Artemis drawn in a chariot by stags. Many of the attitudes of the figures appear to be repetitions of those seen on the Attic temples, but there are at the same time great differences, for the Phigaleian marbles sometimes show a boldness of design which almost borders on extravagance, while some figures are incorrectly drawn and in forced attitudes. The best descriptions of them are those in *Bassi relievi della Grecia, disegni*, da G. M. Wagner (1814), and in *Stackelberg's Apollotempel zu Bassas in Arcadien u. die daselbst ausgegrab. Bildwerke*, 1828.

2. Marbles of the temple of the Olympian Zeus, which were made by Paeonius of Mende and Alcamenes of Athens. (Paus. v. 16.) Several fragments of these sculptures were discovered in 1829, and are now at Paris (*Expédit. Scientif. de la*

Morée, pl. 74—78.) The figures of these marbles are indeed free from the fetters of the ancient style, and show a true imitation of nature, but do not nearly come up to the ideal simplicity of the works of Pheidias.

About the same time that the Attic school rose to its highest perfection under Pheidias, the school of Argos was likewise raised to its summit by Polycleitus, who was inferior to the former in his statues of gods (Quintil. xii. 10. § 7, &c.; Cic. *Brut.* 18), though he advanced the toreutic art in his colossal statue of Hera at Argos further than Pheidias. (Plin. *H.N.* xxxiv. 8. a. 19. § 2.) But the art of making bronze statues of athletes was carried by him to the greatest perfection: ideal youthful and manly beauty was the sphere in which he excelled. Among his statues of gods we only know two, that of Hera and another of Hermea. Pliny mentions several of his representations of human beings, in which without neglecting to give them individuality, he made youthful figures in their purest beauty, and with the most accurate proportions of the several parts of the human body. (Plin. *l. c.*; comp. Strab. viii. p. 372.) One of these statues, a youthful Doryphorus, was made with such accurate observation of the proportions of the parts of the body, that it was looked upon by the ancient artists as a canon of rules on this point. (Cic. *Brut.* 86, *Orat.* 2; Quintil. v. 12. § 21; Lucian, *de Saltat.* 75.) Polycleitus is said to have written a work on the same subject, and it may be that his Doryphorus was intended to give a practical specimen of the rules he had laid down in his treatise. He gained a victory over Pheidias in the representation of an Amazon, which must consequently have been a figure in the greatest luxuriance of female beauty combined with a manly character. (Müller, *Archäol.* § 121.) Polycleitus was also distinguished in portrait-statues, among which that of Artemon Periphoretus, a mechanician of the time of Pericles, is mentioned with especial praise. (Comp. *Dict. of Biog. s. v.*)

Myron of Eleutherae, about Ol. 87, was, like Polycleitus, a disciple of Ageladas, but adhered to a closer imitation of nature than Polycleitus, and as far as the impression upon the senses was concerned, his works were most pleasing, but *animi sensus non expressit*, says Pliny (*H. N.* xxxiv. 8. a. 19. § 3). The cow of Myron in bronze was celebrated in all antiquity. (Tzetzes, *Chil.* viii. 194, &c.; Propert. ii. 31. 7.) Pliny mentions a considerable number of his works, among which a dog, a discobolus, pentathli and pancratiasts were most celebrated; the last of them were especially distinguished for their *eurythmia* and the animation displayed in their movements, as well as for the most beautiful athletic attitudes. Among his statues of gods we find only mention of a colossal group representing Heracles, Zeus, and Athena, which he made for the Samians. (Plin. *l. c.*; Cic. *c. Verr.* iv. 3; Strab. xiv. p. 637.) In his execution of the hair he adhered, according to Pliny, to the ancient style. (See *Dict. of Biog. s. v.*)

The deviation from the sublime ideality of the Attic school of Pheidias was still more manifest in the works of Callimachus and Demetrius. The former executed his statues with the utmost possible accuracy and attention to the minutest details, but was careless in the conception as well as in the execution of the whole, which destroyed the value of his works, whence he was designated by the

nickname of *καταξίρετρος*. Quintilian (xii. 10. § 9) says of him *nimius in veritate*. (Comp. Lucian, *Philops.* 18; Plin. *Epist.* iii. 6.) On the whole it should be observed, that near the end of the Peloponnesian war and afterwards the greater part of the artists continued to work in the spirit and style of Polykleitos, and that the principal productions in Peloponnesus were bronze statues of athletes and statues erected in honour of other distinguished persons. (Paus. x. 9. § 4, vi. 2. § 4; Plut. *Lysand.* 1, 18, *de Orac. Pyth.* 2.)

The change which took place after the Peloponnesian war in the public mind at Athens could not fail to show its influence upon the arts also; and the school of statuary, which had gradually become developed, was as different from that of Pheidias as the then existing state of feeling at Athens was from that which had grown out of the wars with Persia. It was especially Scopas of Paros and Praxiteles of Athens, about one generation after Myron and Polykleitos, who gave the reflex of their time in their productions. Their works expressed the softer feelings and an excited state of mind, such as would make a strong impression upon and captivate the senses of the beholders. But the chief masters of this new school still had the wisdom to combine these things, which were commanded by the spirit of the age, with a noble and sublime conception of the ideas which they embodied in their works. Scopas and Praxiteles were both distinguished as sculptors in marble, and both worked in the same style; the legendary circles to which most of their ideal productions belong are those of Dionysus and Aphrodite, a fact which also shows the character of the age. There was a time when this school of statuary was considered superior even to that of Pheidias, and it is indeed true that its productions are distinguished by exquisite beauty and gracefulness, whence their female statues in particular are, in one sense, unrivalled; but the effect they produced upon the minds of the beholders was by no means of the same pure and elevating nature as that of the works of their predecessors. (For an account of their works, see the articles *Praxiteles* and *Scopas* in the *Dictionary of Biography*.)

Cephissodorus and Timarchus were sons of Praxiteles. There were several works of the former at Rome in the time of Pliny; he made his art subservient to passions and sensual desires. Pliny (*H. N.* xxxvi. 5. s. 4. § 6) mentions among his works a celebrated Symplegma at Pergamus, which is the first instance of this kind that we hear of in Grecian art. A similar spirit pervaded the works of Leochares (as his Ganymedes carried by an eagle up to Zeus), of Polycles, who was the first that made the voluptuous statues of Hermaphrodites, and of Silanion, who made a dying Jocaste. (Plin. *H. N.* xxxiv. 8. s. 19. § 17 and 20; Plut. *de Aud. Poet.* 3, *Sympos.* v. 1; see *Dict. of Biog.* s. vv.) Leochares also made a number of portrait-statues in ivory and gold of members of the royal family of Macedonia, and of other persons. (Paus. v. 20.) Such portrait-statues about this time began to give much occupation to the artists. About the year 350 B. C. several of the greatest artists of the age, such as Scopas, Leochares, Timotheus, and Bryaxis, were engaged in Caria in making the magnificent mausoleum of Mausolus, a general description of which is given under *MAUSOLEUM*.

Most of the above-mentioned artists, however widely their works differed from those of the school

of Pheidias, may yet be regarded as having only continued and developed its principles of art in a certain direction; but towards the end of this period Euphranor and Lysippus of Sicyon carried out the principles of the Argive school of Polykleitos. (Cic. *Brut.* 86.) Their principal object was to represent the highest possible degree of physical beauty and of athletic and heroic power. (See their lives in the *Dict. of Biog.*) The chief characteristic of Lysippus, and his school is a close imitation of nature, which even contrived to represent bodily defects in some interesting manner, as in his portraits of Alexander; its tendency is entirely realistic. The ideal statues of former times disappear more and more, and make way for mere portraits. Lysippus, it is true, made statues of gods; but they did not properly belong to his sphere; he merely executed them because he had received orders which he could not well refuse. His greatest care was bestowed upon the execution of the details (*argutiae operum*), upon the correct proportions of the parts of the human body, and upon making his statues slender and tall above the common standard. In short, all the features which characterise the next period appear in the school of Lysippus.

IV. Fourth Period, from O^l. 111 to O^l. 158. (336—146 B. C.)

Within a few generations Grecian art had passed through the various stages of development, and each of them had produced such an abundance of masterpieces that it was difficult for a new generation of artists to produce new and original works. Hence the artists of the periods which followed could not do much more than imitate, and their productions are better or worse in proportion as they were founded upon the study of earlier works or not. But even this period of eclecticism has nevertheless produced statues and groups worthy of the highest admiration, and which can be placed by the side of the best works of antiquity. The very slow decay of the arts, in comparison with the rapid decline of literature, is indeed a strange phenomenon.

During the first fifty years of this period the schools of Praxiteles and Lysippus continued to flourish, especially in works of bronze; but after this time bronze statues were seldom made, until the art was carried on with new vigour at Athens about the end of the period. The school of Lysippus gave rise to that of Rhodes, where his disciple Chares formed the most celebrated among the hundred colossal statues of the sun. It was seventy cubits high and partly of metal. It stood near the harbour, and was thrown down by an earthquake about 225 B. C. (Plin. *H. N.* xxxiv. 18; Meursius, *Rhodus*, i. 16; *Dict. of Biog.* s. v.) Antiquarians assign to this part of the fourth period several very beautiful works still extant, as the magnificent group of Laocoon and his sons, which was discovered in 1506 near the baths of Titus, and is at present at Rome. This is, next to the Niobe, the most beautiful group among the extant works of ancient art; it was according to Pliny the work of three Rhodian artists: Agesander, Polydorus, and Athenodorus. (Plin. *H. N.* xxxvi. 5. s. 4. § 11, Lessing's *Laocoon*.) The celebrated Farnesian bull is likewise the work of two Rhodian artists, Apollonius and Tauriscus. (Plin. *H. N.* xxxvi. 5. s. 4. § 10.)

In the various kingdoms which arose out of the conquests of Alexander the arts were more or less cultivated, and not only were the great master-works of former times copied to adorn the new capitals, but new schools of artists sprang up in several of them. Alexandria, Pergamus, and Seleucia rivalled each other in art no less than in literature. At Pergamus the celebrated groups were composed which represented the victories of Attalus and Eumenes over the Gauls. (Plin. *H. N.* xxxiv. 8. s. 19. § 24; Paus. i. 25. § 2; Plut. *Anton.* 60.) It is believed by some (Müller, *Arch.* § 158) that the so-called dying gladiator at Rome is a statue of a Gaul, which originally belonged to one of these groups. Ephesus also had a flourishing school of art, which appears to have followed in the main the style of Lysippus, and excelled, like that of Pergamus, in the representation of battle scenes. The Borghese fighter in the Louvre is supposed to be the work of an Ephesian Agasias, and to have originally formed a part of such a battle-scene. In Syria too, art flourished at Antioch until the time of Antiochus IV., before whose reign a number of statues had already been carried away by Scipio.

In these new monarchies statues of the gods were seldom made, and when they were executed they were in most cases copies from earlier works, as the character in which the gods were represented had gradually become fixed, and few artists ventured to alter the forms, which had become typical. Portrait-statues of kings increased, on the other hand, to a great extent. The vanity of the kings and the flattery of the artists created a new kind of statues: the princes were frequently identified with certain deities, and were consequently represented as such with all the requisite attributes. In many cases the mere bust of a king was put upon the body of a statue of a god. This was a most dangerous rock for artists; for the simple representation of a king in the shape of a god, which commenced as early as the time of Alexander, was soon thought an insufficient mark of veneration, and art degenerated into a mere instrument of the most vulgar flattery: pomp and show and tasteless ornaments were mistaken for art. Flattery towards the great was also shown in the monstrous number of statues that were erected to one and the same individual. Demetrius Phalereus had 360, or according to others 1500 statues erected to him. (Athen. xii. p. 537; Paus. v. 24. § 3; Clem. Alex. *Protrept.* iv. p. 16, ed. Sylb.; Dion Chrysost. *Orat.* 37. p. 122.) When the honour of a statue ceased to be considered as a high distinction, and when it became necessary to produce such numbers of statues, the workmanship naturally became worse in proportion as the honour sank in public estimation. During this time it became customary to combine with the statues of kings and generals symbolical representations of towns, which are called *πόλεις ἀνδρών*. In Magna Graecia art gradually fell into decay after the wars with the Romans; and the example of Capua, from which all the statues were carried to Rome, affords us an instance of the robberies and plunder which were committed by the Romans in other towns of Italy. But even after the Roman conquests the cultivation of the plastic arts cannot have ceased altogether, as we must infer from the numerous works found at Pompeii, some of which possess a higher degree of perfection and beauty than might have been expected in works of so late

a date. In Sicily the activity of the artists appears to have ceased after the Roman conquest, for the numerous works with which Syracuse was adorned and with which we are made acquainted by Cicero (*c. Verr.* iv.), mostly belong to an earlier period.

Shortly before the taking of Corinth by Mummius, statues in bronze and marble were revived at Athens; and although the artists were far inferior to those of former times, yet they still produced works of great excellence, as they showed their good sense and taste by making the master-works of their predecessors the subjects of study and imitation. (Plin. *H. N.* xxxiv. 8. s. 19.) Among those who contributed most to this revival of statuary were Cleomenes (who made the Medicean Venus, an imitation of that of Cnidus, but inferior in point of taste and delicacy), his son Cleomenes (by whom there is a statue in the Louvre, which shows exquisite workmanship but little life), Glycon, Apollonius, and others. (See their lives in the *Dict. of Biog.*)

About the close of this period, and for more than a century afterwards, the Romans, in the conquest of the countries where the arts had flourished, made it a regular practice to carry away the works of art; and, as they were unable to appreciate their value and merit, they acted in many cases no better than rude barbarians, regarding the most precious relics of art in no other light than that of chairs and tables, which might be made again at pleasure and at any time. At first these robberies were carried on with some moderation, as by Marcellus at Syracuse and by Fabius Maximus at Tarentum, and only with a view to adorn their triumphs and the public buildings of Rome. The triumphs over Philip, Antiochus, the Aetolians, the Gauls in Asia, Perseus, Pseudo-Philip, and above all the taking of Corinth, and subsequently the victories over Mithridates and Cleopatra, filled the Roman temples and porticoes with the greatest variety of works of art. After the taking of Corinth, the Roman generals and governors of provinces began to show a kind of amateurship in works of art, which was probably more owing to the fashion prevailing among the Roman grandees than to any real taste or love for the fine arts: they now carried off whatever they could, to adorn their own residences. Sometimes either their avarice or necessity induced them to melt down the most precious works without any regard to artistic worth. The sacrilegious plunder of temples and the carrying away of the sacred statues from the public sanctuaries, which had at first been prevented to some extent by the pontiffs, became afterwards a common practice. The manner in which Verres acted in Sicily is but one of many instances of the extent to which these robberies were carried on. The emperors, especially Augustus, Caligula, and Nero, followed these examples, and the immense number of statues which notwithstanding all this remained at Rhodes, Delphi, Athens, and Olympia, is truly astonishing. (See Völkelt, *Ueber die Wegführung der alten Kunstwerke aus den eroberten Ländern nach Rom*; Müller, *Archäol.* § 164, &c.)

Before we proceed to describe the state of statuary during the last stage, in which Rome was the centre of the ancient world, it will be necessary to give an outline of the history of statuary among the Etruscans and Romans down to the year 146 A. C.

The Etruscans were on the whole an industrious and enterprising people. Different hypotheses have been proposed to account for the cultivation of the arts, in which this nation excelled all others in central and northern Italy, as well as for the peculiar style of some of their productions. Some writers think that it was owing to colonies from Lydia, which were established at Caere and Tarquinii, others that the Etruscans themselves were a Pelasgian tribe. With the works of Grecian art they must have become acquainted at an early time through their intercourse with the Greeks of southern Italy, whose influence upon the art of the Etruscans is evident in numerous cases. The East also appears to have exercised some influence upon the Etruscans, as many works of art found in Etruria contain precisely the same representations as those which we find in Asia, especially among the Babylonians. However this may have been effected, we know for certain that the whole range of the fine arts was cultivated by the Etruscans at an early period. Statuary in clay (which here supplied the place of wood, ξύλον, used in Greece) and in bronze appears to have acquired a high degree of perfection. In 267 B.C. no less than 2000 bronze statues are said to have existed at Volsinii (Plin. *H. N.* xxxiv. 16, 18; compare Vitruv. iii. 2), and numerous works of Etruscan art are still extant, which show great vigour and life, though they do not possess a very high degree of beauty. Among them we may mention the Chimaera of Arretium (at Florence); the Capitoline She-wolf (Dionys. i. 79; Liv. x. 23), which was dedicated in B.C. 296; the Minerva of Arezzo (now at Florence); and others. Some of their statues are worked in a Greek style; others are of a character peculiar to themselves, and entirely different from works of Grecian art, being stiff and ugly; others again are exaggerated and forced in their movements and attitudes, and resemble the figures which we meet with in the representations of Asiatic nations. Etruscan utensils of bronze, such as candelabra, paterae, cups, thrones, &c., embellished with various ornaments and figures, were very highly valued in antiquity, and even at Athens at a time when the arts were still flourishing there. (Ath. i. p. 28, xv. p. 700.) Their works in stone, especially the alto and basso-relievos, which are found in considerable numbers on chests containing the ashes of the dead, are with few exceptions, of very inferior merit.

The Romans previously to the time of the first Tarquin are said to have had no images of the gods; and for a long time afterwards their statues of gods in clay or wood were made by Etruscan artists. (Plin. *H. N.* xxxv. 45, xxxiv. 16.) During the early part of the republic the works executed at Rome were altogether of a useful and practical and not of an ornamental character; and statuary was in consequence little cultivated. But in the course of time the senate and the people, as well as foreign states which desired to show their gratitude to some Roman, began to erect bronze statues to distinguished persons in the Forum and other places. (Plin. *H. N.* xxxiv. 14.) The earliest works of this kind, which we can consider as really historical, are the statues of Attus Navius (Plin. *H. N.* xxxiv. 11; Cic. *de Divin.* i. 11), of Minucius outside the Porta Trigemina, and of Pythagoras and Alcibiades, which stood in the corners of the comitium from the year B.C. 314 down to the dis-

tatorship of Sulla. (Plin. *H. N.* xxxiv. 12.) The last two statues were undoubtedly of Greek workmanship. The earliest metal statue of a deity was, according to Pliny, a Ceres which was made of the confiscated property of Spurius Cassius, about 485 B.C. (Plin. *H. N.* xxxiv. 9.) Two other metal statues of gods were the Capitoline Hercules, 306 B.C. (Liv. ix. 44), and the colossal statue of the Capitoline Jupiter, which, according to Livy, was made about 490 B.C. (Liv. ix. 40, x. 38; Plin. *H. N.* xxxiv. 18.) The number of statues of men in the Forum appears soon to have become very great, and many persons seem to have had them erected there without any right: hence in 161 B.C. the censors P. Cornelius Scipio and M. Popilius removed from the Forum all the statues of magistrates which had not been erected with the sanction of the senate or the people. (Plin. *H. N.* xxxiv. 14.) A statue of Cornelia, the mother of the Gracchi, stood in the porticus of Metellus. The artists by whom these and other statues were executed were undoubtedly Greeks and Etruscans.

V. *Fifth Period, from Ol. 158 (B.C. 146) to the fall of the Western Empire.*

During this period Rome was the capital of nearly the whole of the ancient world, not through its intellectual superiority, but by its military and political power. But it nevertheless became the centre of art and literature, as the artists resorted thither from all parts of the empire for the purpose of seeking employment in the houses of the great. The mass of the people, however, had as little taste for and were as little concerned about the arts as ever. (Horat. *Art. Poët.* 323; Petron. 88.) In addition to this there was still a strong party of the Romans, who, either from an affected or an honest contempt for the Greeks, entertained the vain hope of being able to restore the olden times. These circumstances account for the fact that a man like Cicero thought it necessary to conceal and disguise his love and knowledge of the fine arts. It was, therefore, only the most distinguished and intellectual Romans that really loved and cherished the arts. This was both a fortunate and an unfortunate circumstance: had it not been so, art would have perished at once; now it continued in some degree to be cultivated, but it experienced the same fate which it has met with at all times, when it has continued its existence without the sympathies of the people, and merely under the patronage of the great. Notwithstanding these unfavourable circumstances, there were a number of distinguished artists at Rome during the latter period of the republic, who had really imbibed the spirit of the ancient Greeks and who produced works of great beauty and merit. We need only mention such names as Pasiteles of southern Italy, who was a Roman citizen, and who made an ivory statue of Jupiter for the temple of Metellus (Plin. *H. N.* xxxvi. 5. s. 4 § 12); Arcesilaus, of whom Pliny mentions several highly valued works, and whose models were prized more than the statues of others; Decius, who even ventured to rival Chares in the art of founding metal statues; Diogenes, and others. During the empire the arts declined, and, with some noble exceptions, merely administered to the vanity, luxuries, and caprices of the emperors. (Senec. *Epist.* 88.) The inertness of the times, says Pliny (*H. N.* xxxv. 2), has destroyed the arts; and as there were no more minds to be represented, the repre-

sentations of the bodies were likewise neglected. Occasionally, however, excellent and gifted sculptors still arose, and adorned the palaces of the emperors with beautiful groups. Pliny (*H. N.* xxxvi. 4. § 11) mentions as such Craterus, Pythodorus, Polydectes, Hermolaus, a second Pythodorus, Artemon, and Aphrodisius of Tralles. (See the articles in the *Dict. of Biog.*) In the time of Nero, who did much for the arts, we meet with Zenodorus, a founder of metal statues, who was commissioned by the emperor to execute a colossal statue of 110 feet high, representing Nero as the Sun. The work was not completely executed, as the art of using the metal had fallen into oblivion. In A. D. 75 the statue was consecrated as a Sol, and was afterwards changed into a statue of Commodus by altering the head. (Plin. *H. N.* xxxiv. 18; Herodian, i. 15.) The principal sculptured works that were produced during the empire, were, 1. Reliefs on public monuments, such as those adorning the triumphal arch of Titus, which represented the apotheosis of the emperor, and his triumph over Judaea. The invention and grouping of the figures are good and tasteful, but the execution is careless. The same may be said of the reliefs of the temple of Minerva in the Forum of Domitian, in which the drapery in particular is very bad. 2. Statues and busts of the emperors. These may again be divided into classes, and are easiest distinguished by the costumes in which they are represented. They are (a) faithful portraits in the costume of ordinary life (*toga*), or in the attire of warriors (*statuæ thoracatas*) generally in an attitude as if they were addressing a body of men, as, e. g. the colossal statue of Augustus in the palace Grimani. To this class also belong the equestrian statues, and the statues upon triumphal cars with from two to six horses, and sometimes even with elephants, which were frequently made for emperors out of mere vanity, and without there having been any real triumph to occasion such a work. (Dion Cass. liii. 22; Stat. *Silo.* i. 1; Mart. ix. 69; Tacit. *de Orat.* 8. 11; Juv. vii. 126; Plin. *H. N.* xxxiv. 10.) 6. Such statues as were intended to show the individual in an exalted, heroic or deified character. Among those were reckoned the so-called Achillean statues, which were first made in the time of Augustus; they were naked, and bore a hasta in one hand (Plin. *H. N.* xxxiv. 10); and secondly, statues in a sitting position, with the upper part of the body naked, and a pallium covering the loins. These statues were intended to represent an emperor as Jupiter, but sometimes also as an Apollo. (Müller, *Arch.* § 199.) This method of representing an emperor as a god was at first practised with much good taste. The statues of the ladies of the imperial families are likewise either simple and faithful portraits, or they are idealized as goddesses: specimens of each kind are still extant. The custom adopted in the Macedonian time, of combining allegorical representations of towns and provinces with the monuments erected in honour of the sovereigns, was sometimes followed by the Romans also, and some of them were made by very distinguished artists. (Strab. iv. p. 192; Müller, *l.c.*) In the reign of Trajan were executed the column of Trajan, with sculptures representing the victories of this emperor over the Dacians, and other similar works. We also possess a beautiful colossal statue of Nerva in the Vatican, and in the Louvre there is a beau-

tiful statue thoracata of Trajan, and several fine busts of the same emperor.

Down to the reign of Hadrian statuary had become more and more confined to the representation of subjects of a common nature, so that at length we scarcely find anything else but the records of victories in the reliefs on the public monuments, and the various kinds of statues of the emperors and the members of their families. But in the reign of Hadrian the arts seemed to begin a new æra. He himself was undoubtedly a real lover and connoisseur of art, and he encouraged it not only at Rome, but in Greece and Asia Minor. The great Villa of Hadrian below Tivoli, the ruins of which cover an extent of ten Roman miles in circumference, was richer in works of art than any other place in Italy. Here more works of art have been dug out of the ground than anywhere else within the same compass. Hadrian was fond of the ancient forms in art as well as in language, and many works in the archaic style still extant may have been executed at this time. Some statues made at this time combine Egyptian stiffness with Grecian elegance; and, especially, the representations of Egyptian deities, such as that of Isis, are half Greek and half Egyptian. But, by the aide of this strange school, there existed another, in which the pure Greek style was cultivated, and which has produced works worthy of the highest admiration. Foremost among these stand the statues and busts of Antinous, for whom the emperor entertained a passionate partiality, and who was represented in innumerable works of art. The colossal bust of Antinous in the Louvre is reckoned one of the finest works of ancient art, and is placed by some critics on an equality with the best works that Greece has produced. The two centaurs of black marble on the Capitol probably belong to the reign of Hadrian: one of them is executed in an old and noble style, and is managed by a little Eros riding on his back; the other looks more like an intoxicated Satyr. There are also some very good works in red marble which are referred to this period, as that material is not known to have been used before the age of Hadrian.

As the arts had received such encouragement and brought forth such fruits in the reign of Hadrian, the effects remained visible for some time during the reigns of the Antonines. Antoninus Pius built the great villa at Lanuvium, of which ruins are still extant, and where many excellent works of art have been discovered. But sophistry and pedantic learning now began to regard the arts with the same contempt as the ignorance of the Romans had formerly done. The frieze of a temple, which the senate caused to be erected to Antoninus Pius and Faustina, is adorned with griffins and vessels of very exquisite workmanship; but the busts and statues of the emperors show in many parts an affected elegance, while the features of the countenance are tasteless and trivial copies of nature. The best among the extant works of this time are the equestrian statue of M. Aurelius of gilt bronze, which stands on the Capitol, and the column of M. Aurelius with reliefs representing scenes of his war against the Marcomanni. The busts which we possess of M. Aurelius, Faustina, and Lucius Verus, are executed with very great care, especially as regards the hair. The number of extant busts of the Antonines amounts to above one hundred; and the rate at which busts

of emperors were sometimes multiplied may be inferred from the fact, that the senate sometimes ordained that the bust of an emperor should be in the house of every citizen.

After the time of the Antonines the symptoms of decline in the arts became more and more visible. The most numerous works continued to be busts and statues of the emperors, but the best among them are not free from affectation and mannerism. The hair, especially in the representations of female figures, becomes gradually utterly tasteless, and instead of the natural hair the artists made it a point to show that it was a large peruke, which in some cases might be put on and taken off at pleasure. [GALERUS.] In the time of Caracalla many statues were made, especially of Alexander the Great. Alexander Severus was a great admirer of statues, not from a genuine love of art, but because he delighted in the representations of great and good men. (Lamprid. *Al. Sev.* 25.) The reliefs on the triumphal arch of Septimius Severus, representing his victories over the Parthians, Arabs, and Adiabeniens, have scarcely any artistic merits. During this time of decay the custom arose of adorning sarcophagi with figures in high relief, representing scenes from the legends of Demeter and Dionysus, and from the heroic ages of Greece, sometimes also the fable of Eros and Psyche: all these contained allusions to the immortality of the soul. Art, however, now declined with great rapidity: busts and statues were more seldom made than before, and are awkward and poor; the hair is frequently indicated by nothing else but holes bored in the stone. The reliefs on the sarcophagi gradually become monotonous, lifeless, and evidently executed without spirit. The reliefs on the arch of Constantine, which are not taken from that of Trajan, are perfectly rude and worthless, and those on the column of Theodosius were not better. Art in the proper sense of the word ceased to exist; statues of victors in the public games continued to be erected down to the fourth, and statues of the emperors (at Constantinople) down to the eighth century; but at Rome, as at Constantinople, those who were honoured in this way were more concerned about their rank and dress being properly represented in their statues, than about the real artistic merit of the work. Statuary became mere manual labour, and required nothing but mechanical skill. At Constantinople, however, where statues had been collected from Rome, Greece, and Asia Minor, the events of history allowed the plastic arts to die away more gradually than in Italy.

Before concluding, it remains to say a few words on the destruction of ancient works of art. During the latter part of the reign of Constantine many statues of the gods were destroyed and melted down, and not long after his time a systematic destruction began, which under Theodosius spread to all parts of the empire. The spirit of destruction, however, was not directed against works of art in general and as such, but only against the pagan idols. The opinion, therefore, which is entertained by some, that the losses we have sustained in works of ancient art, are mainly attributable to the introduction of Christianity, is too sweeping and general. Of the same character is another opinion, according to which the final decay of ancient art was a consequence of the spiritual nature of the new religion. The coincidence of the general

introduction of Christianity with the decay of the arts is merely accidental. That the early Christians did not despise the arts as such, is clear from several facts. We know that they erected statues to their martyrs, of which we have a specimen in that of St. Hippolytus in the Vatican library; and it is expressly stated that Christians devoted themselves to the exercise of the arts. (Baronius, *Annal. ad A.* 303.) The numerous works, lastly, which have been found in the Christian catacombs at Rome, might alone be a sufficient proof that the early Christians were not hostile towards the representation of the heroes of their religion in works of art. The hostility, such as it appears in the writings of Tatian and Augustine, cannot therefore have been general; and, in fact, Christianity during the middle ages became as much the mother of the arts of modern times, as the religion of Greece was the mother of ancient art. Another very general and yet incorrect notion is, that the northern barbarians after the conquest of Rome intentionally destroyed works of art. This opinion is not supported by any of the contemporary historians, nor is it at all probable. The barbarians were only anxious to carry with them the most precious treasures in order to enrich themselves; a statue must have been an object of indifference to them. What perished, perished naturally by the circumstances and calamities of the times: in times of need bronze statues were melted down and the material used for other purposes; marble statues were frequently broken to pieces and used for building materials. If we consider the history of Rome during the first centuries after the conquest of Italy by the Germans, we have every reason to wonder that so many specimens of ancient art have come down to our times.

The greatest destruction, at one time, of ancient works of art is supposed to have occurred at the taking of Constantinople, in the beginning of the thirteenth century. The collection of statues had been made with great care, and their number had accumulated to an amount which seems quite surprising when it is considered how long a time had elapsed since art had been encouraged or protected. At the period alluded to we are told that some of the finest works of the ancient masters were purposely destroyed; either in mere wantonness, or with the view of turning the material into money, or for sale to the metal founders for the value of the bronze. Among the few works saved from this devastation are the celebrated bronze horses which now decorate the exterior of St. Mark's church at Venice. They have been ascribed, but without sufficient authority, to Lysippus.

The finest collection of ancient bronzes is in the Museo Borbonico at Naples. They have been found chiefly in the ruins of Herculaneum and Pompeii, and among them are some examples of great skill and beauty. A few of the heads offer peculiarities in the treatment of the hair, the small corkscrew curls, and the ends of the beards being formed of separate pieces of metal fastened on. Several of the statues have the eyes of paste, and of stones, or sometimes of a different metal from the material of the rest of the work. Silver was often united with bronze. Cicero (*Verr. iv.* 43) mentions a statue of *Apollo aeneas, cujus in femore litterulis minutis argenteis nomen Myronis erat inscriptum*. In a bronze statue, of a youth, in the collection at Paris, are the remains of a Greek

inscription in silver letters. They are inserted into the left foot. The Museo Borbonico possesses some examples of inlaid silver work. There are also instances of it in the collection of bronzes in the British Museum. Many of the examples of bronze works that have reached us exhibit signs of having been gilt, and the writers of antiquity refer occasionally to the practice. It does not seem to have been employed till taste had much deteriorated; probably when the value and richness of the material were more highly estimated than the excellence of the workmanship. Nero commanded a statue of Alexander, the work of Lysippos, to be gilt; but Pliny (*H. N.* xxxiv. 19. § 6) tells us it was found to injure the beauty and effect of the work, and the gold was removed. (Winckelmann, *Gesch. der Kunst*; Meyer, *Gesch. der bildenden Künste bei den Griechen*; F. Thiersch, *Ueber die Epochen der bildenden Kunst unter den Griechen*; K. O. Müller, *Handbuch der Archæologie der Kunst*, 2nd ed. 1835, 3d ed. with notes by Welcker, 1848.) [L. S.]

STELAE (στῆλαι). [FUNUS, p. 556, b.]

STELLATU'RAE. [EXERCITUS, p. 505, a.]

STHENIA (σθένια), a festival with contests celebrated by the Argives in honour of Zeus surnamed Sthenius, who had an altar consisting of a large rock in the neighbourhood of Hermione. (Hesych. s. v. Σθένια; compare Paus. ii. 32. § 7, 34. § 6.) Plutarch (*de Mus.* p. 1140, c.) states that the *πύλη* or wrestling, which formed a part of the contests at this festival, was accompanied by the flute; and he also mentions a tradition according to which the festival had originally been held in honour of Danaus, and that it was afterwards consecrated to Zeus Sthenius. [L. S.]

STIBADIUM. [MNSA.]

STILLICIDIUM. [SERVITU'ES, p. 1031, b.]

STILUS or STYLUS is in all probability the same word with the Greek *στύλος*, and conveys the general idea of an object tapering like an architectural column. It signifies,

1. An iron instrument (Ovid. *Mét.* ix. 521; Martial, xiv. 21), resembling a pencil in size and shape, used for writing upon waxed tablets. (Plaut. *Bacch.* iv. 4. 63; Plin. *H. N.* xxxiv. 14.) At one end it was sharpened to a point for scratching the characters upon the wax (Quintil. i. 1. § 27), while the other end being flat and circular served to render the surface of the tablets smooth again, and so to obliterate what had been written. Thus, *vertens stilum* means to erase, and hence to correct, as in the well-known precept *sæpe stilum vertas*. (Hor. *Sat.* i. 10. 72; Cic. *Verr.* ii. 41.) The stylus was also termed *graphium* (Ovid. *Amor.* i. 11. 23; Suet. *Jul.* 82), and the case in which it was kept *grapharium* (Martial. xiv. 21) or *grapharia theca*. (Suet. *Claud.* 35.) The annexed cut is

from a picture found in Herculaneum. (Mus. Borbon. vol. vi. tav. 35.)

2. A sharp stake or spike placed in pitfalls before an entrenchment to embarrass the progress of an attacking enemy. (*Bell. African.* 31; Sil. Ital. x. 415.) It was intended to answer the same purpose as the contrivances called *cippi*, *lilia*, and *stimuli* by Caesar (*B. G.* vii. 73).

3. A bronze needle or rod for picking worms off fruit-trees (Pallad. iv. 10. § 20), also a wooden probe employed in gardening operations. (Columell. xi. 3. § 53.)

It bears also the meaning of the stem of a tree or vegetable (Columell. v. 10. § 21, xi. 3. § 46), which is perhaps the primary signification of *στύλος*. [W. R.]

STIPENDIARI'II. The Stipendiarie urbes of the Roman provinces were so denominated, as being subject to the payment of a fixed money tribute, "stipendium," in contradistinction to the vectigales, who paid a certain portion, as a tenth or twentieth of the produce of their lands, their cattle, or customs. The word "stipendium" was used to signify the tribute paid, as it was originally imposed for and afterwards appropriated to the purpose of furnishing the Roman soldiers with pay (*stipendium*, Liv. iv. 60; Tacit. *Hist.* iv. 74). The condition of the urbes stipendiarie is generally thought to have been more honourable than that of the vectigales, but the distinction between the two terms was not always observed. (Liv. xxxvii. 35.) The word stipendiarius is also applied to a person who receives a fixed salary or pay, as a "stipendiarius miles" (Hirtius, *de Bell. Afric.* 43), a phrase which is sometimes used to denote a veteran who has received pay for many years, or served in many campaigns. (Veget. *de Re Milit.* i. 18.) Some MSS. have stipendiosus in the passage last quoted, which is perhaps a better reading. (Göttling, *Gesch. der Röm. Staatsverf.* p. 418.) [R. W.]

STIPE'NDIUM, a pension or pay, from *stipem* and *pendo*, because before silver was coined at Rome the copper money in use was paid by weight and not by tale. (Varro, *L. L.* v. 182, ed. Müller; Plin. *H. N.* xxx. 3.) According to Livy the practice of giving pay to the Roman soldiers (*ut stipendium miles de publico acciperet*) was not introduced till B. C. 405, on the occasion of the taking of Tarracina or Anxur. He represents the change as the spontaneous and unsolicited act of the senate, but from another passage (iv. 36) we learn that in the year 421 B. C. the tribunes had proposed that the occupiers of the public land should pay their *vectigal* regularly, and that it should be devoted to the payment of the troops. The concession was probably accelerated by the prospect of the last war with Veii, and made with a view of conciliating the plebs, who without some such favour would in their then humour have refused to vote for the war. Livy also represents the funds for the payment to have been raised by a tributum or general tax, but as Arnold observes (*Hist. of Rome*, vol. i. p. 369; compare Niebuhr, vol. ii. p. 440), "The vectigal, or tithe, due from the occupiers of the public land, was to provide pay for the soldiers; and if this were not sufficient, it was to be made good by a tax or tribute levied upon the whole people. This tithe, however, was probably paid very irregularly, and hence the pay of the soldiers would in point of fact be provided chiefly out of the tributum." A few years after this concession (B. C. 403), and

during the hostilities against Veii, a certain amount of pay was assigned (*certus numerus aeris est assignatus*, Liv. v. 7) to the knight also. [EQUITES, p. 472, a.] Livy, however, seems to be here speaking of the citizens who possessed an equestrian fortune, but had no horse (*equus publicus*) assigned to them by the state. For it had always been customary for the knights of the 18 centuries to receive pay out of the common treasury, in the shape of an allowance for the purchase of a horse, and a yearly pension of 2000 asses for its keep. [AES EQUESTRE; AES HORDEARIUM.] Hence Niebuhr (vol. i. p. 474, and vol. ii. p. 441) doubts the accuracy of the account which is given by Livy (iv. 59), and observes that "the Veientine war cannot have been the occasion on which the practice of giving pay to the troops was first established: the aerarii must undoubtedly have always continued to pay pensions (*capita*) to the infantry, in the same way as single women and minors did to the knights; and the change consisted in this, that every legionary now became entitled to pay, whereas the number of pensioners had previously been limited by that of the persons liable to be charged with them; and hence the deficiency was supplied out of the aerarium, from the produce of the vectigal, and when this failed, by a tribute levied even from those plebeians who were themselves bound to serve." Consequently the tribunes murmured that the tribute was only imposed for the sake of ruining the plebs. (Liv. iv. 60.) In support of his opinion Niebuhr (l.c.) advances arguments which at least make it very probable that the "paternal legislation" of Servius Tullius provided for the pay of the infantry in the manner mentioned; but even admitting this, the practice might have been discontinued so as to justify the statement made on this subject by Livy. We have not space to repeat or discuss those arguments here, and therefore simply refer to vol. i. p. 374, and vol. ii. p. 441, of his History. According to Polybius (vi. 37) the daily pay of a legionary amounted, in his time, to two oboli, which, as he makes a drachma equivalent to a denarius, and a denarius in paying the soldiers was then estimated at ten asses (Plin. l. c.), and not at sixteen, as was usual in other money transactions, gives $3\frac{1}{2}$ asses a day, or 100 a month. Now the yearly pension of the knights (1000 asses), observes Niebuhr, gives, if we take the old year of 10 months, 200 asses a month: just double the pay of the foot soldiers. In later times the knights received triple pay (*triplex stipendium merobant*). This allowance was first established by the military tribune Cn. Cornelius Cossus (400 B. C.), and according to Niebuhr was then designed as a compensation to those who served with their own horses; it did not become the general custom till some time afterwards. Polybius (vi. 37) thus speaks of the stipendium of his day, which he calls *ὀψώνιον*, as St. Luke (iii. 14) also does. "The foot soldier receives as pay two oboli a day: the centurion twice as much: the horseman a drachma or denarius. The foot soldiers also receive in corn every month an allowance (*demensum*) of $\frac{3}{4}$ of an Attic medimnus or about 2 bushels of wheat: the horsemen 7 medimni of barley and 2 of wheat. The infantry of the allies receive the same allowance (*σπομετρούμεναι*) as the Roman: the horsemen $1\frac{1}{2}$ medimni of wheat and 5 of barley. But there is this difference, that the allied forces receive their

allowances as a gratuity; the Roman soldiers, on the contrary, have deducted from their pay the money value of whatever they receive, in corn, armour or clothes." There was indeed a law passed by C. Gracchus (Plut. C. Gracch. 5) which provided that besides their pay the soldiers should receive from the treasury an allowance for clothes; but from Tacitus (*Ann.* i. 17) this law seems either to have been repealed or to have fallen into disuse. The two oboli of Polybius, which we make equal to $3\frac{1}{2}$ asses, are reckoned by Plautus in round numbers at 3 asses. Thus he says (*Most.* ii. l. 10), "Isti qui trium nummorum causa subeunt sub falas." This amount was doubled for the legions by Julius Caesar (Sueton. *Jul. Caes.* 26) before the civil war. He also gave them corn whenever he had the means, without any restrictions (*sine modo mensuraque*). Under Augustus (Suet. *Aug.* 49; Tacit. l. c.) it appears to have been raised to 10 asses a day (three times the original sum), or 300 a month, or 1200 in four months. Now as the original amount of their pay had been tripled, the soldiers could not complain if the denarius were reckoned at 16 asses in payments made to themselves, as well as other persons; and taking this value, the 1200 asses amount to exactly 3 aurei, or 3×400 asses. This sum then was considered as an unit, and called *stipendium*, being paid three times a year. Hence Suetonius says of Domitian (*Dom.* 7): "Addidit et quartum stipendium, ternos aureos:" a fact which Zonaras (*Ann.* ii. p. 196) otherwise expresses by stating, that instead of 75 drachmae (i. e. denarii) Domitian gave the soldiers 100, i. e. he made an addition of 25 denarii or 1 aureus to their pay. The expression of Suetonius supposes that 3 aurei were paid every quarter instead of every four months, after the addition made by Domitian; that of Zonaras implies, that 4 aurei instead of 3 were paid, as before, every three months, the annual amount being the same either way, and the quarterly or four months' instalment of 3 or 4 aurei being called a stipendium. Niebuhr's (vol. ii. p. 443) statement on this subject is only partially correct or else obscure: at any rate, if the soldiers received 10 asses a day they must have received more than 1200 a year.

The Praetorian cohorts received twice as much as the legionaries. (Tacit. l. c.) The pay of the tribunes is not known; but it was considered very great (Juven. iii. 132), and probably was not less than 48 aurei per annum, after the time of Domitian. We must not omit to mention that if his pay were withheld the Roman soldier was allowed by an old unwritten custom to distrain the goods (*per pignoris capionem*) of the officer whose duty it was to supply it. The eques was allowed the same privilege against the persons who were bound to furnish him with the aes equestre, for the purchase of his horse, and the aes hordearium for its keep. (Gaius, lib. iv. § 26—28.)

From an expression which Livy (v. 4) puts into the mouth of a patrician orator, it might be supposed that the soldiers always received a full year's pay, independent of the length of their service. This, however, seems so unreasonable, that we cannot but agree with Niebuhr in supposing that the historian was misled by the custom of his own time, when a full year had long been the stipulated term of a soldier's pay as well as of his service.

[R. W.]

STIPULATIO, STIPULA'TOR. [OBLIGATIONES, pp. 817, b, 818, a.]

STIVA. [ARATRUM.]

STOA. [PORTICUS.]

STOICHEION. [HOROLOGIIUM.]

STOLA, was a female dress worn over the tunic; it came as low as the ankles or feet (*ad talos stola demissa*, Hor. Sat. i. 2. 99), and was fastened round the body by a girdle, leaving above the breast broad folds (*rugosiorum stola frontem*, Mart. iii. 93. 4). The tunic did not reach much below the knee, but the essential distinction between the tunic and stola seems to have been, that the latter always had an INSTITA or flounce sewed to the bottom and reaching to the instep. (Hor. Sat. i. 2. 29; Ovid. *Ar. Amat.* i. 32.) Over the Stola the Palla or Pallium was worn [PALLIUM], as we see in the cut annexed. (*Mus. Borbon.* iii. tav. 37.)

The stola seems to have been usually fastened over the shoulder by a FIBULA or clasp, and generally had sleeves, but not always.

The Stola was the characteristic dress of the Roman matrons as the toga was of the Roman men. (Cic. *Phil.* ii. 18.) Hence the meretrices were not allowed to wear it, but only a dark-coloured toga (Tibull. iv. 10. 3; Mart. i. 36. 8); and accordingly Horace (*Sat.* i. 2. 63) speaks of the *matrona* in contradistinction to the *togata*. For the same reason women, who had been divorced from their husbands on account of adultery, were not allowed to wear the Stola, but only the toga (Schol. *ad Hor. l. c.*): to which Martial alludes (ii. 39, vi. 64. 4). See Becker, *Gallus*, vol. i. p. 321, &c.

STRA'GULUM. [TAPES.]

STRATE'GUS (στρατηγός). The office and title of Strategus, or General, seem to have been more especially peculiar to the democratic states of ancient Greece: we read of them, for instance, at Athens, Tarentum, Syracuse, Argos, and Thurii; and when the tyrants of the Ionian cities in Asia Minor were deposed by Aristagoras, he established Strategi in their room, to act as chief magistrates. (Herod. v. 38.)

The Strategi at Athens were instituted after the remodelling of the constitution by Cleisthenes, to discharge the duties which had in former times been performed either by the king or the Archon Polemarchus. They were ten in number, one for each of the ten tribes, and chosen by the suffrages (*χευρωσια*) of the people. (Pollux, viii. 87.) Before entering on their duties, they were required

to submit to a δοκιμασία, or examination of their character (Lysias, c. *Alcib.* 144); and no one was eligible to the office unless he had legitimate children, and was possessed of landed property in Attica. (Dinarch. c. *Demosth.* 99.) They were, as their name denotes, entrusted with the command on military expeditions, with the superintendence of all warlike preparations, and with the regulation of all matters in any way connected with the war department of the state. They levied and enlisted the soldiers (κατέλεξαν), either personally or with the assistance of the Taxiarchs. (Lysias, c. *Alcib.* 140, *pro Militi* 114.) They were entrusted with the collection and management of the εἰσφοραί, or property taxes raised for the purposes of war; and also presided over, or officiated as Εὐαγγελισταί in the courts of justice in which any disputes connected with this subject or the trierarchy were decided. (Wolf, *ad Lept.* p. 94; Dem. c. *Lacr.* 940. 16.) They also nominated from year to year persons to serve as trierarchs (Dem. c. *Boeot.* i. 997; Xenoph. *de Rep. Athen.* 3), and took cognizance of the cases of ANTIDOSIS arising out of the trierarchy and property taxes (ἐπὶ τοῖς τὰς ἀντιδόσεως, c. *Phaenip.* 1040.) They also presided at courts-martial and at the trials in cases of accusation for non-performance of military and naval duties. [ASTRATIAS and ANAUMACHIOU GRAFHAR.] They likewise had the power of convening extraordinary assemblies of the people in cases of emergency [ΕΚΚΛΗΣΙΑ, pp. 440, b, 441, a], and from the instance of Pericles it would always seem that in critical times they had the power of preventing an assembly being holden. (Thucyd. ii. 22.) But their most important trust was the command in war, and it depended upon circumstances to how many of the number it was given. At Marathon all the ten were present, and the chief command came to each of them in turn. The Archon Polemarchus also was there associated with them, and according to the ancient custom, his vote in a council of war was equal to that of any of the generals. (Herod. vi. 109.) In the expedition against Samos, also, all the ten generals were engaged (Thucyd. i. 116), the poet Sophocles being one of the number (Müller, *Literature of Ancient Greece*, p. 338); but it was obvious that in most cases it would be neither convenient nor useful to send out the whole number on the same undertaking, and during the course of a protracted war it would be necessary for some of them to be left at home, in charge of the war department there. Accordingly, in the best times of Athens, three only were for the most part sent out; one of these (πρῶτος αὐτός) was considered as the commander-in-chief, but his colleagues had an equal voice in a council of war. Sometimes a strategus, as Pericles, was vested with extraordinary powers (Thucyd. ii. 65): in like manner, the three generals engaged in the Sicilian expedition, Nicias, Alcibiades, and Lamachus, were made ἀνκνρότοποι, or supreme and independent in all matters connected with it. (Thucyd. vi. 8, 26.) So also was Aristides in his command at Plataeae. But even in ordinary cases the Athenian generals were not fettered in the conduct of a campaign by any council of war, or other controlling authority, as the Spartan kings sometimes were; still they were responsible for it, and in the time of Demosthenes (*Philipp.* i. 53) exposed on the termination of their command to capital indictment at the caprice of

the people, or from the malevolence of personal enmity. (*a. Mid.* 535, *c. Aristocr.* 676.) Even Pericles himself (Thucyd. ii. 65) was fined by the people for imputed mismanagement, but really because the Athenians were disappointed in their expectations.

In the times of Chabrias and Phocion, however, the greater part of the generals regularly remained at home to conduct the processions, &c., as the citizens did to enjoy them, leaving their wars to be conducted by mercenaries and their leaders. (Demosth. *Phil.* i. 47. 12.) Some of them too were not commanders of all the troops, but only of the horse and foot of separate armies (*στρατηγὸς δ' ἐπὶ τῶν ὀπλῶν or ὀπλιτῶν, and δ' ἐπὶ τῶν ἵππεων*): and one of them, the general of the administration (*δ' ἐπὶ τῆς διοικήσεως*), performed part of the judicial labours of the strategi, and other civil services, such as that of giving out the pay of the troops. (Böckh, *Publ. Econ. of Athens*, p. 181, 2d ed.; Dem. *pro Coros.* 265. 11.) We must also remember that the Athenian navy as well as the army was commanded by the Strategi, whence the "praetoria navis" or flag-ship is called *στρατηγικὴ ναῦς*. (Hermann, *Lehrbuch der griech. Staatsalt.* § 152.)

The strategi at Athens were perhaps the most important officers of the republic, especially during war; and amongst them are numbered some of her most distinguished citizens, Miltiades, Themistocles, Pericles, Phocion, &c. But the generals of the early times differed in many respects from the contemporaries of Demosthenes. Formerly the general and the statesman were united in one person; the leader in the field was the leader in the assembly, and thus acquired a double influence, accompanied with a double responsibility. But in later times, the general and the professed orator or statesman were generally perfectly distinct (Isocr. *de Pace*, 173), and the latter, as ought always to be the case in free states, had by far the greater influence. The last of the Athenian generals who was considered to unite the two characters, was Phocion, who was general no less than forty-five times. (Plut. *Phoc.* 5.) Accordingly the various parties into which the state was then divided had each their orator and general, the former acting as a recognised leader (Demosth. *Olyn.* ii. 26); and a general, when absent on foreign expeditions, was liable to be maligned or misrepresented to the people by an unfriendly and influential demagogue. (Demosth. *de Cherson.* 97. 12.) Hence we cannot wonder that the generals of the age of Demosthenes were neither so patriotic nor so distinguished as those of former times, more especially when we call to mind, that they were often the commanders of mercenary troops, and not of citizens, whose presence might have checked or animated them. Moreover, they suffered in moral character by the contamination of the mercenary leaders with whom they were associated. The necessity they were under of providing their hired soldiers with pay, habituated them to the practice of levying exactions from the allies; the sums thus levied were not strictly accounted for, and what should have been applied to the service of the state was frequently spent by men like Chares upon their own pleasures, or in the purchase of a powerful orator. (Thirlwall, *Hist. of Greece*, vol. v. p. 214.) Another effect of the separation of the two characters, was that the responsibility of the general and of

the orator or minister was lessened, and it was in most cases easy for a general to purchase an apparently disinterested advocacy of his conduct. There was this further abuse connected with the system, that according to Isocrates (*de Pace*, 168), military command was so much coveted, that the election of generals was often determined by the most profligate bribery.

The most eminent generals of the time of Demosthenes were Timotheus, Chabrias, Iphicrates, and Diopithes: Chares and Lysicles were inferior to them both in loyalty and skill, but the former and the mercenary Charidemus were frequently employed. Towards the decline of the Roman empire the chief magistrate at Athens was called *Ἐπαρχος*, or the Duke: Constantine bestowed on him the title of *Μέγας Ἐπαρχός* or the *Grand Duke*. (Julian. *Orat.* i.) The military chiefs of the Aetolian and Achaean leagues were also called Strategi. The Achaean Strategi had the power of convening a general assembly of the league on extraordinary occasions. [ACHAÏCUM FORUM, p. 5, b.] [R. W.]

STRATO'RES. 1. Imperial Equerries subject to the *Tribunus Stabuli*. Their proper duty, as the name imports, was to saddle the horses; they also led them from the stable and assisted the emperor to mount. Hence they were termed in Greek *ἀναβαλεῖς*. From the addition of *sales* to their title it appears that they were considered as part of the military establishment. (Spartian. *Caracall.* 7; *Amm. Marc.* xxx. 5; see Dugange, *s. v.*) Consuls and praetors had their *stratores* as we learn from inscriptions (Orell. *Inscr.* n. 798, 3250, 3523), and perhaps aediles also. (Orell. n. 1584.)

2. Officers sent into the provinces to select horses for the stud of the prince or for the general service of the state. (*Amm. Marc.* xxix. 3; *Cod. Theod.* 8, tit. 8. s. 4; *Cod. 12.* tit. 25; *Salmas. ad Capitolin. M. Antonin.* 8, *ad Trebell. Poll. Valerian.* 3.) These in all probability belonged to the same body with those mentioned above; the title *stratores a publicis rationibus*, by which they are usually distinguished in works upon Roman antiquities, rests upon no authority except the letters STR. A.P.R. in an inscription (Gruter, p. DLXIX. n. 8), the interpretation of which is very doubtful.

3. Jailors under the orders of the *Commentariensis* or Chief Inspector of Prisons. (*Cod. Theod.* 9, tit. 3. s. 1.) To these Ulpian refers (Dig. l. tit. 16. s. 4), "*nemo proconsulum stratores suos habere potest, sed vice eorum milites ministerio in provinciis funguntur*," although the passage is quoted in most dictionaries as bearing upon the *stratores* of the stable. (Compare the *Notitia Dignitatum Imperii Orientis*, c. 13 and c. 101 in *Graevii Thes. Rom. Antiq.* vol. vii. p. 1375 and p. 1606.)

4. In the later Latin writers and especially in the monkish historians of the middle ages, *stratores* denote a chosen body of soldiers sent in advance of an army to explore the country, to determine the proper line of march, to select the spots best fitted for encamping, and to make all the arrangements necessary for the safety and comfort of the troops when they halted, their duties being in some respects analogous to those of the classical *scoutatores*, and in others to those of a modern *corps-de-guides*. (Symmach. *Epist. ad Theod. et Valent.* 1; Dugange, *s. v.*)

5. We find in an inscription the words *DIO-MEDUS AP. STRATOR*, which is generally understood to commemorate the labours of some individual in paving the Appian Way, and mention is made of *stratores* of this description in another inscription found at Mayence. (Orell. n. 1450; compare Fuchs, *Geschichte von Mainz.*) [W. R.]

STRENA, a present given on a festive day and for the sake of good omen (Festus, s. v.), whence a good omen is called by Plautus *bona strema*. (Stich. v. 2. 24.) It was however chiefly applied to a new year's gift, to a present made on the Calends of January. In accordance with a *Senatusconsultum* new year's gifts had to be presented to Augustus in the Capitol, even when he was absent. (Suet. Aug. 57; comp. Dion Cass. liv. 35.) The person who received such presents was accustomed to make others in return (*strenarum commercium*); but Tiberius, who did not like the custom on account of the trouble it gave him and also of the expense in making presents in return, frequently left Rome at the beginning of January, that he might be out of the way (Dion Cass. lvii. 8), and also strictly forbade any such presents to be offered him after the first of January, as he used to be annoyed by them during the whole of the month. (Suet. Tib. 34; Dion Cass. lvii. 17.) The custom, so far as the emperor was concerned, thus seems to have fallen almost entirely into disuse during the reign of Tiberius. It was revived again by Caligula (Suet. Cal. 42; Dion Cass. lix. 24), but abolished by Claudius (Dion Cass. lx. 6); it must, however, have been restored afterwards, as we find it mentioned as late as the reigns of Theodosius and Arcadius. (Auson. Ep. xviii. 4; Symmach. Ep. x. 28.)

STRIAE. [COLUMNA.]

STRIGA. [CASTRA, p. 254.]

STRIGIL. [BALNEUM, pp. 185, a, 192, a.]

STROPHIUM (*ταυρία, ταυρίδιον, ἀνδρόστροφος*) was a girdle or belt worn by women round the breast and over the inner tunic or chemise. (Non. xiv. 8; *tereti strophio lactantes vinota popillas*, Catull. lxi. 65.) It appears from an epigram of Martial (xiv. 66) to have been usually made of leather. (Becker, *Gallus*, vol. i. p. 321.)

SUBITARIUM. [TUMULTUS.]

SUBLIGACULUM or SUCCINCTORIUM (*βιδίωμα, περιβόημα*), drawers. (Joseph. Ant. iii. 7. § 1.) This article of dress, or a bandage wound about the loins so as to answer the same purpose, was worn by athletes at the public games of Greece in the earliest ages [ATHLETAE]: but the use of it was soon discontinued, and they went entirely naked. (Schol. in *Hom. Il.* xxiii. 683; Isid. Orig. xviii. 17.) The Romans, on the contrary, and all other nations except the Greeks, always adhered to the use of it in their gymnastic exercises. (Thucyd. i. 6; Schol. in *loc.*; Clem. Alex. Paedag. iii. 9; Isid. Orig. xix. 22.) It was also worn by actors on the stage (Cic. de Off. i. 35), by those who were employed in treading grapes [TORCULAR] (Geopon. vi. 11), and by the Roman popa at the sacrifices, and it then received the denomination *limus* (Virg. Aen. xii. 120; Servius,

in *loc.*), which name was also applied to it as worn by Roman slaves. (Gell. xii. 3.) The circumstance of the slaves in India wearing this as their only covering (Strabo, xv. l. § 78. p. 156, ed. Sieb.) is agreeable to the practice of modern slavery in the West Indies and other tropical countries. [J. Y.] SUBSCRIPTIO CENSORIA. [CENSOR, p. 263, b.]

SUCCESSIO. This word is used to denote a right which remains unchanged as such, but is changed with reference to its subject. The change is of such a nature that the right when viewed as attached to a new person is founded on a preceding right, is derived from it and depends upon it. The right must accordingly begin to be attached to the new person at the moment when it ceases to be attached to the person who previously had it; and it cannot be a better right than it was to the person from whom it was derived (Dig. 50. tit. 17. § 1). Thus in the case of the transfer of ownership by tradition, the new ownership begins when the old ownership ceases, and it only arises in case the former possessor of the thing had the ownership, that is, prior ownership is a necessary condition of subsequent ownership. This kind of change in ownership is called Successio. It follows from the definition of it that Usucapion is not included in it; for Usucapion is an original acquisition. The successio of a heres is included, for though there might be a considerable interval between the death and the aditio hereditatis, yet when the hereditas was once taken possession of, the act of aditio had by a legal fiction relation to the time of the death. Thus whereas we generally view persons who possess rights as the permanent substance and the rights as accidents, in the case of Succession the right is the permanent substance, which persists in a series of persons.

The notion of Succession applies mainly though not exclusively to property. With respect to the law that relates to Familia, it applies so far as the parts of the Familia partake of the nature of property, such as the power of a master over his slave, and the case of Patronatus and Mancipii causa. Thus the patria potestas and the condition of a wife in manu may be objects of succession. It applies also to the case of adoption.

Successio is divided into Singular Succession and Universal Succession. These terms conveniently express the notion, but they are not Roman terms. The Roman terms were as follows: in universum jus, in eam duntaxat rem succedere (Dig. 21. tit. 3. § 3); per universitatem, in rem succedere (Gaius, ii. 97; Dig. 43. tit. 3. § 1); in omne jus mortui, in singularum rerum dominium succedere (Dig. 29. tit. 2. § 37); in universa bona, in rei tantum dominium succedere. (Dig. 39. tit. 2. § 24.)

It is Singular succession when a single thing as an object of ownership is transferred, or several things together, when they are transferred as individual things, and not as having any relation to one another in consequence of this accidental common mode of transfer. The person into whose place another comes by Singular succession, is

called Auctor with respect to his successor. In order to be Singular succession, the whole right of the auctor must be transferred. He to whom an estate in fee simple is transferred, takes by Singular succession: he to whom a life estate is granted out of an estate in fee simple, does not take by Singular succession.

The object of Universal succession is property as an ideal whole (*universitas*) without any reference to its component parts. Yet the notion of succession applies as well to a fraction of this ideal whole as to the unit which this ideal whole is conceived to be; for the whole property being viewed as a unit, it may be conceived to be divided into fractional parts without any reference to the several things which are included in the ideal whole. It was also consistent with this species of succession that many particular things should be incapable of being transferred: thus in the case of an hereditas the usufructus of the deceased did not pass to the heres, and in the case of adrogation neither the usufructus nor the debts of the adrogated person, according to the old law.

In the case of Obligationes there is no Singular succession: there is either the change of the Obligatio into another by Novatio, or the suing for the debt by another (*cessio actionis*).

The object of Universal succession is a Universitas as such, and it is by means of the words Universitas and Universum, that the Romans denote this kind of succession; but it would be erroneous to infer from this use of the term that succession applies to all Universitates. Its proper application is to property, and the true character of Universal succession is the immediate passing over from one person to another of all the credits and debts that belong or are attached to the property. This happens in the case of an hereditas: heres in omne jura mortui, non tantum singularium rerum dominium succedit, quum et ea quae in nominibus sunt ad heredem transeant (Dig. 29. tit. 2. a. 37); and in the case of adrogation as to most matters. The debts would be transferred by adrogation if this were not accompanied with a capitis deminutio. Credits and debts could not be transferred by Singular succession. The cases of Universal succession were limited and the notion could not be applied and made effectual at the pleasure of individuals. The most important cases of Universal succession were the property of a deceased person; as hereditas, bonorum possessio, fideicommissaria hereditas, and others of the like kind. The property of a living person might be transferred in this way, in the case of adrogatio, conventio in manum, and the bonorum emptio. (Gaius, ii. 98.) In many other cases though the object is to transfer a whole property, it is in fact effected by the transfer of the several things: the following are instances of this kind of transfer, the gift of a whole property, or its being made a Dos, or being brought into a Societas, or the sale of an hereditas by a heres.

The notion of a Universal succession among the Romans appears to have been derived from the notion of the hereditas, to which it was necessary to attach the credits and debts of the deceased and the sacra. Other instances of Universal succession such as the Bonorum Possessio grew out of the notion of the hereditas; and it was found convenient to extend it to other cases, such as Adrogation. But, as already observed, the extension

of the notion was not left to the pleasure of individuals, and accordingly this doctrine was, to use a Roman phrase, *Juris Publici*.

The words Successio, Successor, Succedere by themselves have a general meaning and comprise both kinds of Succession. Sometimes these words by themselves signify universal succession, as appears from the context (Gaius, iii. 82), and by such expressions as *heredes ceterique successores*. In other cases the kind of succession is denoted by appropriate words as *per universitatem succedere*, *acquirere*, *transire*, in *universum jus succedere*, &c. in the case of Universal Succession; and in rem, in *rei dominium*, in *singularium rerum dominium succedere*, &c. in the case of Singular Succession.

In the phrase "*per universitatem succedere*" the notion of universal succession is not directly expressed; for the phrase has immediate reference to the acquisition of a single thing, and it is only by means of the word Universitas that we express the notion, that the acquisition of the individual thing is effected by means of the acquisition of the whole.

(Savigny, *System*, &c. iii. p. 8; Gaius, ii. 97, &c.; Puchta, *Inst.* ii. § 198.) [G. L.]

SUCCESSOR. [SUCCESSIO.]

SUCCINCTORIUM. [SUBLIGACULUM.]

SUDATIO, SUDATORIUM. [BALNEAE, p. 190, b.]

SUFFIBULUM. [VESTALES.]

SUFFRAGIA SEX. [EQUITES, p. 472, b.]

SUFFRAGIUM, a vote. At Athens the voting in the popular assemblies and the courts of justice was either by show of hands or by ballot, as is explained under CHIROTONIA and PSEPHUS. It is commonly supposed that at Rome the people were always polled in the comitia by word of mouth, till the passing of the *Leges Tabellariae* about the middle of the second century before Christ [TABELLARIAE LEGES], when the ballot by means of tabellae was introduced. [TABELLAE] Wunder (*Codex Erfordensis*, p. clxvii. &c.) however has shown, that the popular assemblies voted by ballot, as well as by word of mouth, long before the passing of the *Leges Tabellariae*, but that instead of using tabellae they employed stones or pebbles (the Greek *ψήφοι*), and that each voter received two stones, one white and the other black, the former to be used in the approval and the latter in the condemnation of a measure. The voting by word of mouth seems to have been adopted in elections and trials, and the use of pebbles to have been confined to the enactment and repeal of laws. That the latter mode of voting was adopted in early times is proved by many passages of Dionysius, and especially by x. 41: *ὅτι δὲ ὁ δῆμος ἀπαιτεῖ τὰς ψήφους, οἱ νεώτατοι τῶν πατρικίων—τὰ ἀγγεῖα τῶν ψήφων τοὺς ἔχοντες ἀφαιροῦντο*; and by xi. 52: *ἐκέλευσαν καθίστασθαι πύλινον ὑπὲρ τῆς πόλεως Ῥωμαίων, καθ' ἑκάστην φυλὴν, εἰς ᾗ ἀποθήσονται τὰς ψήφους*. It is also confirmed by the common expressions used with respect to voting, as *suffragium ferre*, *mittere in suffragia*, *inire*, or *ire in suffragia*, which lead us to suppose that the suffragium probably signified something which was put by the hand from one place into another. For if the Romans had from the first been polled only by word of mouth, it is scarcely possible that such an expression as *suffragium ferre* would have been used, when they had nothing to carry; but on the contrary, some such

word as *dicere* would have been employed, more especially as it is certain that in the most ancient times those who voted by word of mouth did not go up one by one to the officer who received the votes, but remained in their places, and were asked for their votes by the *Rogatores*, who thence derived their name. Besides which the word *suffragium* can scarcely signify the same as *sententia* or *vox*. The etymology is uncertain, for the opinions of those who connect it with *φωδέρβαι* or *fragor* do not deserve notice. Wunder thinks that it may possibly be allied with *suffrago*, and signified originally an ankle-bone or knuckle-bone. On the passing of the *Leges Tabellariae* the voting with stones or pebbles went out of use. For further particulars with respect to the voting in the comitia, see *COMITIA*, p. 336; *DIRIBITORES*; *SITULA*; *TABELLA*; *TABELLARIAE LEGES*.

Those who had the *Jus Suffragii* or the right of voting in the comitia, as well as the capacity of enjoying magistracies, were citizens *optimo jure*. [*CIVITAS*, p. 291, b.]

SUGGESTUS means in general any elevated place made of materials heaped up (*sub* and *gero*), and is specially applied: 1. To the stage or pulpit from which the orators addressed the people in the comitia. [*ROSTRA*.] 2. To the elevation from which a general addressed the soldiers. (Tacit. *Hist.* i. 35.) 3. To the elevated seat from which the emperor beheld the public games (Suet. *Jul.* 76; Plin. *Paneg.* 51), also called *cubiculum*. [*CUBICULUM*.]

SUGGRUNDARIUM. [*FUNUS*, p. 559, b.]

SUI HEREDES. [*HERES*, p. 598, b.]

SUMTUARIAE LEGES, the name of various laws passed to prevent inordinate expense (*sumtus*) in banquets, dress, &c. (Gellius, ii. 24, xx. 1.) In the states of antiquity it was considered the duty of government to put a check upon extravagance in the private expenses of persons, and among the Romans in particular we find traces of this in the laws attributed to the kings and in the Twelve Tables. The censors, to whom was entrusted the *disciplina* or *cura morum*, punished by the *nota censoria* all persons guilty of what was then regarded as a luxurious mode of living: a great many instances of this kind are recorded. [*CENSOR*, p. 264, a.] But as the love of luxury greatly increased with the foreign conquests of the republic and the growing wealth of the nations, various *Leges Sumtuarie* were passed at different times with the object of restraining it. These however, as may be supposed, rarely accomplished their object, and in the latter times of the republic they were virtually repealed. The following is a list of the most important of them arranged in chronological order.

OPPIA, proposed by the tribune C. Oppius in the consulship of Q. Fabius and Ti. Sempronius in the middle of the second Punic war B. C. 213, enacted that no woman should have above half an ounce of gold, nor wear a dress of different colours, nor ride in a carriage in the city or in any town, or within a mile of it, unless on account of public sacrifices. This law was repealed twenty years afterwards (Liv. xxxiv. 1, 8; Val. Max. ix. 1. § 3), whence we frequently find the *Lex Orchia* mentioned as the first *Lex Sumtuaria*. Tacitus (*Ann.* iii. 33, 34) speaks of *Oppiae Leges*.

ORCHIA, proposed by the tribune C. Orchius in the third year after the censorship of Cato B. C. 181,

limited the number of guests to be present at entertainments. When attempts were afterwards made to repeal this law, Cato offered the strongest opposition, and delivered a speech in defence of the law, which is referred to by the grammarians. (Macrob. *Sat.* ii. 13; Festus, s. vv. *Obsconitatore*, *Percunctatum*; Schol. Bob. in *Cic. pro Sest.* p. 310, ed. Orelli; Meyer, *Orat. Roman. Fragm.* p. 91, &c., 2d ed.)

FANNIA, proposed by the consul C. Fannius B. C. 161, limited the sums which were to be spent on entertainments, and enacted that not more than 100 *asses* should be spent on certain festivals named in the law, whence it is called *Centussis* by Lucilius, that on ten other days in each month not more than 30 *asses*, and that on all other days not more than 10 *asses* should be expended; also that no other fowl but one hen should be served up, and that not fattened for the purpose. (Gell. ii. 24; Macrob. *Sat.* ii. 13; Plin. *H. N.* x. 50, s. 71.)

DIDIA, passed B. C. 143, extended the *Lex Fannia* to the whole of Italy, and enacted that not only those who gave entertainments which exceeded in expense what the law had prescribed, but also all who were present at such entertainments, should be liable to the penalties of the law. We are not however told in what these consisted. (Macrob. *Sat.* ii. 13.)

LICINIA agreed in its chief provisions with the *Lex Fannia*, and was brought forward, we are told, that there might be the authority of a new law upon the subject, inasmuch as the *Lex Fannia* was beginning to be neglected. It allowed 200 *asses* to be spent on entertainments upon marriage days and on other days the same as the *Lex Fannia*; also, that on ordinary days there should not be served up more than three pounds of fresh and one pound of salt meat. (Gell. Macrob. *ll. cc.*) Gellius (*l. c.*) states, that this law was brought forward by P. Licinius Crassus, but we do not know at what time, probably however in his praetorship B. C. 103. Gellius relates elsewhere (xv. 8) that a Latin orator of the name of Favorinus spoke in support of this law. (See *Dict. of Biog. art. Favorinus*.)

CORNELIA, a law of the dictator Sulla B. C. 81, was enacted on account of the neglect of the *Fannian* and *Licinian* Laws. Like these it regulated the expenses of entertainments. (Gell. ii. 24; Macrob. *l. c.*) Extravagance in funerals, which had been forbidden even in the Twelve Tables (*Cic. de Leg.* ii. 23—25), was also restrained by a law of Sulla. (Plut. *Sull.* 35.) It was probably the same law which determined how much might be spent upon monuments. (*Cic. ad Au.* xii. 35, 36.)

ÆMILIA, proposed by the consul Æmilius Lepidus B. C. 78, did not limit the expenses of entertainments, but the kind and quantity of food that was to be used. (Gell. Macrob. *ll. cc.*) Pliny (*H. N.* viii. 57. s. 82) and Aurelius Victor (*de Vir. Ill.* 72) ascribe this law to the consulship of M. Æmilius Scaurus B. C. 115. It is not impossible that there may have been two Æmilian *Leges* on the subject.

ANTIA, of uncertain date, proposed by Antius Restio, besides limiting the expenses of entertainments, enacted that no actual magistrate, or magistrate elect, should dine abroad anywhere except at the houses of certain persons. This law however was little observed; and we are told that Antius never dined out afterwards, that he might not see his own law violated. (Gell. Macrob. *ll. cc.*)

JULIA, proposed by the dictator C. Julius Caesar, enforced the former sumptuary laws respecting entertainments, which had fallen into disuse. (Dion Cass. xliii. 25.) Julius Caesar adopted strong measures to carry this law into execution, but it was violated when he was absent from Rome. (Cic. *ad Att.* xiii. 7.) He stationed officers in the provision market to seize upon all estates forbidden by the law, and sometimes sent lictors and soldiers to banquets to take away every thing which was not allowed by the law. (Suet. *Jul.* 43.) Cicero seems to refer to this law in two of his epistles (*ad Fam.* vii. 26, ix. 15).

JULIA, a lex of Augustus, allowed 200 sesterces to be expended upon festivals on dies profesti, 300 upon those on the Calends, Ides, Nones, and some other festive days, and 1000 upon marriage feasts. There was also an edict of Augustus or Tiberius by which as much as from 300 to 2000 sesterces were allowed to be expended upon entertainments, the increase being made with the hope of securing thereby the observance of the law. (Gell. *l. c.*; Sueton. *Octav.* 34.)

Tiberius attempted to check extravagance in banquets (Suet. *Tib.* 34); and a senatusconsultum was passed in his reign for the purpose of restraining luxury, which forbade gold vases to be employed, except for sacred purposes, and which also prohibited the use of silk garments to men. (Tacit. *Ann.* ii. 33; Dion Cass. lvii. 15.) This sumptuary law, however, was but little observed. (Tacit. *Ann.* iii. 52, 53.) Some regulations on the subject were also made by Nero (Suet. *Ner.* 16), and by succeeding emperors, but they appear to have been of little or no avail in checking the increasing love of luxury in dress and food. (Platner, *Exercit. II. de Legibus Sumptuariis Rom.* Lips. 1752; Boxmann, *Dissert. antiquario-juridica de Leg. Rom. Sumptuariis*, Lugd. Batav. 1816.)

Sumptuary laws were not peculiar to antiquity. "Our own legislation, which in its absurd as well as its best parts has generally some parallel in that of the Romans, contains many instances of Sumptuary Laws, which prescribed what kind of dress, and of what quality, should be worn by particular classes, and so forth. The English Sumptuary Statutes relating to apparel commenced with the 37th of Edward III. This statute, after declaring that the outrageous and excessive apparel of divers people against their estate and degree is the destruction and impoverishment of the land, prescribes the apparel of the various classes into which it distributes the people; but it goes no higher than knights. The clothing of the women and children is also regulated. The next statute, 3rd of Edward IV., is very minute. This kind of statute-making went on at intervals to the 1st of Philip and Mary, when an act was passed for the Reformation of Excessive Apparel. These Apparel statutes were repealed by the 1st of James I." (Long's Translation of Plutarch's Life of Sulla, c. 2.)

SUOVETAVRIA. [SACRIFICIUM; LUTRATIO.]

SUPERFICIES, SUPERFICIA RIUS. — Superficies is anything which is placed upon the ground, so as to become attached to it. The most common case of superficies is that of buildings erected on another man's land. "Those are aedes superficiales which are built on hired ground, and the property of which both by the Jus Civile and Naturale belongs to him to whom

the ground (*solum*) also belongs." (Gaius, Dig. 43. tit. 18. s. 2.) Cicero (*ad Att.* iv. 2) uses the expression "*superficies aedium*." Every building then was considered a part of the ground on which it stood; and the ownership and possession of the building were inseparable from the ownership and possession of the ground. The Superficies resembles a Servitus and is classed among the Jura in re. According to the definition, the Superficiarium had not the thing even In bonis; and as the animus Domini could not exist in the case of Superficies, he consequently could not be Possessor. He had however a Juris Quasi Possessio. The Superficiarium had the right to the enjoyment of the Superficies: he could alienate the Superficies and pledge it for the term of his enjoyment; he could dispose of it by testament; and it could be the object of succession ab intestato; he could also make it subject to a Servitus; and he could prosecute his right by a utilis in rem actio. As he had a Juris Quasi Possessio, he was protected against threatened disturbance by a special Interdict, which is given in the Digest (43. tit. 18), and in its effect resembles the Interdictum Ut possidetis. The explanation of the passage relating to this Interdict (Dig. 43. tit. 18. s. 3) is given by Savigny (*Das Recht des Besitzes*, p. 289, 5th ed.). If he was ejected, he could have the Interdictum de vi, as in the case of proper Possession; and if he had granted the use of the Superficies to another Precario, who refused to restore it, he had the Interdictum de precario.

A man could obtain the use of a Superficies by agreement with the owner of the land for permission to erect a building on it: he thus obtained a Jus Superficiarium; and he might also by agreement have the use of an existing Superficies. He was bound to discharge all the duties which he owed in respect of the Superficies, and to make the proper payment in respect of it (*solarium*), if any payment had been agreed on. The solarium was a ground-rent. (Dig. 43. tit. 8. s. 2. § 17.)

The rule of law that the Superficies belonged to the owner of the soil was expressed thus: Superficies solo cedit. (Gaius, ii. 73.) If then a man built on another man's land, the house became the property of the owner of the land. But if the owner of the land claimed the house, and would not pay the expense incurred by building it, the builder of the house could meet the claimant with a plea of *dolus malus* (*exceptio doli mali*), that is to say, if he was a Bonae fidei possessor. In any other case, he had of course no answer to the owner's claim.

According to Coke (*Co. Litt.* 48, b), "a man may have an inheritance in an upper chamber, though the lower buildings and the soil be in another, and seeing it is an inheritance corporeal, it shall pass by livery." But this doctrine is open to serious objections, and contradicts a fundamental principle of law.

At Rome if a man received permission to build on a locus publicus, he thereby obtained a Jus Superficiarium. The Lex Icilia de Aventino, a. c. 486, probably gave the ground in ownership to the Plebs. Dionysius, who speaks particularly of this lex, says that several persons united to build a house on the same plot of ground, and distributed the stories among them; this, however, would not be a case of superficies, but a *communio pro indiviso*. In later times, it was common at Rome

for the ground on which Insulae were built to remain the property of the owner of the soil, while other persons had a *Jus Superficiarium* in the different stories, in respect of which a rent (*solarium*) was payable to the dominus of the soil. Rudorff (*Beitrag zur Geschichte der Superficies, Zeitschrift für Geschicht. Rechtsw. &c.*, No. xi.) says that these terms were as common in Rome "as they now are in London where great landholders, in consideration of a rent for nine and ninety years, and the reservation of the ownership of the soil, allow others to occupy building ground and slightly built houses." He who builds on another's land on a building lease has a *Jus Superficiarium* and nothing more.

(Gaius, ii. 73—75; Dig. 43. tit. 18; Lex Icilica, Dionys. *Antiq. Rom.* x. 32; Puchta, *Inst.* ii. § 244; *Zeitschrift. &c.* xi. 219; Stair, *Institutes*, book ii. tit. 7; M'Dowell, *Inst.* i. 676; *Code Civil*, art. 664.) [G. L.]

SUPERNUMERARIL. [ACCENSIL.]

SUPPARUM. [NAVIS, p. 790, a; TUNICA.]

SUPPLICATIO was a solemn thanksgiving or supplication to the gods decreed by the senate, when all the temples were opened, and the statues of the gods frequently placed in public upon couches (*pulvinaria*), to which the people offered up their thanksgivings and prayers (*ad omnia pulvinaria supplicatio decreta est*, Cic. in *Catil.* iii. 10). [LECTISTERNIUM.] A *Supplicatio* was decreed for two different reasons.

I. As a thanksgiving, when a great victory had been gained; it was usually decreed as soon as official intelligence of the victory had been received by a letter from the general in command. The number of days during which it was to last was proportioned to the importance of the victory. Sometimes it was decreed for only one day (*Liv.* iii. 63), but more commonly for three or five days. A supplication of ten days was first decreed in honour of Pompey at the conclusion of the war with Mithridates (Cic. *de Proce. Cons.* 11), and one of fifteen days after the victory over the Belgae by Caesar, an honour which Caesar himself says (*B. G.* ii. 35) had never been granted to any one before. (Compare Cic. *l. c.*) Subsequently a supplication of twenty days was decreed after his conquest of Vercingetorix. (*Caes. B. G.* vii. 90.) From this time the senate seems to have frequently increased the number of days out of mere compliment to the general. We thus find mention of thanksgivings for forty days (*Dion Cass.* xliii. 14), fifty days (*Id.* xliii. 42, and Cic. *Phil.* xiv. 14), and even sixty. (*Dion Cass.* xl. 50.) A supplication was usually regarded as a prelude to a triumph, but it was not always followed by one, as Cato reminds Cicero, to whose honour a supplication had been decreed. (*Cic. ad Fam.* xv. 5.) This honour was conferred upon Cicero on account of his suppression of the conspiracy of Catiline, which had never been decreed to any one before in a civil capacity (*togatus*), as he frequently takes occasion to mention. (*In Catil.* iii. 6, 10, in *Pis.* 3, *Phil.* ii. 6.)

II. A *Supplicatio*, a solemn supplication and humiliation, was also decreed in times of public danger and distress, and on account of prodigies to avert the anger of the gods. (*Liv.* iii. 7, x. 23, xxxi. 9, xxxvii. 3.)

SURDUS. [OBLIGATIONES, p. 818, a; TESTAMENTUM.]

SUSPENSURA. [BALNEAE, p. 191, b.]

SYCOPHANTES (*συκοφάντης*). At an early period in Attic history a law was made prohibiting the exportation of figs. Whether it was made in a time of dearth, or through the foolish policy of preserving to the natives the most valuable of their productions, we cannot say. It appears, however, that the law continued in force long after the cause of its enactment, or the general belief of its utility, had ceased to exist; and Attic fig-growers exported their fruit in spite of prohibitions and penalties. To inform against a man for so doing was considered harsh and vexatious; as all people are apt to think that obsolete statutes may be infringed with impunity. Hence the term *συκοφαντεῖν*, which originally signified to lay an information against another for exporting figs, came to be applied to all ill-natured, malicious, groundless, and vexatious accusations. It is defined by Suidas, *ψευδὲς τιμὸς κατηγορεῖν*. (*Stephan. Thesaur.* 8873, b.)

Sycophantes in the time of Aristophanes and Demosthenes designated a person of a peculiar class, not capable of being described by any single word in our language, but well understood and appreciated by an Athenian. He had not much in common with our *sycophant*, but was a happy compound of the common barretor, informer, pettifogger, busybody, rogue, liar, and slanderer. The Athenian law permitted any citizen (*τὸν βουλόμενον*) to give information against public offenders, and prosecute them in courts of justice. It was the policy of the legislator to encourage the detection of crime, and a reward (such as half the penalty) was frequently given to the successful accuser. Such a power, with such a temptation, was likely to be abused, unless checked by the force of public opinion, or the vigilance of the judicial tribunals. Unfortunately, the character of the Athenian democracy and the temper of the judges furnished additional incentives to the informer. Eminent statesmen, orators, generals, magistrates, and all persons of wealth and influence were regarded with jealousy by the people. The more causes came into court, the more fees accrued to the judges, and fines and confiscations enriched the public treasury. The prosecutor therefore in public causes, as well as the plaintiff in civil, was looked on with a more favourable eye than the defendant, and the chances of success made the employment a lucrative one. It was not always necessary to go to trial or even to commence legal proceedings. The timid defendant was glad to compromise the cause, and the conscious delinquent to avert the threat of a prosecution by paying a sum of money to his opponent. Thriving informers found it not very difficult to procure witnesses, and the profits were divided between them. According to Theophrastus (*ap. Athen.* vi. 254, b), Athens was full of *Διονυσιοκόλῳκαον καὶ λαγοδυντῶν καὶ ψευδομαρτύρων καὶ συκοφαντῶν καὶ ψευδοκλητῆρων*. The character of the *συκοφάνται* will be best understood by the examples and descriptions found in the Attic writers. Aristophanes directs the keenest edge of his satire against them. (See particularly *Acharn.* 818, *Aves.* 1410, *Plut.* 850.) Demosthenes says: *πονηρὸν δὲ συκοφάντης καὶ βάσκανος καὶ φιλαίτιον* (*de Corou.* 307; compare *a. Eubul.* 1309). *Συκοφαντεῖν τριάκοντα μνᾶς* in *Lyias* (*a. Euband.* 177, ed. Steph.) signifies "to extort thirty minas by *Sycophant-like* practices." (See further *Lys. Δημ. Καταλ. Απολ.* 171. *Aesch. de Fals. Leg.* 36, ed

Steph.; Dem. *de Cor.* 291; Xenoph. *Mem.* ii. 9. § 4, *de Rep. Ath.* i. 4.) That the increase of litigation and perjury was in some measure owing to the establishment of clubs and political associations and the violence of party spirit, may be gathered from various passages of the Attic writers. (Thucyd. viii. 54; Demosth. *c. Boeot. de dote*, 1010, *c. Pantaen.* 978, *c. Zenoth.* 885.)

The Athenian law did indeed provide a remedy against this mischievous class of men. There was a *γραφὴ συκοφαντίας* tried before the Thesmothetæ. Any person who brought a false charge against another, or extorted money by threat of legal proceedings, or suborned false witnesses, or engaged in a conspiracy to ruin the character of an innocent man, was liable to this *γραφὴ*. He might also be proceeded against by *φάσις*, *ἐνδείξις*, *ἀπαγωγὴ*, *προβολή* or *εἰσαγγελία*. (See articles PHASIS, &c.; Aesch. *de Fals. Leg.* 47, ed. Steph.; Dem. *c. Theocr.* 1325.) The trial was an *ἀγών τιμητός*. The heaviest punishment might be inflicted, together with *ἀτιμία* and confiscation of property. Besides this, if any man brought a criminal charge against another, and neglected to prosecute it (*ἐπέλθειν*), he was liable to a penalty of 1000 drachmas, and lost the privilege of instituting a similar proceeding in future, which was considered to be a species of *ἀτιμία*. (Dem. *c. Mid.* 548, *c. Theocr.* 1323.) The same consequence followed, if he failed to obtain a fifth part of the votes at the trial. The *ἐκωσέλια* in civil actions was a penalty of the same kind and having the same object: viz., to prevent the abuse of legal process, and check frivolous and unjust actions. Such were the remedies provided by law, but they were found inefficacious in practice; and the words of Aristophanes (*Plutus*, 885) were not more severe than true: "there is no charm against the bite of a Sycophanthes." (See Platner, *Proc. und Klug.* vol. ii. p. 164; Meier, *Att. Proc.* p. 335; Schömann, *Ant. Jur. pub. Gr.* pp. 101, 185; Pollux, viii. 31, 46, 47, 88.) [C.R.K.]

SYLAE (*σῦλαι*). When a Greek state, or any of its members, had received an injury or insult from some other state or some of its members, and the former was unwilling, or not in a condition, to declare open war, it was not unusual to give a commission, or grant public authority to individuals to make reprisals. This was called *σύλας*, or *σύλα διδόναι*. (Demosth. *c. Lacrit.* 931; Lysias, *c. Nicom.* 185, ed. Steph.) Polybius (iv. 26, 36, 53) calls it *ἀφύρον* or *ρῆσια καταγγέλλειν*. Thus, when the Lacedæmonians thought the Athenians had broken the treaty with them by making incursions from Pylus, they issued a proclamation that any of their subjects might commit depredations on the Athenians (*ἡτίζεσθαι τοὺς Ἀθηναίους*, Thucyd. v. 115). Demosthenes (*de Coron. Trierarch.* 1232) declares that the deputy captains of triremes so misbehaved themselves in foreign countries, plundering everybody they came near, that no Athenian could travel safely *διὰ τὰς ὑπὸ τούτων ἀνδροληψίας καὶ σύλας κατασκευασμένας*, where *ἀνδροληψίας* refers to the arrest of the person, *σύλας* to the seizure of goods. Suidas explains *σῦλαι* by the synonym *συλλήψεις*. As to *ἀνδροληψίαι* for another purpose, see PHONOS. In the *ναυτικὴ συγγραφὴ* in the speech of Demosthenes (*c. Lacr.* 927), one of the conditions is that goods may be hunded only *ἔπου ἂν μὴ σύλαι ᾖσιν Ἀθηναίους*, "where no hostilities are exercised

against Athenians." The people of Athens passed a special decree to authorise privateering; and when any booty was taken by Athenian subjects, they reserved to themselves the right of determining whether it was lawfully taken, whether it ought to be kept or restored, and what should be done with it. (Demosth. *c. Timocr.* 703; Argum. 694, 695.) The ancient practice may be compared with the modern one of granting letters of marque and reprisal. (Harpocr. *s. v.* *Σύλας*: Schömann, *de Comit.* p. 284, *Ant. Jur. Pub. Gr.* p. 367.) [C.R.K.]

SYLLOGEIS (*συλλογείς*), usually called *Συλλογείς τοῦ δήμου*, or the Collectors of the People, were special commissioners at Athens, who made out a list of the property of the oligarchs previously to its confiscation. (*Les Rhét.* p. 304, Bekker.) They formed an *ἀρχή* (Harpocr. *s. v.* *Συλλογή*), and seem to have been introduced after the dominion of the Thirty Tyrants. It appears from an inscription that the Syllogeis had to attend to the sacred rites connected with the worship of Athena and the Olympian Zeus, whence Böckh conjectures that they collected or summoned the citizens to certain sacred rites, in which the people were feasted, and that from this circumstance they derived their name: the property of the oligarchs, of which they are said to have made out a list for the purpose of confiscation, may have been applied to these public banquets, since confiscated property was not unfrequently divided among the citizens. (*Corpus Inscr. Graec.* No. 99. pp. 137, 138, No. 157. p. 250.)

SYMBOLA. [COENA, p. 304, b; DICASTES.] SYMBOLAEON, SYNALLAGMA, SYNTHÈCE (*συμβόλαιον, συνάλλαγμα, συνθήκη*), are all words used to signify a contract, but are distinguishable from one another. *Συμβόλαιον* is used of contracts and bargains between private persons, and peculiarly of loans of money. Thus, *συμβάλλειν εἰς ἀνδράποδον* is to lend upon the security of a slave. (Demosth. *c. Aphob.* 822, *c. Zenoth.* 884, *c. Phorm.* 907, *c. Timoth.* 1185, *c. Dionys.* 1284.) *Συνάλλαγμα* signifies any matter negotiated or transacted between two or more persons, whether a contract or anything else. (Demosth. *c. Onet.* 867, 869, *c. Timocr.* 760.) *Συνθήκη* is used of more solemn and important contracts, not only of those made between private individuals, but also of treaties and conventions between kings and states. (Thucyd. i. 40, v. 18, viii. 37; Xenoph. *Hell.* vii. 1. § 2; Demosth. *de Rhod.* 199, *de Coron.* 251, *c. Aristog.* 774; Dinarch. *c. Demosth.* 101, ed. Steph.)

As to the necessity or advantage of having written agreements between individuals, see SYNGRAPHÆ. National compacts, on account of their great importance, and the impossibility of otherwise preserving evidence of them, were almost always committed to writing, and commonly inscribed on pillars or tablets of some durable material. (Thucyd. v. 23, 47; see Aristoph. *Ackern.* 727.) Upon a breach, or on the expiration, of the treaty, the pillars were taken down. (Demosth. *pro Megalopol.* 209.)

For breaches of contract actions were maintainable at Athens, called *συμβολαίων* (or *συνθηκῶν*) *παράδοσες δίκαι*. (Pollux, vi. 153, viii. 31.) Such actions, it is apprehended, applied only to express contracts, not to obligations *ae delicto*, or the *ἀκούσια συνάλλαγματα* of Aristotle. (*Ethic. Nicom.* v. 4.) Thus, if I had promised to pay a sum of money by a certain day, and failed to perform that

promise, an action for breach of contract would have lain at Athens. But if my cow had broken my neighbour's fence, my obligation to repair the damage would have given rise not to an action for breach of contract, but to a *δική βλάβης*. (Meier, *Att. Proc.* pp. 476, 477.) On the other hand, a *δική βλάβης* would lie against a person who had committed a breach of contract; for he was regarded as a wrongdoer, and liable to pay compensation to the party injured. Therefore Dionysodorus, who had failed to perform the conditions of a *ναυτική συγγραφή*, had a *δική βλάβης* brought against him by the persons who lent him money on his ship. (Demosth. 1282; see also *pro Phorm.* 950, c. *Cullipp.* 1240.) The Athenian law frequently gave an option between various forms of action. It is not, however, improbable that the *δική συνθήκων παραδόσεως* was only one species of the *δική βλάβης*, and the name one of a less technical kind. Wherever a debt had become due to a man by reason of some previous contract, we may suppose that he had the option between an action of debt (*χρέους*) and one for breach of contract. The same observation will apply to the *δικαι παρακαταθήκης*, *ἀργυρίου*, and others of a similar kind. The main point of difference might be this: that in a general action for breach of contract, the plaintiff went for unliquidated damages, which the court had to assess; whereas, upon a claim to recover a debt or sum certain, or a specific chattel, the court had nothing more to do than to determine whether the plaintiff was entitled to it or not; the *ἀγών* was *ἀτίμητος*. All such actions were tried before the *Θεσμοθέται*. (Meier, *Att. Proc.* pp. 67, 184, 493—497, 510.)

Ὁμολογία appears to be a word of less technical nature than *συνθήκη*, though (as we might expect in words of this sort) they are often used indifferently. Grammarians make them synonymous. (Harpocr. s. v. *Ἀσυνθετάτων*: Suidas, s. v. *Συνθήκη*.) *Συνθήκας ποιέσθαι* or *τίθεσθαι μετὰ τινος* is, to make an agreement with any one; *ἐμμένειν ταῖς συνθήκαις*, to abide by it; *ὑπερβαίνειν* or *παραβαίνειν*, to break or transgress. Here we may observe, that *συνθήκαι* is constantly used in the plural, instead of *συνθήκη*, the only difference being, that strictly the former signifies the terms or articles of agreement, in the same manner as *διαθήκαι*, the *testamentary dispositions*, is put for *διαθήκη*, the *will*. *Σύμβολον* also signifies a compact or agreement, but had become (in Attic parlance) obsolete in this sense, except in the expression *δικαι ἀπὸ συμβόλων*. (See below.) [C.R.K.]

SYMBOLON, DIKAE APO (*δικαι ἀπὸ συμβόλων*). The ancient Greek states had no well defined international law for the protection of their respective members. In the earlier times troops of robbers used to roam about from one country to another, and commit aggressions upon individuals, who in their turn made reprisals, and took the law into their own hands. Even when the state took upon itself to resent the injury done to its members, a violent remedy was resorted to, such as the giving authority to take *σῦλα*, or *ῥέσια*, a sort of national distress. As the Greeks advanced in civilization, and a closer intercourse sprang up among them, disputes between the natives of different countries were settled (whenever it was possible) by friendly negotiation. It soon began to be evident, that it would be much better, if, instead of any interference on the part of the state,

such disputes could be decided by legal process, either in the one country or the other. Among every people, however, the laws were so framed, as to render the administration of justice more favourable to a citizen than to a foreigner; and therefore it would be disadvantageous, and often dangerous, to sue a man, or be sued by him, in his own country. The most friendly relation might subsist between two states, such as *συμμαχία* or *ἐπικράμια*, and yet the natives of each be exposed to this disadvantage in their mutual intercourse. To obviate such an evil, it was necessary to have a special agreement, declaring the conditions upon which justice was to be reciprocally administered. International contracts of this kind were called *σύμβολα*, defined by Suidas thus, *συνθήκαι ἅς ἂν ἀλλήλαις αἱ πόλεις δέμεναι τάττωσι τοῖς πολίταις, ὥστε διδόναι καὶ λαμβάνειν τὰ δίκαια*; and the causes tried in pursuance of such contracts were called *δικαι ἀπὸ συμβόλων*. The more constant and more important the intercourse between any two nations, the more necessary would it be for them to establish a good system of international jurisprudence. Commercial people would stand in need of it the most. Aristotle mentions the Tuscan and Carthaginians as having *σύμβολα περὶ τοῦ μὴ ἀδικεῖν*. (*Polit.* iii. 1, 3, and 5, 10.) No such agreement has been preserved to us, and we know but little about the terms that were usually prescribed. The basis of them seems to have been the principle that *actor sequitur forum rei*; but this, as well as other conditions, must have varied according to circumstances. Liberty of person, and protection of property, would, no doubt, be secured to the foreigner, as far as possible; and it would be the duty of the *πρόξενος* to see that these rights were respected. A common provision was, that the party who lost his cause might appeal to the tribunal of the other country, or to that of some third state mutually agreed upon. (Etyim. Magn. s. v. *Ἐκκλητὸς πόλις*.) This was perhaps suggested by the practice which had grown up, of referring national quarrels to the arbitration of some individual or third state. (Thucyd. i. 34, 78, 140, v. 41, vii. 18; Schömann, *Ant. Jur. pub. Gr.* p. 367.)

When the Athenians made any such treaty, they required it to be approved of and finally ratified by a jury of the Heliaea, under the direction of the *Thesmothetae*. Hence Pollux (viii. 88) says of those magistrates, *τὰ σύμβολα τὰ πρὸς τὰς πόλεις κυροῦσιν*. The other contracting state was therefore compelled to send an envoy to Athens, with power to conclude the treaty (if he thought fit) as it was drawn up and settled by the *Thesmothetae* and jurors. Most of the people with whom the Athenians had to deal, were either subject or inferior to them, and were content to acquiesce in the above regulation. Philip, however, would not submit to it, and demanded that the terms should receive final ratification in Macedonia. This demand is made the subject of complaint by Demosthenes (*de Halon.* 78).

The name of *δικαι ἀπὸ συμβόλων* was given also to the causes which the allies of the Athenians sent to be tried at Athens. (Pollux, vii. 63.) This fact has been called in question by Böckh, but there is not much reason for doubting it. It is true that the expression is not strictly applicable to causes, not between an Athenian and a foreigner, but between two foreigners; and it may be allowed

that the object of the Athenians in bringing such causes to Athens was, not to give the allies a better or speedier means of obtaining justice, but to secure certain advantages to the imperial city. (Xenoph. *de Republ. Ath.* i. 16.) It is, however, not improbable that the arrangement was called *σύμβολα*, for the very purpose of softening the harshness of the measure, by giving an honourable name to that which in reality was a mark of servitude. For the same reason the confederate states were called *σύμμαχοι*, allies, while in point of fact they were rather *υπήκοοι* or subjects.

These causes were tried in the summer months, when the voyage to Athens was more convenient, and (like all other *δικαὶ ἀπὸ συμβόλων*) belonged to the jurisdiction of the Thesmothetae. We have but one example of such a cause preserved to us, viz. the speech of Antiphon on the death of Herodes, where both the prosecutor and the defendant are natives of Mytilene. (Harpoc. s. v. *Σύμβολα*: Thucyd. i. 77. c. not. Goeller; Platner, *Proc. und Klag.* vol. i. pp. 105—114; Meier, *Att. Proc.* pp. 67, 773; Schömann, *Ant. jur. publ. Gr.* p. 376.) [C. R. K.]

SYMBU'LI (σύμβουλοι). [PAREDL.]

SYMMO'RIA (συμμορία). [EISPHORA; TRIERARCHIA.]

SY'MPHOREIS (συμφορεῖς). [EXERCITUS, p. 485, b.]

SYMPO'SIUM (συμπόσιον, *comissatio, convivium*), a drinking-party. The *συμπόσιον*, or the *πότης*, must be distinguished from the *δείπνον*, for though drinking almost always followed a dinner-party, yet the former was regarded as entirely distinct from the latter, was regulated by different customs, and frequently received the addition of many guests, who were not present at the dinner. For the Greeks did not usually drink at their dinner, and it was not till the conclusion of the meal, that wine was introduced, as is explained under COENA [p. 306, a.]. Thus we read in the Symposium of Plato (p. 176, a.) that after the dinner had been finished, the libations made, and the paean sung, they turned to drinking (*τρέψασθαι πρὸς τὸν πότον*).

Symposia seem to have been very frequent at Athens. Their enjoyment was heightened by agreeable conversation, by the introduction of music and dancing, and by games and amusements of various kinds: sometimes, too, philosophical subjects were discussed at them. The Symposia of Plato and Xenophon give us a lively idea of such entertainments at Athens. The name itself shows, that the enjoyment of drinking was the main object of the Symposia: wine from the juice of the grape (*οἶνος ἀμπελίνος*) was the only drink partaken of by the Greeks, with the exception of water. For palm-wine and beer [CEREVISIA], though known to many of the Greeks from intercourse with foreign nations, were never introduced among them; and the extraordinary cheapness of wine at Athens [VINUM] enabled persons even in moderate circumstances to give drinking-parties to their friends. Even in the most ancient times the enjoyment of wine was considered one of the greatest sources of pleasure, and hence Musaeus and his son supposed that the just passed their time in Hades in a state of perpetual intoxication, as a reward of their virtue (*ἡγησάμενοι κάλλιστον ἔρετ' ἢ μισθὸν μέθην αἰώνιον*, Plat. *Leg.* ii. p. 363, a. d.). It would appear from the Symposium of

Plato, that even the Athenians frequently concluded their drinking-parties in rather a riotous manner, and it was to guard against this that such parties were forbidden at Sparta and in Crete. (Plat. *Mén.* p. 320, a.)

The wine was almost invariably mixed with water, and to drink it unmixed (*ἄκρατος*) was considered a characteristic of barbarians. (Plat. *Leg.* i. p. 637, e.) Zaleucus is said to have enacted a law among the Locrians, by which any one who was ill and drank of unmixed wine without the command of his physician, was to be put to death (Aelian, *V. H.* ii. 37); and the Greeks in general considered unmixed wine as exceedingly prejudicial to physical and mental health. (Athen. ii. p. 36, b.) The Spartans attributed the insanity of Cleomenes to his indulging in this practice, which he learnt from the Scythians. (Herod. vi. 84.) So universal was it not to drink wine unless mixed with water, that the word *οἶνος* is always applied to such a mixture, and whenever wine is spoken of in connection with drinking, we are always to understand wine mixed with water, unless the word *ἄκρατος* is expressly added (*τὸ κρῆμα, καίτοι ἔδατος μετέχον πλείονος, οἶνον καλούμεν*, Plut. *Conjng. Praec.* 20).

The proportion, in which the wine and water were mixed, naturally differed on different occasions. To make a mixture of even half wine and half water (*ἴσον ἴσῳ*) was considered injurious (Athen. i. c.), and generally there was a much greater quantity of water than of wine. It appears from Plutarch (*Symp.* iii. 9), Athenaeus (x. p. 426), and Eustathius (*ad Od.* ix. 209. p. 1624), that the most common proportions were 3 : 1, or 2 : 1, or 3 : 2. Hesiod (*Op.* 596) recommends the first of these.

The wine was mixed either with warm or cold water: the former, which corresponded to the *Calida* or *Calda* of the Romans [CALIDA], was by far the less common. On the contrary, it was endeavoured to obtain the water as cool as possible, and for this purpose both snow and ice were frequently employed. [PSYCTER.] Honey was sometimes put in the wine (Athen. i. p. 32, a.), and also spices (Id. p. 31, e.): in the latter case it received the name of *τρίμμα*, and is frequently mentioned by the writers of the New Comedy. (Pollux, vi. 18.) Other ingredients were also occasionally added.

The mixture was made in a large vessel called the *κρατήρ* [CRATER], from which it was conveyed into the drinking-cups by means of *οἰνοχόαι* or *κύαθοι*. [CYATHUS.] The cups usually employed were the *κύλιξ*, *φιδίλη*, *καρχησιον*, and *κύνθαρος*, of which an account is given in separate articles. The *βύρνον*, or drinking-horn, was also very commonly used. We find several craters on vases representing drinking scenes. (See for example *Mus. Borbon.* vol. v. t. 51.)

The guests at a Symposium reclined on couches and were crowned with garlands of flowers, as is explained under COENA. A master of the revels (*ἄρχων τῆς πόσεως, συμποσιαρχος* or *βασιλεύς*) was usually chosen to conduct the Symposium (*παυδαργεῖν συμπόσιον*, Plat. *Leg.* i. p. 641, a. b.), whose commands the whole company had to obey, and who regulated the whole order of the entertainment, proposed the amusements, &c. The same practice prevailed among the Romans, and their Symposiarch was called the *Magister* or *Rex Convivi*, or the *Arbitor Bibendi*. The choice was

generally determined by the throwing of Astragali or Tali; but we find in Plato (*Symp.* p. 213, e.) Alcibiades constituting himself Symposiarch. The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink. The servants (*οἰνοχόοι* and *οἰνητοὶ* *δεσπότες*), usually young slaves, who had to mix the wine and present it to the company, were also under his orders; but if there was no Symposiarch, the company called for the wine just as they pleased. (*Xen. Symp.* ii. 27.)

Before the drinking commenced, it was agreed upon in what way they should drink (*Plat. Symp.* p. 176, a. b.), for it was not usually left to the option of each of the company to drink as much or as little as he pleased, but he was compelled to take whatever the Symposiarch might order. At Athens they usually began drinking out of small cups (*μέτρια ποτήρια*, *Athen.* x. p. 431, e.), but as the entertainment went on, larger ones were introduced. (*Diog. Laërt.* i. 104.) In the Symposium of Plato (pp. 213, 214) Alcibiades and Socrates each empty an immense cup, containing eight cotylæ, or nearly four English pints; and frequently such cups were emptied at one draught (*ἀπνευστί* or *ἀμυστί* *πίνειν*, *ἀμυστί* *εἶναι*, *Athen.* x. p. 431, b.; *Lucian, Leaps.* 8; *Suidas, s. v. Ἀμυστί*).

The cups were always carried round from right to left (*ἐπὶ δεξιᾷ*), and the same order was observed in the conversation and in everything that took place in the entertainment (*ἐπὶ δεξιᾷ διαπίνειν*, *Plat. Rep.* iv. p. 420, e., *ἐπὶ δεξιᾷ λόγους εἰπεῖν*, *Symp.* p. 214, b.; *Athen.* xi. p. 463, e.). The company frequently drank to the health of one another (*προσπίνειν φιλοτησίας*, *Lucian, Gall.* 12; *Athen.* xi. p. 498, d.), and each did it especially to the one to whom he handed the same cup. This seems to have been the custom, which Cicero alludes to, when he speaks of "drinking after the Greek fashion." (*Graeco more bibere*, *Verr.* i. 26; compare *Tusc.* i. 40, *Graeci in convivio solent nominare, cui poculum tradituri sint*.)

Music and dancing were usually introduced, as already stated, at Symposia, and we find few representations of such scenes in ancient vases without the presence of female players on the flute and the cithara. Plato, indeed, decidedly objects to their presence, and maintains that it is only men incapable of amusing themselves by rational conversation, that have recourse to such means of enjoyment (*Protag.* p. 347, c. d., *Symp.* p. 176, e.);

but this says nothing against the general practice, and Xenophon in his Symposium represents Socrates mightily pleased with the mimetic dancing and other feats performed on that occasion. The female dancers and the players on the flute and the cithara were frequently introduced at the Symposia of young men for another purpose, and were oftentimes actually *ἐταῖραι* [*ΗΕΤΑΙΡΑΙ*], as we see clearly represented on many ancient vases. (See for example *Mus. Borbon.* vol. v. t. 51.) Respecting the different kinds of dances performed at Symposia, see *SALTATIO*.

Representations of Symposia are very common on ancient vases. Two guests usually reclined on each couch (*κλίση*), as is explained on p. 305, and illustrated by the following cut from one of Sir W. Hamilton's vases, where the couch on the right hand contains two persons, and that on the left is represented with only one, which does not appear to have been the usual practice. The guests wear garlands of flowers, and the two who are reclining on the same couch hold a *φιδλή* each in the right hand.

Sometimes there were four or five persons on one couch, as in the following woodcut, taken from Millin (*Peintures de Vases Antiques*, vol. ii. pl. 58). Three young and two older men are reclining on a couch (*κλίση*), with their left arms resting on striped pillows (*προσκεφάλαια* or *ὀπαγκώνια*). Before the couch are two tables. Three of the men are holding a *calix* or *κύλιξ* suspended by one of the handles to the fore-finger, the fourth holds a *φιδλή*, and the fifth a *φιδλή* in one hand and a *βυτόν* in the other. [*CALIX*; *PHIALA*; *RHYTON*.] In the middle *Comos* is beating the tympanum.

Respecting the games and amusements by which the Symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (*αἰνίγματα* or *γρίφοι*) were among the most usual and favourite modes of diversion. [ΑΙΝΙΓΜΑ.] The Cottabos was also another favourite game at Symposia, and was played at in various ways. [ΚΟΤΤΑΒΟΣ.] The other games at Symposia, which require mention, are, the *δοτραγαλισμός* and *κυβέλα*, explained under TALI and TESSERA, the *πεττέλα*, spoken of under LATRUNCULL, and the *χαλκισμός*. The latter consisted in turning round a piece of money placed upright on its edges, and causing it suddenly to stop while moving by placing a finger on its top. (Pollux, ix. 118; Eustath. *ad Il.* xiv. 291, p. 986.)

A drinking-party among the Romans was sometimes called *Convivium*, but the word *Comissatio* more nearly corresponds to the Greek *συμπόσιον*. [COMISSATIO.] The Romans, however, usually drank during their dinner (*coena*), which they frequently prolonged during many hours in the later times of the republic and under the empire. Their customs connected with drinking differed little from those of the Greeks, and have been incidentally noticed above.

The preceding account has been mainly composed from Becker's *Charikles* (vol. i. p. 451, &c.) and *Gallus* (vol. ii. p. 235, &c.), where the subject is treated at length.

SYNALLAGMA (*συνάλλαγμα*). [ΣΥΜΒΟΛΑΕΟΝ.]

SYNDICUS (*σύνδικος*), an advocate, is frequently used as synonymous with the word *συνήγορος*, to denote any one who pleads the cause of another, whether in a court of justice or elsewhere. *Συνδικεῖν* also is used indifferently with *συνηγореῖν* or *συναγωνίζεσθαι*. (Andoc. *de Myst.* 19, ed. Steph.; Demosth. *c. Aristocr.* 689, *c. Zenoth.* 885, *c. Steph.* 1127.) Thus, the five public advocates, who were appointed to defend the ancient laws before the Court of Heliasts, when an amendment or a new law in abrogation thereof was proposed, are called both *σύνδικοι* and *συνήγοροι*. As to them, see ΝΟΜΟΤΗΤΕΣ and also Schömann, *de Comit.* p. 255, *Ant. Jur. Publ. Gr.* p. 228. The name of *σύνδικοι* seems to have been peculiarly applied to those orators who were sent by the state to plead the cause of their countrymen before a foreign tribunal. Aeschines, for example, was appointed to plead before the Amphictyonic council on the subject of the Delian temple; but a certain discovery having been made not very creditable to his patriotism, the court of Areiopagus took upon themselves to remove him, and appoint Hyperides in his stead. (Demosth. *de Coron.* 271, 272.) These extraordinary advocates are not to be confounded with the Pylagorae, or ordinary Amphictyonic deputies. (Schömann, *de Comit.* p. 321, *Ant. Jur. Publ. Gr.* p. 257.) There were other *σύνδικοι*, who acted rather as magistrates or judges than as advocates, though they probably derived their name from the circumstance of their being appointed to protect the interests of the state. These were extraordinary functionaries, created from time to time, to exercise a jurisdiction in disputes concerning confiscated property; as when, for instance, an information was laid against a man for having in his possession the goods of a condemned criminal, or which were liable to be seized

in execution on behalf of the state; or when the goods of a convict having been confiscated, a claim was made by a mortgagee, or other creditor having a lien thereupon, to have his debt satisfied out of the proceeds. Such a claim was called *ἐνεπίσκημμα*, and to prosecute it *ἐνεπίσκηψασθαι*. (Harpoc. and Suidas, *s. v.*) On this subject the reader is referred to the speeches of *Lysias de Publ. Pecun.*, *de Nic. Fratr. Pecun.*, *de Aristoph. Pecun.*, and more especially pp. 149, 151, 154, ed. Steph. The first appointment of these judicial *σύνδικοι* took place after the expulsion of the thirty tyrants; and one of their duties appears to have been to receive informations from the *φύλαρχοι* against those persons who had served in the cavalry during the interregnum, and who by a special decree of the people were ordered to restore to the treasury all the pay which they had received for that service. (Lysias, *pro Maitih.* 146, ed. Steph.) See SYNEGORUS; Harpoc. *s. v. Σύνδικοι*; Meier, *Att. Proc.* p. 110; Schömann, *de Comit.* p. 316. [C. R. K.]

SYNEDRI (*σύνεδροι*), a name given to the members of any council, or any body of men who sat together to consult or deliberate. The congress of Greeks at Salamis is called *σύνεδριον*. (Herod. viii. 75, 79.) Frequent reference is made to the general assembly of the Greeks, *τὸ κοινὸν τῶν Ἑλλήνων συνέδριον*, at Corinth, Thermopylae, &c. elsewhere. (Aesch. *c. Cleisth.* 62, ed. Steph.; Demosth. *Περὶ τῶν πρὸς Ἀλέξανδρον*, 215.) When the new alliance of the Athenians was formed after B. C. 377, upon fairer and more equitable principles than the former, the several states who were included therein were expressly declared to be independent, and a congress was held at Athens, to which each of the allied states sent representatives. The congress was called *σύνεδριον*, and the deputies *σύνεδροι*, and the sums furnished by the allies *συντάξεις*, in order to avoid the old and hateful name of *φόρος* or tribute. (Harpocrat. *s. v.*; Plut. *Sol.* 15.) Many allusions to this new league are made by the orators, especially Isocrates, who strongly urges his countrymen to adhere to the principle on which the league was formed, and renounce all attempt to re-establish their old supremacy. (*De Pace*, 165, ed. Steph.) Perhaps the *σύνεδροι* mentioned in the oath of the *Δικασταί* are the Athenian members of this congress. (Schömann, *Att. Proc.* 130.) For further information on the subject of this confederacy, see Schömann, *Ant. Jur. Publ. Gr.* p. 434; Böckh, *Publ. Econ. of Athens*, p. 418, 2d ed.; Thirlwall, *Hist. of Greece*, vol. v. pp. 42, 203.

The name of *σύνεδριον* was given at Athens to any magisterial or official body, as to the court of Areiopagus (Aesch. *c. Timarch.* 13; Dinarch. *c. Demosth.* 91, ed. Steph.); or to the place where they transacted business, their board or council-room. (Isocrat. *Περὶ Ἀντιδόσεως*, 318, ed. Steph.; Demosth. *c. Theocr.* 1324.) [C. R. K.]

SYNEGORICON (*συνηγориόν*). [SYNEGORUS.]

SYNEGORUS (*συνήγορος*), may be translated an advocate or counsel, though such translation will convey to the English reader a more comprehensive meaning than the Greek word strictly bears.

According to the ancient practice of the Athenian law, parties to an action were obliged to conduct their own causes without assistance: but on the increase of litigation the sciences of law and rhetoric began to unfold themselves; and men, who had

paid no attention to these, were unable to compete with more experienced opponents. To consult a friend before bringing an action, or about the best means of preparing a defence, were obvious expedients. It was but another step to have a speech prepared by such friend out of court, to be delivered by the party himself when the cause was brought to trial. A class of persons thus sprang up, somewhat in the nature of chamber counsel, who received money for writing speeches and giving legal advice to those who consulted them. Of this class Antiphon was the first who acquired any celebrity. Lysias, Isæus, and Isocrates obtained considerable incomes by speech-writing. Demosthenes followed the same profession for some time, until his engagements in public business forced him to relinquish it. (Dem. c. *Zenoth.* 890.) These persons were called not *συνήγοροι*, but *λογογράφοι*, a name applied to Demosthenes reproachfully by his rival, who accuses him also of betraying his clients by showing the speeches which he had written to the adversary. (Æsch. c. *Ctesiph.* 78, c. *Timarch.* 13, ed. Steph.) [LOGOGRAPHI.] Still, whatever assistance the party might have received out of court, the law which compelled him to appear in person at the trial, remained in force; although the prohibition to speak by counsel was so far relaxed, that if the party was labouring under illness, or through any physical or mental debility was unable to conduct his own cause without manifest disadvantage, he might (by permission of the court) procure a relation or friend to speak for him. Thus, when Miltiades was impeached for treason, and by reason of a gangrene in his hip was unable to plead his own cause, he was brought on a litter into court, and his brother Tisagoras addressed the people on his behalf. So, when Isocrates was ill, his son Aphareus spoke for him in the cause about the *ἀντιδοσίς*. And in the speech of Demosthenes against Leocrates we see (p. 1081) that the son conducts his father's cause. As a general rule, the party was expected to address the court himself; for the judges liked to form an opinion of him from his voice, look, and demeanour; and therefore if a man distrusted his own ability, he would open the case himself by a short speech, and then ask permission for his friend to come forward. (Demosth. c. *Phorm.* 922, c. *Neæd.* 1349.) This was seldom refused; and in the time of the orators the practice was so well established, that the principal speeches in the cause were not unfrequently made by the advocate. The defences by Demosthenes of Ctesiphon against Aeschines, and of Phanus against Aphobus, may be cited as examples. In both of these it will be seen that Demosthenes was as much interested as the defendants themselves; and it is further to be observed, that the advocate was looked upon with more favour on this very account; for as no fees were allowed to be taken, a speaker was regarded with suspicion who had no apparent motive for undertaking the cause of another person. Hence we find in most of the *συνήγορικοί λόγοι*, that the speaker avows what his motives are; as for instance, that he is connected by blood or friendship with the one party, or at enmity with the other, or that he has a stake in the matter at issue between them. (See the opening of the speeches of Isæus, *de Nicost. her.* and *de Philoct. her.*; Isocrates c. *Euthym.* and Demosthenes c. *Androt.*) In the cause against Leocrates above cited it is evident that the son had

an equal interest with his father in preserving the inheritance, and therefore he would be considered in the light of a party. The law which prohibited the advocate from taking fees, under peril of a *γρᾶφή* before the Thesmothetæ (Demosth. c. *Steph.* 1137), made no provision (and perhaps it was impossible to make an effective provision) against an influence of a more pernicious kind, viz. that of political association, which induced men to support the members of their club or party without the least regard for the right or justice of the case. Hence the frequent allusions by the orators to the *ἐργαστήρια συκοφαντῶν, μοχθηρῶν ἀνθρώπων συνεστηκότων, παρασκευὰς λόγων, μαρτύρων, συναμοτῶν*, all which expressions have reference to that system of confederation at Athens, by which individuals endeavoured to influence and control the courts of justice. (See ERANI; SYCOPHANTES; Reiske, *Index in Oral. Att. s. v. Ἐργαστήριον and παρασκευή.*) That friends were often requested to plead, not on account of any incapacity in the party, but in order that by their presence they might exert an influence on the bench, is evident from an attentive perusal of the orators. In some cases this might be a perfectly legitimate course, as where a defendant charged with some serious crime called a man of high reputation to speak in his behalf, and pledge himself thereby that he believed the charge was groundless. With such view Aeschines, on his trial for misconduct in the embassy, prayed the aid of Eubulus and Phocion, the latter of whom he had previously called as a witness. (Æsch. *de Fals. Leg.* 51, 52, ed. Steph.)

On criminal trials the practice with respect to advocates was much the same as in civil actions; only that it seems to have been more common to have several speakers on the part of the prosecution; and in causes of importance, wherein the state was materially interested, more especially in those which were brought before the court upon an *εἰσαγγελία*, it was usual to appoint public advocates (called *συνήγοροι, σύνδικοι, or κατήγοροι*) to manage the prosecution. Thus, Pericles was appointed, not at his own desire, to assist in the impeachment of Cimon. (Plut. *Pericl.* 10.) Public prosecutors were chosen by the people to bring to trial Demosthenes, Aristogiton, and others charged with having received bribes from Harpalus. (Dinarch. c. *Demosth.* 90, 96, ed. Steph.) In ordinary cases however the accuser or prosecutor (*κατήγορος*) was a distinct person from the *συνήγορος*, who acted only as auxiliary to him. It might be, indeed, that the *συνήγορος* performed the most important part at the trial, as Anytus and Lycon are said to have done on the trial of Socrates, wherein Melitus was prosecutor; or it might be that he performed a subordinate part, making only a short speech in support of the prosecution, like those of Lysias against Epicrates, Ergocles, and Philocrates, which are called *ἐπιλογοί*. But however this might be, he was in point of law an auxiliary only, and was neither entitled to a share of the reward (if any) given by the law to a successful accuser, nor liable, on the other hand, to a penalty of a thousand drachma, or the *ἀτιμία* consequent upon a failure to get a fifth part of the votes. Here we must distinguish between an advocate and a joint prosecutor. The latter stood precisely in the same situation as his colleague, just as a co-plaintiff in a civil action. The names of both would appear in the bill (*ἔγκλημα*), both would attend the *ἀνδείξεις*

and would in short have the same rights and liabilities; the elder of the two only having priority in certain matters of form, such as the *πρωτολογία*. (Argum. Or. Dem. c. Androt. 592.) In the proceeding against the law of Leptines there were two prosecutors, Aphepsion and Cteaisippus the son of Chabrias; each addressed the court, Aphepsion first, as being the elder; each had his advocate, the one Phormio, the other Demosthenes, who tells us in the exordium that he had undertaken to speak, partly from a conviction of the impolicy of the law, and partly to oblige the son of Chabrias, who would have been deprived of certain privileges inherited from his father, if the law had taken effect. (See Argum. 453.)

There seems to have been no law which limited the number of persons who might appear as advocates, either in public or private causes. There was however this practical limitation, that as the time allowed for speaking to either party was measured by the clepsydra, if either chose to employ a friend to speak for him, he subtracted so much from the length of his own speech as he meant to leave for that of his friend, and the whole time allowed was precisely the same, whatever the number of persons who spoke on one side. Both parties were usually allowed to make two speeches, the plaintiff beginning, the defendant following, then the plaintiff replying, and lastly the defendant again. These are often called *λόγοι πρότεροι* and *ὕστεροι* respectively, but are not to be confounded with the *συνηγορίαι* or *δευτερολογίαι*, which might, and usually did, immediately follow the speech of the party in whose favour they were made, though as a matter of arrangement it might be convenient sometimes to reserve the speech of the advocate for the reply, in which case the *συνηγορικὸς λόγος* and the *ὕστερος λόγος* would be the same. (Schömann, *Att. Proc.* pp. 707—712, 715; Platner, *Proc. und Klag.* vol. i. p. 91.)

With respect to the custom of producing friends to speak in mitigation of damages or punishment, see *ΤΙΜΕΜΑ*. As to the public advocates appointed to defend the old laws before the Court of Heliasts, see *SYNDICUS*, *ΝΟΜΟΤΗΤΕΣ*.

The fee of a drachm (*τὸ συνηγορικόν*) mentioned by Aristophanes (*Περσας*, 691) was probably the sum paid to the public advocate whenever he was employed on behalf of the state. It has been shown clearly by Schömann, that Petit was wrong in supposing that the orators or statesmen who spoke in the assembly are called *συνηγοροί*. They are always distinguished by the title of *ῥήτορες* or *δημηγόροι*, or if they possessed much influence with the people, *δημαγωγοί*; and it is not to be supposed that they constituted a distinct class of persons, inasmuch as any Athenian citizen was at liberty to address the assembly when he pleased; though, as it was found in practice that the possession of the *βήμα* was confined to a few persons who were best fitted for it by their talent and experience, such persons acquired the title of *ῥήτορες*, &c. (*De Comit.* pp. 107—109, 210.) There appears however to have been (at least at one period) a regular appointment of *συνηγοροί*, ten in number, with whom the Scholiast on Aristophanes (*l.c.*) confounded the *ῥήτορες* or orators. For what purpose such ten *συνηγοροί* were appointed, is a matter about which we have no certain information. Some think they were officers connected with the board of Scrutators who audited magistrates' accounts.

Aristotle (*Polit.* vi. 8) says the authorities to whom magistrates rendered their accounts were called in some of the Greek states *εἰσβύται*, in others *λογισταί*, in others *συνηγοροί* or *ἐξετασταί*, and the author of the *Lexicon Rhetoricum*, published by Bekker (*Anecd.* i. 301), says that the Synegori were *ἀρχοντες κληρονομοὶ ἐβόησαν τοῖς λογισταῖν πρὸς τὰς εἰσβύτας*. But what sort of assistance did they render? Is it not probable that they performed the duty which their name imports, viz. that of prosecuting such magistrates as, in the opinion of the Logistae, had rendered an unsatisfactory account? Any individual, indeed, might prefer charges against a magistrate when the time for rendering his account had arrived; but the prosecution by a *συνηγορός* would be an *ex officio* proceeding, such as the Logistae were bound to institute, if they had any reason to suspect the accounting party of malversation or misconduct. If this conjecture be well-founded, it is not unreasonable to suppose that these ten *συνηγοροί* were no other than the public advocates who were employed to conduct state prosecutions of a different kind. They might be appointed annually, either by lot or by election (according to Harpocration, *s. v.* *Συνηγορος*). Their duties would be only occasional, and they would receive a drachm as their fee whenever they were employed. Böckh's conjecture, that they received a drachm a day for every day of business, is without much foundation. [C. R. K.]

SYNGENEIA (*συγγένεια*). [HERES, p. 595, b.]

SYNGRAPHE (*συγγραφή*), signifies a written contract; whereas *συνθήκη* and *συμβόλαιον* do not necessarily import that the contract is in writing; and *ὁμολογία* is, strictly speaking, a verbal agreement. Pollux explains the word, *συνθήκη ἑγγράφος*, *ὁμολογία ἑγγράφος* (viii. 140).

At Athens important contracts were usually reduced to writing; such as leases (*μισθώσεις*), loans of money, and all executory agreements, where certain conditions were to be performed. The rent, the rate of interest, with other conditions, and also the penalties for breach of contract (*ἐπιτίμια τὰ ἐκ τῆς συγγραφῆς*) were particularly mentioned. The names of the witnesses and the sureties (if any) were specified. The whole was contained in a little tablet of wax or wood (*βιβλίον* or *γραμματεῖον*, sometimes double, *διπτυχον*), which was sealed, and deposited with some third person, mutually agreed on between the parties. (Isocrat. *Troas*. 362, ed. Steph.; Demos. c. *Apod.* 903, 904, c. *Dionysiod.* 1283.) An example of a contract on a bottomry loan (*ναυτικὴ συγγραφή*) will be found in Demosth. c. *Loctik.* 926, where the terms are carefully drawn up, and there is a declaration at the end, *κυριώτερον δὲ περὶ τούτων ἀλλὰ μᾶλλον εἶναι τῆς συγγραφῆς*, "which agreement shall be valid, anything to the contrary notwithstanding."

Anything might form the subject of a written contract — a release (*ἑφεσις*), a settlement of disputes (*διαλύσις*), the giving up of a slave to be examined by torture, or any other accepted challenge (*πρόκλησις*); in short, any matter wherein the contracting parties thought it safer to have documentary evidence of the terms. *Ἐκδίδοναι ἀνδρῶντα κατὰ συγγραφὴν* is, to give an order for the making of a statue of certain dimensions, of a certain fashion, at a certain price, &c., as specified in the agreement. (Demosth. *de Cor.* 268.) No

particular form of words was necessary to make the instrument valid in point of law, the sole object being to furnish good evidence of the parties' intention. The agreement itself was valid without any writing; and would form the ground of an action against the party who broke it, if it could be sufficiently proved. Hence it was the practice to have witnesses to a parol agreement. The law declared *κύριος εἶναι τὰς πρὸς ἀλλήλους ὁμολογίας, ὥς ἂν ἐναντίῳ μαρτύρων ποιήσωνται*. (Demosth. c. *Phaenipp*. 1042, c. *Emerg. et Mnes*. 1162, c. *Dionys*. 1283, c. *Ondor*. 869.) It seems that for the maintenance of an ἐμπορικὴ δίκη it was necessary to have a written contract. (Demosth. c. *Zenoth*. 882.)

Bankers were persons of extensive credit, and had peculiar confidence reposed in them. They were often chosen as the depositaries of agreements and other documents. Money was put into their hands without any acknowledgment, and often without witnesses. They entered these and also the loans made by themselves to others in their books, making memoranda (ὑπομνήματα) of any important particulars. Such entries were regarded as strong evidence in courts of justice. Sureties were usually required by them on making loans. (Isocr. *Trapez*. 369, ed. Steph.; Demosth. c. *Apat*. 894, *pro Phorm*. 950, 958, c. *Timoth*. 1185, c. *Phorm*. 908; Böckh, *Publ. Econ. of Athens*, p. 128, 2d ed.)

Συγγραφή denotes an instrument signed by both or all the contracting parties. Χειρόγραφον is a mere acknowledgment by one party. Συγγραφάσθαι συγγραφήν or συνθήκην is to draw up the contract, σημειώσθαι to seal it, ἀναρῆναι to cancel, ἀνελεῖσθαι to take it up from the person with whom it was deposited, for the purpose of cancelling, when it was no longer of any use. Τρανοῦναι, to break the seal clandestinely for some fraudulent purpose, as to alter the terms of the instrument, or erase or destroy some material part, or even the whole, thereof (μεταγράψαι or διαφθεῖναι). [SYMBOLABON.] [C. R. K.]

SYNOIKIA (συνοικία or συνοικία), a festival celebrated every year at Athens on the 16th of Hecatombæon in honour of Athena. It was believed to have been instituted by Theseus to commemorate the concentration of the government of the various towns of Attica and Athens. (Thucyd. iii. 15; Steph. Byz. s. v. Ἀθῆναι.) According to the Scholiast on Aristophanes (*Pas*, 962) an unbloody sacrifice was on this day offered to the goddess of peace (εἰρήνη). This festival, which Plutarch (*Thea*. 24) calls μετοικία, is mentioned both by him and by Thucydides as still held in their days. (Compare Meyer, *de Bon. damnal*. p. 120.) [L. S.]

SYNOIKIA (συνοικία) differs from οἰκία in this: that the latter is a dwelling-house for a single family: the former adapted to hold several families, a lodging-house, *insula*, as the Romans would say. The distinction is thus expressed by Aeschines (c. *Timarch*. 17, ed. Steph.): οὐκ μὲν γὰρ πολλοὶ μισθωσάμενοι μίαν οἰκίαν διελόμενοι ἔχουσι, συνοικίαν καλοῦμεν, οὐκ δ' εἰς οἰκίαν οἰκίαν.

There was a great deal of speculation in the building and letting of houses at Athens. (Xenoph. *Oecon*. iii. 1.) The lodging-houses were let mostly to foreigners who came to Athens on business, and especially to the μέτοικοι, whom the law did not allow to acquire real property, and who

therefore could not purchase houses of their own. (Demosth. *pro Phorm*. 946.) As they, with their families, formed a population of about 45,000, the number of συνοικίαι must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas. Xenophon recommended that the μέτοικοι should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house-proprietors (οἰκοδομησάμενοι ἐγκεκτῆσθαι, *de Vectig*. ii. 6.) The ἰσοτελεῖς laboured under no such disability; for Lysias and his brother Polemarchus, who belonged to that class, were the owners of three houses. The value of houses must have varied according to the size, the build, the situation, and other circumstances. Those in the city were more valuable than those in the Peiræus or the country, *caeteris paribus*. Two counting-houses are mentioned by Isæus (*de Hagm*. her. 88, ed. Steph.) as yielding a return of rather more than 8½ per cent. interest on the purchase-money. But this probably was much below the average. The summer season was the most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called ναύκληροι or σταθμούχοι, who made a profit by underletting them, and sometimes for not very reputable purposes. (Isæus, *de Philoct*. her. 58, ed. Steph.) Hesychius explains the word ναύκληρος, ὁ συνοικίας προστάς: see also Harpocration, s. v. Some derive the word from ναῖο: but it is more probable that it was given as a sort of nickname to the class, when they first sprang up. (See Stephan. *Thesaur*. 6608; Reiske, *Index in Or. Att.* s. v. Συνοικία: Böckh, *Publ. Econ. of Athens*, pp. 65, 141, 2d ed.) [C. R. K.]

SYNTAGMA (σύνταγμα). [EXERCITUS, p. 488, a.]

SYNTAXEIS (συντάξεις). [SYNEDRI.]

SYNTELEIA (συντέλεια). [TRIERARCHIA.]

SYNTHECE (συνθήκη). [SYMBOLABON.]

SYNTHEISIS, a garment frequently worn at dinner, and sometimes also on other occasions. As it was inconvenient to wear the toga at table on account of its many folds, it was customary to have dresses especially appropriated to this purpose, called *vestes coenatoria*, or *coenatoria* (Mart. x. 87. 12, xiv. 135; Petr. 21), *accubitoria* (Petr. 30), or *Syntheses*. The Synthesis is commonly explained to be a loose kind of robe, like the Pallium; but Becker (*Gallus*, vol. i. p. 37) supposes from a comparison of a passage of Dion Cassius (lxi. 13) with one of Suetonius (*Ner*. 51) describing the dress of Nero, that it must have been a kind of tunic, an *indumentum* rather than an *amicus*. [AMICTUS.] That it was, however, an easy and comfortable kind of dress, as we should say, seems to be evident from its use at table above mentioned, and also from its being worn by all classes at the SATURNALIA, a season of universal relaxation and enjoyment. (Mart. xiv. 1, 141, vi. 24.) More than this respecting its form we cannot say: it was usually dyed with some colour (Mart. ii. 46, x. 29), and was not white like the toga.

The word Synthesis is also applied to a set of wearing apparel or a complete wardrobe. (Dig. 34. tit. 3. s. 38.) This use of the word agrees better with its etymology (σύνθεσις, συντίθημι) than the one mentioned above. (Becker, *l.c.*)

SYRINX (*σύριγξ*), the Pan's Pipe, or Pandean Pipe, was the appropriate musical instrument of the Arcadian and other Grecian shepherds, and was regarded by them as the invention of Pan, their tutelary god (Virg. *Buc.* ii. 32, viii. 24), who was sometimes heard playing upon it (*σὺν(σ)υρρος*: see Theocrit. i. 3. 14, 16; Schol. *in loc.*; Longus, iv. 27), as they imagined, on mount Maenalus. (Paus. viii. 36. § 5.) It was of course attributed to Faunus, who was the same with Pan. (Hor. *Carm.* i. 17. 10.) When the Roman poets had occasion to mention it, they called it *fiatula* (Virg. *Buc.* ii. 36, iii. 22, 25; Hor. *Carm.* iv. 12. 10; Ovid. *Met.* viii. 192, xiii. 784; Mart. xiv. 63; Tibull. i. 5. 20.) It was also variously denominated according to the materials of which it was constructed, whether of cane (*tenni arundine*, Virg. *Buc.* vi. 8; Hom. *Hymn. in Pana*, 15; *τοῦτοριπ ὀρνίθι*, Brunch, *Ana.* i. 489), reed (*calamo*, Virg. *Buc.* i. 10, ii. 34, v. 2; *κάλυμπος*, Theocrit. viii. 24; Longus, i. 4), or hemlock (*ciusia*, Virg. *Buc.* v. 85). In general seven hollow stems of these plants were fitted together by means of wax, having been previously cut to the proper length, and adjusted so as to form an octave (Virg. *Buc.* ii. 32, 36); but sometimes nine were admitted, giving an equal number of notes. (Theocrit. viii. 18—22.) Another refinement in the construction of this instrument, which, however, was rarely practised, was to arrange the pipes in a curve so as to fit the form of the lip, instead of arranging them in a plane. (Theocrit. i. 129.) A syrinx of eight reeds is shown in the gem figured on page 846. The annexed woodcut is taken from a bas-relief in the collection at Appledurcombe in the Isle of Wight. (*Mus. Worlesyanum*, pl. 9.) It represents Pan reclining at the entrance of the cave, which was dedicated to him in the Acropolis at Athens. He holds in his right hand a drinking-horn [*RAYTON*] and in his left a syrinx, which is strengthened by two transverse bands.

The ancients always considered the Pan's Pipe as a rustic instrument, chiefly used by those who tended flocks and herds (Hom. *Il.* xviii. 526; Apoll. Rhod. i. 577; Dionys. Perieg. 996; Longus, i. 2, i. 14—16, ii. 24—26); but also admitted to regulate the dance. (Hes. *Scut.* 278.) The Lydians, whose troops marched to military music, employed this together with other instruments for the purpose. (Herod. i. 17.) This instrument was the origin of the organ [*HYDRAULA*].

The term *σύριγξ* was also applied to levels, or narrow subterranean passages, made either in

searching for metals, in mining at the siege of a city (Polyaen. v. 17), or in forming catacombs for the dead. (Aelian. *H. A.* vi. 43, xvi. 15.) [J. Y.]

SYRMA (*σύρμα*), which properly means that which is drawn or dragged (from *σύρω*), is applied to a dress with a train. The long Peplos worn by the Trojan matrons was consequently a dress somewhat of this kind. (*Il.* vi. 442.) The *Syrma*, however, was more especially the name of the dress worn by the tragic actors, which had a train to it trailing upon the ground; whence the word is explained by Pollux (vii. 67), as a *τραγικὸν φόρυμα ἐκισχυμένον*, and is alluded to by Horace (*Ar. Poet.* 215), in the words,

— *traxique vagus per pulpita vestem.*

(Compare Juv. viii. 229.) Hence we find *Syrma* used metaphorically for tragedy itself. (Juv. xv. 30; Mart. iv. 49.)

SYSSITIA (*συσιτία*). The custom of taking the principal meal of the day in public prevailed extensively amongst the Greeks from very early ages. It existed not only with the Spartans and Cretans, amongst both of whom it was kept up till comparatively recent times, but also at Megara in the age of Theognis (v. 305), and at Corinth in the time of Perander, who it seems abolished the practice as being favourable to aristocracy. (Arist. *Pol.* v. 9. § 2.) Nor was it confined to the Hellenic nation: for according to Aristotle (*Pol.* vii. 9), it prevailed still earlier amongst the Oenotrians in the south of Italy, and also at Carthage, the political and social institutions of which state resembled those of Sparta and Crete. (*Pol.* ii. 8.) The origin of the usage cannot be historically established; but it seems reasonable to refer it to infant or patriarchal communities, the members of which being intimately connected by the ties of a close political union and kindred, may naturally be supposed to have lived together almost as members of the same family. But however and wherever it originated, the natural tendency of such a practice was to bind the citizens of a state in the closest union; and accordingly we find that at Sparta, Lycurgus availed himself of it for this purpose, though we cannot determine with any certainty whether he introduced it there, or merely perpetuated and regulated an institution, which the Spartans brought with them from their mother-country and retained at Sparta as being suitable to their position and agreeable to their national habits. The latter supposition is perhaps the more probable. The Cretan usage Aristotle (*Pol.* vii. 9) attributes to Minos; this, however, may be considered rather "the philosopher's opinion than as an historical tradition:" but the institution was confessedly of so high antiquity, that the Peloponnesian colonists may well be supposed to have found it already existing in Crete, even if there had been no Dorian settlers in the island before them. (Thirlwall, *Hist. of Greece*, vol. i. p. 287.)

The Cretan name for the *Syssitia* was *Ἀσπίς* (Arist. *Pol.* ii. 7), the singular of which is used to denote the building or public hall where they were given. This title affords of itself a sufficient indication that they were confined to men and youths only: a conclusion justified and supported by all the authorities on the subject. (Plat. *Leg.* vi. 780, d.) It is not however improbable, as Heeck (*Crete*, vol. iii. p. 123) suggests, that in some of the Dorian states there were *syssitia* of the young

unmarried women as well as of the men. (Comp. Pindar, *Pyth.* ix. 18.) All the adult citizens partook of the public meals amongst the Cretans, and were divided into companies or "messes," called *ἑταίρια*, or sometimes *ἀνδρεία*. (Athen. iv. p. 143.) These divisions were perhaps originally confined to persons of the same house and kindred, but afterwards any vacancies in them were filled up at the discretion of the members. (Hoeck, vol. iii. p. 126.) The divinity worshipped under the name of *Zeús ἑταρσεύς* (Hesych. s. v.) was considered to preside over them.

According to Dosiadas, who wrote a history of Crete (Athen. l. c.), there were in every town of the island (*παράγειοι*) two public buildings, one for the lodging of strangers (*κοιμητήριον*), the other a common hall (*ἀνδρείον*) for the citizens. In the latter of these the *syssitia* were given, and in the upper part of it were placed two tables for the entertainment of foreign guests (*ξενικὰ τράπεζαι*), a circumstance deserving of notice, as indicating the extent to which the Dorians of Crete encouraged mutual intercourse and hospitality. Then came the tables of the citizens. But besides these there was also a third table on the right of the entrance dedicated to *Zeús ἑνός*, and perhaps used for the purpose of making offerings and libations to the god.

The *Syssitia* of the Cretans were distinguished by simplicity and temperance. They always sat at their tables, even in later times, when the custom of reclining had been introduced at Sparta. (Cic. *pro Mur.* 35.) The entertainment began with prayer to the gods and libations. (Athen. iv. p. 143, e.) Each of the adult citizens received an equal portion of fare, with the exception of the "Archon," or "Master of the Tables," who was perhaps in ancient times one of the *κράτοι*, and more recently a member of the *γεροντία* or council. This magistrate received a fourfold portion; "one as a common citizen, a second as President, a third for the house or building, a fourth for the furniture" (*τῶν σκευῶν*, Heraclid. Pont. iii.): an expression from which it would seem that the care of the building and the provision of the necessary utensils and furniture devolved upon him. The management of all the tables was under the superintendence of a female of free birth (*ἡ προσεστηκνία τῆς συσσιτίας γυνή*), who openly took the best fare and presented it to the citizen who was most eminent in council or the field. She had three or four male assistants under her, each of whom again was provided with two menial servants (*καληφόροι*, or wood-carriers). Strangers were served before the citizens, and even before the Archon or President. (Heracl. Pont. l. c.) On each of the tables was placed a cup of mixed wine, from which the messmates of the same company drank. At the close of the repast this was replenished, but all intemperance was strictly forbidden by a special law. (Plat. *Minos*, p. 265.)

Till they had reached their eighteenth year, when they were classed in the *ἐγείλαι*, the youths accompanied their fathers to the *syssitia* along with the orphans of the deceased. (Hoeck, vol. iii. p. 185.) In some places the youngest of the orphans waited on the men; in others this was done by all the boys. (Ephor. *ap. Strab.* x. p. 483.) When not thus engaged, they were seated near to the men on a lower bench, and received only a half portion of meat: the eldest of the orphans appear to have

received the same quantity as the men, but of a plainer description of fare. (Athen. iv. p. 143.) The boys like the men had also a cup of mixed wine in common, which however was not replenished when emptied. During the repast a general cheerfulness and gaiety prevailed, which were enlivened and kept up by music and singing. (Alcman, *ap. Strab.* l. c.) It was followed by conversation, which was first directed to the public affairs of the state, and afterwards turned on valiant deeds in war and the exploits of illustrious men, whose praises might animate the younger hearers to an honourable emulation. While listening to this conversation, the youths seem to have been arranged in classes (*ἀνδρεία*), each of which was placed under the superintendence of an officer (*παυδρόμος*) especially appointed for this purpose; so that the *syssitia* were thus made to serve important political and educational ends.

In most of the Cretan cities, the expenses of the *syssitia* were defrayed out of the revenues of the public lands and the tribute paid by the *Perioeci*, the money arising from which was applied partly to the service of the gods, and partly to the maintenance of all the citizens both male and female. (Arist. *Pol.* ii. 7. 4); so that in this respect there might be no difference between the rich and the poor. From the statement of Aristotle compared with Dosiadas (Athen. l. c.), it appears probable that each individual received his separate share of the public revenues, out of which he paid his quota to the public table, and provided with the rest for the support of the females of his family. This practice however does not appear to have prevailed exclusively at all times and in all the cities of Crete. In *Lyctus*, for instance, a colony from Sparta, the custom was different: the citizens of that town contributed to their respective tables a tenth of the produce of their estates; a practice which may be supposed to have obtained in other cities, where the public domains were not sufficient to defray the charges of the *syssitia*. But both at *Lyctus* and elsewhere, the poorer citizens were in all probability supported at the public cost.

In connection with the accounts given by the ancient authors respecting the Cretan *syssitia* there arises a question of some difficulty, viz. how could one building accommodate the adult citizens and youths of such towns as *Lyctus* and *Gortyna*? The question admits of only two solutions: we are either misinformed with respect to there being only one building in each town used as a common hall, or the number of Dorian citizens in each town must have been comparatively very small.

The Spartan *Syssitia* were in the main so similar to those of Crete that one was said to be borrowed from the other. (Arist. *Pol.* ii. 7.) In later times they were called *φειδίτια*, or the "spare meals," a term which is probably a corruption of *φιλτία*, the love-feasts, a word corresponding to the Cretan *ἑταίρια*. (Götting, *ad Arist. Oecon.* p. 190; Müller, *Dor.* iv. 3. § 3.) Anciently they were called *ἀνδρεία*, as in Crete, (Plut. *Lycur.* 12.) They differed from the Cretan in the following respects. Instead of the expenses of the tables being defrayed out of the public revenues, every head of a family was obliged to contribute a certain portion at his own cost and charge; those who were not able to do so were excluded from the public tables. (Arist. *Pol.* ii. 7. 4.) The guests were divided into companies generally of fifteen persons each, and all

vacancies were filled up by ballot, in which unanimous consent was indispensable for election. No persons, not even the kings, were allowed what was called an ἀφίστερος ἡμέρα (Hesych. s. v.) or excused from attendance at the public tables, except for some satisfactory reason, as when engaged in a sacrifice, or a chase, in which latter case the individual was required to send a present to his table. (Plut. l. c. Agis, c. 10.) Each person was supplied with a cup of mixed wine, which was filled again when required; but drinking to excess was prohibited at Sparta as well as in Crete. The repast was of a plain and simple character, and the contribution of each member of a mess or φειβήτης was settled by law. (Wachsmuth, vol. ii. pt. ii. p. 24, 1st ed.; Plut. l. c.) The principal dish was the μέλας (μεῖος or black broth, with pork. (Athen. iv. p. 141.) The ἀρτίκλον or aftermeal (from the Doric ἀρτίκλον, a meal) was however more varied, and richly supplied by presents of game, poultry, fruit, &c., and other delicacies which no one was allowed to purchase. Moreover, the entertainment was enlivened by cheerful conversation, though on public matters. (Xen. Rep. Lacœ. v. 6.) Singing also was frequently introduced, as we learn from Alcman (Frag. 31), that "at the banquets and drinking entertainments of the men it was fit for the guests to sing the pæan." The arrangements were under the superintendence of the Polemarcha.

The use and purposes of the institutions described above are very manifest. They united the citizens by the closest ties of intimacy and union, making them consider themselves as members of one family, and children of one and the same mother, the state. They maintained a strict and perfect separation between the higher and the subject classes both at Sparta and in Crete, and kept up in the former a consciousness of their superior worth and station, together with a strong feeling of nationality. At Sparta also they were eminently useful in a military point of view, for the members of the syssitia were formed into corresponding military divisions, and fought together in the field, as they had lived together at home, with more bravery and a keener sense of shame (αἰδώς), than could have been the case with merely chance comrades. (Herod. i. 65.) Moreover "they gave an efficacy to the power of public opinion which must have nearly superseded the necessity of penal laws." (Thirlwall, vol. i. p. 289.) With respect to the political tendencies, they were decidedly arranged upon aristocratical principles, though no individual of a company or mess was looked upon as superior to his fellows. Plutarch (Quæst. Sympos. vii. p. 332) accordingly calls them συνθήκη ἀριστοκρατικὴ, or aristocratical meetings, and compares them with the Prytaneium and Thesmoethesium at Athens.

The simplicity and sobriety, which were in early times the characteristic both of the Spartan and Cretan Syssitia, were afterwards in Sparta at least supplanted by luxury and effeminate indulgence. The change was probably gradual, but the kings Areus and Acrotatus (a. c. 300) are recorded as having been mainly instrumental in accelerating it. The reformer Agis endeavoured but in vain to restore the old order of things, and perished in the attempt. In his days Sparta contained 4500 families, out of which he proposed to make fifteen syssitia, whence Müller infers that formerly, when

the number of families was 9000, the number of syssitia was thirty; and consequently that Herodotus, when he spoke of Lycurgus having instituted the "syssitia" for war, alluded to the larger divisions and not the single banqueting companies; a conclusion justified by the context. Müller moreover supposes, that in this sense the Syssitia at Sparta corresponded to the divisions of the state called obœ, and sometimes φασεῖλαι, which were also thirty in number. (Dorians, iii. 5. § 6, and 12. § 4.)

(Hoeck, Crete, vol. iii. pp. 120—139; Hüllmann's Anfänge, § 138; Thirlwall, Hist. of Greece, vol. i. pp. 288, 331; Hermann, Lehrbuch der Griech. Staats. §§ 22, 28.) [R. W.]

SYSTYLOS. [TEMPULUM.]

T.

TABELLA, dim. of TABULA, a billet or tablet, with which each citizen and judex voted in the comitia and courts of justice. In the comitia, if the business was the passing of a law, each citizen was provided with two Tabellæ, one inscribed V. R. i. e. *Utī Rogas*, "I vote for the law," the other inscribed A. i. e. *Antiquo*, "I am for the old law." (Compare Cic. ad Att. i. 14.) If the business was the election of a magistrate, each citizen was supplied with only one tablet, on which the names of the candidates were written, or the initials of their names, as some suppose from the cætion *pro Domo*, c. 43; the voter then placed a mark (*punctum*) against the one for whom he voted, whence *puncta* are spoken of in the sense of votes. (Cic. pro Planc. 22.) For further particulars respecting the voting in comitia, see DIRIBITORES, CISTA, SITELLA, and SUFFRAGIUM.

The judges were provided with three Tabellæ: one of which was marked with A. i. e. *Abesto*, "I acquit;" the second with C. i. e. *Condemno*, "I condemn;" and the third with N. L. i. e. *Nos Liquet*, "It is not clear to me." The first of these was called *Tabella absolutoria* and the second *Tabella damnatoria* (Suet. Octav. 33), and hence Cicero (*pro Mil.* 6) calls the former *littera solatoria*, and the latter *littera tristicæ*. It would seem that in some trials the Tabellæ were marked with the letters L. and D. respectively, i. e. *Liber* and *Damn*, since we find on a denarius of the Cælian gens a Tabella marked with the letters L. D.; and as we know that the vote by ballot in cases of Perduellio was first introduced by C. Cælius Caldus [TABULARIÆ LEGES], the Tabella on the coin undoubtedly refers to that event. There is also a passage in Cæsar (*B. C.* iii. 83), which seems to intimate that these initial letters were sometimes marked on the tabellæ: "Unam fore tabellam, qui *liberos* omni periculo censerent; alteram, qui *capitis damnarent*," &c. (Compare Spanheim, *Novius* vol. ii. p. 199.)

BRITISH MUSEUM.

The preceding cut contains a copy of a coin of the Cassian gens, in which a man wearing a toga is represented in the act of placing a tabella, marked with the letter A. (i. e. *absolvo*), in the cista. The letter on the tabella is evidently intended for A.

For the other meanings of Tabella see TABULA. TABELLA'RIAE LEGES, the laws by which the ballot was introduced in voting in the comitia. As to the ancient mode of voting at Rome, see SUFFRAGIUM. There were four enactments known by the name of Tabellariae Leges, which are enumerated by Cicero (*de Leg.* iii. 16). They are mentioned below according to the order of time in which they were passed.

1. GABINIA LEX, proposed by the tribune Gabinius B. C. 139, introduced the ballot in the election of magistrates (*Cic. l. c.*); whence Cicero (*Agr.* ii. 2) calls the tabella "vindex tacitae libertatis."

2. CASSIA LEX, proposed by the tribune L. Cassius Longinus B. C. 137, introduced the ballot in the "Judicium Populi," with the exception of cases of Perduellio. The "Judicium Populi" undoubtedly applies to cases tried in the comitia by the whole body of the people [*JUDEX*, p. 649], although Ernesti (*Index Leg.*) wishes to give a different interpretation to the words. This law was supported by Scipio Africanus the younger, for which he was censured by the aristocratical party. (*Cic. de Leg.* iii. 16, *Brut.* 25, 27, *pro Sestio*, 48; *Ascon. in Cornel.* p. 78, ed. Orelli.)

3. PAPIRIA LEX, proposed by the tribune C. Papirius Carbo B. C. 131, introduced the ballot in the enactment and repeal of laws. (*Cic. de Leg.* iii. 16.)

4. CAELIA LEX, proposed by C. Caelius Caldus B. C. 107, introduced the ballot in cases of Perduellio, which had been excepted in the Cassian law. (*Cic. l. c.*)

There was also a law brought forward by Marius B. C. 119, which was intended to secure freedom and order in voting. (*Cic. de Leg.* iii. 17; *Plut. Mar.* 4.)

TABELLA'RIVS, a letter-carrier. As the Romans had no public post, they were obliged to employ special messengers, who were called *Tabellarii*, to convey their letters (*tabellae, litterae*), when they had not an opportunity of sending them otherwise. (*Cic. Phil.* ii. 31; *Cic. ad Fam.* xii. 12, xiv. 22.)

TABELLIO, a notary. (*Suidas. s. v.*) Under the empire the Tabelliones succeeded to the business of the Scribae in the times of the republic. [*SCRIBAE.*] They were chiefly employed in drawing up legal documents, and for this purpose usually took their stations in the market-places of towns. (*Cod.* 4. tit. 21. s. 17; *Novell.* 73. c. 5, &c.) They formed a special order in the state. (*Gothofr. ad Cod. Theod.* 12. tit. 1. s. 3.)

TABERNA is defined by Ulpian as any kind of building fit to dwell in "nempe ex eo, quod tabulis clauditur" (*Dig.* 50. tit. 10. § 183), or according to the more probable etymology of Festus, because it was made of planks. (*Festus, s. v. Contubernales, Tabernacula.*) Festus (*s. v. Aditibernalis*) asserts that this was the most ancient kind of abode used among the Romans, and that it was from the early use of such dwellings that the words *taberna* and *tabernaculum* were applied to military tents, though the latter were constructed of skins. We know very little of the form and materials of the ancient tents; but we may infer from the notices we have of them that they were generally

composed of a covering of skins partly supported by wooden props, and partly stretched on ropes. Sometimes, in a permanent camp, they may have been constructed entirely of planks; and sometimes, in cases of emergency, garments and rushes were spread over any support that could be obtained. (*Lipsius, de Milit. Roman.* in *Oper.* vol. iii. pp. 154—155.) From *taberna*, when used in this sense, are derived *tabernaculum*, the more common name of a tent, and *CONTUBERNALES*.

The usual meaning of *taberna* is a shop. Originally the shops were stalls or booths in or round the market-place [*AGORA*; *FORUM*]; afterwards they were permanently established both on the sides of the market-place, and in other parts of the city. Neither the ancient authors nor the remains of Pompeii lead us to suppose that tradesmen often had their shops forming part of their houses, as with us. A few houses are indeed found in Pompeii entirely devoted to the purposes of trade, consisting, that is, of the shop and the rooms occupied by the tradesman and his family. Most commonly, however, the shops formed a part of a large house, to the owner of which they belonged, and were by him let out to tradesmen. [*DOMUS*, p. 430.] Some of the shops round a house were retained by the owner for the sale of the produce of his estates. This arrangement of the shops was probably an improvement on an older plan of placing them against the walls of houses. Even under the emperors we find that shops were built out so far into the street as to obstruct the thoroughfare. Martial (vii. 61) mentions an edict of Domitian by which this practice was put down, and the shops were confined within the areas of the houses.

The following are the most remarkable classes of shops of which we have notices or remains.

1. Shops for the sale of wine, hot drinks, and ready-dressed meat. [*CAUPONA.*]

2. Bakers' shops. Of these several have been found at Pompeii, containing the mill as well as the other implements for making bread. [*MOLA*; *PISTOR.*]

3. Booksellers' shops. [*LIBER.*]

4. Barbers' and Hairdressers' shops. [*BARBA.*] [*P. S.*]

TABERNA'CULUM. [*TABERNA*; *TEMPLUM.*]

TABLIVM. [*DOMUS*, p. 428, s.]

TABULAE. This word properly means planks or boards, whence it is applied to several objects, as gaming-tables (*Juv.* i. 90), pictures (*Cic. de Fin.* v. 1; *Propert.* i. 2. 22), but more especially to tablets used for writing, of which alone we have to speak here. The word *Tabulae* was applied to any flat substance used for writing upon, whether stone or metal, or wood covered with wax. Livy (i. 24) indeed distinguishes between *Tabulae* and *Cera*, by the former of which he seems to mean tablets of stone or metal; but *Tabulae* and *Tabellae* more frequently signify waxen tablets (*tabulae ceratae*), which were thin pieces of wood usually of an oblong shape, covered over with wax (*cera*). The wax was written on by means of the stylus. [*STYLUS.*] These *tabulae* were sometimes made of ivory and citron-wood (*Mart.* xiv. 3. 5), but generally of a wood of a more common tree, as the beech, fir, &c. The outer sides of the tablets consisted merely of the wood; it was only the inner sides that were covered over with wax. They were fastened together at the back by means of wires, which answered the purpose of hinges, so

that they opened and shut like our books; and to prevent the wax of one tablet rubbing against the wax of the other, there was a raised margin around each, as is clearly seen in the woodcut under *STILUS*. There were sometimes two, three, four five, or even more, tablets fastened together in the above-mentioned manner. Two such tablets were called *Diptycha* (δίπτυχα), which merely means "twice-folded" (from *πτύσσω* "to fold"), whence we have *πτυκτερον*, or with the *τ* omitted, *τυκτερον*. The Latin word *pagillares*, which is the name frequently given to tablets covered with wax (Mart. xiv. 3; Gell. xvii. 9; Plin. *Ep.* i. 6), may perhaps be connected with the same root, though it is usually derived from *pagillus*, because they were small enough to be held in the hand. Such tablets are mentioned as early as the time of Homer, who speaks of a *πίναξ πτυκτός*. (*Il.* vi. 169.) Three tablets fastened together were called *Triptycha* (τρίπτυχα), which Martial (xiv. 6) translates by *triplices (ceras)*; in the same way we also read of *Pentaptycha* (πεντάπτυχα) called by Martial (xiv. 4) *Quintuplices (ceras)*, and of *Polyptycha* (πολύπτυχα) or *Multiplices (ceras)*. The pages of these tablets were frequently called by the name of *ceras* alone; thus we read of *prima ceras, altera ceras*, "first page," "second page." (Compare Suet. *Ner.* 17.) In tablets containing important legal documents, especially wills, the outer edges were pierced through with holes (*foramina*), through which a triple thread (*linum*) was passed, and upon which a seal was then placed. This was intended to guard against forgery, and if it was not done such documents were null and void. (Suet. *Ner.* 17; Paulus, *Sent. Rec.* v. 25. § 6; *TESTAMENTUM*.)

Waxen tablets were used among the Romans for almost every species of writing, where great length was not required. Thus letters were frequently written upon them, which were secured by being fastened together with packthread and sealed with wax. Accordingly we read in Plautus (*Bacchid.* iv. 4. 64) when a letter is to be written,

"Effice cito stilum, ceram, et tabellas, et linum."

The sealing is mentioned afterwards (l. 96). (Compare Cic. in *Catil.* iii. 5.) Tabulae and tabellae are therefore used in the sense of letters. (Ovid. *Met.* ix. 522.) Love-letters were written on very small tablets called *Vitelliani* (Mart. xiv. 8, 9), of which word however we do not know the origin. Tablets of this kind are presented by Amor to Polyphemus on an ancient painting. (*Mus. Borbon.* vol. i. tav. 2.)

Legal documents, and especially wills, were almost always written on waxen tablets, as mentioned above. Such tablets were also used for accounts, in which a person entered what he received and expended (*Tabulae* or *Codex accepti et expensi*, Cic. *pro Rosc. Com.* 2), whence *Novae Tabulae* mean an abolition of debts either wholly or in part. (Suet. *Jul.* 42; Cic. *de Off.* ii. 23.) The above are merely instances of the extensive use of waxen tablets; it is unnecessary to pursue the subject further.

Two ancient waxen tablets have been discovered in a perfect state of preservation, one in a gold mine four or five miles from the village of Abrudbánya in Transylvania, and the other in a gold mine in the village itself. Of this interesting discovery an account has been published by Massmann in a work intitled "Libellus Aurarius, sive Tabulae

Ceratae, et antiquissimae et unice Romanae in Fodina Auraria apud Abrudbanyam, oppidulum Transylvanum, nuper repertae." Lipsiae (1841). An account of these tablets, taken from Massmann's description, will serve as a commentary on what has been said above. Both the tabulae are triptycha, that is, consisting of three tablets each. One is made of fir-wood, the other of beech-wood, and each is about the size of what we call a small octavo. The outer part of the two outside tablets of each exhibits the plain surface of the wood, the inner part is covered with wax, which is now almost of a black colour, and is surrounded with a raised margin. The middle tablet has wax on both sides with a margin around each; so that each of the two tabulae contains four sides or four pages covered with wax. The edges are pierced through, that they might be fastened together by means of a thread passed through them. The wax is not thick in either; it is thinner on the beech tabulae, in which the stilus of the writer has sometimes cut through the wax into the wood. There are letters on both of them, but on the beechen tabulae they are few and indistinct; the beginning of the first tablet contains some Greek letters, but they are succeeded by a long set of letters in unknown characters. The writing on the tabulae made of fir-wood is both greater in quantity and is a much better state of preservation. It is written in Latin, and is a copy of a document relating to some business connected with a collegium. The name of the consuls is given, which determines its date to be A. D. 169. One of the most extraordinary things connected with it is, that it is written from right to left. The writing begins on what we should call the last or fourth page, and ends at the bottom of the third; and by some strange good fortune it has happened that the same document is written over again, beginning on the second page and ending at the bottom of the first; so that where the writing is effaced or doubtful in the one it is usually supplied or explained by the other.

Waxen tablets continued to be used in Europe for the purposes of writing in the middle ages; but the oldest of these with which we are acquainted belongs to the year 1301 A. D., and is preserved in the Florentine Museum.

The tablets used in voting in the comitia and the courts of justice were also called tabulae as well as tabellae. [TABELLAE.]

TABULAE PUBLICAE. [TABULARIUM.]

TABULARII were notaries or accountants, who are first mentioned under this name in the time of the empire. (Sen. *Ep.* 88; Dig. 11. tit. 6. § 7; 50. tit. 13. a. 1. § 6.) Public notaries, who had the charge of public documents, were also called tabularii (Dig. 43. tit. 5. a. 3), and these seem to have differed from the tabelliones in the circumstance that the latter had nothing to do with the custody of the public registers. Public tabularii were first established by M. Antoninus in the provinces, who ordained that the births of all children were to be announced to the tabularii within thirty days from the birth. (Capitol. *M. Anton.* 9.) Respecting the other duties of the public tabularii, see Cod. Theod. 8. tit. 2, and Gothofr. *ad loc.*

TABULARIUM, a place where the public records (*tabulae publicae*) were kept. (Cic. *pro C. Rabir.* 3, *pro Arch.* 4.) These records were of various kinds, as for instance *Senatusconsulta*, *Te-*

bulæ Censoriæ, registers of births, deaths, of the names of those who assumed the toga virilis, &c. (See Abram. *ad Cæ. Mil.* 27.) There were various tabularia at Rome, all of which were in temples; we find mention made of tabularia in the temples of the Nymphs (Cic. *pro Mil.* 27), of Lucina, of Juventas, of Libitina, of Ceres, and more especially in that of Saturn, which was also the public treasury. (Servius, *ad Virg. Georg.* ii. 502; Capitol. *M. Anton. Phil.* 9.) [ÆRARIUM.]

A tabularium was also called by other names, as *Grammatophylacium*, *Archium*, or *Archivum*. (Dig. 48. tit. 19. s. 9.) In a private house the name of *Tablinum* was given to the place where the family records and archives were kept. [DOMUS, p. 428, a.]

TAEDA or TEDA (*δαῖς*, Att. *δαῖς*, dim. *δαδίων*), a light of fir-wood, called on this account *pinæ taeda*. (Catull. *l.* ix. 15; Ovid. *Fast.* ii. 558.) Before the adoption of the more artificial modes of obtaining light, described under CANDELA, FAX, FUNALIS, and LUCERNA, the inhabitants of Greece and Asia Minor practised the following method, which still prevails in those countries, and to a certain extent in Scotland and Ireland, as well as in other parts of Europe, which abound in forests of pine. (Fellows, *Æcæ. in Asia Minor*, pp. 140, 333—335.) A tree having been selected of the species *Pinus Maritima*, *Linn.*, which was called *πύκη* by the ancient Greeks from the time of Homer (*Il.* xi. 494, xxiii. 328), and which retains this name, with a slight change in its termination, to the present day, a large incision was made near its root, causing the turpentine to flow so as to accumulate in its vicinity. This highly resinous wood was called *δαῖς*, i. e. torch-wood; a tree so treated was called *ἐνδαῖος*, the process itself *ἐνδαδύν* or *δαδουργεῖν*, and the workmen employed in the manufacture, *δαδουργοί*. After the lapse of twelve months the portion thus impregnated was cut out and divided into suitable lengths. This was repeated for three successive years, and then, as the tree began to decay, the heart of the trunk was extracted, and the roots were dug up for the same purpose. (Theophrast. *H. P.* i. 6. § 1, iii. 9. § 3, 5, iv. 16. § 1, x. 2. § 2, 3; Athen. xv. 700, f.) These strips of resinous pinewood are now called *δαῖα* by the Greeks of Mount Ida. (Hunt and Sibthorp, in *Walpole's Mem.* pp. 120, 235.)

When persons went out at night, they took these lights in their hands (Aristoph. *Eccles.* 688, 970), more particularly in a nuptial procession. (Hom. *Il.* xviii. 492; Hes. *Scut.* 275; Aristoph. *Pax*, 1317; Ovid. *Met.* iv. 326; *Fast.* vi. 223.) Hence *taedæ felices* signified "a happy marriage" (Catull. 61. 25; compare Prudent. *c. Symm.* ii. 165); and these lights, no less than proper torches, are attributed to Love and Hymen. (Ovid. *Met.* iv. 758.) [J. Y.]

TAENIA. [VITTA; STROPHIUM.]

TAGUS (*ταγός*), a leader or general, was more especially the name of the military leader of the Thessalians. Under this head it is proposed to give a short account of the Thessalian constitution.

The Thessalians were a Thesprotian tribe (Herod. vii. 176; Vell. Pat. i. 3), and originally came from the Thesprotian Ephyra. Under the guidance of leaders, who are said to have been descendants of Hercules, they invaded the western part

of the country afterwards called Thessaly, and drove out or reduced to the condition of Penestæ or bondsmen the ancient Aeolian inhabitants (*τῆν τότε μὲν Αἰολίδα νῦν δὲ Θερταλίαν καλουμένην*, Diod. iv. 57). The Thessalians afterwards spread over the other parts of the country, and took possession of the most fertile districts, and compelled the Peræbi, Magnetes, Achæan Phthiotæ, and other neighbouring people to submit to their authority and to pay them tribute. (Thucyd. ii. 101, iv. 78, viii. 3; Aristot. *Pol.* ii. 6.) The population of Thessaly therefore consisted, like that of Laconica, of three distinct classes. 1. The Penestæ, whose condition was nearly the same as that of the Helots. [PENESTÆ.] 2. The subject people, who inhabited the districts which were not occupied by the Thessalian invaders. They paid tribute, as stated above, but were personally free, though they had no share in the government. They corresponded to the Perioeci of Laconica, by which name they are called by Xenophon. (*Hell.* vi. 1. § 19.) [PERIOECI.] 3. The Thessalian conquerors, who alone had any share in the public administration, and whose lands were cultivated by the Penestæ.

For some time after the conquest Thessaly seems to have been governed by kings of the race of Hercules, who may however have been only the heads of the great aristocratical families, invested with the supreme power for a certain time. Under one of these princes, named Aleuas, the country was divided into four districts, Phthiotia, Histiaiotia, Thessaliothia, and Pelasgiotia. (Aristot. *ap. Harpocrat. s. v. Τετραρχία*: Strab. ix. p. 450.) This division continued till the latest times of Thessalian history, and we may therefore conclude that it was not merely a nominal one. Each district may perhaps have regulated its affairs by some kind of provincial council, but respecting the internal government of each we are almost entirely in the dark. (Thirlwall, *Hist. of Greece*, vol. i. p. 437.)

When occasion required, a chief magistrate was elected under the name of Tagus (*ταγός*), whose commands were obeyed by all the four districts. He is sometimes called king (*βασιλεύς*, Herod. v. 63), and sometimes *ἀρχός*. (Dionys. v. 74.) His command was of a military rather than of a civil nature, and he seems only to have been appointed when there was a war or one was apprehended. Pollux (i. 128) accordingly in his list of military designations classes together the Boeotarchs of the Thebans, the King of the Lacedæmonians, the Polemarch of the Athenians (in reference to his original duties), and the Tagus of the Thessalians. We do not know the extent of the power which the Tagus possessed constitutionally, nor the time for which he held the office; probably neither was precisely fixed, and depended on the circumstances of the times and the character of the individual. (Thirlwall, vol. i. p. 438.) He levied soldiers from the states in each district, and seems to have fixed the amount of tribute to be paid by the allies. (Xenoph. *Hell.* vi. 1. § 19.) When Jason was tagus he had an army of more than 8000 cavalry and not less than 20,000 hoplites (Xenoph. *l. c.*), and Jason himself says that when Thessaly is under a tagus, there is an army of 6000 cavalry and 10,000 hoplites. (*Id.* vi. 1. § 8.) The tribute which Jason levied from the subject towns was the same as had been previously paid by one of the Scopadæ, whom Buttmann supposes to be the

same Scopas as the one mentioned by Aelian (*V. H.* xii. 1) as a contemporary of Cyrus the younger. When Thessaly was not united under the government of a tagus the subject towns possessed more independence. (Xenoph. *Hell.* vi. 1. § 9.) In later times some states called their ordinary magistrates *tagoi* (Böckh, *Corp. Inscr.* n. 1770), which may have been done however, as Hermann suggests, only out of affectation.

Thessaly however was hardly ever united under one government. The different cities administered their own affairs independent of one another, though the smaller towns seem to have frequently been under the influence of the more important ones (τῶν δὲ ὑμῶν (τῶν Φαρσαλέων) ἡγεμένων πόλεων, Xenoph. *Hell.* vi. 1. § 8). In almost all the cities the form of government was aristocratical (δυναστεία μᾶλλον ἢ ἰσονομία ἐχράντο τὸ ἐγγράσιον οἱ Θεσσαλοί, Thucyd. iv. 78), and it was chiefly in the hands of a few great families, who were descended from the ancient kings. Thus Larissa was subject to the Aleuadae, whence Herodotus (vii. 6) calls them kings of Thessaly; Crannon or Crannon to the Scopadae, and Pharsalus to the Creondae. (Compare Theocr. xvi. 34, &c.) These nobles had vast estates cultivated by the Penestae; they were celebrated for their hospitality and lived in a princely manner (φιλόξενός τε καὶ μεγαλόπρεπός τιν Θεσσαλικὸν τρόπον, Xenoph. *Hell.* vi. 1. § 3), and they attracted to their courts many of the poets and artists of southern Greece. The Thessalian commonalty did not however submit quietly to the exclusive rule of the nobles. Contests between the two classes seem to have arisen early, and the conjecture of Thirlwall (vol. i. p. 438), that the election of a tagus, like that of a dictator at Rome, was sometimes used as an expedient for keeping the commonalty under, appears very probable. At Larissa the Aleuadae made some concessions to the popular party. Aristotle (*Pol.* v. 5) speaks, though we do not know at what time he refers to, of certain magistrates at Larissa, who bore the name of πολιτοφύλακες, who exercised a superintendence over the admission of freemen, and were elected themselves out of the body of the people, whence they were led to court the people in a way unfavourable to the interests of the aristocracy. There were also other magistrates at Larissa of a democratical kind, called *Λαρισσοποιοί*. (Aristot. *Pol.* iii. 1.) Besides the contests between the oligarchical and democratical parties, there were feuds among the oligarchs themselves; and such was the state of parties at Larissa under the government of the Aleuadae two generations before the Persian war, that a magistrate was chosen by mutual consent, perhaps from the commonalty, to mediate between the parties (ἀρχων μεσίδιος, Aristot. *Pol.* v. 5). At Pharsalus too at the close of the Peloponnesian war the state was torn asunder by intestine commotions, and for the sake of quiet and security the citizens entrusted the acropolis and the whole direction of the government to Polydamas, who discharged his trust with the strictest integrity. (Xenoph. *Hell.* vi. 1. § 2, 3.)

The power of the aristocratical families however seems to have continued with little diminution till towards the close of the Peloponnesian war, when decided democratical movements first began to appear. At this time the Aleuadae and the Scopadae had lost much of their ancient influence. Pherae and Pharsalus then became the two leading states

in Thessaly. At Pherae a tyranny, probably arising from a democracy, was established by Lycophron, who opposed the great aristocratical families, and aimed at the dominion of all Thessaly. (Xenoph. *Hell.* ii. 3. § 4; Diod. xiv. 82.) The latter object was accomplished by Jason, the successor and probably the son of Lycophron, who effected an alliance with Polydamas of Pharsalus, and caused himself to be elected tagus about B. C. 374. While he lived the whole of Thessaly was united as one political power, but after his murder in B. C. 370 his family was torn asunder by intestine discords and did not long maintain its dominion. The office of tagus became a tyranny under his successors, Polydorus, Polyphron, Alexander, Tisiphonus, and Lycophron; till at length the old aristocratical families called in the assistance of Philip of Macedonia, who deprived Lycophron of his power in B. C. 353, and restored the ancient government in the different towns. At Pherae he is said to have restored popular or at least republican government. (Diod. xvi. 38.) The country however only changed masters; for a few years later (B. C. 344) he made it completely subject to Macedonia by placing at the head of the four divisions of the country, tetrarchies or tetradarchies, which he re-established, governors devoted to his interests and probably members of the ancient noble families, who had now become little better than his vassals. (Dem. *Philip.* ii. p. 71, iii. p. 117; Harpocrat. s. v.) Thessaly from this time remained in a state of dependence on the Macedonian kings (Polyb. iv. 76), till the victory of T. Flaminius at Cynoscephalae in B. C. 197 again gave them a show of independence under the protection of the Romans. (Liv. xxxiii. 34, xxxiv. 51, Polyb. xviii. 30.)

(Buttmann, *Mythologus*, No. xxii. Von den Geschlecht der Aleuaden; Voemel, *de Thessaliae Incolis antiquis*. Frankf. 1829; Horn, *de Thessaliae Macedonum imperio subjecta*, Gryphinae, 1829; Tittmann, *Darstellung d. Griech. Staatsverf.* p. 713, &c.; Schömann, *Antiq. Juris publ. Graec.* p. 401, &c.; Hermann, *Lehrbuch d. griech. Staatsalt.* § 178.)

TALARIA, small wings, fixed to the ankles of Mercury and reckoned among his attributes (πῆδιλα, Athen. xii. p. 537, E; πτερυγῆδες, Orph. *Hymn.* xxvii. 4; Ovid. *Mel.* ii. 736; Fulgent. *Mythol.* 1.) In many works of ancient art they are represented growing from his ankles, as if they were a part of his bodily frame; but more frequently they are attached to him as a part of his dress, agreeably to the description of the poets (Hom. *Il.* xxiv. 340, *Od.* v. 44; Virg. *Aen.* iv. 239); and this is commonly done by representing him with sandals, which have wings fastened to them on each side over the ankles. But there is a most beautiful bronze statue of this divinity in the

museum at Naples, in which the artist, instead of the sole of a sandal, has made the straps unite in a rosette under the middle of the foot (see the wood-cut), evidently intending by this elegant device to represent the messenger of the gods as borne through space without touching the ground.

Besides Mercury the artists of antiquity also represented Perseus as wearing winged sandals (*Mon. Myth.* iii. 28; Inghirami, *Vasi Fittili*, i. tav. 70, iv. tav. 166); because he put on those of Mercury, when he went on his aerial voyage to the rescue of Andromeda. (Ovid. *Mét.* iv. 665—677; Hea. *Scut.* 216—220; Eratosth. *Catal.* 22; Hygin. *Poet. Astron.* ii. 12.) The same appendage was ascribed to Minerva, according to one view of her origin, viz. as the daughter of Pallas. (Cic. *de Nat. Deor.* iii. 23; Tzetzes, *Schol. in Lycoph.* 355.) [J. Y.]

TALARUS (τάλαρος). [CALATHUS.]

TALASSIO. [MATRIMONIUM, p. 743, b.]

TALENTUM. [LIBRA, 2d art.; PONDERA; NUMMUS.]

TALIO, from Talia, signifies an equivalent, but it is used only in the sense of a punishment or penalty the same in kind and degree as the mischief which the guilty person has done to the body of another. A provision as to Talio occurred in the Twelve Tables: Si membrum rupit ni cum eo pacit talio esto. (Festus, s. v. *Talionis*.) This passage does not state what Talio is. Cato as quoted by Priscian (vi. p. 710, Putsch) says: Si quis membrum rupit aut os fregit, talione proximus cognatus ulciscatur. The law of Talio was probably enforced by the individual or his friends: it is not probable that the penalty was inflicted under a decision of a court of justice. It seems likely that it bore some analogy to the permission to kill an adulterer and adulteress in certain cases, which the Julia Lex confirmed; and if so, the law would define the circumstances under which an injured person or his cognati might take this talio. The punishment of death for death was talio; but it is not said that the cognati could inflict death for death. Talio, as a punishment, was a part of the Mosaic law: "breach for breach, eye for eye, tooth for tooth: as he hath caused a blemish in a man, so shall it be done to him again." (*Levit.* xxiv. 20; Rein, *Das Criminalrecht der Römer*, pp. 37, 358, 816, 915.) [G. L.]

TALUS (δορυγάλος), a huckle-bone. The huckle-bones of sheep and goats have often been found in Greek and Roman tombs, both real, and imitated in ivory, bronze, glass, and agate. Those of the antelope (δορυδάβαιοι) were sought as objects of elegance and curiosity. (Theoph. *Char.* 5; Athen. v. p. 193, f.) They were used to play with from the earliest times, principally by women and children (Plut. *Alcib.* p. 350), occasionally by old men. (Cic. *de Senect.* 16.) A painting by Alexander of Athens, found at Resina, represents two women occupied with this game. One of them, having thrown the bones upwards into the air, has caught three of them on the back of her hand. (*Ant. d'Érc.* i. tav. 1.) See the following woodcut, and compare the account of the game in Pollux (ix. c. 7). Polygnotus executed a similar work at Delphi, representing the two daughters of Pandarus thus employed (παρδωνίας δορυγάλλοις, Paus. x. 30. § 1). But a much more celebrated production was the group of two naked boys, executed in bronze by Polyclethus, and called the *Astragalizontes*. (Plin.

H. N. xxxiv. 8. a. 19.) A fractured marble group of the same kind, preserved in the British Museum, exhibits one of the two boys in the act of biting the arm of his play-fellow so as to present a lively illustration of the account in Homer of the fatal quarrel of Patroclus. (*Il.* xxiii. 87, 88.) To play at this game was sometimes called *παραλιδίζεω*, because five bones or other objects of a similar kind were employed (Pollux, *l. c.*); and this number is retained among ourselves.

Whilst the tali were without artificial marks, the game was entirely one of skill; and in ancient no less than in modern times, it consisted not merely in catching the five bones on the back of the hand as shown in the wood-cut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight. When the sides of the bone were marked with different values, the game became one of chance. [ALMA; TESSERA.] The two ends were left blank, because the bone could not rest upon either of them on account of its curvature. The four remaining sides were marked with the numbers 1, 3, 4, 6; 1 and 6 being on two opposite sides, and 3 and 4 on the other two opposite sides. The Greek and Latin names of the numbers were as follows (Pollux, *l. c.*; Eustath. in *Hom. Il.* xxiii. 88; Sueton. *August.* 71; Mart. xiii. 1. 6): — 1. Μοῦρα, εἰς, κύβω, Χῆος (Bruck, *Anal.* i. 35, 242); Ion. Οἰτῆρ: Unio, Vulturius, canis (Propert. iv. 9. 17; Ovid. *Art. Amat.* ii. 205, *Fast.* ii. 473); 3. Τριὰς: Ternio; 4. Τετράς: Quaternio; 6. Ἑξάς, ἑξήτης, Κῆος: Senio.

As the bone is broader in one direction than in the other, it was said to fall upright or prone (ὀρθός ἢ πρηνής, *rectus aut pronus*), according as it rested on the narrow or the broad side. (Plut. *Sympos. Prob.* p. 1209, ed. Steph; Cic. *de Fin.* iii. 16.)

Two persons played together at this game, using four bones, which they threw up into the air, or emptied out of a dice-box [FAUTILLUS], and observing the numbers on the uppermost sides. The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of ali was four aces (*jacit vultorios quatuor*, Plaut. *Curr.* ii. 3. 78). But the value of a throw (*βόλος, jactus*) was not in all cases the sum of the four numbers turned up. The highest in value was that called *Venus*, or *jactus Veneris* (Plaut. *Asin.* v. 2. 55; Cic. *de Div.* ii. 59; Sueton. *l. c.*), in which the numbers cast up were all different (Mart. xiv. 14), the sum of them being only fourteen. It was by obtaining this throw that the king

of the feast was appointed among the Romans (Hor. *Carm.* i. 4. 18, ii. 7. 25) [Symposium], and hence it was also called *Basilicus*. (Plaut. *Cura* ii. 3. 80.) Certain other throws were called by particular names, taken from gods, illustrious men and women, and heroes. Thus the throw, consisting of two aces and two trays, making eight, was denominated *Stesichorus*. When the object was simply to throw the highest numbers, the game was called *πλειστοβολινδα*. (Pollux, vii. 206, ix. 35, 110, 117.) Before a person threw the tali, he often invoked either a god or his mistress. (Plaut. *Capt.* i. 1. 5, *Cura* ii. 3. 77—79.) These bones, marked and thrown as above described, were also used in divination. (Sueton. *Tiber.* 14.) [J. Y.]

TAMIAS (*ταμίας*), was a name given to any person who had the care, managing, or dispensing of money, stock, or property of any description, confided to him; as a steward, butler, housekeeper, storehousekeeper, or treasurer. And the word is applied metaphorically in a variety of ways. But the *ταμιαί*, who will fall under our notice in this article, are certain officers entrusted with important duties by the Athenian government; and more especially the treasurers of the temples and the revenue.

In ancient times every temple of any importance had property belonging to it, besides its furniture and ornaments; and a treasury where such property was kept. Lands were attached to the temple, from which rents accrued; fines were made payable to the god; trophies and other valuables were dedicated to him by the public; and various sacred offerings were made by individuals. There was a *ταμίας* *λεπῶν χρημάτων*, who, together with *ἐπιστάται* and *λεπιστοί*, had the custody and management of these funds. The wealthiest of all the temples at Athens was that of Athena in the Acropolis, in which were kept the spoils taken from the Persians (*τὰ δριστεὰ τῆς πόλεως*), besides magnificent statues, painting, and other works of art. (Demosth. c. *Timocr.* 741.) To the Goddess large fines were specially appropriated by the law or given by decree of the courts or the assembly; and besides this she received a tenth of all the fines that went to the state, a tenth of all confiscations and prizes taken in war. Her treasurers were called *ταμιαί τῆς θεοῦ*, or *τῶν τῆς θεοῦ*, or *ταμιαί* *λεπῶν χρημάτων τῆς θεοῦ*, and sometimes simply *ταμιαί*. (Demosth. c. *Androt.* 615.) They appear to have existed from an early period. Herodotus (viii. 51, 53) relates that the *ταμιαί* *τοῦ λεποῦ* with a few other men awaited the attack of Xerxes upon the Acropolis, and perished in its defence. They were ten in number, chosen annually by lot from the class of Pentacosiomedimni, and afterwards when the distinction of classes had ceased to exist, from among the wealthiest Athenian citizens. (Harpocr. and Suid. s. v. *Ταμιαί*.) The treasurers of the other gods were chosen in like manner; but they, about the 90th Olympiad, where all united into one board, while those of Pallas remained distinct. (Demosth. c. *Timocr.* 743.) Their treasury, however, was transferred to the same place as that of Athena, viz. to the Opisthodomus of the Parthenon, where were kept not only all the treasures belonging to the temples, but also the state treasure (*δῶρα χρήματα*, as contra-distinguished from *λεπὰ*), under the care of the treasurers of Pallas. (Aristoph. *Plut.* 1194.) All the funds of the state were considered as being

in a manner consecrated to Pallas; while on the other hand the people reserved to themselves the right of making use of the sacred monies, as well as the other property of the temples, if the safety of the state should require it. (Thucyd. ii. 13.) Payments made to the temples were received by the treasurers in the presence of some members of the senate, just as public monies were by the Apodectae; and then the treasurers became responsible for their safe custody. As to fines see *ΕΡΙΒΟΛΑ*, *ΠΡΑΚΤΟΡΕΣ*, and on the whole of this subject, Böckh, *Publ. Econ. of Athens*, pp. 160—164.

The treasurer of the revenue, *ταμίας* or *ἐν-μελητής τῆς κοινῆς προσόδου*, was a more important personage than those last mentioned. He was not a mere keeper of monies, like them, nor a mere receiver, like the Apodectae; but a general paymaster, who received through the Apodectae all money which was to be disbursed for the purposes of the administration (except the property-taxes which were paid into the war-office, and the tribute from the allies, which was at first paid to the Hellenotamiae, and afterwards to other persons hereafter mentioned), and then distributed it in such manner as he was required to do by the law; the surplus (if any) he paid into the war-office or the Theoric fund. As this person knew all the channels in which the public money had to flow, and exercised a general superintendence over the expenditure, he was competent to give advice to the people upon financial measures, with a view to improve the revenue, introduce economy, and prevent abuses; he is sometimes called *ταμίας τῆς δημοσίως*, or *ὁ ἐπὶ τῆς διοικήσεως*, and may be regarded as a sort of minister of finance. To him Aristophanes refers in *Equit.* 947. He was elected by *χευρονομία*, and held his office for four years, but was capable of being re-elected. A law, however, was passed during the administration of Lycurgus, prohibiting re-election; so that Lycurgus, who is reported to have continued in office for twelve years, must have held it for the last eight years under fictitious names. The power of this officer was by no means free from control; inasmuch as any individual was at liberty to propose financial measures, or institute criminal proceedings for malversation or waste of the public funds; and there was an *ἀντιγραφὸς τῆς διοικήσεως* appointed to check the accounts of his superior. Anciently there were persons called *Πορισταί* who appear to have assisted the *ταμίας* in some part of their duties. (Böckh, *id.* 166) [FORISTAE.]

The money disbursed by the treasurer of the revenue was sometimes paid directly to the various persons in the employ of the government, sometimes through subordinate pay offices. Many public functionaries had their own paymasters, who were dependent on the *ταμίας τῆς προσόδου*, receiving their funds from him, and then distributing them in their respective departments. Such were the *τρίηροισι*, *τευχιστοῖ*, *διδουοῖ*, *ταρπαστοῖ*, *ἐνμεληταὶ νεωρίων*, who received through their own *ταμιαί* such sums as they required from time to time for the prosecution of their works. The payment of the judicial fees was made by the Colacretae (*κολακρέται*), which, and the providing for the meals in the Prytaneum, were the only duties that remained to them after the establishment of the Apodectae by Cleistheneas. (Aristoph. *Vesp.* 693, 724.) The *ταμιαί* of the sacred vessels, *τῆς*

Παρόλου and τῆς Σαλαμίνος, acted not only as treasurers, but as trierarchs; the expenses (amounting for the two ships together to about sixteen talents) being provided by the state. They were elected by χειροτονία (Demosth. c. *Mid.* 570; Pollux, viii. 116.) Other trierarchs had their own private ταμίαι, for the keeping of accounts and better dispatch of business. (Böckh, *Id.* p. 171, &c.; Schömann, *Ant. Jur. publ. Gr.* pp. 250, 312.)

The duties of the ἑλληνοταμίαι are spoken of in a separate article. [HELLENOTAMIAE.]

The war fund at Athens (independently of the tribute) was provided from two sources, 1st, the property-tax [ΕΙΣΦΟΡΑ], and 2dly, the surplus of the yearly revenue, which remained after defraying the expenses of the civil administration, τὰ περίοντα χρήματα τῆς διοικήσεως. Of the ten Στρατηγῶν, who were annually elected to preside over the war department, one was called στρατηγὸς ἐν τῇ τῆς διοικήσεως, to whom the management of the war fund was entrusted. He had under him a treasurer, called ταμίης τῶν στρατιωτικῶν, who gave out the pay of the troops, and defrayed all other expenses incident to the service. Demosthenes, perhaps on account of some abuses which had sprung up, recommended that the generals should have nothing to do with the military fund, but that this should be placed under the care of special officers, ταμίαι καὶ δημόσιοι, who should be accountable for its proper application: τὸν μὲν τῶν χρημάτων λόγον παρὰ τούτων λαμβάνειν, τὸν δὲ τῶν ἔργων παρὰ τοῦ στρατηγῶν. (*De Cherson.* 101.) The passage just cited confirms the opinion of those who think that in Demosth. *de Coron.* 238, 265, the words ἐν τῇ τῆς διοικήσεως refer to a στρατηγὸς so designated, and not to the ταμίης τῆς προσόδου. (Schömann, *Ant. Jur. publ. Gr.* p. 252, n. 7; Böckh, *Id.* p. 168; Meier, *All. Proc.* p. 105.)

So much of the surplus revenue, as was not required for the purposes of war, was to be paid by the treasurer of the revenue into the Theoric fund; of which, after the Archonship of Euclidea, special managers were created. [THEORICA.]

Lastly, we have to notice the treasurers of the demi, δήμων ταμίαι, and those of the tribes, φυλῶν ταμίαι, who had the care of the funds belonging to their respective communities, and performed duties analogous to those of the state treasurers. The demi, as well as the tribes, had their common lands, which were usually let to farm. The rents of these formed the principal part of their revenue. Φύλαρχοι, δήμαρχοι, and other local functionaries were appointed for various purposes; but with respect to their internal economy we have but scanty information. (Schömann, *de Comit. pp.* 371—378, *Ant. Jur. publ. Gr.* pp. 203, 204.) [C. R. K.]

TAPES or TAPÈTE (Non. Marcell. p. 229, ed. Merceri), τάπηξ, τάπις, or δάπις, *dim.* δαπίδιον, a piece of tapestry, a carpet.

The use of tapestry was in very ancient times characteristic of Oriental rather than of European habits (Athen. ii. p. 48, n.) ; we find that the Asiatics, including the Egyptians and also the Carthaginians, who were of Asiatic origin, excelled in the manufacture of carpets, displayed them on festivals and other public occasions, and gave them as presents to their friends. (Xen. *Anab.* vii. 3. § 18, 27.) They were nevertheless used by the Greeks as early as the age of Homer (*Il.* xvi. 224, xxiv. 230, 645, *Od.* iv. 298, vii. 387), and by

some of the later Roman Emperors they were given as presents to the combatants at the Circensian Games. (Sidon. *Apoll. Carm.* xxiii. 427.) The places most renowned for the manufacture were Babylon (Arrian, *Exped. Alex.* vi. p. 436, ed. Blanc; Sidon. *Apoll. Epist.* ix. 13), Tyre and Sidon (Heliodor. v. p. 252, ed. Commelin.), Sardes (Athen. ii. p. 48, b, vi. p. 255, e., xii. p. 514, c.; Non. Marcell. p. 543), Miletus (Aristoph. *Ran.* 542), Alexandria (Plaut. *Pseud.* i. 2. 13), Carthage (Athen. i. p. 28, a), and Corinth. (Athen. i. p. 27, d.) In reference to the texture, these articles were distinguished into those which were light and thin with but little nap, chiefly made at Sardes and called ψιλοτάπιδες (Athen. vi. p. 255, e., xii. p. 514, c.; Diog. Laërt. v. 72), and those in which the nap (μαλλός) was more abundant, and which were soft and woolly (οἰόλοι, Hom. *Il.* xvi. 224; μαλακοῦ ὁρίου, *Od.* iv. 124). The thicker and more expensive kinds (μαλλαστοί) resembled our baize or drugget, or even our soft and warm blankets, and were of two sorts, viz. those which had the nap on one side only (ἑτερόμαλλοι), and those which had it on both sides, called ἀμφίταποι (Athen. v. p. 197, b, vi. p. 255, e.; Diog. Laërt. v. 72, 73), ἀμφίταπος (Non. Marcell. p. 540; Lucil. *Sat.* i. p. 188, ed. Bip.), or ἀμφιτάπηντες (Eustath. in Hom. *Il.* ix. 200), and also ἀμφίμαλλοι or ἀμφιμάλλα. (Plin. *H. N.* viii. 48. a. 73.) Instead of being always used, like blankets, in single pieces as they came from the loom [PALLIUM], carpets were often sewed together. (Plaut. *Stich.* ii. 2. 54.) They were frequently of splendid colours, being dyed either with the kermes (Hor. *Sat.* ii. 6. 102—106) or with the murex (δουρυγεία, ἀλιγορφύροι), and having figures, especially hunting-pieces, woven into them. (Sidon. *Apoll. L. c.*; Plaut. *Pseud.* i. 2. 14.) These fine specimens of tapestry were spread upon thrones or chairs, and upon benches, couches, or sofas, at entertainments (Hom. *Il.* ix. 200, *Od.* xx. 150; Virg. *Aen.* i. 639, 697—700; Ovid. *Met.* xiii. 638; Cic. *Tusc.* v. 21), more especially at the nuptials of persons of distinction. Catullus (*Argon.* 47—220) represents one to have been so employed, which exhibited the whole story of Theseus and Ariadne. They were even used to sleep upon (Hom. *Il.* x. 156; Anac. viii. 1, 2; Theocrit. xv. 125; Aristoph. *Plut.* 540; Virg. *Aen.* ix. 325, 358), and for the clothing of horses. (*Aen.* vii. 277.) The tapestry used to decorate the bier and catafalque at the ΑΠΟΤΗΜΩΣIS of a Roman Emperor was interwoven with gold. (Herodian, iv. 2, p. 82, ed. Bekker.) The orientals upon occasions of state and ceremony spread carpets both over their floors and upon the ground. (Aeschyl. *Agam.* 879—936; Athen. iv. p. 131, b, xii. p. 514, c.)

Besides the terms which have now been explained, the same articles of domestic furniture had denominations arising from the mode of using them, either in the TRICLINIUM (*triclinaria Babylonica*, Plin. *H. N.* viii. 48. a. 74) or in the CUBICULUM (*cubicularia polymita*, Mart. xiv. 150), and especially from the constant practice of spreading them out (*textile stragulum*, Cic. *Tusc.* v. 21; *stratum*, C. Nepos, *Ages.* viii. 2; *vestis stragula*, Liv. xxxiv. 7; Hor. *Sat.* ii. 3. 118; *στρωματά*, Plat. *Lycurg.* p. 86, ed. Steph.; Athen. iv. p. 142, a, *στρώματα*, ii. p. 48, d.). The Greek term *peristroma*, which was transferred into the Latin (Diog. Laërt. *L. c.*; Plaut. *Stich.* ii. 2. 54; Cic. *Phil.* ii. 27), had a

special signification, meaning probably a coverlet made so large as to hang round the sides of the bed or couch. [J. Y.]

TAURII LUDI. [LUDI SÆCULARES.]

TAXIARCHI (ταξιάρχαι), were military officers at Athens, who were next in rank to the Strategoi. [STRATEGUS.] They were ten in number like the strategoi, one for each tribe, and were elected in the same way, namely by χειροτονία. (Dem. *Philip.* i. p. 47; Pollux, viii. 87.) In war each commanded the infantry of his own tribe (Dem. in *Boeot.* p. 999; Aesch. *de Fals. Leg.* p. 333), and they were frequently called to assist the Strategoi with their advice at the war-council. (Thucyd. vii. 60.) In peace they assisted the Strategoi in levying and enlisting soldiers, as is stated under STRATEGUS, and they seem to have also assisted the latter in the discharge of many of their other duties.

The Taxiarchs were so called from their commanding τάξεις, which were the principal divisions of the hoplites in the Athenian army. Each tribe (φυλή) formed a τάξις, whence we find φυλή used as synonymous with τάξις. (Lys. in *Agoral.* pp. 498, 501.) As there were ten tribes, there were consequently in a complete Athenian army ten τάξεις, but the number of men contained in each would of course vary according to the importance of the war. Among the other Greeks the τάξις was the name of a much smaller division of troops. The λόχος among the Athenians was a subdivision of the τάξις, and the λοχαγοί were probably appointed by the taxiarchs. (Schömann, *Ant. Jur. publ. Græc.* p. 253, &c.)

TAXIS (τάξις). [TAXIARCHI.]

TECTOR, TECTORIUM OPUS. [PARIES, p. 870, a.]

TEGULA (τέγυλα, dim. τεγάρις, Xen. *Hellen.* vi. 5. § 9), a roofing-tile. Roofing-tiles were originally made, like bricks, of baked clay (γῆς ὀπτήης). Byzus of Naxos first introduced tiles of marble about the year 620 B. C. (Paus. v. 10. § 2.) Besides the superior beauty and durability of the material, these tiles could be made of a much larger size than those of clay. Consequently, when they were employed in the construction of the greatest temples, such as that of Jupiter at Olympia (Paus. l. c.), the Parthenon at Athens, and the Serapeum at Puteoli, their dimensions were in exact proportion to the other parts of the building; and the effect of the parallel rows of joint-tiles descending from the ridge to the eaves, and terminated by ornamental frontons, with which the lions'-heads (*capita leonina*, Vitruv. iii. 5. § 15; *χολέραι*, Horapoll. *Hier.* i. 21) over the cornice alternated, was exceedingly grand and beautiful. How highly this invention was prized by the ancients is proved by the attempt of the Roman censor Q. Fulvius Flaccus to despoil the temple of the Lacinian Juno of some of its marble tiles (*tegulae marmoreae*), in order to adorn another temple which he had vowed to erect in Rome. (Liv. xlii. 4; Val. Max. i. 1. § 20.) A still more expensive and magnificent method of roofing consisted in the use of tiles made of bronze and gilt. (Plin. *H. N.* xxxiii. 3. a. 18.)

At Rome the houses were originally roofed with shingles, and continued to be so down to the time of the war with Pyrrhus, when tiles began to super-

TEGULA.

sede the old roofing material. (Plin. *H. N.* xvi. 10. a. 36; Niebuhr, *Hist. of Rome*, vol. iii. p. 559.)

Tiles were originally made perfectly flat, or with nothing more than the hook or nozzle underneath the upper border, which fulfilled the purpose of fixing them upon the rafters. They were afterwards formed with a raised border on each side, as is shown in the annexed woodcut representing the section of four of the tiles remaining at Pompeii.

In order that the lower edge of any tile might overlap the upper edge of that which came next below it, its two sides were made to converge downwards. See the next woodcut representing a tiled roof, from a part of which the joint-tiles are removed in order to show the overlapping and the convergence of the sides. It was evidently necessary to cover the lines of junction between the rows of flat tiles, and this was done by the use of semicylindrical tiles called *imbrices*. The above woodcut shows the section of three imbrices found at Pompeii, and indicates their position relatively to the flat tiles. This is also shown in the next woodcut. The roof, by the exact adaptation of

the broad *tegulae* and the narrow *imbrices* throughout its whole extent, became like one solid and compact frame-work. (Xen. *Mem.* iii. 1. § 7; *confringit tegulas imbricesque*, Plaut. *Most.* i. 2. 28; Plin. *H. N.* xxxvi. 22. a. 44.) The rows of joint-tiles divided the roof into an equal number of channels, down which the water descended into the gutter (*canalis*) to be discharged through openings made in the lions'-heads, the position and appearance of which are shown in the woodcuts. The rows of flat tiles terminated in a variously ornamented front, which rose immediately above the cornice, and of which four specimens are shown in the first woodcut. The first and fourth patterns are drawn from tiles found at Pompeii, and the two internal from tiles preserved in the British

Museum and brought thither from Athens. The lions' heads upon the third and fourth are perforated. [ANTEPIKA.] The frontons, which were ranged along the cornice at the termination of the rows of joint-tiles, were either painted or sculptured so as to represent leaves, aplustria [APLUSTRE], or masks. The first woodcut shows three examples of such frontons, which belong to the Elgin collection in the British Museum. They are drawn on a much larger scale than the other objects in the same woodcut. The invention of these graceful ornaments is ascribed to Dibutades of Corinth. (Plin. *H. N.* xxxv. 12. s. 43.)

Other highly curious details upon the tiled roofs of Greek temples may be seen in the *Unedited Antiquities of Attica*, Lon. 1817.

The same arrangement of tiles which was placed round a temple was also to be found within a house which was formed with an opening in the centre. Hence any person who descended from the roof into the open court or impluvium of a house, was said to pass "through the tiles" (*per tegulas*, Ter. *Eun.* iii. 5. 40; compare Gellius, x. 15; *διὰ τῶν κεράμων*, St. Luke, v. 19).

Pliny mentions a kind of tiling under the name *pacinacum* (*H. N.* xxxvi. 22. s. 44), so called probably because the tiles were semicircular at their lower edge, and overlapped one another like the feathers in the train of a peacock. Ancient sepulchres and urns, made in the form of small temples [FUNUS], often represent very exactly the appearance of a roof with the above-mentioned varieties in the form of the tiles. [J. Y.]

TEICHOPOEUS (τειχοποιός). Among the various persons to whom was entrusted the management of public works at Athens (*ἐπιστάται δημοσίων ἔργων*), were those whose business it was to build and keep in repair the public walls. It is needless to observe how important to the city of Athens were her walls and fortifications, more especially the long walls, which connected the upper city with the Peiræus, and which gave it the advantages of an island. These were maintained at considerable expense. The *τειχοποιοί* appear to have been elected by *χειροτονία*, one from each tribe, and probably for a year. They were considered to hold a magisterial office (*ἀρχή*), and in that capacity had an *ἡγεμονία δικαστηρίου*. Aeschines calls them *ἐπιστάται τοῦ μεγίστου τῶν λόγων*. Funds were put at their disposal, for which they had their treasurer (*ταμίης*), dependent on the treasurer of the revenue. They were liable to render an account (*εὐθύνη*) of their management of these funds, and also of their general conduct, like other magistrates. The office of *τειχοποιός* has been invested with peculiar interest in modern times, on account of its having been held by Demosthenes, and its having given occasion to the famous prosecution of Ctesiphon, who proposed that Demosthenes should receive the honour of a crown before he had rendered his account according to law. As to the nature of the office, and the laws thereto relating, we may probably rely upon the account given by Aeschines. (Aesch. *c. Ctesiph.* 55—57, ed. Steph.; Böckh, *Publ. Econ. of Athens*, pp. 170, 203, 2d ed.) [C. R. K.]

TELA (*lōrōs*), a loom. Although weaving was amongst the Greeks and Romans a distinct trade carried on by a separate class of persons (*ὀφθαῖται*, *textores* and *textrices*, *histones*), who more particularly supplied the inhabitants of the towns with

the productions of their skill (Cato, *de Re Rust.* 135), yet every considerable domestic establishment, especially in the country, contained a loom (Cato, *de Re Rust.* 10, 14) together with the whole apparatus necessary for the working of wool (*lanificium*, *ταλασία*, *ταλασιουργία*). (Hesiod, *Op. et Dies*, 779; Virg. *Georg.* i. 285, 294.) [CALATHUS.] These occupations were all supposed to be carried on under the protection of Minerva, specially denominated *Ἐργάνη*, who was always regarded in this character as the friend and patroness of industry, sobriety, and female decorum. (Serr. in Virg. *Ecl.* vi. 3.)

When the farm or the palace was sufficiently large to admit of it, a portion of it called the *lōrōs* (*histones*, Varro, *de Re Rust.* i. 2) or *textorium*, was devoted to this purpose. (Cic. *Varr.* iv. 26.) The work was there principally carried on by female slaves (*quasillanas*, *αἱ ἐπὶ τοῖς*, Theocrit. xv. 80; Hom. *Od.* i. 356—360, vii. 235, xxi. 350) under the superintendence of the mistress of the house, who herself also together with her daughters took part in the labour, both by instructing beginners and by finishing the more tasteful and ornamental parts. (Vitruv. vi. 7. p. 164, ed. Schneider; Symmachus, *Epist.* vi. 40.) But although weaving was employed in providing the ordinary articles of clothing among the Greeks and Romans from the earliest times, yet as an inventive and decorative art, subservient to luxury and refinement, it was almost entirely Oriental. Persia, Babylonia, Egypt, Phoenicia, Phrygia, and Lydia, are all celebrated for the wonderful skill and magnificence displayed in the manufacture of scarfs, shawls, carpets and tapestry. [CHLAMYA, PALLIUM, PEPLUM, TAPES.]

Among the peculiarities of Egyptian manners Herodotus (ii. 35; compare Athen. ii. p. 48, b) mentions that weaving was in that country the employment of the male sex. This custom still continues among some Arab and negro tribes. (Weisted, *Travels*, vol. i. p. 123; Prichard, *Researches*, vol. ii. p. 60, 3d edit.) Throughout Europe, on the other hand, weaving was in the earliest ages the task of women only. The matron, assisted by her daughters, wove clothing for the husband and the sons. (Colum. *de Re Rust.* xii. *Præf.*; Plin. *H. N.* viii. 48. s. 74; Herod. ix. 109.) This domestic custom gives occasion in the works of the epic and tragic poets to some very interesting *dénouemens* and expressions of affection between near relations. Indeed the recognition, or *Ἀναγνώρισις*, as Aristotle calls it (*de Art. Poet.* 6. § 18, 14. § 21), often depends on this circumstance. Thus Crenæa proves herself to be the mother of Ion (Eurip. *Ion*, 1416, 1417) by describing the pattern of a shawl which she had made in her youth, and in which she had wrapped her infant son. Iphigenia recognises her brother Orestes on one occasion (Eurip. *Iph. in Taur.* 814—817), and Electra recognises him on another (Aeschyl. *Choeph.* 225) by the figured clothing which he wore, and which they had long before woven for him.

Besides the shawls which were frequently given to the temples by private persons, or obtained by commerce with foreign nations, companies or colleges of females were attached to the more opulent temples for the purpose of furnishing a regular supply. Thus the sixteen women, who lived together in a building destined to their use at Olympia, wove a new shawl every five years to be displayed at the games which were then celebrated in honour

of Hera, and to be preserved in her temple. (Paus. v. 16. § 2—4, vi. 24. § 8.) [HΕΡΑΙΑ.] A similar college at Sparta was devoted to the purpose of weaving a tunic every year for the sitting statue of the Amyclean Apollo, which was thirty cubits high. (Paus. iii. 16. § 2, 19. § 2.) At Athens the company of virgins called *ἐργαστῖναι* or *ἐργάται*, and *ἀθήναιοι*, who were partly of Asiatic extraction, wove the shawl which was carried in the Panathenaic procession and which represented the battle between the gods and the giants. (Eurip. *Hec.* 461—469; Virg. *Chris.* 21—35.) [ΑΡΡΗΦΟΡΙΑ; ΠΑΝΑΘΗΝΑΙΑ.] A similar occupation was assigned to young females of the highest rank at Argos. (Eurip. *Iph. in Taur.* 213—215.) In the fourth century the task of weaving began to be transferred in Europe from women to the other sex, a change which St. Chrysostom deploras as a sign of prevailing sloth and effeminacy. (*Orat.* 34. vol. iii. p. 470, ed. Saville.) Vegetius (*de Re Mil.* i. 7), who wrote about the same time, mentions *linteones*, or the manufacturers of linen cloth, in the number of those who were ineligible as soldiers.

Every thing woven consists of two essential parts, the warp and the woof, called in Latin *Stamen* and *Subdogmen*, *Subtemen*, or *Trama* (Vitruv. x. 1; Ovid. *Met.* iv. 397; Plin. *H. N.* xi. 24. s. 28; Pers. *Sat.* vi. 73), in Greek *στήμων* and *κροχή*. (Plato, *Polit.* pp. 297, 301, 302, ed. Bekker; Aelian, *H. A.* ix. 17; Plut. *de Is. et Osir.* p. 672.) Instead of *κροχή* Plato (*Leg.* v. p. 386, ed. Bekker) sometimes uses *ἐφύψη*, and in the passages referred to he mentions one of the most important differences between the warp and the woof: viz. that the threads of the former are strong and firm in consequence of being more twisted in spinning, whilst those of the latter are comparatively soft and yielding. This is in fact the difference which in the modern silk manufacture distinguishes *organzine* from *trama*, and in the cotton manufacture *twist* from *woof*. Another name for the woof or trama was *πόδιον*. (Hom. *Batr.* 181; Eustath. in *Hom.* II. xxiii. 762, *Od.* v. 121.)

The warp was called *stamen* in Latin (from *stare*) on account of its erect posture in the loom. (Varro, *L. L.* v. 113, ed. Müller.) The corresponding Greek term *στήμων* and likewise *λῶρός* have evidently the same derivation. For the same reason the very first operation in weaving was to set up the loom, *λῶρόν στήσασθαι* (Hom. *Od.* ii. 94; Hesiod, *Op. et Dies*, 779); and the web or cloth, before it was cut down or "descended" from the loom (*κατέβα δὲ λῶρά*, Theocrit. xv. 35), was called "vestis pendens," or "pendula tela" (Ovid, *Met.* iv. 395, *Epist.* i. 10), because it hung from the transverse beam or JUGUM. These particulars are all clearly exhibited in the picture of Circe's loom, which is contained in the very ancient illuminated MS. of Virgil's *Aeneid* preserved at Rome in the Vatican Library. (See the annexed wood-

cut, and compare *Aen.* vii. 14: *apud majores stans tessabant*, Servius is loc.; Hom. *Od.* x. 222.) Although the upright loom here exhibited was in common use, and employed for all ordinary purposes, the practice, now generally adopted, of placing the warp in an horizontal position was occasionally resorted to in ancient times; for the upright loom (*stans tela*, *λῶρός ὀρθίος*), the management of which required the female to stand and move about, is opposed to another kind at which she sat. (Artemidor. iii. 36; Servius, l.c.)

We observe in the preceding woodcut about the middle of the apparatus a transverse rod passing through the warp. A straight cane was well adapted to be so used, and its application is clearly expressed by Ovid in the words "stamen secernit arundo." (*Met.* vi. 55.) In plain weaving it was inserted between the threads of the warp so as to divide them into two portions, the threads on one side of the rod alternating with those on the other side throughout the whole breadth of the warp. The two upright beams supporting the jugum, or transverse beam, from which the warp depends, were called *κελεύοντες* (Theocrit. xviii. 34), and *λῶρόπδες*, literally, "the legs of the loom." (Eustath. in *Hom.* *Od.* xiii. 107.)

Whilst the improvements in machinery have to a great extent superseded the use of the upright loom in all other parts of Europe, it remains almost in its primitive state in Iceland. The following woodcut is reduced from an engraving of the Icelandic loom in Olaf Olafsen's *Economic Tour* in that island, published in Danish at Copenhagen, A. D. 1780. We observe underneath the jugum a roller (*ἀντιον*, Pollux, vii. x. § 36; Eustath. in *Hom.* *Od.* xiii. 107) which is turned by a handle, and on which the web is wound as the work advances. The threads of the warp, besides being separated by a transverse rod or plank, are divided into thirty or forty parcels, to each of which a stone is suspended for the purpose of keeping the warp in a perpendicular position and allowing the necessary play to the strokes of the spatha, which is drawn at the side of the loom. The mystical ode written about the eleventh century of our era,

with which Gray has made us familiar in his translation, and which describes the loom of "the Fatal Sisters," represents warriors' skulls as supplying the place of these round stones (*pondera*, Sen. *Epist.* 91; Plin. *H. N. L. c.*). The knotted bundles of threads, to which the stones were attached, often remained after the web was finished in the form of a fringe. [FIMBRIÆ.]

Whilst the comparatively coarse, strong, and much-twisted thread designed for the warp was thus arranged in parallel lines, the woof remained upon the spindle [*Fusus*], forming a *spool*, *bobbin*, or *pen* (*πῆνη*, *dim. πῆνιον*, Hom. *Il.* xxiii. 762; Eurip. *Hec.* 466). This was either conveyed through the warp without any additional contrivance, as is still the case in Iceland, or it was made to revolve in a shuttle (*πανούλκος*, Hesych. s. v. *πῆνιον*; *radix*, Lucret. v. 1352). This was made of box brought from the shores of the Euxine, and was pointed at its extremities, that it might easily force its way through the warp. (Virg. *Aen.* ix. 476; Ovid. *Met.* iv. 275, vi. 56, 132, *Fast.* iii. 879.) The annexed woodcut shows the form in which it is still used in some retired parts of our island for common domestic purposes, and which may be regarded as a form of great antiquity. An oblong cavity is seen in its upper surface, which holds the bobbin. A small stick, like a wire, extends through the length of this cavity, and enters its two extremities so as to turn freely. The small stick passes through a hollow cane, which our manufacturers call a *quill*, and which

is surrounded by the woof. This is drawn through a round hole in the front of the shuttle, and, whenever the shuttle is thrown, the bobbin revolves and delivers the woof through this hole. The process of winding the yarn so as to make it into a bobbin or pen, was called *πηνίεσθαι* (Theocrit. xviii. 32) or *δανηνίεσθαι* (Aristot. *H. A.* v. 19). The reverse process by which it was delivered through the hole in front of the shuttle (see the last woodcut) was called *δανηνίεσθαι*. Hence the phrase *δανηνίεσθαι ταῦτα* means "he shall disgorge these things" (Aristoph. *Ran.* 586; Schol. in *loc.*)

All that is effected by the shuttle is the conveyance of the woof across the warp. To keep every thread of the woof in its proper place it is necessary that the threads of the warp should be decussated. This was done by the leashes, called in Latin *licia*, in Greek *μύροι* (*μύρος*, Hom. *Il.* xxiii. 762). By a leash we are to understand a thread having at one end a loop, through which a thread of the warp was passed, the other end being fastened to a straight rod called *Licetorium*, and in Greek *καρύν*. (Aristoph. *Theam.* 829.) The warp, having been divided by the arundo, as already mentioned, into two sets of threads, all these of the same set were passed through the loops of the corresponding set of leashes, and all these leashes were fastened at their other end to the same wooden rod. At least one set of leashes was necessary to decussate the warp, even in the plainest and simplest weaving. The number of sets was increased

according to the complexity of the pattern, which was called *bilia* or *trilia* (Mart. xiv. 143), *δύμυτος*, *τρίμυτος* (Crat. Jun. *Frag.* p. 103, ed. Runkel), or *πολύμυτος* (Per. *Mar. Eryth.* pp. 164, 170, 173, ed. Blancardi), according as the number was two, three, or more.

The process of annexing the leashes to the warp was called *ordiri telam* (Plin. *H. N.* xi. 24. s. 28), also *licia telas addere*, or *adnectere*. (Virg. *Georg.* i. 285; Tibull. i. 6. 78.) It occupied two women at the same time, one of whom took in regular succession each separate thread of the warp and handed it over to the other; this part of the process was called *παράλπειν*, *παράδιδοναι*, or *προπορεύειν* (Schol. in *Aristoph. Av.* 4; Suidas, Hesychius, s. v.). The other woman, as she received each thread, passed it through the loop in proper order, and this act, which we call "entering," was called in Greek *διδύεσθαι*. (Schol. in *Hom. Od.* vii. 107.)

Supposing the warp to have been thus adjusted, and the pen or the shuttle to have been carried through it, it was then decussated by drawing forwards the proper rod, so as to carry one set of the threads of the warp across the rest, after which the woof was shot back again, and by the continual repetition of this process the warp and woof were interlaced. (Plutarch, vii. *asp. conv.* p. 592, ed. Reiske; Hom. *Il.* xxiii. 760—763.) In the preceding figure of the Icelandic loom we observe two staves, which are occasionally used to fix the rods in such a position as is most convenient to assist the weaver in drawing her woof across her warp. After the woof had been conveyed by the shuttle through the warp, it was driven sometimes downwards, as is represented in the first woodcut, but more commonly upwards as in the second. (Isid. *Orig.* xix. 22; Herod. ii. 35.) Two different instruments were used in this part of the process. The simplest and probably the most ancient was in the form of a large wooden sword (*σπάθα*, *σπῆθη*, *dim. σπῆθιον*, Brunck, *Analect.* i. 222; Plato, *Lysis*, p. 118; Aesch. *Choeph.* 226). From the verb *σπαθᾶν*, to beat with the spatha, cloth rendered close and compact by this process was called *σπαθηρός*. (Athen. xii. p. 525, d.) This instrument is still used in Iceland exactly as it was in ancient times, and a figure of it copied from Olafsen, is given in the second woodcut.

The spatha was, however, in a great degree superseded by the comb (*pecten*, *κερκίς*), the teeth of which were inserted between the threads of the warp, and thus made by a forcible impulse to drive the threads of the woof close together. (Ovid. *Fast.* iii. 880, *Met.* vi. 58; Juv. ix. 26; Virg. *Aen.* vii. 14; Hom. *Il.* xxii. 448; Aristoph. *Aves*, 832; Eurip. *Ion*, 509, 760, 1418, 1492.) It is probable that the teeth were sometimes made of metal (Hom. *Od.* v. 62); and they were accommodated to the purpose intended by being curved (*pectinis uncis*, Claudian, in *Eutrop.* ii. 382), as is still the case in the combs which are used in the same manner by the Hindoos. Among us the office of the comb is executed with greater ease and effect by the *reed*, *lay*, or *batten*.

The lyre [ΛΥΡΑ], the favourite musical instrument of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the loom, with which they were familiar. The terms *yugum* and *stamina* were transferred by an obvious resemblance from the latter to the former

object; and, although they adopted into their own language the Greek word *plectrum* (Ovid. *Met.* xi. 167—170), they used the Latin *PLECTRUM* to denote the same thing, not because the instrument used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand and inserted between the stamina of the lyre as the comb was between the stamina of the loom. (Virg. *Aen.* vi. 647; Juv. vi. 290—293; Pers. vi. 2.)

After enumerating those parts of the loom which were necessary to produce even the plainest piece of cloth, it remains to describe the methods of producing its varieties, and more especially of adding to its value by making it either warmer and softer, or more rich and ornamental. If the object was to produce a checked pattern (*acutulis dividere*, Plin. *H. N.* viii. 48. a. 74; Juv. ii. 97), or to weave what we should call a Scotch plaid, the threads of the warp were arranged alternately black and white, or of different colours in a certain series according to the pattern which was to be exhibited. On the other hand, a striped pattern (*παλαιοτάτος*, Diod. Sic. v. 30; *virgata sagula*, Virg. *Aen.* viii. 660) was produced by using a warp of one colour only, but changing at regular intervals the colour of the woof. Of this kind of cloth the Roman *trabea* (Virg. *Aen.* vii. 188) was an example. Checked and striped goods were, no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. [PALLIUM.] The woof also was the medium, through which almost every other diversity of appearance and quality was effected. The warp as mentioned above was generally more twisted, and consequently stronger and firmer than the woof: and with a view to the same object different kinds of wool were spun for the warp and for the woof. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket (Plato, *Polit.* p. 302) [FULLO]; and, when the intention was to guard against the cold, the warp was diminished and the woof or nap (*ῥαβδὸς, ῥαβδός*) made more abundant in proportion. (Hesiod. *Op. et Dies*, 537; Proclus *ad loc.*) In this manner they made the soft *χλαῖνα* or *LAENA* [PALLIUM]. On the other hand a woof of finely twisted thread (*ἡτριον*) produced a thin kind of cloth, which resembled our buntine (*lacernae nimia subteminum tenuitate perfractiles*, Amm. Marcell. xiv. 6). Where any kind of cloth was enriched by the admixture of different materials, the richer and more beautiful substance always formed part of the woof. Thus the *vestis saeberica*, or *tramoserica*, had the tram of silk. [SERICUM.] In other cases it was of gold (Virg. *Aen.* iii. 483; Servius *in loc.*); of wool dyed with Tyrian purple (Ovid. *Met.* vi. 578; *Tyrio subtegmine*, Tibull. iv. l. 123; *picto subtegmine*, Val. Flacc. vi. 228); or of beavers-wool (*vestis fibrina*, Iuid. *Orig.* xix. 22). Hence the epithets *φοινικέροκος*, "having a purple woof" (Pind. *Ol.* vi. 39, ed. Böckh; Schol. *in loc.*), *ἀνθοκρόκος*, "producing a flowery woof" (Eurip. *Hec.* 466), *χρυσόσπινθος*, "made from bobbins or pens of gold thread" (Eurip. *Orest.* 829), *εὐπνός*, "made with good bobbins" (Eurip. *Iph. in Taur.* 814, 1465), *κεκλιθεὶς ποικιλλοῦσα*, "variegating with the comb" (Eurip. *Iph. in Taur.* 215), &c.

But besides the variety of materials constituting the woof, an endless diversity was effected by the

manner of inserting them into the warp. The terms *biblia* and *δύμνος*, the origin of which has been explained, probably denoted what we call *dimity* or *wooled* cloth, and the Germans *swillich*. The poets apply *trilix*, which in German has become *drillich*, to a kind of armour, perhaps chain-mail, no doubt resembling the pattern of cloth, which was denoted by the same term. (Virg. *Aen.* iii. 467, v. 259, vii. 639, xii. 375; Val. Flaccus, iii. 199.) In the preceding figure of the Icelandic loom the three rods with their leashes indicate the arrangement necessary for this texture. All kinds of damask were produced by a very complicated apparatus of the same kind (*plurimis liciis*), and were therefore called *Polymita*. (Plin. *H. N.* viii. 48. a. 74; Mart. xiv. 150.)

The sprigs or other ornaments produced in the texture at regular intervals were called flowers (*ἄσθῃ*, Philostr. *Imag.* ii. 28; *σπῆρα*, Hom. *Il.* xxi. 440) or feathers (*plumas*). Another term, adopted with reference to the same machinery, was *ἔξμυρον* or *ἑξμυρον*, denoting velvet. In the middle ages it became *ἔξμυρον*, and thus produced the German *sammet*.

The Fates are sometimes mentioned by classical writers in a manner very similar to the description of "the Fatal Sisters" above referred to. (*Divae sororum licia*, Stat. *Achill.* i. 520; *faturnum inextricabiliter contorta licia*, Apul. *Met.* xi.)

As far as we can form a judgment from the language and descriptions of ancient authors, the productions of the loom appear to have fallen in ancient times very little, if at all, below the beauty and variety of the damasks, shawls, and tapestry of the present age, and to have vied with the works of the most celebrated painters, representing first mythological, and afterwards scriptural subjects. In addition to the notices of particular works of this class, contained in the passages and articles which have been already referred to, the following authors may be consulted for accounts of some of the finest specimens of weaving: Euripid. *Ion*, 190—202, 1141—1165; Aristot. *Mir. Assect.* 99; Athen. xii. p. 541; Asterii, *Homilia de Din. et Laz.*; Theod. Prodrum. *Rhod. et Dos. Amor.* ad fin.; Virg. *Aen.* v. 250—257, *Cir.* 21—35; Ovid. *Met.* vi. 61—128; Stat. *Theb.* vi. 64, 540—547; Auson. *Epig.* 26; Lamprid. *Heliog.* 28; Claudian. *de VI. Cons. Honor.* 561—577, in *Stilic.* ii. 330—365.

[J. Y.]

TELAMONES. [ATLANTER.]

TE'LETAE (τελεται). [MYSTERIA.]

TELO'NES (τελώνες). Most of the taxes at Athens were farmed by private persons, who took upon themselves the task of collecting, and made periodical payments in respect thereof to the state. They were called by the general name of *τελώνες*, while the farmers of any particular tax were called *εἰκοστῶναι*, *πεντηκοστολόγοι*, &c., as the case might be. The duties were let by auction to the highest bidder. Companies often took them in the name of one person, who was called *ἀρχάντης* or *τελωδότης*, and was their representative to the state. Sureties were required of the farmer for the payment of his dues. The office was frequently undertaken by resident aliens, citizens not liking it, on account of the vexatious proceedings to which it often led. The farmer was armed with considerable powers; he carried with him his books, searched for contraband or uncustomed goods, watched the harbour, markets and other places, to

prevent smuggling, or unlawful and clandestine sales; brought a *φάσις* or other legal process against those whom he suspected of defrauding the revenue; or even seized their persons on some occasions, and took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (*ἐκλογεῖς*) were sometimes employed by the farmers; but frequently the farmer and the collector were the same person. (Böckh, *Publ. Econ. of Athens*, p. 335, &c., 2d ed.)

The taxes were let by the Commissioners, acting under the authority of the Senate. [ΠΟΛΕΤΑΕ.] The payments (*καταβολαί τέλους*) were made by the farmer on stated Prytaneias in the Senate-house. There was usually one payment made in advance, *προκαταβολή*, and one or more afterwards, called *προκατάδελμμα*. Upon any default of payment, the farmer became *ἄτιμος*, if a citizen, and he was liable to be imprisoned at the discretion of the court, upon an information laid against him. If the debt was not paid by the expiration of the ninth Prytaneia, it was doubled; and if not then paid, his property became forfeited to the state, and proceedings to confiscation might be taken forthwith. Upon this subject the reader should consult the speech of Demosthenes against Timocrates. (Schömann, *Ant. Jur. publ. Gr.* p. 317.) [C. R. K.]

TELOS (τέλος), a tax. The taxes imposed by the Athenians and collected at home were either ordinary or extraordinary. The former constituted a regular or permanent source of income; the latter were only raised in time of war or other emergency. The ordinary taxes were laid mostly upon property, and upon citizens indirectly in the shape of toll or customs; though the resident aliens paid a poll-tax, called *μερολκίον*, for the liberty of residing at Athens under protection of the state. [ΜΗΤΡΟΕΙ.] As to the customs and harbour dues, see ΠΕΝΤΕΚΟΣΤΕ. An excise was paid on all sales in the market, called *ἐπώνια*, though we know not what the amount was. (Harpor. s. v. *ἑπώνια*.) And a duty was imposed on aliens for permission to sell their goods there. Slave-owners paid a duty of three obols for every slave they kept; and slaves who had been emancipated paid the same. This was a very productive tax before the fortification of Deceleia by the Lacedaemonians. (Xenoph. *de Vectig.* iv. 25.) There was also a *πορνικόν τέλος*, and some others of minor importance, as to which the reader is referred to Böckh (*Publ. Econ. of Athens*, p. 333, 2d ed.). The justice fees (*Πρυτανεία, Παράστασις*, &c.) were a lucrative tax in time of peace. (Thucyd. vi. 91; Böckh, *Id.* p. 345, &c.)

The extraordinary taxes were the property tax (*εἰσφορά*), and the compulsory services called *λευτοურγία*. Some of these last were regular, and recurred annually; the most important, the *τριηραρχία*, was a war-service, and performed as occasion required. As these services were all performed, wholly or partly, at the expense of the individual, they may be regarded as a species of tax. [ΕΙΣΦΟΡΑ; ΛΕΙΤΟΥΡΓΙΑ; ΤΡΙΗΡΑΡΧΙΑ.]

The tribute (*φοροί*) paid by the allied states to the Athenians formed, in the flourishing period of the republic, a regular and most important source of revenue. In B. C. 415 the Athenians substituted for the tribute a duty of five per cent. (*εἰκοστή*) on all commodities exported or imported

by the subject states, thinking to raise by this means a larger income than by direct taxation. [ΕΙΚΟΣΤΗ.]

A duty of ten per cent. (*δεκάτη*) on merchandise passing into and from the Euxine Sea was established for a time by Alcibiades and other Athenian generals. [ΔΕΚΥΜΑΤΗ.] This may be regarded as an isolated case. In general, where *δεκάται* are mentioned among the Greeks, they denote the tithes of land; such as the Persian Satraps collected from conquered countries, or such as tyrants exacted of their subjects for the use of land held under them as lords of the whole country. For instance, Peisistratus took a tithe of this kind, which was reduced by his sons to a twentieth. The state of Athens held the tithe of some lands; other tithes were assigned to the temples or service of the Gods, having been dedicated by pious individuals, or by reason of some conquest or vow, such as that recorded by Herodotus (vii. 132).

Other sources of revenue were derived by the Athenians from their mines and public lands, fines, and confiscations. The public demesne lands, whether pasture or arable, houses or other buildings, were usually let by auction to private persons. The conditions of the lease were engraven on stone. The rent was payable by Prytaneias. If not paid at the stipulated time, the lessee, if a citizen, became *ἄτιμος*, and subject to the same consequences as any other state debtor. As to fines and confiscations, see ΤΙΜΗΜΑ.

These various sources of revenue produced, according to Aristophanes, an annual income of two thousand talents in the most flourishing period of the Athenian empire. (*Vesp.* 660.) See the calculations of Böckh, *Id.* p. 433, &c.

Τελεῖν signifies "to settle, complete, or perfect," and hence "to settle an account," and generally "to pay." Thus Τέλος comes to mean any payment in the nature of a tax or duty. The words are connected with *zahlen* in German, and the old sense of *tale* in English, and the modern word *toll*. (Arnold, *ad Thuc.* i. 58.) Though τέλος may signify any payment in the nature of a tax or duty, it is more commonly used of the ordinary taxes, as customs, &c. Τέλος, τελεῖν is used with reference to the property-tax, in the sense of *being rated in a certain proportion*, or, which is the same thing, *belonging to a particular class of rate-payers*. Thus *ἑπτάδα* or *ἑπτικόν τελεῖν*, or *εἰς ἑπτάδα τελεῖν*, means, to belong to the class of knights. And the same expression is used metaphorically, without any immediate reference to the payment of a tax. Thus *εἰς ἀνδρας τελεῖν*, is to be classed among adults. So *εἰς Βουετοὺς τελεῖν*, Herod. vi. 108. *Ἰσοτέλεια* signifies the right of being taxed on the same footing, and having other privileges, the same as the citizens; a right sometimes granted to resident aliens. [ΜΗΤΡΟΕΙ.] *Ἀτέλεια* signifies an exemption from taxes, or other duties and services; an honour very rarely granted by the Athenians. [ΑΤΕΛΕΙΑ.] As to the farming of the taxes, see ΤΕΛΩΝΕΣ. For an epitome of the whole subject, see Schömann, *Ant. Jur. publ. Gr.* p. 314, &c. [C. R. K.]

ΤΕΜΕΝΟΣ (τέμενος), a piece of land cut or marked off from other land. The name was particularly applied to a piece of land cut off from the public land and appropriated to the support of a king in the heroic age (Hom. *Il.* vi. 193, vii. 313, xx. 184, *Od.* vi. 293, xi. 183), and likewise to a

piece of land, cut off from common uses, and dedicated to a god. In Attica, there appears to have been a considerable quantity of such sacred lands (*τεμεῖον*), which were let out by the state to farm; and the income arising from them was appropriated to the support of the temples, and the maintenance of public worship. (Xen. *Vectig.* iv. 19; Harpocrat. s. v. δὲδ *Μεθυσμάτων*; Böckh, *Publ. Econ. of Athens*, p. 303, 2d ed.)

TEMO. [ARATRUM; CURRUS.]

TEMPLUM is the same word as the Greek *τέμενος*, from *τέμνω* to cut off, for *templum*, according to Servius (*ad Aen.* i. 446), was any place which was circumscribed and separated by the augurs from the rest of the land by a certain solemn formula. The technical terms for this act of the augurs are *liberare* and *effari*, and hence a templum itself is a *locus liberatus et effatus*. A place thus set apart and hallowed by the augurs was always intended to serve religious purposes, but chiefly for taking the *auguria*. ("Templum locus augurii aut auspicii causa quibuscumque conceptis verbis finitus," Varro, *de Ling. Lat.* vi. p. 81, Bip.) When Varro (*de Ling. Lat.* v. p. 65, Bip.) says that a *locus effatus* was always outside the city, we must remember that this only means outside the *pomoerium*, for the whole space included within the *pomoerium* was itself a *templum*, i. e. a place in which auspices could be taken [ΠΟΜΟΗΡΙUM]; but when they were to be taken in any place outside the *pomoerium*, it was always necessary for such a place to be first circumscribed and sanctified by the augur (*liberare et effari*). The place in the heavens within which the observations were to be made was likewise called *templum*, as it was marked out and separated from the rest by the staff of the augur. When the augur had defined the *templum* within which he intended to make his observations, he fixed his tent in it (*tabernaculum capere*), and this tent was likewise called *templum*, or more accurately, *templum minus*. To this *minus templum* we must refer what Servius (*ad Aen.* iv. 200) and Festus (s. v. *minora templa*) state, that a *templum* was enclosed with planks, curtains, &c., attached to posts fixed in the ground, and that it had only one door (*exitus*). The place chosen for a *templum* was generally an eminence, and in the city it was the *ars*, where the fixing of a tent does not appear to have been necessary, because here a place called *auguraculum* was once for all consecrated for this purpose. (Paul Diac. s. v. *Auguraculum*; comp. Liv. i. 18, iv. 18; Cic. *de Off.* iii. 16.)

Besides this meaning of the word *templum* in the language of the augurs, it also had that of a temple in the common acceptance. In this case too, however, the sacred precinct within which a temple was built, was always a *locus liberatus et effatus* by the augurs, that is, a *templum* or a *forum* (Liv. x. 37; Varro, *de Ling. Lat.* v. p. 65, Bip.); the consecration was completed by the pontiffs, and not until inauguration and consecration had taken place, could *sacra* be performed or meetings of the senate be held in it. (Serv. *ad Aen.* i. 446.) It was necessary then for a temple to be sanctioned by the gods, whose will was ascertained by the augurs, and to be consecrated or dedicated by the will of man (the pontiffs). Where the sanction of the gods had not been obtained, and where the mere act of man had consecrated a place to the gods, such a place was only a *sacrum*, *sacrarium*,

or *sacellum*. [SACRARIIUM; SACELLUM.] Varro (*op. Coll.* xiv. 7. § 7) justly considers the ceremony performed by the augurs as essential to a temple, as the consecration by the pontiffs took place also in other sanctuaries which were not *templa*, but mere *sacra* or *aedes sacrae*. Thus the sanctuary of Vesta was not a *templum* but an *aedes sacra*, and the various *curiae* (Hostilia, Pompeia, Julia) required to be made *templa* by the augurs before *senatusconsulta* could be made in them. In what manner a *templum* differed from a *delubrum* is more difficult to decide, and neither the ancient nor modern writers agree in their definitions. Some ancients believed that *delubrum* was originally the name given to a place before or at the entrance of a temple, which contained a font or a vessel with water, by which persons, before entering the temple, performed a symbolic purification (Serv. *ad Aen.* iv. 56, ii. 225; Corn. Fronta, quoted by Dacier on Fest. s. v. *Delubrum*); others state that *delubrum* was originally the name for a wooden representation of a god (ἱεῶνος), which derived its name from *librum* (the bark of a tree), which was taken off (*delibrare*) before the tree was worked into an image of the god, and that hence *delubrum* was applied to the place where this image was erected. (Fest. s. v. *Delubrum*; Massur. *Sab. op. Serv.* *ad Aen.* ii. 225.) Hartung (*Die Rel. d. Röm.* i. p. 143, &c.) derives the word *delubrum* from *liber* (anciently *luber*), and thinks that it originally meant a *locus liberatus*, or a place separated by the augur from the profane land, in which an image of a god might be erected, and sacred rites be performed. A *delubrum* would therefore be a sanctuary, whose chief characteristic was its being separated from the profane land. But nothing certain can be said on the subject. (Comp. Macroh. *Sat.* iii. 4.)

After these preliminary remarks, we shall proceed to give a brief account of the ancient temples, their property, and their ministers, both in Greece and Rome. We must, however, refer our readers for a more detailed description of the architectural structure of ancient temples to other works, such as Stieglitz, *Archäologie der Baukunst*, and others, especially as the structure of the temples varied according to the divinities to whom they were dedicated, and other circumstances.

Temples in Greece.—Temples appear to have existed in Greece from the earliest times. They were separated from the profane land around them (τόπος βέβηλος, or τὰ βέβηλα), because every one was allowed to walk in the latter. (Schol. *ad Soph. Oed. Col.* 10.) This separation was in early times indicated by very simple means, such as a string or a rope. (Paus. viii. 10. § 2.) Subsequently, however, they were surrounded by more efficient fences, or even by a wall (ἔρκος, περίβολος, Herod. vi. 134; Pollux, i. 10; Paus. *passim*), the entrance to which was decorated, as architecture advanced, with magnificent Propylaea [ΠΡΟΠΥΛΑΙΑ]. The whole space enclosed in such a *περίβολος* was called *τέμενος*, or sometimes *ιερόν* (Herod. ix. 36, vi. 19, with Valckenae's note; Thucyd. v. 18); and contained, besides the temple itself, other sacred buildings, and sacred ground planted with groves, &c. Within the precincts of the sacred enclosure no dead were generally allowed to be buried, though there were some exceptions to this rule, and we have instances of persons being buried in or at least near certain temples. The religious laws of the island of Delos did not allow any

corpses to be buried within the whole extent of the island (Thucyd. iii. 104 : comp. Herod. i. 64), and when this law had been violated, a part of the island was first purified by Peisistratus, and subsequently the whole island by the Athenian people.

The temple itself was called *νέωσ*, and at its entrance fountains (*περιβαντήρια*) were generally placed, that those who entered the sanctuary to pray or to offer sacrifices might first purify themselves. (Pollux, i. 10 ; Herod. i. 51.) In the earliest times the Greek temples were either partly or wholly made of wood (Paus. v. 20. § 3 ; 16. § 1, viii. 10. § 2), and the simplest of all appear to have been the *σηκοί*, which were probably nothing but hollow trees in which the image of a god or a hero was placed as in a niche (Hesiod. *Fragm.* 54, ed. Göttling ; Schol. ad *Soph. Trach.* 1169) ; for a temple was originally not intended as a receptacle for worshippers, but simply as an habitation for the deity. The act of consecration, by which a temple was dedicated to a god, was called *ἱερουργία*. The character of the early Greek temples was dark and mysterious, for they had no windows, and they received light through the door, which was very large, or from lamps burning in them. Vitruvius (iv. 5) states that the entrance of Greek temples was always towards the west, but most of the temples still extant in Attica, Ionia, and Sicily have their entrance towards the east. Architecture, however, in the construction of magnificent temples, made great progress even at an earlier time than either painting or statuary, and long before the Persian wars we hear of temples of extraordinary grandeur and beauty. All temples were built either in an oblong or round form, and were mostly adorned with columns. Those of an oblong form had columns either in the front alone, in the fore and back fronts, or on all the four sides. Respecting the original use of these porticoes see *Ποικίλια*. The classification of temples, according to the number and arrangement of their columns, will be described presently. The friezes and metopes were adorned with various sculptures, and no expense was spared in embellishing the abodes of the gods. The light which was formerly let in at the door, was now frequently let in from above through an opening in the middle, which was called *θαυθρον*, and a temple thus constructed was called *θαυθρος*. (Vitruv. *l. c.*) Many of the great temples consisted of three parts : 1. the *πρόναος* or *πρόδομος*, the vestibule ; 2. the *cella* (*ναός*, *σηκός*) ; and 3. the *δπισθόδομος*. The *cella* was the most important part, as it was, properly speaking, the temple, or the habitation of the deity whose statue it contained. In one and the same cella there were sometimes the statues of two or more divinities, as in the Erechtheum at Athens the statues of Poseidon, Hephaestus, and Butas. The statues always faced the entrance, which was in the centre of the *προτύλιος*, or front portico. The place where the statue stood was called *ἕδος*, and was surrounded by a balustrade or railings (*ἱκρία*, *ἐρύματα*, Paus. v. 11. § 2). Some temples also had more than one cella, in which case the one was generally behind the other, as in the temple of Athena Polias at Athens. In temples where oracles were given, or where the worship was connected with mysteries, the cella was called *ἄδυτον*, *μύητρον*, or *διδάκτρον*, and to it only the priests and the initiated had access. (Pollux, i. 9 ; Paus. ix. 8. § 1, viii. 62 ; 37. § 5 ; Herod. viii. 53, ix. 65 ; Plut. *Num.* 13 ; Caes. *de Bell. Civ.*

iii. 105.) In some cases the cella was not accessible to any human being, and various stories were related of the calamities that had befallen persons who had ventured to cross the threshold. (Paus. viii. 52. § 3 ; 10. § 2 ; 88. § 2 ; Soph. *Oed. Col.* 37.) The *δπισθόδομος* was a chamber which had its entrance in the back front of a temple, and served as a place in which the treasures of the temple were kept, and thus supplied the place of the *θησαυροί* which were attached to some temples. (Compare Müller, *Archäol. d. Kunst*, § 288 ; Stieglitz, *Archäol. der Baukunst*, vol. ii. § 1 ; Hirt, *Lehre der Gebäude*, § 1 ; Böckh, *ad Corp. Inscript.* pp. 264, &c.)

We now proceed to describe the classification of temples, both Greek and Roman, the latter being chiefly imitated from the former. They were either quadrangular or circular.

Quadrangular Temples were described by the following terms, according to the number and arrangement of the columns on the fronts and sides.

1. *Ἀστύλος*, *astyle*, without any columns. (Leonidas Tarent. in Brannch, *Anac.* vol. i. p. 237 ; Plin. *H. N.* xxxiv. 8.)

2. *Ἐν παραστάσι*, *in antis*, with two columns in front between the antae. (Pind. *Ol.* vi. 1.)

3. *Πρόστύλος*, *prostyle*, with four columns in front.

4. *Ἀμφιπρόστύλος*, *amphiprostyle*, with four columns at each end.

5. *Περιπτερος* or *ἀμφικύλιος* (Soph. *Ant.* 285), *peripteral*, with columns at each end and along each side.

6. *Δίπτερος*, *dipteral*, with two ranges of columns (πτερά) all round, the one within the other.

7. *Ψευδοδίπτερος*, *pseudodipteral*, with one range only, but at the same distance from the walls of the cella as the outer range of a *δίπτερος*.

To these must be added a sort of sham invented by the Roman architects, namely :

8. *Ψευδοπερίπτερος*, *pseudoperipteral* (Vitruv. iv. 7), where the sides had only half-columns (at the angles three-quarter columns), attached to the walls of the cella, the object being to have the cella large without enlarging the whole building, and yet to keep up something of the splendour of a peripteral temple.

Names were also applied to the temples, as well as to the porticoes themselves, according to the number of columns in the portico at either end of the temple ; namely, *τετράστυλος*, *tetrastyle*, when there were four columns in front, *ἑξάστυλος*, *hexastyle*, when there were six, *ὀκτάστυλος*, *octastyle*, when there were eight, *δεκάστυλος*, *decastyle*, when there were ten. There were never more than ten columns in the end portico of a temple ; and when there were only two, they were always arranged in that peculiar form called *in antis* (*ἐν παραστάσι*). The number of columns in the end porticoes was never uneven, but the number along the sides of a temple was generally uneven. The number of the side columns varied : where the end portico was tetrastyle, there were never any columns at the sides, except false ones, attached to the walls, as in the temple of *Fortuna Virilis* at Rome, which has a tetrastyle portico, with a column behind each corner column, and then five false columns along each side of the cella : where it was hexastyle or octastyle, there were generally 13 or 17 columns at the sides, counting in the corner columns : sometimes a hexastyle temple had only eleven co-

lums on the sides. The last arrangement resulted from the rule adopted by the Roman architects, who counted by intercolumniations (the spaces between the columns), and whose rule was to have *twice as many intercolumniations along the sides of the building as in front*; another example of the rule is furnished by the above-mentioned temple of Fortuna Virilis, which has four columns in front and, altogether, seven on each side. The Greek architects, on the contrary, counted by columns, and their rule was to have *twice as many columns along the sides as in front, and one more**, counting the corner columns in each case: sometimes, however, they followed the other rule, as in the temple at Mylasa, where there are six columns in front and eleven at each side. Another set of terms, applied to temples and other buildings having porticoes, as well as to the porticoes themselves, was derived from the distances between the columns as compared with the lower diameters of the columns. They were the following:—

1. Πυκνόστυλος, *pycnostyle*, the distance between the columns a diameter of a column and half a diameter.

2. Ξύστυλος, *xystyle*, the distance between the columns two diameters of a column.

3. Εὐστυλος, *eustyle*, the distance between the columns two diameters and a quarter, except in the centre of the front and back of the building, where each intercolumniation (*intercolumnium*) was three diameters; called *eustyle*, because it was best adapted both for beauty and convenience.

4. Διάστυλος, *diastyle*, the intercolumniation, or distance between the columns, three diameters.

5. Ἀραιόστυλος, *aræostyle*, the distances excessive, so that it was necessary to make the epistyle (ἐπιστύλιον), or architrave, not of stone, but of timber. [EPISTYLUM.]

These five kinds of intercolumniation are illustrated by the following diagram:—

The following elevations and plans of temples will aid the reader in understanding the different terms descriptive of the number and arrangement of the columns. They are taken from the plates to Hirt's *Geschichte der Baukunst*; and although, for the sake of greater clearness and convenience, they are not all taken from actual buildings, but are general representations of each form, yet they are not merely imaginary, for they are founded on a careful comparison of existing remains with the descriptions of Vitruvius.

I. IN ANTIS.

An engraving of a temple of this form has been given under ANTÆ.

* The Roman rule might also be stated according to the number of columns thus:—*twice as many columns along the sides as in front, and one less*

II. PROSTYLE, TETRASTYLE, of the Ionic order.

The above engraving exhibits clearly the *pronaos* or *pronaos*, or space enclosed by the portico and the side walls projecting beyond the front wall; and the *cella*, with the statue of the god opposite to the entrance.

TEMPLUM.

III. AMPHIPROSTYLE, TETRASTYLE.

Vitruvius (iii. 1) says that "the *Amphiprostyle* has every part which the *Prostyle* has, and moreover it has columns and a pediment in the *posticum* after the same manner." This *posticum* (the Greek *opisthodomus*) appears to have been of two kinds; either a mere portico attached to the back wall of the *cella*, or a larger space, as shown in the figure.

TEMPLUM.

1107

IV. PERIPTERAL, HEXASTYLE, of the Doric order.

The above plan is that of a Roman *Peripteros*: to represent the Grecian *Peripteros* two columns should be added to each side, and the length thus gained thrown into the *opisthodomus*. In this form there were two columns between the *antae* terminating the projecting walls; and the three intercolumniations thus formed were fenced with marble railings (*plutei*, Vitruv. iv. 4), with gates in them giving access to the *prodomus*, as shown by the lines in the figure.

This species of temple was not only more splendid than the former, but also more fully adapted for the performance of grand religious ceremonies, as the continuous portico all round it would give shelter and passage to a large number of people. Accordingly we find that several of the most celebrated Greek temples are of this form; such as that of Zeus Nemeus between Argos and Corinth, of Concord at Agrigentum, of Theseus at Athens, which has no pillars between the *antae* of the *posticum*.

V. DIPTERAL and PSEUDODIPTERAL, OCTASTYLE, of the Ionic order. To save space, the one side of the cut represents half of the dipteral temple, the other side half of the pseudodipteral.

The *Dipteros* may be considered as a *Peripteros*, increased in size and magnificence by the addition of another row of pillars along each side; the *Pseudodipteros* as a *Peripteros* with the side columns moved outwards over the space of one column and intercolumniation, so as to allow of eight columns in front. Vitruvius, who describes the latter first, assigns its invention to the architect Hermogenes. From the expense of such edifices, there were naturally very few examples of them. The far-famed temple of Artemis at Ephesus, and that of Quirinus at Rome, were dipteral. That of Artemis at Magnesia, built by Hermogenes, was pseudodipteral.

VI. HYPÆTHRAL, DECASTYLE, of the Corinthian order.

a, the statue of the god; *b b*, entrances to the cella from the opisthodomus; *c*, apartments for the keeper of the temple.

Every decastyle temple was also hypæthral, but there were also octastyle and even hexastyle hypæthral temples.

A question has lately been raised whether there ever were any hypæthral temples. The two sides of the question will be found discussed in the following works: Rosa, *Keine Hypæthraltempel mehr*, in his *Hellenika*, pt. i. pp. 1—39, Halle, 1846, 4to, and Bötticher, *Der Hypæthraltempel, auf Grund des Vitruvianischen Zeugnisse, gegen Prof. D. L. Ross, erwiesen*, Potsdam, 1847, 4to.

TEMPLUM.

VII. PSEUDOPERICLITRAL, HEXASTYLE, of the Ionic Order.

These were the chief normal forms of quadrangular temples. The variations made upon them, especially by the union of two or more temples in one building, were very numerous. (See Hirt, Stieglitz, and the other authorities.) One form deserves particular notice, inasmuch as it was certainly very ancient, and some writers have supposed that it contained the germs of all the other forms; this was what Vitruvius called the *Tuscan Temple*. (Vitruv. iv. 7.) The passage of

TEMPLUM.

FIG 9

Vitruvius is very difficult, and has been differently explained. (Comp. Stieglitz and Hirt.) The following engraving is so constructed as to contain a representation of the three chief forms, real or supposed, of the Tuscan temple.

The above plan is divided by the lines *a*, *b*, into three portions, by completing each of which, we have three different plans. Thus, if the middle portion be retained as it is, and the part to the right of *b* be made like that to the left of *a*, we have one of the supposed forms. Again, if the middle portion be retained, and the two sides completed on the same plan, namely, like the portion to the left of *a*, but without the projecting side wall, and with a round column in place of the square pillar which terminates it, we have what others suppose to have been the true original form of the Tuscan temple. In either case, the characteristic feature is the union of three *cellae* in one temple, dedicated to three associated deities, the middle *cella*, which (as shown in the figure) was larger than the other two, being assigned to the chief of the three divinities; as in the great temple on the Capitol, the middle *cella* of which was dedicated to Jupiter, the *cella* on the right side of the middle one to Minerva, and the remaining *cella* to Juno. Lastly, a later variation of the Tuscan temple, in which its chief peculiarity was lost, was made by retaining only the middle *cella*, and carrying a peristyle of columns

along each side of it, as represented in the right-hand division of the plan and elevation.

Circular Temples, properly so called, were probably not used by the Greeks in early times. The round buildings of which we have notices were either *tholi* or mere monumental edifices. Several round buildings of this kind are mentioned by Pausanias; such as the *tholus* at Athens, in which there were several small silver statues; where the Prytaneis sacrificed (Paus. i. 5), and where, according to Pollux (viii. 155) they also banqueted. There was another *tholus* at Epidaurus, in the sacred grove of Asclepius, which he describes as well worth seeing: it was built of white marble, after the design of Polycleitus, and adorned on the inside with paintings by Pausias. (Paus. ii. 27.) (See Stieglitz, vol. ii. pp. 38, fol.) Vitruvius (iv. 7) however recognises two regular forms of circular temples, to which a third must be added.

I. The *MONOPTEROS* consisted of a single circle of columns, standing on a platform (*tribunal*), the outer wall of which formed a *stylobate* or continuous pedestal for the columns, and surmounted by a dome; but without any *cella*. For the proportions see Vitruvius. The remains of such a temple have been found at the ruins of Puteoli.

II. The *PERIPTEROS* had a circular *cella* surrounded by a single peristyle of columns, standing on three steps, and the whole surmounted by a dome. Specimens are preserved in the so-called temples of Vesta at Rome (see wood-cut on p. 299) and at Tivoli.

The proportions of the temples of this form were very carefully regulated. The existing specimens agree in most particulars with the rules laid down by Vitruvius, according to whom the distance of the wall of the *cella* from the edge of the substruction was one-fifth of the whole diameter of the substruction; and consequently the diameter of the *cella* (including its walls) was three-fifths of the whole: the internal diameter of the *cella* was equal to the height of the columns: the height of the dome was equal to a semi-diameter of the whole building: and the centre of the dome was surmounted by a pyramid (or cone), to support an ornament equal in height to the capitals of the columns. (For a full discussion of the passage, see Hirt, *Lekre d. Gebäude*, pp. 29, 30.)

Both species of round temples are mentioned by Servius (*ad Aen.* ix. 408), who says that they were peculiar to Vesta, Diana, Hercules, and Mercury; and he distinguishes the *Monopteros* by the following description: — *tectum sine parietibus columnis substructum*.

TEMPLUM.

III. Another form, of which we have the chief example in the Pantheon, besides some smaller specimens (see Hirt, § 19), consists of a circular *cella* surmounted by a dome, without a peristyle, but with an advanced portico. The following engraving represents such a temple, with a prostyle tetrastyle portico, of two slightly different kinds (compare the left and right sides of the portico in the plan); the niches are for the statues of three associated deities, such as Apollo, Diana, and Latona; and thus this form of temple may be regarded, in its religious design, as a variation of the old Tuscan temple.

The portico of such a temple might be hexastyle, or even octastyle, as in the Pantheon.

TEMPLUM.

1111

Respecting the more minute details of the construction of temples of both sorts, which our space does not permit us to enter into, the reader is referred to the works of Hirt and Stieglitz, as quoted above; and lists and brief descriptions of the chief Greek and Roman temples, with references to the works in which they are more fully described, will be found in Müller's *Handbuch der Archäologie der Kunst*, under the heads of the respective periods in the history of the art.

Besides the terms which have now been explained, temples were designated by the names of the deities to whom they were dedicated, as the *Ὀλυμπεῖον* or temple of *Zeus Olympius*; the *Παρθενόν*, or temple of *Athena Parthenos*, &c.; and sometimes a name was given according to some peculiar feature of the structure, as in the case of the Parthenon at Athens, which was called *Hecatompedon*, because its front was exactly 100 feet wide.

Independently of the immense treasures contained in many of the Greek temples, which were either utensils or ornaments, and of the tithes of spoils, &c. (Herod. vii. 152; Diodor. xi. 3; Polyb. iv. 33), the property of temples, from which they derived a regular income, consisted of lands (*τεμενά*), either fields, pastures, or forests. In Attica we sometimes find that a *demos* is in possession of the estates of a particular temple: thus the *Peiraieus* possessed the lands belonging to the *Theaeum*: in what their right consisted is not known; but of whatever kind it may have been, the revenues accruing from such property were given to the temples, and served to defray the expenses for sacrifices, the maintenance of the buildings, &c. For this purpose all temple-property was generally let out to farm, unless it was, by some curse which lay on it, prevented from being taken into cultivation. (Harpocrat. s. v. *ἱερὰ μισθωμένα*: comp. Isocrat. *Areop.* 11.) The rent for such sacred domains was, according to Demosthenes (*in Eubulid.* p. 1318), received by the demarch, probably the demarch of the *demos* by which the sacred domain was occupied; for in other cases we find that the rents were paid to the authorities entrusted with the administration of the temples. (Böckh, *Staatsk.* i. p. 327, &c., ii. p. 339.) The supreme control over all property of temples belonged to the popular assembly. (Demosth. *in Noer.* p. 1380.)

Respecting the persons entrusted with the superintendence, keeping, cleaning, etc., of temples, we scarcely possess any information. [ΑΞΙΤΟΥΛ.] We have mention of persons called *ελεῖδουχοι*, *ελρεδουχοι*, *ρεοφλάκτες*, who must have been employed as guards and porters (Aeschyl. *Suppl.* 294), although it is not certain whether these functions were not performed by priests who were occasionally called by names derived from some particular function. At Olympia *φασφύρται* were appointed who belonged to the family of Pheidias, and had to keep clean the statue of the Olympian Zeus. (Paus. v. 14. § 5.)

Temples at Rome.—In the earliest times there appear to have been very few temples at Rome, and in many spots the worship of a certain divinity had been established from time immemorial, while we hear of the building of a temple for the same divinity at a comparatively late period. Thus the foundation of a temple to the old Italian divinity Saturnus, on the capitoline did not take place till

498 a. c. (Liv. ii. 21; Dionys. vi. 1; Plut. *Publ.* 12.) In the same manner Quirinus and Mars had temples built to them at a late period. Jupiter also had no temple till the time of Ancus Martius, and the one then built was certainly very insignificant. (Dionys. ii. 34; Liv. i. 33.) We may therefore suppose that the places of worship among the earliest Romans were in most cases simple altars or sacella. The Roman temples of later times were constructed in the Greek style. The cella was here, as in Greece, the inner spacious part of the temple which contained the statue or statues of the gods, and an altar before each statue. (Vitruv. iv. 5.) The roof which covered the cella is called *tectado*, but it was in most cases not wholly covered, in order to let the light in from above. (Varro, *ap. Serv. ad Aen.* i. 505.) The entrance of a Roman temple was, according to Vitruvius, if possible, always towards the west, which side was at the same time faced by the image of the divinity, so that persons offering prayers or sacrifices at the altar looked towards the east. (Comp. *Isidor.* xv. 4, 7; Hygin. *de Limit.* p. 153, ed. Goes.) If it was not practicable to build a temple in such a position, it was placed in such a manner that the greater part of the city could be seen from it; and when a temple was erected by the side of a street or road, it was always so situated that those who passed by could look into it, and offer their salutations to the deity.

As regards the property of temples, it is stated that in early times lands were assigned to each temple, but these lands were probably intended for the maintenance of the priests alone. [SACERDOS.] The *sacra publica* were performed at the expense of the treasury, and in like manner we must suppose, that whenever the regular income of a temple, arising from fees and fines, was not sufficient to keep a temple in repair, the state supplied the deficiency, unless an individual volunteered to do so.

The supreme superintendence of the temples of Rome, and of all things connected with them, belonged to the college of pontiffs. Those persons who had the immediate care of the temples were the *ANDRUL*. [L. S.] and [P. S.]

TEMPORA'LIS ACTIO. [ACTIO.]

TEMPORIS PRAESCRIPTIO. [PRAESCRIPTIO.]

TENSAE. [THENSAE.]

TEPIDARIUM. [BALNEAE, p. 190, a.]

TERMINA'LIA, a festival in honour of the god Terminus, who presided over boundaries. His statue was merely a stone or post stuck in the ground to distinguish between properties. On the festival the two owners of adjacent property crowned the statue with garlands and raised a rude altar, on which they offered up some corn, honeycombs, and wine, and sacrificed a lamb (Hor. *Epod.* ii. 59) or a sucking pig. They concluded with singing the praises of the god. (Ovid. *Fast.* ii. 639, &c.) The public festival in honour of this god was celebrated at the sixth milestone on the road towards Laurentum (*Id.* 682), doubtless because this was originally the extent of the Roman territory in that direction.

The festival of the Terminalia was celebrated a. d. VII. *Kal. Mart.*, or the 23d of February on the day before the Regifugium. The Terminalia was celebrated on the last day of the old Roman

year, whence some derive its name. We know that February was the last month of the Roman year, and that when the intercalary month Mercedonius was added, the last five days of February were added to the intercalary month, making the 23d of February the last day of the year. (Varro, *L. L.* vi. 13, ed. Müller; Macrobi. *Sat.* i. 13.) When Cicero in a letter to Atticus (vi. 1) says, *Accipit duas litteras a. d. V. Terminalia* (i. e. Feb. 19), he uses this strange mode of defining a date, because being then in Cilicia he did not know whether any intercalation had been inserted that year. [CALENDARIIUM, pp. 229, b. 230, a.]

TERU'NCIUS. [As, p. 141, a.]

TESSERA, *dim.* TESSERULA and TESSEL-LA (*τέσσερος*), a square or cube; a die; a token.

The use of small cubes of marble, earthenware, glass, precious stones, and mother-of-pearl for making tessellated pavements (*pavimenta tessellata*, Sueton. *Jul.* 46) is noticed under DOMUS, p. 431 and PICTURA, p. 915.

The dice used in games of chance [ALAE] had the same form, and were commonly made of ivory, bone, or some close-grained wood, especially privet (*ligustria tessoris utilisima*, Plin. *H. N.* xvi. 18. a. 81). They were numbered on all the six sides like the dice still in use (Ovid. *Trist.* ii. 473); and in this respect as well as in their form they differed from the *tali*, which are often distinguished from tesserae by classical writers. (Gellius, xviii. 13; Cic. *de Sen.* 16.) [TALUS.] Whilst four tali were used in playing, only three tesserae were anciently employed. Hence arose the proverb, *τρεῖς ἔξ, ἢ τρεῖς κίβοι*, i. e. "either three sizes or three aces," meaning, all or none (Plat. *Leg.* xii. ad fin.; Schol. *in loc.*; Pherecrates, p. 49, ed. Runkel); for *κίβη* was used to denote the ace, as in the throw *ἑὴς κίβη καὶ τέτταρα*, i. e. 1, 1, 4, = 6. (Eupolis, p. 174, ed. Runkel; Aristoph. *Ran.* 1447; Schol. *in loc.*) Three sizes is mentioned as the highest throw in the Agamemnon of Aeschylus (32). As early as the time of Eustathius (*in Od.* i. 107) we find that the modern practice of using two dice instead of three had been established.

The ancients sometimes played with dice *παιε-ροελαίβη* [TALUS], when the object was simply to throw the highest numbers. At other times they played also with two sets of LATRUNCULI or draughtsmen, having fifteen men on each side. The board (*aleus laevinus*, Plin. *H. N.* xxxvii. 2. a. 6; *aleolus*, Gellius, i. 20, xiv. 1) was divided by twelve lines, so that the game must have been nearly or altogether the same with tric-trac or backgammon. (Brunck, *Anal.* iii. 60; Jacobs, *ad loc.*) Perhaps the *duodecim scripta* of the Romans was the same game. [ARABUS.]

Objects of the same materials with dice, and either formed like them or of an oblong shape, were used as tokens for different purposes. The *tessera hospitalis* was the token of mutual hospitality, and is spoken of under HOSPITIUM, p. 619, a. This token was probably in many cases of earthenware, having the head of Jupiter Hospitalis stamped upon it. (Plaut. *Poen.* v. 1. 25; 2. 87—99.) *Tesserae frumentariae* and *summariae* were tokens given at certain times by the Roman magistrates to the poor, in exchange for which they received a fixed amount of corn or money. (Sueton. *Aug.* 40, 42, *Nero*, 11.) [FRUMENTARIAN LIGER.] Similar tokens were used on various occasions, as they arose in the course of events. For example, when

the Romans sent to give the Carthaginians their choice of peace or war, they sent two *tesserae*, one marked with a spear, the other with a *CADUCEUS*, requesting them to take either the one or the other. (Gellius, x. 27.)

From the application of this term to tokens of various kinds, it was transferred to the *word* used as a token among soldiers. This was the *tessera militaris*, the *συνθήκη* of the Greeks. Before joining battle it was given out and passed through the ranks as a method by which the soldiers might be able to distinguish friends from foes. Thus at the battle of Cunaxa the word was "Zeus the Saviour and Victory," and on a subsequent engagement by the same troops "Zeus the Saviour, Heracles the Leader." (Xen. *Anab.* i. 8. § 16, vi. 3. § 25.) The soldiers of Xenophon used a verbal sign for the same purpose when they were encamped by night (vii. 3. § 34). Aeneas Tacticus (c. 24) gives various directions necessary to be observed respecting the word. Respecting the *tessera* or watchword in the Roman camp, see *CASTRÆ*, p. 251, a. [J. Y.]

TESTA. [FICTILE.]

TESTAMENTUM is "mentis nostræ justa contestatio in id solemniter facta ut post mortem nostram valeat." (Ulp. *Frag.* tit. 20; comp. Ulp. Dig. 28. tit. 1. a. 1, where he has "justa sententia.") In this passage the word *Justa* means "jure facta," "as required by law." The word *Contestatio* is apparently used with reference to the origin of the term *Testamentum*, which is to be referred to "Testari," which signifies "to make a solemn declaration of one's will." Gellius (vi. 12) properly finds fault with Servius Sulpicius for saying that the word is compounded "a mentis contestatione." The person who made a *Testamentum* was *Testator*. (Sueton. *Ner.* 17; Dig. 28. tit. 3. a. 17.)

In order to be able to make a valid Roman will, the Testator must have the *Testamentifictio* (Cic. *ad Fam.* vii. 21), which term expresses the legal capacity to make a valid will: the word has also another signification. [Hæres, p. 598, b.] The *testamentifictio* was the privilege only of Roman citizens who were *patresfamilias*. The following persons consequently had not the *testamentifictio*: those who were in the *Potestas* or *Manus* of another, or in *Mancipii causa*, as sons and daughters, wives *In manu* and slaves; but with respect to his *Castrense Peculium* [*PATRIA POTESTAS*] a *filiusfamilias* had the privilege of testamentary disposition; *Latini Juniani*, *Dediticii*; *Peregrini* could not dispose of their property according to the form of a Roman will: a person who was doubtful as to his status, as for instance if his father had died abroad and the fact was not ascertained, could not make a testament: an *Impubes* could not dispose of his property by will even with the consent of his Tutor; when a male was fourteen years of age, he obtained the *testamentifictio*, and a female obtained the power, subject to certain restraints, on the completion of her twelfth year: *muti, surdi, furiosi*, and *prodigi* "quibus lege bonis interdictum est" had not the *testamentifictio*; the reasons why these several classes of persons had not the *testamentifictio* illustrate the Roman mode of deducing legal conclusions from general principles:—the *Muti* had not the *Testamentifictio*, because he could not utter the words of *Nuncupatio*; the *Surdi*, because he could not hear the words of the *Emtor familias*;

the *Furiosus*, because he had not intellectual capacity to declare his will (*testari*) about his property; and the *Prodigus*, because he was under a legal restraint, so that he had no *commercium*, and consequently could not exercise the formal act of the *familias mancipatio*. (Ulp. *Frag.* tit. 20. a. 13; *CURATOR*; *IMPUBES*.) As to the testament which a man has made before he becomes *Furiosus*, see Dig. 28. tit. 1. s. 20. § 4.

Women had originally no *testamentifictio*, and when they did acquire the power, they could only exercise it with the *auctoritas* of a Tutor. Of course a daughter in the power of her father, whether she was unmarried or married, and a wife in *manu* could never make a will. The rules therefore as to a woman's capacity to make a will, could apply only to unmarried women after the death of their father and to widows who were not in the power of a father. This subject requires explanation.

Cicero (*Tbp.* 4) observes "if a woman has made a will, and has never undergone a *capitis diminutio*, it does not appear that the *Bonorum Possessio* can be granted in pursuance of such will according to the Praetor's Edict; for if it could, the Edict must give the *Possessio* in respect of the wills of *Servi, Exules*, and *Pueri*." Cicero means to say that if a woman made a will without having sustained a *capitis diminutio*, the will could have no effect at all: and he derives his argument "ab adjunctis," for if such a will could have any effect, then the wills of other persons, who had not the *testamentifictio*, might be effectual so far as to give the *Bonorum Possessio*. It is not a logical inference from the language of Cicero that a woman who had sustained a *capitis diminutio* could make a will; but this is the ordinary meaning of such language and it appears to be his. Consistently with this, Ulpian says (*Frag.* tit. 20. a. 15), "women after their twelfth year can make a will with the *auctoritas* of a Tutor, so long as they are in *tutela*;" and the comment of Boethius on the passage of the *Topica* clearly shows that he understood it in this way. A woman then could make a will with the *auctoritas* of her Tutor and not without. Now if a woman was in *Tutela Legitima*, it might be correctly said that she could not make a will; for, if she was *Ingenua*, the *tutela* belonged of right to the *Agnati* and *Gentiles*, and if she was a *Liberta*, it belonged to the patron. In these cases a woman could indeed make a valid will with the consent of her *Tutores*, but as her *Tutores* were her heirs in case of intestacy, such consent would seldom be given, and though a woman under such circumstances might be allowed to make a will, it may be assumed that it was a circumstance altogether unusual, and thus the rule as to a woman in *Tutela Legitima*, as above stated, might be laid down as generally true. The passage of Cicero therefore does not apply to the *Tutela Legitima*, but to something else. Since the discovery of the Institutes of Gaius the difficulty has been cleared up, though it had been solved in a satisfactory manner by Savigny before the publication of Gaius. (*Beitrag zur Geschichte der Geschlechtsregel*, Zeitschrift, vol. iii. p. 328.)

A woman could make a "coemptio *fiduciae causa*," in order to qualify herself to make a will; for "at that time women had not the power of making a will, except certain persons, unless they made a coemptio and were remancipated and manumitted; but on the recommendation of Ha-

drian the senate made the ceremony of coemptio unnecessary for this purpose." (Gaius, 115, a.) The coemptio was accompanied with a capitis diminutio, and this is what Cicero alludes to in the passage of the *Topica*. [MATRIMONIUM (ROMAN).] A woman who came in manum viri had sustained a capitis diminutio, but it must not be inferred from this that if she became a widow she could make a will. The Capitis diminutio of Cicero means that the will must be made with the auctoritas of a tutor. Now if the husband died, when the wife had been in manu, and he appointed no tutor for her, she was in the legitima tutela of her nearest agnati, who would be her own children and step-children, if she had any. But the tutela legitima in such a case would seem something unnatural, and accordingly the magistratus would give a tutor to the woman; and such a tutor, as he had no interest in the woman's property, could not prevent her from making a will. The husband might by his will give the wife a power to choose a Tutor (tutoris optio), and such a Tutor could not refuse his consent to the woman making a will; for instead of the woman being in the potestas of the tutor, he was in the potestas of the woman, so far as to be bound to assent to her testamentary dispositions. (Compare Liv. xxxix. 19; Cic. *pro Murem*. c. 17; Gaius, i. 150.)

The case of Silius (Cic. *ad Fam.* vii. 21) may be a case of a woman's making a will, without the auctoritas of a tutor, for it appears that a woman (Turpilia) had disposed of property by will, and Servius Sulpicius was of opinion that this was not a valid will, because the will-maker had not the testamentifacio. There may however have been other reasons why the will-maker had not the testamentifacio, than the want of a capitis diminutio (in the sense of Cic. *Top.* 4), and consequently the opinion of those critics who refer the case mentioned in this letter to the principle of the Capitis diminutio is not a certain truth.

The following references may be consulted as to this matter: Cic. *pro Caecina*. 6. 25, *pro Flacco*. 35, *pro Murem*. 12, *ad Att.* vii. 8; Liv. xxxix. 19; Gaius, i. 150, &c.

Libertae could not make a testament without the auctoritas of their patronus, except so far as this rule was altered by enactments; for they were in the legitima tutela of their patronus. Libertae, who had a certain number of children, could make a will without the auctoritas of their patronus. [PATRONUS.]

The Vestal Virgins had no tutor, and yet they could make a Testament. The Twelve Tables released them from all tutela "in honorem sacerdotii." (Cic. *de Rep.* iii. 10; Gaius, i. 145.)

In order to constitute a valid will, it was necessary that a heres should be instituted, which might be done in such terms as follow: — Titius heres esto, Titium heredem esse jubeo. [HERES (ROMAN).]

All persons who had the commercium could be heredes; slaves also and others who were not sui juris could be made heredes, but they could not take for themselves. [HERES; SERVUS, p. 1037.] But there were many classes of persons who could not be heredes: Peregrini, who had not received the commercium; persons who were imperfectly described: Juristical persons or universitates, except by their liberti, a privilege granted by a Senatusconsultum: Gods, or the temples of Gods,

except such as were excepted by a Senatusconsultum and Imperial Constitutions, such as Jupiter Tarpeius, Apollo Didymaeus, Mars in Gallia, Minerva Iliesia, Hercules Gaditana, and others enumerated by Ulpian (*Frag.* tit. 22. a. 6): a Postumus alienus could not be made a heres, for he was an incerta persona: it is a disputed question whether, according to the old law, women could be made heredes; but the question concerns only those who were sui juris, as to whom there seems no sufficient reason why they could not be made heredes; the capacity of women to take under a will was limited by the *LEX VOCOMIA*: unmarried persons and persons who had no children were limited as to their capacity to take under a will by the *Papia Poppaea Lex*. [LEX JULIA ET PAPIA POPPAEA.]

The first question as to the validity of a will was the capacity of the testator: the next question was as to the proper observance of the forms required by law, "except in the case of soldiers, who, in consideration of their little acquaintance with such matters, were allowed to make their wills as they pleased or as they could." (Gaius, ii. 114.) This remark of Gaius seems to refer to the Imperial period.

As to the Form of wills, Gaius (ii. 101) and Ulpian (*Frag.* tit. xx.) are now the best authorities.

Originally there were two modes of making wills; for people made their wills either at Calata Comitia, which were appointed twice a year for the making of wills; or they made wills in *prociectis*, that is, when they were going to battle; for an army in movement and under arms is *Prociectus*. A third mode of making wills was introduced, which was effected *per aes et libram*, whence the name of Testamentum *per aes et libram*. If a man had neither made his will at Calata Comitia nor in *prociectis*, and was in imminent danger of death, he would mancipate (*mancipio daret*) his Familia, that is, his Patrimonium to a friend and would tell him what he wished to be given to each after his death. The old form of making a will *per aes et libram* was this. The Familia *emtor*, that is the person who received the Familia by mancipation, filled the place of heres, and accordingly the testator instructed him what he wished to be given to each after his death. In the time of Gaius the practice was different. One person was instituted heres (*heres testamento instituitur*), who was charged with the payment of the legacies, or, as it is expressed in the phraseology of the Roman Law, "a quo etiam legata relinquebantur;" and another person was present as familiae *emtor* from a regard to the old legal form. The mode of proceeding was this. The testator, after having written his will (*tabulae testamenti*), called together five witnesses, who were Roman citizens and puberes, and a libripens, as in the case of other mancipations, and mancipiated his familia to some person in compliance with legal forms (*dicis causa*). The words of the Familia *emtor* (Gaius, ii. 104) show clearly the original nature of the transaction: "Familiam pecuniamque tuam endo mandatam tutelam custodelamque meam recipio eaque quo tu jure testamentum facere possis secundum legem publicam hoc aere (aeneaque libra) esto mihi emta." (As to the reading of this passage, see Puchta, *Inst.* iii. § 306, note g.) The *Emtor* then struck the scales with a piece of money which he gave to the testator as the price of the Familia. Then the testator taking the will in his

hand said: "Hæc ita ut in his tabulis ceriæque (or ceriæ) scripta sunt ita do ita lego ita testor itaque vos Quirites testimonium mihi perhibetote." This was called the Nuncupatio or publishing of the will; in other words the testator's general confirmation of all that he had written in his will.

As the *Familiae emptio* was supposed to be a real transaction between the *Emtor* and *Testator*, the testimony of their several families was excluded, and consequently a person who was in the power of the *Familiae Emtor*, or in the power of the *Testator* could not be a witness. If a man who was in the power of another was the *familiae emtor*, it followed that his father could not be a witness, nor his brother, if the brother was in the power of the father. A *filiusfamilias* who after his *Misio* disposed of his *Castrensæ peculium* by testament, could not have his father as witness nor any one who was in the power of his father. The same rules applied to the *libripens*, for he was a witness. A person who was in the power of the *heres* or of a legatee or in whose power the *heres* or legatee was, or who was in the power of the same person as the *heres* or a legatee, and also the *heres* or a legatee could all be witnesses; for as *Ulpian* observes, there is no objection to any number of witnesses from the same family. But *Gaius* observes that this ought not to be considered as law with respect to the *heres*, and him who is in the power of the *heres* and him in whose power the *heres* is.

According to *Gaius*, wills were originally made only at *Calata Comitia*, and *In Prociuctu*. The *Comitia* were held twice a year for the purpose of making wills, and a will not made there was invalid. It is sometimes assumed that these *Comitia* were held in order that the *Gentes* might consent to the testamentary disposition, in which it is implied that they might refuse their consent. But there is no direct evidence for this opinion, and it derives no support from a consideration of the mode of disposing of property *per aes et libram*. The form *per aes et libram* was a form introduced in cases when the will had not been made at the *Calata Comitia* nor *In Prociuctu*. It had effect because it was an alienation of property *inter vivos* without the consent of any parties except the buyer and seller, which alienation must be assumed to have been a legal transaction at the time when this new form of will was introduced. This new form was a sale and the *familiae emtor* undertook a trust; he resembled the *heres fiduciarius* of later times. It is probable enough that there were originally no means of compelling him to execute the trust, but opinion would be a sufficient guarantee that the testator's will would be observed, and thus would arise one of those parts of Law which had its source in *Mos*. Now when the Romans introduced new legal forms, they always assimilated them to old forms, whence we have a probable conclusion that the form of *mancipatio* was also observed at the *Calata Comitia*; and if so, the consent of the *Gentes* was not necessary, unless it was necessary to every alienation of property, which in the absence of evidence must not be assumed, though such may have been the fact. The difference then between the will made at the *Calata Comitia* and the will *per aes et libram*, consisted in the greater solemnity and notoriety of the former, and the consequent greater security that the testator's intentions would be observed. Written wills are not spoken of with reference to this time,

nor is it probable that wills were written: it does not appear that a written will was ever required by law. The testator's disposition of his property would be short and simple in those early times, and easily remembered; but there would be greater security for an unwritten will made at the *Comitia* than for an unwritten will made *per aes et libram*; whence in course of time *Tabulae* became a usual part of the ceremony of a will.

As we are ignorant of the true nature of private property among the Romans, viewed with respect to its historical origin, we cannot determine with certainty such questions as these respecting testamentary disposition, but it is of some importance to exclude conjectures which are devoid of all evidence. *Rein* (*Das Röm. Privatrecht*, p. 373, note) has referred to the modern writers who have discussed this subject: he has adopted the opinion of *Niebuhr*, according to which "as the property of an extinct house escheated to the cury, that of an extinct cury to the publicum of the citizens at large, the consent of the whole *populus* was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the *curies*." (*Hist. of Rome*, vol. ii. p. 338.) But there is no evidence of the assertion contained in the first part of this passage; and if this rule as to escheat is admitted to be a fact, the rule that testaments must be confirmed by the pontiff and *curies* is no necessary conclusion. *Niebuhr* further observes that "the plebeian houses were not so connected; but the whole order had a public offer in the temple of *Ceres*; and when the army, being assembled in centuries, either on the field of *Mars*, or before a battle, passed the last will of a soldier into a law, it thereby resigned the claims of the whole body to the property." This assertion also is not supported by evidence, and is therefore a mere conjecture against the probability of which there are sufficient reasons.

The *Testamentum in prociuctu* is, for anything we know to the contrary, as old as the testament at the *Calata Comitia*. In this case the forms of the *Calata Comitia* were of necessity dispensed with, or the soldier would often have died intestate. This power of disposition in the case of a *Testamentum in prociuctu* could not depend on the consent of the whole *populus*, in each particular instance; for the nature of the circumstances excluded such consent. He had therefore full power of disposition *In Prociuctu*, a circumstance which leads to the probable conclusion that the will made at the *Calata Comitia* differed only from the other will in its forms and not in its substance. Some writers assert that the *Testamentum in Prociuctu* could only be made after the auspices were taken, which gave the testament the religious sanction, and that when the auspices ceased to be taken in the field, this kind of testament ceased to be made; and that the military testaments mentioned about the latter part of the republic (as by *Caesar*, *Bell. Gall.* i. 39; *Vell. Pat.* ii. 5, &c.) were not the same kind of testaments, but purely military testaments made without any form, which in the Imperial period became in common use and of which *Julius Caesar* probably introduced the practice. (*Dig.* 29. tit. 1. *De Testamento Militis*.) *Cicero* however speaks of the will *In prociuctu* (*de Or.* i. 53) as then in use, and he describes it as made "sine libra et tabulis," that is, without the forms which were used after the introduction of the testamentum

per aes et libram. Thus the Testamentum in Prociuncto always retained its characteristic of being exempted from legal forms, but as to the capacity of the Testator it was always subject to the same rules of law as other wills, so far as we know.

The form of Mancipatio owed its origin to positive enactments: it was a form of alienation accompanied with certain public ceremonies, the presumed object of which was to secure evidence of the transfer. The form of Mancipatio as applied to a will was exactly the same form as Mancipatio applied to any other purpose: it was an alienation of the property, and according to strict principles it must have been irrevocable. It may be concluded then that Roman wills were originally irrevocable. It is sometimes assumed that the five witnesses to the Testament (*quies Romani puberes*) were representatives of the five Classes of Servius Tullius. If this is true (which is a mere assumption) the classes were represented as witnesses only, not as persons who gave their consent to the act. Engelbach states: "Mancipation was originally a formal sale in which the publicness of the transaction constituted the essential characteristic. When the seller had transferred to the buyer the ownership of a thing before the five representatives of the five classes of the Roman People, this was as valid as any other Lex which was brought before the assembly of the People and passed into a Lex." (*Ueber die Ursprung der Zeit der zwölf Tafeln*, p. 80.) The whole meaning of this is not clear, but so far as this it is clear and true: the Testamentum per aes et libram differed in no respects as to the capacity of the alienor, from any other Mancipatio. Now we must either suppose that the assumed consent of the populus to the Testamentary disposition at the Calata Comitia, was expressed by a special enactment which should transfer the property according to the Testator's wish, or that the consent only must have been given to the transfer, and the transfer must have been made in the usual way: the latter is the only conceivable case of the two. In assuming this original necessity of consent on the part of the populus to the testamentary disposition, we assume that Roman property was originally inalienable at the will of the owner. This may be true, but it is not yet shown to be so.

The Twelve Tables recognize a man's power to dispose of his property by will as he pleased: "Uti legassit super pecunia tutelave suae rei ita ius esto." (Ulp. *Frag.* tit. xi. 14.) It is generally admitted, and the extant passages are consistent with the opinion, that the new testamentary form per aes et libram existed while the two original forms were still in use. Now in the testamentum per aes et libram there is no pretence for saying that any consent was required except that of the buyer and seller; and the Twelve Tables recognize the testator's power of disposition. If then the form of testament at Comitia Calata subsisted after the Twelve Tables, we have, according to the views of some writers, a form of testamentum to which the consent of the testator was sufficient and another form in which it was not. There still remains to those who support this opinion, the power of saying that the consent of the sovereign people had become a form, and therefore it was indifferent, so far as concerns this consent, whether the will was made at the Comitia where it would be fully witnessed, or per aes et libram where it would be witnessed

by the five representatives. But it is easy to suggest possibilities; less easy to weigh evidence accurately and to deduce its legitimate consequences.

As already observed, there seems to have been no rule of law that a testament must be written. The mancipatio required no writing, nor did the institution of a heres, and the number of witnesses was probably required in order to secure evidence of the testator's intentions. Thus it is said (Dig. 28. tit. 1. s. 21) that the heres might either be made by oral declaration (*nuncupatio*) or by writing. Written wills however were the common form among the Romans at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word "cera" is often used as equivalent to "tabella;" and the expressions prima, secunda cera are equivalent to prima, secunda pagina. The will might be written either by the testator or any other person with his consent, and sometimes it was made with the advice of a lawyer. It was written in the Latin language, until A. D. 439 when it was enacted that wills might be in Greek. (Cod. 6. tit. 23. s. 21.) By the old law a legacy could not be given in the Greek language, though a fideicommissum could be so given. It does not appear that there was originally any signature by the witnesses. The will was sealed, but this might be done by the testator in secret, for it was not necessary that the witnesses should know the contents of the will; they were witnesses to the formal act of mancipatio, and to the testator's declaration that the tabulae which he held in his hand contained his last will. It must however have been in some way so marked as to be recognized, and the practice of the witnesses (*testes*) sealing and signing the will became common. (As to the will of Claudius, see Suetonius, *Claudius*, 44.) It was necessary for the witnesses both to seal (*signare*), that is, to make a mark with a ring (*anulus*) or something else on the wax and to add their names (*adscribere*). The five witnesses signed their names with their own hand, and their adscription also declared whose will it was that they sealed. (Dig. 28. tit. 1. s. 30.) The seals and adscriptions were both on the outside. A *Senatus-consultum*, which applied to wills among other instruments, enacted that they should be witnessed and signed as follows: they were to be tied with a triple thread (*lissum*) on the upper part of the margin which was to be perforated at the middle part, and the wax was to be put over the thread and sealed. Tabulae which were produced in any other way had no validity. (Compare Paulus, *S. R. v.* tit. 25. s. 6, where *impositae* seems to be the true reading, with Sueton. *Ner.* 17.) A man might make several copies of his will, which was often done (*ut vulgo fieri solent*, Dig. 31. tit. 1. s. 47; a case put to Proculus for the sake of caution. Both Augustus and Tiberius made two copies of their wills. (Sueton. *Aug.* 101, *Tiber.* 76.) When sealed, it was deposited with some friend, or in a temple, or with the Vestal Virgins; and after the testator's death it was opened (*resignare*) in due form. The witnesses or the major part were present, and after they had acknowledged their seals, the thread (*lissum*) was broken and the will was opened and read, and a copy was made; the original was then sealed with the public seal and placed in the archium, whence a fresh copy might be got, if the first copy should ever be lost. (Paulus, *iv.* 6.) This practice described by Paulus may have been of

considerable antiquity. The will of Augustus which had been deposited with the Vestal Virgins was brought into the Senate after his death (Tacit. *Ann.* i. 8): none of the witnesses were admitted except those of Senatorial rank; the rest of the witnesses acknowledged their signatures outside of the Curia. (Sueton. *Tib.* 23.)

A passage in a Novel of Theodosius II. (A. D. 439, *De Testamentis*) states the old practice as to the signature of the witnesses. "In ancient times a testator showed (*offerebat*) his written testament to the witnesses, and asked them to bear testimony that the will had so been shown to them (*oblatorum tabularum perhibere testimonium*)" which are almost the words of Gaius. The Novel goes on to state that the ignorant presumption of posterity had changed the cautious rule of the ancient law, and the witnesses were required to know the contents of the will; the consequence of which was that many persons preferred dying intestate to letting the contents of their wills be known. The Novel enacted what we may presume to have been the old usage, that the testator might produce his will sealed, or tied up, or only closed, and offer it to seven witnesses, Roman citizens and puberes, for their sealing and adscription, provided at the same time he declared the instrument to be his will and signed it in their presence, and then the witnesses affixed their seals and signatures at the same time also. Valentinian III. enacted that if a Testamentum was holographum, witnesses were not necessary.

A fragment of a Roman will, belonging to the time of Trajan, was published by Puggé in the *Rheinisches Museum*, vol. i. p. 249, &c.; and it is explained by Rudorff (*Das Testament des Domitianus*, *Zeitschrift*, &c. vol. xii. p. 301).

The penalties against fraud in the case of wills and other instruments were fixed by the Lex Cornelia. [FALSUM.]

The Edict established a less formal kind of will, since it acknowledged the validity of a written will when there had been no mancipation, provided there were seven witnesses and seven seals, and the testator had the testamentificatio at the time of making the will and at the time of his death. (Gaius, ii. 147.) The terms of the Edict are given by Cicero (*in Ferr.* i. 1, 45.) The Edict only gave the Bonorum Possessio which is the sense of hereditas in the passage of Cicero referred to, as well as in Gaius (ii. 119). This so-called Praetorian Testament existed in the Republican period, and for a long time after. Thus a man had his choice between two forms of making his will; the Civil form by Mancipatio, and the Praetorian with seven seals and seven witnesses, and without Mancipatio. (Savigny, *Beitrag zur Geschichte der Röm. Testam.*, *Zeitschrift*, vol. i. p. 78.)

The Praetorian Testament prepared the way for the abolition of Mancipatio, the essential character of a will made according to the Jus Civile, and in the Legislation of Justinian the form of making a testament was simplified. It required seven male witnesses of competent age and legal capacity, and the act must be done in the presence of all, at the same place, and at the same time, that is, it must be continuous. The testator might declare his last will orally (*sine scriptis*) before seven witnesses, and this was a good will. If it was a written will, the testator acknowledged it before the witnesses as his last will, and put his name to it, and the witnesses then subscribed their names and affixed

their seals. The testator might write his will or have it written by another person, but such other person could derive no advantage under the will. [SENATUSCONSULTUM LIBONIANUM.]

The cases in which a will was not valid, because the heredes sui were not expressly exheredated, are stated in HERES (ROMAN).

A testament which was invalid from the first was Injustum and never could become valid: it was Non jure factum, when the proper forms had not been observed; it was Nullius Momenti, as in the case of a filiusfamilias who is "præteritus." A Testamentum Justum might become either Ruptum or Irritum in consequence of subsequent events. (Dig. 28. tit. 3. s. 1.)

A testament became Ruptum, if the testator made a subsequent testament in due form as required by law: and it made no matter, whether or not there turned out to be a heres under the second will; the only question was whether there could have been one. If then the heres named in the second will refused the hereditas, or died either in the lifetime of the testator, or after his death, and before the cretio, or failed to comply with the conditions of the will, or lost the hereditas under the Lex Julia et Papia Poppæa—in all these cases the paterfamilias died intestate.

The testator must have a capacity to make a will and continue to have the capacity until his death; but this principle does not apply to mental sanity, for the will was valid if the testator became insane. But the will became Irritum if the testator sustained a capitis diminutio after the date of the will; or if it failed of effect because there was no heres. Thus a prior will which was invalidated by a subsequent will was Ruptum, and if there was no heres under the subsequent will, such will was Irritum.

If a man who had made a will was taken prisoner by the enemy, his will was good jure postliminii if he returned home; if he died in captivity, it was made as valid by the Lex Cornelia as if he had not been a captive.

Though a will might be Ruptum or Irritum by the Jus Civile, it was not always without effect; for the Bonorum Possessio secundum tabulas might be had by the scriptus heres, if the will was witnessed by seven witnesses, and if the testator had the testamentificatio. The distinction between the case of a will which was invalid Jure Civili for want of due forms, and one which was invalid for want of legal capacity to dispose of property by will was well recognized in the time of Cicero. (Top. 11.) A will also became Ruptum by adgnatio, that is, if a suus heres was born after the making of the will who was not either instituted heres or exheredated, as the law required. A quasi adgnatio also arose by adoption, or by the in manum conventio, or by succession to the place of a suus heres, as in the instance of a grandson becoming a suus heres in consequence of the death or the emancipation of a son: a will also became ruptum by the manumission of a son, that is, where the son after a first and second mancipation returned into the power of his father. [EMANCIPATIO.]

A testament was called Inofficiosum which was made in legal form, "sed non ex officio pietatis." For instance, if a man had exheredated his own children, or passed over his parents, or brothers or sisters, the will was in form a good will, but if there was no sufficient reason for this exheredation

or praeterition, the persons aggrieved might have an Inofficiosi querela. The ground of the complaint was the allegation that the testator was "non sanae mentis," so as to have capacity to make a will. It was not alleged that he was Furiosus or Demens, for these were technical words which implied complete legal incapacity. The distinction was a fine one, and worthy of the subtlety of the Jurists, to whom it may be presumed to owe its origin. By the legislation of Justinian no person could maintain a Querela inofficiosi beyond the degree of brothers and sisters; and brothers and sisters could only maintain their claim against "scripti heredes" who were "turpes personae." The complaint also could only be maintained in cases where the complaining parties had no other right or means of redress. If any portion, however small, was left by the will to the complaining party, he could not maintain a Querela inofficiosi, and he was only intitled to so much as would make up his proper share. If the iudex declared the testamentum to be Inofficiosum, it was rescinded; but if there were several heredes, the testament would only be rescinded as to him or them against whose institution the Iudex had pronounced. The portion of an hereditas which might be claimed by the Querela inofficiosi was one-fourth, which was divided among the claimants pro rata. (Plin. Ep. v. 1; Inst. 2. tit. 18; Dig. 5. tit. 2, De Inofficioso Testamento.)

The Querela Inofficiosi is explained by Savigny with his usual perspicuity (*System*, &c. vol. ii. p. 127). When a testator passed over in his will any of his nearest kinsfolks, who in the case of intestacy would be his heredes, this gave rise to the opinion that the person thus passed over had merited this mark of the testator's disapprobation. If this opinion was unfounded, the testator had done an unmerited injury to the person, and his remedy was by getting the will set aside, as made under the influence of passion. If the will was set aside, the testator was thereby declared to have died intestate, and the complainant obtained the hereditas which was the immediate object of the Querela, or his share of it. But the ultimate object of the Querela was the public re-establishment of the injured honour of the complainant, who in this action appeared in a hostile position with respect to the Testator who had brought his character in question. Consequently this action had for its ultimate object Vindicta, and the peculiarity of the action consisted in the difference between this ultimate object of the action and the immediate object of it (property), which was merely a means to the ultimate object. [VINDICTA.]

There is no evidence to show when the Querela Inofficiosi was introduced as a mode of setting aside a will. The phrase Testamentum Inofficiosum occurs in Cicero, and in Quintilian (*Inst. Or.* x. 2).

Codicilli were an informal will: they may be defined to be a testamentary disposition of such a kind which does not allow any direct universal succession, and, consequently, neither the direct appointment nor exheredation of a heres, even though the codicilli are confirmed by a testament; but he who was appointed heres by a testament, might be requested by codicilli to give the hereditas to another altogether or in part, even though the codicilli were not confirmed by a Testament. A legacy could not be given by codicilli,

unless the codicilli were confirmed by a will; and this must be the case to which Pliny refers (*Ep.* ii. 16). Aclianus had made Pliny "heres ex parte," but he had also made codicilli in his own handwriting, which as Pliny alleges were void (*pro non scriptis habendi*), because they were not confirmed by the will. Now, as already observed, it appears from Gaius (ii. 278), that a person who was appointed heres by a will, might be required by codicilli to give the whole hereditas or a part to another, even though the codicilli were not confirmed by a will. But Pliny is speaking of codicilli which were void for want of a testamentary confirmation; and this, as we learn from Gaius, is the case of a legacy given by codicilli which have not been confirmed by a will. This confirmation might be either prospective or retrospective (*si in testamento caverit testator, ut quidquid in codicillis scripserit, id ratum sit*, Gaius, ii. 270; *quos sociissimos fecero*, Dig. 29. tit. 7. s. 8). This passage of Pliny as to the confirmation of codicilli by a testament, has sometimes been misunderstood. It is stated, (Dig. 29. tit. 7. s. 8), "Confiuntur codicilli quatuor modis: aut enim in futurum confirmantur aut in praeteritum, aut per fideicommissum testamento facto aut sine testamento." These four modes are referred to in Gaius: the first two are contained in the words above quoted, *Si in testamento, &c.*: the third is the case of the heres institutus being required to give the hereditas to another person by codicilli non confirmati; and the fourth is the case of a fideicommissum given by codicilli of a person who made no other testamentary disposition. It was a rule of law that codicilli, when duly made, were to be considered (except in a few cases) as incorporated in the will at the time when the will was made, a principle which led to various legal conclusions, which the Roman jurists deduced with their usual precision. (Dig. 27. tit. 7. s. 2.)

Originally there was probably no particular form required for codicilli; but there must have been evidence of their containing the testator's intention. Subsequently witnesses were required and five witnesses were sufficient for codicilli made in writing, if the witnesses subscribed their names to the codicilli. (Cod. 6. tit. 36.) But a man could without writing and in the presence of five witnesses impose a fideicommissum on his heres. A testament which was defective as such, might be effectual as codicilli. The power to make codicilli was the same as the power to make a testament (Dig. 29. tit. 7. *De Jure Codicillorum*; Inst. 2. tit. 25.)

The subject of Roman Testaments can only be satisfactorily expounded in a large treatise, and it would require to be treated historically. The preceding sketch may be useful, and generally true, and it affects to be nothing more. (Gaius, ii. 101—108; Ulp. *Frag.* xx.; Inst. 2. tit. 10, &c.; Dig. 28. tit. 1; Cod. 6. tit. 23; Vangerow, *Pandekten*, &c. ii. § 427, &c.) [G.L.]

TESTIS, a witness. 1. GREEK. [ΜΑΡΤΥΡΙΑ.] 2. ROMAN. [JUSJURANDUM.]

TESTUDO (χελών), a tortoise, was the nemo given to several other objects.

1. To the Lyra, because it was sometimes made of a tortoise-shell. [LYRA.]

2. To an arched or vaulted roof. (Virg. *Aen.* i. 505; Cic. *Brut.* 22.) [TEMPLUM, p. 1112, a.] Thus in a Roman house, when the Cavum Aedium was roofed all over and had no opening or com-

pluvium in the centre, the Cavum Aedium was called Testudo. (Varr. *L. L.* v. 161, ed. Müller.) [Domus, p. 427, b.]

3. To a military machine moving upon wheels and roofed over, used in besieging cities, under which the soldiers worked in undermining the walls or otherwise destroying them. (Caes. *B. G.* v. 42, 43, *B. C.* ii. 2.) It was usually covered with raw hides or other materials which could not easily be set on fire. The battering-ram [ARIES] was frequently placed under a testudo of this kind, which was then called *Testudo Arietaria*. (Vitruv. x. 19. p. 322, Bip.) Vitruvius also mentions and explains the construction of several other military machines to which the name of Testudines was given (x. 20, 21; compare Polyb. ix. 41).

4. The name of Testudo was also applied to the covering made by a close body of soldiers who placed their shields over their heads to secure themselves against the darts of the enemy. The shields fitted so closely together as to present one unbroken surface without any interstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them. (Dion Cass. xlix. 30.) A testudo was formed (*testudinem facere*) either in battle to ward off the arrows and other missiles of the enemy, or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking them. (Dion Cass. *l. c.*; Liv. x. 43; Caes. *B. G.* ii. 6; Sall. *Jug.* 94; see cut annexed, taken

from the Antonine column.) Sometimes the shields were disposed in such a way as to make the testudo slope. The soldiers in the first line stood upright, those in the second stooped a little, and each line successively was a little lower than the preceding down to the last, where the soldiers rested on one knee. Such a disposition of the shields was called *Fastigata Testudo*, on account of their sloping like the roof of a building. The advantages of this plan were obvious: the stones and missiles thrown upon the shields rolled off them like water from a roof; besides which, other soldiers frequently advanced upon them to attack the enemy upon the walls. The Romans were accus-

tomed to form this kind of testudo, as an exercise, in the games of the Circus. (Liv. xlv. 9; Polyb. xxviii. 12.)

TETRADRACHMON. [DRACHMA.]

TETRARCHA or TETRARCHES (τετραρχος). This word was originally used, according to its etymological meaning, to signify the governor of the fourth part of a country (*τετραρχία* or *τετραρχία*). We have an example in the ancient division of Thessaly into four tetrarchies, which was revived by Philip. (Harpocrat. s. v. *Tetrapachia*: Strabo, ix. p. 430; Demosth. *Philipp.* ii. p. 117; Eurip. *Alcest.* 1154; Thirlwall's *Greece*, vi. pp. 13, 14.) [TAGUS.] Each of the three Gallic tribes which settled in Galatia was divided into four tetrarchies, each ruled by a tetrarch. (Strabo, xii. pp. 566, 567; Plin. *H. N.* v. 42.) This arrangement subsisted till the latter times of the Roman republic (Appian. *Mithrid.* 46, *Syr.* 50, *Bell. Civ.* iv. 88), but at last the twelve tetrarchs of Gallograecia were reduced to one, namely Deiotarus. (Liv. *Epit.* xciv.; Cic. *pro Deiot.* 15; Hirtius, *de Bell. Alas.* 67.) Some of the tribes of Syria were ruled by tetrarchs, and several of the princes of the house of Herod ruled in Palestine with this title. (Plin. *H. N.* v. 16, 19; Joseph. *Antiq.* xiv. 13. § 1, xvii. 8. § 1, xi. 4. § 18, xvii. 11. § 1, xi. 2. § 1, *Vit.* 11.) Niebuhr (*Hist. of Rome*, ii. p. 135) remarks that the tetrarchs in Syria were semindars, who occupied the rank of sovereigns, in the same way as the semindars of Bengal succeeded under Lord Cornwallis in getting themselves recognised as dependent princes and absolute proprietors of the soil.

In the later period of the republic and under the empire, the Romans seem to have used the title (as also those of *ἀριστοκράτης* and *φύλαρχος*) to designate those tributary princes who were not of sufficient importance to be called kings. (Compare Lucan. vii. 227; Sallust. *Cath.* 20; Cic. *pro Mil.* 28, in *Vatin.* 12; Horat. *Sat.* i. 3. 12; Vell. Patern. ii. 51; Tacit. *Annal.* xv. 25.) [P. S.]

TETRASTYLOS. [TEMPLUM.]

TETROBOLUS. [DRACHMA.]

TETRARACONTA, HOI (οἱ τετταράκοντα), the Forty, were certain officers chosen by lot, who made regular circuits through the demi of Attica, whence they are called *δικασταὶ κατὰ δήμους*, to decide all cases of *αἰκία* and *τὰ περὶ τῶν βιαιῶν*, and also all other private causes, where the matter in dispute was not above the value of ten drachmae. Their number was originally thirty, but was increased to forty after the expulsion of the thirty tyrants, and the restoration of the democracy by Thrasybulus, in consequence, it is said, of the hatred of the Athenians to the number of thirty. They differed from other *δικασταί*, inasmuch as they acted as *εὐαγγεῖς*, as well as decided causes; that is, they received the accusation, drew up the indictment, and attended to all that was understood in Athenian law by the *ἡγεμονία τοῦ δικαστηρίου*. They consequently may be classed among the regular magistrates of the state. (Pollux, viii. 40; Harpocrat. s. v. *Κατὰ δήμους δικαστῆς*: Rhetor. *Lex.* 310. 21; Demosth. *c. Timocr.* p. 785. 11, *c. Pasion.* p. 976. 10; Schubert, *De Aedil.* pp. 96—98; Meier, *Att. Proc.* pp. 77—82; Schömann, *Ant. Jur. Publ. Graec.* p. 267. 10.)

TEXTOR, TEXTRINUM. [TELA, p. 1069.]

THALAMITAE, THALAMII (θαλαμίται, θαλάμιοι). [NAVY, p. 788, a.]

THALLOPHORI (Θαλλοφόροι). [PANATHENAEA, p. 857, a.]

THALYSIA (Θάλυσια), a festival celebrated in honour of Dionysus and Demeter (Menand. Rhet. quoted by Meurnius), or according to others of Demeter alone, as it is described by Theocritus in his seventh idyll, and by the grammarians who wrote the arguments to the same. It was held in autumn, after the harvest, to thank the gods for the benefits they had conferred upon men. (Spanheim ad Callimach. hymn. in Cer. 20 and 137; Wüstemann ad Theocrit. Idyll. vii. 3.) [L.S.]

THARGELIA (Θαργήλια), a festival celebrated at Athens on the 6th and 7th of Thargelion in honour of Apollo and Artemis (Etymol. M.; Suidas, s. v. Θαργήλια), or according to the Scholiast on Aristophanes (Eqn. 1405) in honour of Helios and the Horae; the latter statement however is in substance the same as the former. The Apollo who was honoured by this festival was the Delian Apollo. (Athen. x. p. 424.)

The real festival, or the Thargelia in a narrower sense of the word, appears to have taken place on the 7th, and on the preceding day the city of Athens or rather its inhabitants were purified. (Plut. Symp. viii. 1; Diog. Laërt. ii. 44; Harpocrat. s. v. Φαρμακίς.) The manner in which this purification was effected is very extraordinary and certainly a remnant of very ancient rites, for two persons were put to death on that day, and the one died on behalf of the men and the other on behalf of the women of Athens. The name by which these victims were designated was *φάρμακοι*: according to some accounts both of them were men, but according to others the one dying on behalf of the women was a woman and the other a man. (Hezych. s. v. Φαρμακοί.) On the day when the sacrifice was to be performed the victims were led out of the city to a place near the sea, with the accompaniment of a peculiar melody, called *καπὴνός νόμος*, played on the flute. (Hezych. s. v.) The neck of the one who died for the men was surrounded with a garland of black figs, that of the other with a garland of white ones; and while they were proceeding to the place of their destiny they were beaten with rods of fig-wood, and figs and other things were thrown at them. Cheese, figs, and cake were put into their hands that they might eat them. They were at last burnt on a funeral pile made of wild fig-wood, and their ashes were thrown into the sea and scattered to the winds. (Tzetzes, *Chil.* v. 25.) Some writers maintain from a passage of Ammonius (*de Different. Vocab.* p. 142, ed. Valck.) that they were thrown into the sea alive, but this passage leaves the matter uncertain. We are not informed whether this expiatory and purifying sacrifice was offered regularly every year, but from the name of the victims (*φάρμακοι*) as well as from the whole account of Tzetzes, which is founded on good authorities, it appears highly probable that this sacrifice only took place in case of a heavy calamity having befallen the city (*ποσειδώνος τῆς πόλεως*), such as the plague, a famine, &c. What persons were chosen as victims on such occasions is not mentioned, and we only learn from Suidas (s. v. Φαρμακοί) that they were kept at the public expense (*δημοσίῳ τρεφόμενοι*). But they were in all probability criminals sentenced to death, and who were kept by the state from the time of their condemnation to be sacrificed at the Thargelia. In

the earlier times however they were not criminals, but either cripples (Tzetzes, l. c.; Schol. ad Aristoph. *Ran.* 733), or persons who offered to die voluntarily for the good of their country. (Athen. ix. p. 370; Suidas, s. v. Παθένοι.)

The second day of the Thargelia was solemnized with a procession and an agon which consisted of a cyclic chorus performed by men at the expense of a choragus. (Lysias, *de Muner. accept.* p. 255; Antiphon, *de Chorest.* c. 11; Demosth. in *Mid.* p. 517.) The prize of the victor in this agon was a tripod which he had to dedicate in the temple of Apollo which had been built by Peisistratus. (Suidas, s. v. Πύθιον.) On this day it was customary for persons who were adopted into a family to be solemnly registered and received into the gens and the phratry of the adoptive parents. This solemnity was the same as that of registering one's own children at the apaturia. (Isaeus, *de Apollod. hered.* c. 15, *de Aristarch. hered.* c. 8.) [ADOTTIO (GREEK).]

Respecting the origin of the Thargelia there are two accounts. According to Istrus (*ap. Phot. Lex.* p. 467; Etymol. M., and Harpocrat. s. v. Φαρμακίς) the *φάρμακοι* derived their name from one Pharmacus, who having stolen the sacred phials of Apollo and being caught in the act by the men of Achilles, was stoned to death, and this event was commemorated by the awful sacrifice at the Thargelia. Helladius (p. 534. 3), on the other hand, states that at first these expiatory sacrifices were offered for the purpose of purifying the city of contagious diseases, as the Athenians after the death of the Cretan Androgeus were visited by the plague. A similar festival, probably an imitation of the Thargelia, was celebrated at Massilia (Petron. 141.) (See Meurnius, *Graecia Feriata*, s. v. Θαργήλια; Bode, *Gesch. der lyrisch. Dichtkunst der Hellen.* i. p. 173, &c., where an account is also given of the *καπὴνός νόμος*; K. F. Hermann, *Handb. der Göttend. Alterth.* § 60, n. 4. &c.) [L.S.]

THEATRUM (Θέατρον). The Athenians before the time of Aeschylus had only a wooden scaffolding on which their dramas were performed. Such a wooden theatre was only erected for the time of the Dionysiac festivals, and was afterwards pulled down. The first drama that Aeschylus brought upon the stage was performed upon such a wooden scaffold, and it is recorded as a singular and ominous coincidence that on that occasion (500 B. C.) the scaffolding broke down. To prevent the recurrence of such an accident the building of a stone theatre was forthwith commenced on the south-eastern descent of the acropolis, in the Lenaee; for it should be observed that throughout Greece theatres were always built upon eminences, or on the sloping side of a hill. The new Athenian theatre was built on a very large scale, and appears to have been constructed with great skill in regard to its acoustic and perspective arrangements, but the name of the architect is not known. It is highly probable that dramas were performed in this new theatre as soon as it was practicable, and before it was completely finished, which did not take place till about B. C. 340, unless we adopt the untenable supposition that the completion of the Attic theatre at this time refers to a second theatre. (Paus. i. 29. § 16; Plut. *Vit. X. Orat.* pp. 841, c. 852, c.) During this long interval of forty Olympiads theatres were erected in all parts of Greece and Asia Minor, although Athens was the centre

of the Greek drama and the only place which produced great masterworks in this department of literature. It should also be borne in mind that theatres are mentioned in several parts of Greece where the worship of Dionysus and the drama connected with it did not exist, so that these buildings were devoted to other public exhibitions. Thus at Athens itself there were in later times, besides the theatre in the Lenææ, two others, viz. the Ἀγρίππειον and the ἐπὶ Ῥηγίλλῃ θέατρον, which were not destined for dramatic performances, but were only places in which the sophists delivered their declamations. At Sparta there was a theatre of white marble (Paus. iii. 14. § 1) in which assemblies of the people were held, choral dances performed, and the like (Athen. iv. p. 139, xiv. p. 631), for the festive joy of Dionysus and the regular drama were foreign to the Spartans. All the theatres however which were constructed in Greece were probably built after the model of that of Athens, and with slight deviations and modifications they all resembled one another in the main points, as is seen in the numerous ruins of theatres in various parts of Greece, Asia Minor, and Sicily. Some of them were of prodigious dimensions. The theatre at Epidaurus in the grove of Asclepius, of which considerable ruins are still extant, excelled in beauty the Roman theatres (Paus. ii. 27. § 5), and in size even that of Mega-

lopolis, which was reckoned the largest theatre in Greece. (Paus. viii. 32. § 1.) The great number of ruins of theatres may enable us to form an idea of the partiality of the Greeks for such magnificent buildings, and of their gigantic dimensions. The ruins of the theatre at Argos enclose a space of 450 feet in diameter; the theatre of Ephesus is even 660 feet in diameter. Upon these ruins see the works of Clarke, Dodwell, Leake, Hughes, Arundell, and the Supplement to Stuart's *Antiquities of Athens*.

The construction of the Greek theatres has been the subject of much discussion and dispute in modern times, and although all the best writers agree on the great divisions of which a theatre consisted, the details are in many cases mere matters of conjecture. The Attic theatre was, like all the Greek theatres, placed in such a manner that the place for the spectators formed the upper or north-western, and the stage with all that belonged to it the south-eastern part, and between these two parts lay the orchestra. We shall consider each of these three divisions separately, together with its parts and subdivisions, referring the reader to the annexed plan which has been made from the remains of Greek theatres still extant, and from a careful examination of the passages in ancient writers which describe the whole or parts of a theatre, especially in Vitruvius and Pollux.

1. The place for the spectators was in a narrower sense of the word called θέατρον. The seats for the spectators, which were in most cases cut into the rock, consisted of rows of benches rising one above another; the rows themselves (a) formed parts (nearly three-fourths) of concentric circles, and were at intervals divided into compartments by one or more broad passages (b) running between them and parallel with the benches. These passages were called διαζώματα, or κατατομαί, Lat. *prosceniones* (Vitruv. v. 3 and 7; Bekker, *Anec-*

dot. p. 270; Pollux, iv. 123; Harpocrat. and Suid. s. v. *Κατατομή*), and when the concourse of people was very great in a theatre, many persons might stand in them. One side of such a passage formed towards the upper rows of benches a wall, in which in some theatres, though perhaps not at Athens, niches were excavated which contained metal vessels (ἡχεία) to increase the sounds coming from the stage and orchestra. (Vitruv. i. 1. § 9, v. 4; Stieglitz, *Archäol. der Baukunst*, &c. ii. 1. p. 150.) Across the rows of benches ran stairs, by which

persons might ascend from the lowest to the highest. But these stairs ran in straight lines only from one praecinctio to another; and the stairs in the next series of rows were just between the two stairs of the lower series of benches. By this course of the stairs the seats were divided into a number of compartments resembling cones from which the tops are cut off; hence they were termed *κεκρίδες*, and in Latin *cunei*. The whole of the place for the spectators (*θέατρον*) was sometimes designated by the name *κόλον*, Latin *cavea*, it being in most cases a real excavation of the rock. Above the highest row of benches there rose a covered portico (*c*), which of course far exceeded in height the opposite buildings by which the stage was surrounded, and appears to have also contributed to increase the acoustic effect. (Apol. *Met.* iii. p. 49, Bip.) The entrances to the seats of the spectators were partly underground, and led to the lowest rows of benches, while the upper rows must have been accessible from above. (Pollux, iv. 123; Athen. xiv. p. 622.)

2. The orchestra (*ὀρχήστρα*) was a circular level space extending in front of the spectators, and somewhat below the lowest row of benches. But it was not a complete circle, one segment of it being appropriated to the stage. The orchestra was the place for the chorus, where it performed its evolutions and dances, for which purpose it was covered with boards. As the chorus was the element out of which the drama arose, so the orchestra was originally the most important part of a theatre: it formed the centre around which all the other parts of the building were grouped. In the centre of the circle of the orchestra was the *θυμέλη*, that is, the altar of Dionysus (*d*), which was of course nearer to the stage than to the seats of the spectators, the distance from which was precisely the length of a radius of the circle. In a wider sense the orchestra also comprised the broad passages (*πάροδοι*, *e*) on each side between the projecting wings of the stage and the seats of the spectators, through which the chorus entered the orchestra. The chorus generally arranged itself in the space between the thymele and the stage. The thymele itself was of a square form, and was used for various purposes, according to the nature of the different plays, such as a funeral monument, an altar, &c. It was made of boards and surrounded on all sides with steps. It thus stood upon a raised platform, which was sometimes occupied by the leader of the chorus, the flute-player, and the rhabdophori. (Müller, *Dissert. on the Eumen. of Aeschyl.* p. 249, &c. transl.) The flute-player as well as the prompter (*ὀνοβολεύς*, *monitor*) were generally placed behind the thymele, so as to face the stage and not to be seen by the spectators. (Plut. *Rei publ. gerend. praec.* p. 813, *e*; Ath. xiv. p. 631.) The orchestra as well as the *θέατρον* lay under the open sky; a roof is nowhere mentioned.

3. The stage. Steps led from each side of the orchestra to the stage, and by them the chorus probably ascended the stage whenever it took a real part in the action itself. The back side of the stage was closed by a wall called the *σκηνή* or *scena*, from which on each side a wing projected which was called the *παρασκήνιον*. The whole depth of the stage was not very great, as it only comprised a segment of the circle of the orchestra. The whole space from the *scena* to the orchestra was termed the *proscenium* (*προσκήνιον*), and was

what we should call the real stage. That part of it which was nearest to the orchestra, and where the actors stood when they spoke was the *λογεῖον*, also called *ἐκρίβας* or *ἐκρίβαντες*, in Latin *palcium*, which was of course raised above the orchestra and probably on a level with the thymele. What the *ὀνοσκήνιον* was is not clear; some think that it was a place to which the actors withdrew when they had acted their parts, others think that it was the same as the *κορίστρα* (Suidas, *s. v.* *Σκηνή*); but as it is stated that the *ὀνοσκήνιον* was adorned with statues, it seems more probable that it was the wall under the *λογεῖον* which faced the orchestra and the spectators. The *σκηνή* or *scena* was, as we have already stated, the wall which closed the stage (*proscenium* and *logaeum*) from behind. It represented a suitable background or the locality in which the action was going on. Before the play began, it was covered with a curtain (*παρεπύκνισμα*, *προσκήνιον*, *ἀλάλα*, Latin *aulaea* or *sparsaria*; Etymol. *M.* *s. v.* *Ἀδλός*: Athen. xiii. p. 587; Pollux, iv. 122.) When the play began this curtain was let down and was rolled upon a roller underneath the stage. The *proscenium* and *logaeum* thus were never concealed from the spectators. As regards the scenery represented on the *σκηνή*, it was different for tragedy, comedy, and the satyric drama, and for each of these kinds of poetry the scenery must have been capable of various modifications according to the character of each individual play; at least that this was the case with the various tragedies, is evident from the scenes described in the tragedies still extant. In the latter however the back-ground (*σκηνή*) in most cases represented the front of a palace with a door in the centre (*i*) which was called the *royal door*. This palace generally consisted of two stories (*διεγρη*, Pollux, iv. 129), and upon its flat roof there appears to have sometimes been some elevated place from which persons might observe what was going on at a distance. (Eurip. *Phoenissae* 88, &c.) The palace presented on each side a projecting wing, each of which had its separate entrance. These wings generally represented the habitations of guests and visitors. All the three doors must have been visible to the spectators. (Vitruv. v. 7.) The protagonists always entered the stage through the middle or royal door, the deuteragonistes and tritagonistes through those on the right and left wings. In tragedies like the Prometheus, the Persians, Philoctetes, Oedipus in Colonus, and others the back-ground did not represent a palace. There are other pieces again in which the *scena* must have been changed in the course of the performance, as in the Eumenides of Aeschylus and the Ajax of Sophocles. The dramas of Euripides required a great variety of scenery; and if in addition to this we recollect that several pieces were played in one day, it is manifest that the mechanical parts of stage performance, at least in the days of Euripides, must have been brought to great perfection. The *scena* in the Satyric drama appears to have always represented a woody district with hills and grottoes; in comedy the *scena* represented, at least in later times, the fronts of private dwellings or the habitations of slaves. (Vitruv. v. 8. § 1; Pollux, iv. 125.) The art of scene-painting must have been applied long before the time of Sophocles, although Aristotle (*Post. iv.* 16) ascribes its introduction to him. [PICTURA, p. 908, b.]

The machines in the Greek theatres were ex-

tremely numerous, but we are in many cases unable to form an exact idea of their nature and their effects. We shall only mention the most important among them. 1. The *περίκτοι* (m) stood near the two side entrances of the scena; their form was that of a prism, and by a single turn they produced a change in the scenery. (Vitruv. v. 7; Pollux, iv. 126.) 2. The *χαράνσιοι κλίμακες*, or the Charonian steps, by which the shades ascended from the lower world upon the stage. (Pollux, iv. 132.) 3. The *μηχανή, κρόδη* or *ἐσθήμα*, a machine by which gods or heroes were represented passing through or floating in the air: hence the proverb, *deus ex machina*. (Pollux, iv. 126, 128, 131; Suidas, s. v. *Ἐσθήμα*; Heaych. s. v. *Κρόδη*.) 4. The *ἐξώστρα* or *ἐκκυκλήμα*. [EXOSTRA.] 5. The *θεολογείον*, an especial elevated place above the scena for the Olympian gods when they had to appear in their full majesty. (Pollux, iv. 130; Phot. *Lex.* p. 597.) 6. The *βροντήιον*, a machine for imitating thunder. It appears to have been placed underneath the stage, and to have consisted of large brazen vessels in which stones were rolled. (Pollux, iv. 130; Suidas, s. v. *Βροντή*; Vitruv. v. 7.) Respecting several other machines of less importance, see Pollux, iv. *περὶ μέρων δέκατον*.

It is impossible to enter here upon the differences, which are presented by many ruins of theatres still extant, from the description we have given above. It is only necessary to mention, that in the theatres of the great cities of the Macedonian time the space between the thymele and the logeum was converted into a lower stage, upon which mimes, musicians, and dancers played, while the ancient stage (proscenium and logeum) remained destined, as before, for the actors in the regular drama. This lower stage was sometimes called thymele or orchestra. (Müller, *Hist. of Greek Lit.* i. p. 299; Donaldson, *The Theatre of the Greeks*.)

The Romans must have become acquainted with the theatres of the Italian Greeks at an early period, whence they erected their own theatres in similar positions upon the sides of hills. This is still clear from the ruins of very ancient theatres at Tusculum and Fesulæ. (Niebuhr, *Hist. of Rome*, iii. p. 364, &c.) The Romans themselves however did not possess a regular stone theatre until a very late period, and although dramatic representations were very popular in earlier times, it appears that a wooden stage was erected when necessary, and was afterwards pulled down again, and the plays of Plautus and Terence were performed on such temporary scaffolding. In the meanwhile many of the neighbouring towns about Rome had their stone theatres, as the introduction of Greek customs and manners was less strongly opposed in them than in the city of Rome itself. Wooden theatres, adorned with the most profuse magnificence, were erected at Rome even during the last period of the republic. The first attempt to build a stone theatre was made a short time before the consulship of P. Cornelius Scipio Nasica. It was sanctioned by the censors, and was advancing towards its completion, when Scipio, in 155 B.C., persuaded the senate to command the building to be pulled down as injurious to public morality. (Liv. *Epit.* 48.) Respecting the magnificent wooden theatre which M. Aemilius Scaurus built in his aedileship, 58 B.C., see Pliny, *H. N.* xxxvi. 24. § 7. Its scena consisted of three stories, and the lowest of them was made of white marble, the middle one of glass, and the

upper one of gilt wood. The cava contained 80,000 spectators. (Comp. Plin. *H. N.* xxxiv. 17.) In 55 B.C. Cn. Pompey built the first stone theatre at Rome near the Campus Martius. It was of great beauty, and is said to have been built after the model of that of Mytilene; it contained 40,000 spectators. (Plin. *H. N.* xxxvi. 24. § 7; compare Drumann, *Gesch. Roms.* iv. p. 520, &c.) C. Curio built in 50 B.C. two magnificent wooden theatres close by one another, which might be changed into one amphitheatre. (Plin. *H. N.* xxxvi. 24. § 8.) After the time of Pompey, however, other stone theatres were erected, as the theatre of Marcellus, which was built by Augustus and called after his nephew Marcellus (Dion Cass. xliii. 49; Plin. *H. N.* xxxvi. 12); and that of Balbus (Plin. *l. c.*), whence Suetonius (*Aug.* 44) uses the expression *per trina theatra*.

The construction of a Roman theatre resembled, on the whole, that of a Greek one. The principal differences are, that the seats of the spectators, which rose in the form of an amphitheatre around the orchestra, did not form more than a semicircle; and that the whole of the orchestra likewise formed only a semicircle, the diameter of which formed the front line of the stage. The Roman orchestra contained no thymele, and was not destined for a chorus, but contained the seats for senators and other distinguished persons, such as foreign ambassadors, which are called "primum subselliorum ordo." In the year 68 B.C. the tribune L. Roscius Otho carried a law which regulated the places in the theatre to be occupied by the different classes of Roman citizens: it enacted that fourteen ordines of benches were to be assigned as seats to the equites. (Liv. *Epit.* 99; Ascon. *ad Cornel.* p. 78, ed. Orelli.) Hence these quatuordecim ordines are sometimes mentioned without any further addition as the honorary seats of the equites. They were undoubtedly close behind the seats of the senators and magistrates, and thus consisted of the rows of benches immediately behind the orchestra. Velleius (ii. 32) and Cicero (*pro Mure.* 19) speak of this law in a manner to lead us to infer that it only restored to the equites a right which they had possessed before. Another part of this law was that spendthrifts and persons reduced in their circumstances (*decoctores*), whether through their own fault or not, and whether they belonged to the senatorial or equestrian order, should no longer occupy the seats assigned to their order, but occupy a separate place set apart for them. (Cic. *Philipp.* ii. 18.) In the reign of Augustus the senate made a decree, that foreign ambassadors should no longer enjoy the privilege mentioned above, as it had sometimes happened that freedmen were sent to Rome as ambassadors. The soldiers also were separated from the people by the same decree; the same was the case with women, prætextati and paedagogi. (Suet. *Aug.* 44.) This separation consisted probably in one or more cunei being assigned to a particular class of persons. The woodcut on the following page contains a probable representation of the plan of a Roman theatre.

For a fuller account of the construction of Greek and Roman theatres see the commentators on Vitruvius (*l. c.*), J. Chr. Genelli, *das Theater zu Athen, hinsichtlich auf Architectur, Scenarie und Darstellungs Kunst überhaupt*, Berlin, 1818, 8vo.; J. C. W. Schneider, *Das Attische Theaterwesen*,

zum bessern Verstande der Griech. Dramatiker; Stieglitz, *Archäologie der Baukunst der Griech. und Römer*; Ferrara, *Storia e descrip. de' princip. teatri ant. e moderni*, Milano, 1830; the Supplement to Stuart's *Antiq. of Athens*. A general outline is also given, by Müller, *Hist. of Gr. Lit.* i. p. 299, &c.; and by Bode, *Gesch. der dramat. Dichtkunst d. Hellen*. i. p. 156, &c.

It remains to speak of a few points respecting the attendance in the Greek theatres. Theatrical representations at Athens began early in the morning, or after breakfast (Aeschin. c. *Ctesiph.* p. 466; Athen. xi. p. 464); and when the concourse of people was expected to be great, persons would even go to occupy their seats in the night. The sun could not be very troublesome to the actors, as they were in a great measure protected by the buildings surrounding the stage, and the spectators protected themselves against it by hats with broad brims. (Suidas, s. v. *Πέρας* and *Ἀπέρων*.) When the weather was fine, especially at the Dionysiac festivals in spring, the people appeared with garlands on their heads; when it was cold, as at the Lenaea in January, they used to wrap themselves up in their cloaks. (Suidas, l. c.) When a storm or a shower of rain came on suddenly, the spectators took refuge in the porticoes behind the stage, or in those above the uppermost row of benches. Those who wished to sit comfortably brought cushions with them. (Aeschin. c. *Ctesiph.* l. c.; Theophr. *Char.* 2.) As it was not unusual for the theatrical performances to last from ten to twelve hours, the spectators required refreshments, and we find that in the intervals between the several plays, they used to take wine and cakes. (Athen. xi. p. 464; Aristot. *Eth. Nicol.* x. 5.)

The whole of the caves in the Attic theatre must have contained about 50,000 spectators. The places for generals, the archons, priests, foreign ambassadors, and other distinguished persons, were in the lowest rows of benches, and nearest to the orchestra (Pollux, iv. 121 viii. 133; Schol. ad

Aristoph. *Equit.* 572), and they appear to have been sometimes covered with a sort of canopy. (Aeschin. l. c.) The rows of benches above them were occupied by the senate of 500, those next in succession by the ephebi, and the rest by the people of Athens. But it would seem that they did not sit indiscriminately, but that the better places were let at a higher price than the others, and that no one had a right to take a place for which he had not paid. (Plat. *Apolog.* p. 26; Aelian. *V. H.* ii. 13; Demosth. in *Mid.* p. 572.) The question, whether in Greece, and more especially at Athens, women were present at the performance of tragedies, is one of those which have given rise to much discussion among modern scholars, as we have scarcely any passage in ancient writers in which the presence of women is stated as a positive fact. But Jacobs (*Vermischte. Schriften*, iv. p. 272), and Passow (in Zimmermann's *Zeitschr. für die Alterth.* 1837. n. 29), have placed it almost beyond a doubt, from the various allusions made by ancient writers, that women were allowed to be present during the performance of tragedies. This opinion is now perfectly confirmed by a passage in Athenaeus (xii. p. 534), which has been quoted by Becker (*Charikles*, ii. p. 560), in corroboration of the conclusion to which the above mentioned writers had come. In this passage we find that at Athens, and at the time of the Peloponnesian war, the spectators in the theatre consisted of men and women. We have, however, on the other hand, every reason to believe that women were not present at comedies, while boys might be present both at tragedy and comedy. (Theophr. *Charact.* 9; Isaeus, *de Circon. hered.* p. 206; Aristoph. *Nub.* 537, &c.; Lucian, *de Gymnast.* 22.) The seats which women occupied in the Greek theatres appear to have been separated from those of the men. (Göttling, in the *Rheinisch. Mus.* 1834. p. 103, &c.)

For the purpose of maintaining order and preventing excesses, the ancients had a sort of theatre-police; the persons who held this office were called

in Greece βαλθφοροι or βαλθφοχοι, and at Rome *Præcones*. (Schol. ad *Aristoph. Paz.* 718.)

Respecting the attendance at the Greek theatres, and the conduct of the people, see a very good dissertation of Becker, in his *Charikles*, ii. pp. 249—278. [L. S.]

THENSAE or TENSAE (for the orthography and etymology of the word are alike doubtful, although the oldest MSS. generally omit the aspirate) were highly ornamented sacred vehicles, which, in the solemn pomp of the Circensian games, conveyed the statues of certain deities with all their decorations to the pulvinaria, and after the sports were over bore them back to their shrines. (Cic. in *Verr.* ii. 1, 59, and note of Pseudo-Ascon. iii. 27, v. 72; Serv. ad *Virg. Aen.* i. 21; Festus, s. v.; Diomedes, i. p. 372, ed. Putsch.; Dion Cass. xlvii. 40; Tertull. *de Spect.* 7.) We are ignorant of their precise form; for although we find several representations upon ancient medals and other works of art, of gods seated in cars, and especially of the sun-chariot of Elagabalus (Herodian. v. 6; see Vaillant, *Numismata Imp.* vol. ii. p. 269; Ginzrot, *Die Wagen und Fahrzeuge*, &c. tab. xlii. fig. 6); yet we have no means of deciding which, if any, of these are tensae. We know that they were drawn by horses (Plut. *Coriolan.* 25, who calls them *θήσας*), and escorted (*deducere*) by the chief senators in robes of state, who, along with pueri patrimi [PATRIMI], laid hold of the bridles and traces, or perhaps assisted to drag the carriage (for *ducere* is used as well as *deducere*, Liv. v. 41), by means of thongs attached for the purpose (and hence the proposed derivation from *tendo*). So sacred was this duty considered, that Augustus, when labouring under sickness, deemed it necessary to accompany the tensae in a litter. If one of the horses knocked up or the driver took the reins in his left hand, it was necessary to recommence the procession, and for one of the attendant boys to let go the thong or to stumble was profanation. (Liv. v. 41; Plut. *L. c.*; Ascon. *l. c.*; Arnob. *adv. gent.* iv. 31; compared with the oration of *Harusp. resp.* 11; Tertull. *de cor. mil.* 13, and *de Spectac.* 7; Suet. *Octav.* 43.)

The only gods distinctly named as carried in tensae are Jupiter and Minerva (Suet. *Vespas.* 5; Dion Cass. xlvii. 40, l. 8, lxvi. 1), to which number Mars is usually added on the authority of Dion Cassius (lxxviii. 8), but, in the passage referred to, he merely states, that at the Circensian games celebrated A. D. 216, the statue of Mars, which was in the procession (*πομπήιον*), fell down, and it is very remarkable that Dionysius (vii. 72), in his minute description of the *Pompa Circensis*, takes no notice whatever of the Tensae, but represents the statues of the gods as carried on men's shoulders, i. e. on *fercula*. That a considerable number of deities however received this honour seems probable from the expression of Cicero, in his solemn appeal at the close of the last Verriene oration, "omnesque dī, qui vehiculis tesarum solennes coetus ludorum initiis;" though we cannot determine who these gods were. We frequently hear indeed of the chariot of Juno (*Virg. Georg.* iii. 531), of Cybele (*Aen.* vi. 784), and many others, but as these are not mentioned in connexion with the *Pompa Circensis*, there is no evidence that they were tensae. Among the impious flatteries heaped on Caesar, it was decreed that his ivory statue should accompany the images

of the gods to the circus in a complete chariot (*ἀγυα δλον*, that is, a *tensa*, in opposition to a mere *ferculum*), and that this chariot should stand in the Capitol immediately opposite to that of Jupiter. (Dion Cass. xliii. 15, 21, 45, xlv. 6.)

Similar homage was paid upon high festivals to the images of their gods by other ancient nations. Thus, in the curious ceremonies performed at Papremis connected with the worship of the Egyptian deity, whom Herodotus (ii. 63) imagined to be identical with Ares, the statue, enshrined in a chapel made of gilded wood, was dragged in a four-wheeled car by a body of priests. So also, in the account given by Athenæus (v. c. 27, &c.), after Callixenes of Rhodes, of the gorgeous pageant at Alexandria, during the reign of Ptolemy Philadelphus, we read of a car of Bacchus of prodigious size, most costly materials, and most elaborate workmanship, which was dragged by 180 men, and to such customs we may find a parallel in modern times in the usages which prevail at the festival of S. Agatha at Catania, and S. Rosolia at Palermo.

(Scheffer *de Re vehiculari*, c. 24; Ginzrot, *Die Wagen und Fahrzeuge der Griechen und Römer*, c. 55; but the latter author, both here and elsewhere, allows his imagination to carry him farther than his authorities warrant.) [W. R.]

THEODOSIA'NUS CODEX. [CODEX THEODOSIANUS.]

THEOPHANIA (*Θεοφάνια*), a festival celebrated at Delphi, on the occasion of which the Delphians filed the huge silver crater which had been presented to the Delphic god by Croesus. (Herod. i. 51.) Valckenæer on Herodotus (*l. c.*) thought that the reading was corrupt, and that *Θεοφάνια* should be read, as this festival is well known to have been celebrated by the Delphians. (Plut. *de his qui vero a num. pun.* p. 557, f; Polemon, *op. Athem.* ix. p. 372.) But both festivals are mentioned together by Pollux (i. 34), and Philostratus (*Vit. Apollon.* iv. 31). The Theophania were intended as a celebration of the return of Apollo to Delphi from which he was believed to be absent during the winter months. An agon called theoxenia was also celebrated at Pellene in Achaia in honour of Hermes and Apollo. (Schol. ad *Pind. Ol.* vii. 156, ix. 146.) But no particulars of any of these festivals are known. [L. S.]

THEORI (*Θεοποι*), were persons sent on special missions (*Θεοποιαι*) to perform some religious duty, as to consult an oracle, or to offer a sacrifice, on behalf of the state. It is thus explained by the grammarians: *Θεοπόροι, ἢ οἱ θεόμενοι, ἢ οἱ φροντιστὲς περὶ τὰ θεῖα οἱ εἰς θεῶν πεμπόμενοι καὶ ἱερὰς καὶ πανηγύρεις καὶ χρηστήρια*. (Harpocr. Suidas and Hesych. s. v. *Θεοποι*: compare Pollux, ii. 55; Sophocl. *Oedip. Tyr.* 114.) There were in some of the Dorian states, as the Aeginetana, Troezeniana, Messeniana, and Mantinea, official priests called *Θεοποι*, whose duty it was to consult oracles, interpret the responses, &c., as among the Spartans there were men called Pythii, chosen by the kings to consult the oracle at Delphi. (Schömann, *Ant. Jur. publ. Gr.* pp. 130, 395.) At Athens there were no official persons called *Θεοποι*, but the name was given to those citizens who were appointed from time to time to conduct religious embassies to various places; of which the most important were those that were sent to the Olympian, Pythian, Nemean, and Isthmian games, those

that went to consult the God at Delphi, and those that led the solemn procession to Delos, where the Athenians established a quadriennial festival, in revival of the ancient Ionian one, of which Homer speaks. (Thucyd. iii. 104.) The expense of these embassies was defrayed partly by the state and partly by wealthy citizens, to whom the management of them was entrusted, called ἀρχιθέσποι, chiefs of the embassy. This was a sort of λειτουργία, and frequently a very costly one; as the chief conductor represented the state, and was expected to appear with a suitable degree of splendour; for instance, to wear a golden crown, to drive into the city with a handsome chariot, retinue, &c. Nicias, who was very rich, is reported to have incurred great expenses on his embassy to Delos, beyond what was required of him; and Alcibiades astonished all the spectators at Olympia by the magnificence of his horses, chariots, &c., and the profuseness of his expenditure. (Böckh, *Publ. Econ. of Athens*, p. 214, &c. 2d ed.; Thirlwall, *Hist. of Greece*, vol. iii. pp. 217, 330.) [DELIA.]

The Salaminian, or Delian, ship was also called *Δωπλις ναῦς*, and was principally used for conveying embassies to Delos, though, like the Paralus, it was employed on other expeditions besides. (Suidas, l. c.; Böckh, *Id.* p. 240.) [C. R. K.]

THEORICA (Δωπλία). [THEORI.]

THEORICA (Δωπλία). Under this name at Athens were comprised the monies expended on festivals, sacrifices, and public entertainments of various kinds; and also monies distributed among the people in the shape of largesses from the state.

There were, according to Xenophon, more festivals at Athens than in all the rest of Greece. (*De Rep. Ath.* iii. 8.) Besides those which were open to the whole body of the people, there were many confined to the members of each tribe, deme, and house. These last were provided for out of the private funds of the community who celebrated them. At the most important of the public festivals, such as the Dionysia, Panathenaea, Eleusinia, Thargelia, and some others, there were not only sacrifices, but processions, theatrical exhibitions, gymnastic contests, and games, celebrated with great splendour and at a great expense. A portion of the expense was defrayed by the individuals, upon whom the burden of λειτουργία devolved; but a considerable, and perhaps the larger, part was defrayed by the public treasury. Demosthenes complains, that more money was spent on a single Panathenaeic or Dionysiac festival than on any military expedition. (*Philipp.* i. 50.) The religious embassies to Delos and other places, and especially those to the Olympian, Nemean, Isthmian, and Pythian games, drew largely upon the public exchequer, though a part of the cost fell upon the wealthier citizens who conducted them. (Schömann, *Ant. Jur. publ. Gr.* p. 305.)

The largesses distributed among the people had their origin at an early period, and in a measure apparently harmless, though from a small beginning they afterwards rose to a height most injurious to the commonwealth. The Attic drama used to be performed in a wooden theatre, and the entrance was free to all citizens who chose to go. It was found, however, that the crushing to get in led to much confusion and even danger. On one occasion, about B. C. 500, the scaffolding which supported the roof fell in, and caused great alarm.

It was then determined that the entrance should no longer be gratuitous. The fee for a place was fixed at two obols, which was paid to the lessee of the theatre, (called *θεατρώνης*, *θεατρούλας*, or *ἀρχιτέκτων*), who undertook to keep it in repair, and constantly ready for use, on condition of being allowed to receive the profits. This payment continued to be exacted after the stone theatre was built. Pericles, to relieve the poorer classes, passed a law which enabled them to receive the price of admission from the state; after which all those citizens who were too poor to pay for their places applied for the money in the public assembly, which was then frequently held in the theatre. (Schömann, *Id.* p. 219.) In process of time this donation was extended to other entertainments besides theatrical ones; the sum of two obols being given to each citizen who attended; if the festival lasted two days, four obols; and if three, six obols; but not beyond. Hence all theoric largesses received the name of *δωρεῖα*. The sums thus given varied at different times, and of course depended on the state of the public exchequer. These distributions of money, like those of grain and flour, were called *διανομαί*, or *διαδόσεις*. They were often made at the Dionysia, when the allies were present, and saw the surplus of their tribute distributed from the orchestra. The appetite of the people for largesses grew by encouragement, stimulated from time to time by designing demagogues; and in the time of Demosthenes they seem not to have been confined to the poorer classes. (*Philipp.* iv. 141.) Böckh calculates that from 25 to 30 talents were spent upon them annually. (*Publ. Econ. of Athens*, p. 224, 2d ed.)

So large an expenditure of the public funds upon shows and amusements absorbed the resources, which were demanded for services of a more important nature. By the ancient law the whole surplus of the annual revenue which remained after the expense of the civil administration (*τὰ περίλοιπα χρήματα τῆς διοικήσεως*) was to be carried to the military fund, and applied to the defence of the commonwealth. Since the time of Pericles various demagogues had sprung up, who induced the people to divert all that could be spared from the other branches of civil expenditure into the Theoric fund, which at length swallowed up the whole surplus, and the supplies needed for the purpose of war or defence were left to depend upon the extraordinary contributions, or property-tax (*εὐφοραί*). An attempt was made by the demagogue Eubulus, of whom Theopompus says, that *τὰς προσόδους καταμισθοποιῶν διερέλει* (Athen. iv. p. 166), to perpetuate this system. He passed a law, which made it a capital offence to propose that the Theoric fund should be applied to military service. In A. C. 353 Apollodorus carried a decree empowering the people to determine whether the surplus revenue might be applied to the purpose of war; for which he was indicted by a *γραφὴ παρανόμων*, convicted, and fined; and the decree was annulled, as a matter of course. (Demosth. c. *Neacr.* 1346—1348.) The law of Eubulus was a source of great embarrassment to Demosthenes, in the prosecutions of his schemes for the national defence; and he seems at last, but not before A. C. 339, to have succeeded in repealing it. (Harpocr. and Suidas, s. v. *θεσπιάς* and *Εὐβούλος*; Böckh, *Id.* i. pp. 219—223; Schömann, *Id.* p. 307.)

In the earlier times there was no person, or board of persons, expressly appointed to manage the Theoric fund. The money thus appropriated was disbursed by the Hellenotamiae. After the anarchy, the largess system having been restored by Agyrrihus, a board of managers was appointed, who are called ἀρχὴ ἐπὶ τῷ θεωρικῷ, οἱ ἐπὶ τὸ θεωρικὸν τεταγμένοι or χειροτονημένοι, θεωρικὴ ἀρχή, &c. They were elected by show of hands at the period of the great Dionysia, one from each tribe. In the time of Eubulus many other branches of the administration were placed under the control of this board; as the management of the civil expenditure, the office of the Apodectae, the building of docks, arsenals, streets, &c. This was dictated by an anxiety on the part of the people that no part of the revenue should be improperly diverted from the Theoric fund, which they thought would be prevented by increasing the powers of its managers. But these extraordinary powers appear not to have been of long continuance. (Aeschin. c. Ctesiph. 57, ed. Steph.; Böckh, p. 170, &c.; Schömann, *Jd.* 320; Wachsmuth, *Hellen. Alt.* vol. ii. p. i. pp. 124—127, 1st ed.) [C. R. K.]

THEOXENIA. [THEOPHANIA.]

THERAPON (θεράπων). [HELOTES.]

THERMAE. [BALNEAE, p. 193, b.]

THERMOPOLIUM. [CALIDA; CAUPONA.]

THESAURUS (θησαυρός), a treasure-house. That buildings of this description were required, especially by kings and states, in the earliest period of civilization, is self-evident; and tradition points to subterranean buildings in Greece, of unknown antiquity and of peculiar formation, as having been erected during the heroic period, for the purpose of preserving precious metals, arms, and other pro-

perty (κεμήλια). Such are the treasury of Minyas, at Orchomenus, described by Pausanias (ix. 38), and of which some remains still exist (Doddwell, vol. i. p. 227), and those of Atreus and his sons at Mycenae (Paus. ii. 16), the chief one of which, the so-called Treasury of Atreus, still exists almost in a perfect state. The preceding woodcut shows a ground-plan of the building, and a section of the principal chamber, which is about 48 feet in diameter, and 50 high, and is vaulted over in the manner described under Arcus, p. 128, a. The remains of similar structures have been found at various places in Greece and Italy.

It is, however, very questionable whether these edifices were treasuries at all: some of the best archaeologists maintain that they were tombs. The question cannot be entered into here: a full discussion of it, with a description of the buildings themselves, will be found in the works now quoted. (Müller, *Archiol. d. Kunst*, §§ 48, 291, Welcker's edition; Welcker's review of Müller's *Archäologie*, in the *Rhein. Mus.* for 1834, vol. ii. pp. 469, foll.; Col. Mure, *Ueber die Königl. Grabmäler des heroischen Zeitalters*, in the *Rhein. Mus.* for 1838, vol. vi. pp. 240, foll.; we are not aware whether this Essay has been published in English; Abeken, *Mittelitalien*, pp. 234, foll.)

In the historical times, the public treasury was either in a building attached to the *agora*, or in the *opisthodome* of some temple. (Hirt, *Lehre d. Gebäude*, pp. 189, 190.)

Respecting the public treasury at Rome, see AERARIUM. [P. S.]

THESEIA (θησεία), a festival celebrated by the Athenians in honour of their national hero Theseus (Aristoph. *Plut.* 622, &c. with the Schol. *Thesmoph.* 841; Suidas, s. v. *Θησεϊοίς*), whom they believed to have been the author of their democratical form of government. In consequence of this belief donations of bread and meat were given to the poor people at the Theseia, which thus was for them a feast at which they felt no want and might fancy themselves equal to the wealthiest citizens. We learn from Gellius (xv. 20. § 3) that a contest also was held on this occasion, but we are not informed in what it consisted. The day on which this festival was held was the eighth of every month (ὀγδόη), but more especially the eighth of Pyanepsion, because it was believed that Theseus returned from Crete on that day. (Schol. ad Aristoph. l. c.; Plut. *Thes.* 36.) Hence the festival was sometimes called ὀγδόδιον. (Hesych. s. v.) From the passages above referred to, compared with Diodorus (v. 52), it appears highly probable that the festival of the Theseia was not instituted till a. c. 469, when Cimon brought the remains of Theseus from Scyros to Athens.

(Meursius, *Græc. Fer. s. v. Θησεία, Theseus*, p. 133; Corini, *Fast. Att.* ii. p. 330; Ideler, *Hist. Untersuchungen über die Astronom. Beobachtung der Alten*, p. 383, &c.) [L. S.]

THESMOPHORIA (Θεσμοφορία), a great festival and mysteries celebrated in honour of Demeter in various parts of Greece, and only by married women, though some ceremonies also were performed by maidens. The Attic Thesmophoria were held in the month of Pyanepsion and began on the eleventh. Its introduction is ascribed by Demosthenes, Diodorus Siculus, and Plutarch (ap. Theodoret. *Therap.* 1) to Orpheus, while Herodotus (ii. 171) states that it was introduced into Greece

SECTION.

from Egypt by the daughters of Danaus, who made the Pelasgian women of Peloponnesus acquainted with the mysteries, that after the Dorian conquest they fell into disuse, and were only preserved by the Arcadians, who remained undisturbed in their ancient seats. Thus much appears certain from the name of the festival itself, that it was intended to commemorate the introduction of the laws and regulations of civilized life, which was universally ascribed to Demeter. (Diodor. v. 5.) Respecting the duration of the Attic Thesmophoria, various opinions are entertained both by ancient and modern writers. According to Hesychius (*s. v. Τρίτη Θεσμοφορία*) it lasted four days: it has been inferred from Aristophanes (*Thesmoph.* 80) that it lasted for five days. Such discrepancies have undoubtedly arisen from the circumstance that the women spent several days before the commencement of the real festival in preparations and purifications, during which they were especially bound to abstain from sexual intercourse, and for this purpose they slept and sat upon particular kinds of herbs which were believed to have a purifying effect. (Hesych. *s. v. Κρέσπον*; Etymol. M. *s. v. Σκόροδον*; Aelian. *Nat. An.* ix. 26; Schol. ad *Theocrit.* iv. 25; Dioscorid. i. 135; Plin. *H. N.* xxiv. 19; Stephan. Byz. *s. v. Μίλητος*.) During this time the women of each demos appointed two married women from among themselves to conduct the preliminary solemnities (*ἀρχαὶ εἰς τὰ Θεσμοφώρια*, Isaeus, *de Ciron. hered.* p. 208, ed. Reisk.), and their husbands who had received a dowry amounting to three talents, had to pay the expenses for the solemnity in the form of a liturgy. (Isaeus, *de Pyrrh. hered.* p. 66.) The festival itself, which according to the most probable supposition, also adopted by Wellauer (*de Thesmophoriis*, p. 6), lasted only for three days, began on the 11th of Pyanepsion, which day was called *ἀνοδος* or *κἀνοδος* (Hesych. *s. v. Ἀνοδος*) from the circumstance that the solemnities were opened by the women with a procession from Athens to Eleusis. In this procession they carried on their heads sacred laws (*νόμοι βίβλοι* or *θεσμῶν*), the introduction of which was ascribed to Demeter *Θεσμοφόρος*, and other symbols of civilized life. (Schol. ad *Theocrit.* xiv. 23.) The women spent the night at Eleusis in celebrating the mysteries of the goddess. (Aen. *Tact. Poliorc.* 4.)

The second day, called *νηστεία* (Athen. vii. p. 307), was a day of mourning, during which the women sat on the ground around the statue of Demeter, and took no other food than cakes made of sesame and honey (*σησαμῶν*, Aristoph. *Thesmoph.* 535, *Pax*, 820). On this day no meetings either of the senate or the people were held. (Aristoph. *Thesm.* 79.) It was probably in the afternoon of this day that the women held a procession at Athens, in which they walked barefooted behind a waggon, upon which baskets with mystical symbols were conveyed to the Thesmophorion. (Aristoph. *Thesm.* 276, &c.) The third day, called *καταγέγνετα* from the circumstance that Demeter was invoked under this name (Aristoph. *Thesm.* 296), was a day of merriment and raillery among the women themselves, in commemoration of Iambe who was said to have made the goddess smile during her grief. (Aristoph. *Thesm.* 792, *Ran.* 390; Hesych. *s. v. Στήνια*; Phot. *Lex.* p. 397; Apollod. i. 5. § 1.) Hesychius mentions a sacrifice called *γάλα*, which was offered to the goddess as an

atonement for any excess or error which might have been committed during the sacred days, and this sacrifice was probably offered at the close of the third day.

There are several other particulars mentioned by ancient writers as forming part of the Thesmophoria, but we are not able to ascertain in what manner they were connected with the festival, or on what day they took place.

Thesmophoria were also celebrated in many other parts of Greece, as stated above. The principal places where they are mentioned by ancient authors are the following:—Sparta, where the festival lasted for three days (Hesych. *s. v. Τρήμερος*); Drymae in Phocia (Paus. x. 33. § 6; Steph. Byz. *s. v. Δρυμία*); Thebes in Boeotia (Plut. *Polop.* p. 280; Xenoph. *Hellen.* v. 2. § 29); Miletus (Steph. Byz. *s. v. Μίλητος*; Diog. Laërt. ix. § 43), Syracuse (Athen. xiv. p. 647), Eretria in Euboea (Plut. *Quaest. Gr.* p. 298, b. &c.), Delos (Athen. iii. p. 109), Ephesus (Strab. xiv. p. 633; Herod. vi. 16), Agrigentum (Polyaen. v. l. 1), and other places. But of their celebration in these towns we know no more than a few isolated particulars which are mentioned in the passages referred to.

(Meursius, *Græciæ Pericæta*, *s. v. Θεσμοφώρια*; Wellauer, *de Thesmophoriis*, *Writatlaviae* 1820, 8vo.; Creuzer, *Symbol.* iv. p. 440, &c.; Preller in *Zimmermann's Zeitschrift*, 1835, n. 98; and in general Wachsmuth, *Hellen. Alt.* ii. p. 574, 2d ed. &c.; K. F. Hermann, *Handb. der Göttend. Alterth.* § 56. n. 15, &c.) [L. S.]

THESMOPHYLACES (Θεσμοφύλακες) [HENDÉCA.]

THESMOS (θεσμός). [NOMOS.]

THESMOTHETÆ (θεσμοθέται). [ARCHON.]

THESSA (θήσσα). [HÆRES, p. 597, b.]

THETES (θήτες). In earlier times this name denoted any freemen who worked for hire (*οἱ ἐνεκα τροφῆς δουλεύοντες*, Photius, *s. v.*; *ἐλευθερίων ὄνομα διὰ περὶ τὴν ἐν ἀργυρίῳ δουλεύοντων*, Pollux, iii. 32). Homer (*Od.* iv. 644, xviii. 356) speaks of *θήτες τε θυμῶς τε*, the latter properly signifying those who became slaves by captivity. They are to be distinguished not only from all common slaves, but also from those persons who were in the condition of the Penestæ or Helots. (Wachsmuth, *Hell. Alt.* vol. i. pt. i. pp. 235, 255, 322, 1st ed.; Schömann, *Ant. Jur. pub. Gr.* p. 70.) The persons best known by the name of *θήτες* are the members of the fourth or lowest class at Athens, according to the political division of Solon. They are spoken of under *CENSUS*. [C. R. K.]

THIASOS (θίασος). [DIONYSIA, p. 411, a; ERANI, p. 475, b.]

THOLIA (θολία). [UMBRACULUM.]

THOLUS (θόλος, δ and θ, also called *σκιάς*) is a name which was given to any round building which terminated at the top in a point, whatever might be the purpose for which it was used. (Hesych. and Suidas. *s. v. Θόλος*; *Od.* xxii. 442, 459, 466.) At Athens the name was in particular applied to the new round prytaneum near the senate-house, which should not be confounded with the old prytaneum at the foot of the acropolis. (Paus. i. 5. § 1, 18. § 13.) It was therefore the place in which the prytanes took their common meals and offered their sacrifices. It was adorned with some small silver statues (Pollux, viii. 155; Demosth. *de Fals. Leg.* p. 419), and near it stood

the ten statues of the Attic *ἑκατόνμοι*. [EPONYMI, PRYTHANEIUM.]

Other Greek cities had likewise their public *δῶλοι*: thus we find that Polyclethus built one of white marble at Epidaurus, the inside of which was adorned with paintings by Pausias. It was originally surrounded by columns, of which in the days of Pausanias six only were standing, and upon these were inscribed the names of such persons as had been cured of some disease by Asclepius, together with the name of the disease itself and the manner in which they had obtained their recovery. (Paus. ii. 17. § 3.) [L. S.]

THORAX. [LORICA.]

THRACES. [GLADIATORES, p. 576, a.]

THRANI'TAE (*Θρανίται*). [NAVIS, p. 788, a.]

THRONUS, the Greek *θρόνος*, for which the proper Latin term is *solum*; a throne. This did not differ from a chair (*καθέδρα*) [CATHEDRA; SILLA] except in being higher, larger, and in all respects more magnificent. (Athen. v. p. 192, e.) On account of its elevation it was always necessarily accompanied by a foot-stool (*subsellium*, *ὑποπόδιον*, Att. *ἑκάνιον*, Ion. *ἑκάνιον*, Hom. *Il.* xiv. 240, *Od.* i. 131, x. 315). Besides a variety of ornaments, especially nails or studs of silver, bestowed upon the throne itself, it was often covered with beautiful and splendid drapery. (Hom. *Od.* xx. 150.) [TAPES.] The accompanying woodcut shows two gilded thrones with cushions and drapery represented on paintings found at Resina. (*Ant. d'Exc.* vol. i. tav. 29.) These were intended to be the thrones of Mars and Venus, which is expressed by the helmet on the one and the dove on the other.

All the greater gods were sometimes represented as enthroned. This was in imitation of the practice adopted by mortals, and more particularly in Asia, as in the case of Xerxes (Philostr. *Imag.* ii. 31), and of the Parthians. (Claud. in *IV. Cons. Honor.* 214.) When the sitting statue of the god was colossal, the throne was of course great in proportion, and consequently presented a very eligible field for the display of sculpture and painting. As early as the sixth century before Christ Bathycles of Magnesia thus decorated the throne of the Amyclæan Apollo. (*Dict. of Biog.* art. *Bathycles*.) The throne of the Olympian Zeus, the work of Pheidias, was constructed and ornamented in a similar manner. (*Dict. of Biog.* art. *Pheidias*, vol. iii. p. 252.) As a chair for common use was sometimes made to hold two persons (Hom. *Il.* iii. 424, *Od.* xvii. 330) and a throne shared by two potentates (*διθρόνον*, Doris, *ap. Athen.* i. p. 17, f.), so two divinities were sometimes supposed to occupy the same throne. (Paus. viii. 37. § 2.) Besides those belonging to the statues of the gods, the thrones of

monarchs were sometimes deposited in the temples as DOMARIA. (Paus. ii. 19. § 4, v. 12. § 3.)

The following woodcut, taken from a fictile vase in the Museo Borbonico at Naples, represents Juno seated on a splendid throne, which is elevated, like those already described, on a basement. She holds in her left hand a sceptre, and in her right the apple, which Mercury is about to convey to Paris with a view to the celebrated contest for beauty on Mount Ida. Mercury is distinguished by his TALARIA, his CADUCEUS, and his petasus thrown behind his back and hanging by its string. On the right side of the throne is the representation of a tigress or panther.

The elevated seat used by a schoolmaster was called his throne. (Brunck, *Anal.* ii. 417.) [J. Y.] THY'MELE (*Θυμέλη*). [THEATRUM, p. 1122.]

THYRSUS (*θύρσος*), a pole carried by Dionysus, and by Satyrs, Maenades, and others who engaged in Bacchic festivities and rites. (Athen. xiv. p. 631, a.; Vell. Pat. ii. 82.) [DIONYSIA, p. 411, a.] It was sometimes terminated by the apple of the pine, or fir-cone (*κωνοφόρος*, Brunck, *Anal.* i. 421), that tree (*πέτρην*) being dedicated to Dionysus in consequence of the use of the turpentine which flowed from it, and also of its cones, in making wine. (Walpole, *Mem. on Eur. and As. Turkey*, p. 235.) The monuments of ancient art, however, most commonly exhibit instead of the pine-apple a bunch of vine or ivy-leaves (Ovid. *Met.* xi. 27, 28; Propert. iii. 3. 35) with grapes or berries, arranged into the form of a cone. The following woodcut, taken from a marble ornament (*Mon. Matth.* ii. tab. 86), shows the head of a thyrsus composed of the leaves and berries of the ivy, and surrounded by acanthus-leaves. Very frequently also a white fillet was tied to the pole just below the head, in the manner represented in the woodcut on p. 136, b., where each of the figures holds a thyrsus in her hand. See also the woodcut to FUNAMBULUS and VANNUS. (Statius, *Theb.* vii. 654.) [INSTITA.] The fabulous history of Bacchus relates that he converted the thyrsi carried by himself and his followers into dangerous weapons, by concealing an iron point in the head of leaves. (Diod. iii. 64, iv. 4; Macrobi. *Sat.* i. 19.) Hence his thyrsus is called "a spear enveloped in vine-leaves" (Ovid. *Met.* iii. 667), and

its point was thought to incite to madness. (Hor. *Carm.* ii. 19. 8; Ovid. *Amor.* iii. 1. 23, iii. 15. 17, *Trist.* iv. 1. 43; Brunnck, *Anal.* iii. 201; Orph. *Hymn.* xlv. 5, l. 8.) [J. Y.]

TIA'RA or TIA'RAS (τίρα or τιδράς: *Att. ὑρβάσια*, Moeria, s. v.; Herod. v. 49, vii. 64; Aristoph. *Aves*, 487), a hat with a large high crown. This was the head-dress which characterized the north-western Asiatics, and more especially the Armenians (Xen. *Cyr.* i. § 13; Sueton. *Nero*, 13), the Parthians, and the Persians (Herod. iii. 12; Philost. *Sen. Imag.* ii. 31; Plant. *Pers.* iv. 2, 2), as distinguished from the Greeks and Romans, whose hats fitted the head or had only a low crown. The Mysian hat, or "Phrygian bonnet," as it is now called [PILÉUS, p. 919, b.], was a kind of tiara (Virg. *Aen.* vii. 247; Servius, *in loc.*; Sen. *Thyest.* iv. 1. 40, 41; Philostr. *Jun. Imag.* 8), formed with lappets to be tied under the chin (Juv. vi. 516; Val. Flacc. vi. 700), and dyed purple. (Ovid. *Met.* xi. 181.)

The king of Persia wore an erect tiara, whilst those of his subjects were soft and flexible, falling on one side. (Herod. vii. 61; Xen. *Anab.* ii. 5. § 23, *Cyrop.* viii. 3. § 13; Schol. in *Aristoph. L. c.*) He was also distinguished by the splendid colours of his tiara (Themist. *Orat.* 2. p. 36, c., 24. p. 306, c.), and by a DIADÉMA, which encircled it,

TIBIA.

and which was variegated with white spots upon a blue ground. The Persian name for this regal head-dress was *cidaris*. (Curt. iii. 8; *κιδάρις* or *κίταρις*, Strabo, xi. 12. § 9; Pollux, vii. § 58.) The preceding woodcut shows the *cidaris* as represented on a gem in the Royal Cabinet at Paris, and supposed by Caylus to be worn by a sovereign of Armenia. (*Recueil d'Ant.* ii. p. 124.) From a very remote period (Aeschyl. *Pers.* 668) down to the present day the tiara of the king of Persia has been commonly adorned with gold and jewelry. [J. Y.]

TI'BIA (αὐλός), a pipe, the commonest musical instrument of the Greeks and Romans. It was very frequently a hollow cane perforated with holes in the proper places. (Plin. *H. N.* xvi. 36. s. 66; Athen. iv. p. 182.) In other instances it was made of some kind of wood, especially box, and was bored with a gimblet (*τερόβρατο βύσσος*, Ovid. *Fast.* vi. 697). The Phoenicians used a pipe, called *gingrus*, or αὐλὸς γιγγρωτός, which did not exceed a span in length, and was made of a small reed or straw. (Athen. iv. p. 174, f; Festus, s. e. *Gingriator*.) The use of the same variety in Egypt is proved by specimens in the British Museum, which were discovered in an Egyptian tomb.

When a single pipe was used by itself, the performer upon it, as well as the instrument, was called *monaulos*. (Mart. xiv. 64; *μόναυλος*, Brunnck, *Anal.* i. 484.) Thus used, it was much in fashion at Alexandria. (Athen. iv. p. 174, b.) When its size became comparable to the flageolet, or even to the clarinet of modern times. Among the varieties of the single pipe the most remarkable were the bag-pipe, the performer on which was called *utricularius* (Sueton. *Nero*, 54) or *ἀσκαβλήης* (*Onomast.*); and the αὐλὸς πλάγιος or πλαγίανλος (Theocrit. xx. 29; Longus, i. 2; Heliodor. *Aethiop.* v.; Aelian, *H. A.* vi. 19; Eustath. in *Hom. Il.* xviii. 495), which, as its name implies, had a mouth-piece inserted into it at right angles. Its form is shown in a restored terminal statue of Pan in the Townley collection of the British Museum. Pan was the reputed inventor of this kind of tibia (Bion, iii. 7) as well as of the *fidula* or SYRINX.

But among the Greeks and Romans it was much more usual to play on two pipes at the same time. Hence a performance on this instrument (*tibicinium*, Gellius, iv. 13), even when executed by a single person, was called *canere* or *cantare tibiis*. (Gellius, *N. A.* xv. 17; Corn. Nepos, xv. 2. § 1.) This act is exhibited in very numerous works of ancient art, and often in such a way as to make it manifest that the two pipes were perfectly distinct, and not connected, as some have supposed, by a common mouth-piece. We see this more especially in two beautiful paintings, which were found at Resina and Civitá Vecchia, and which represent *Marcellus* teaching the young *Olympus* to play on the double pipe. (*Ant. d' Ercolano*, i. tav. 9, iii. tav. 19; compare Paus. x. 30. § 5.) The *tibiae pares* in the British Museum, which were found with a lyre in a tomb at Athens, appear to be of cedar. Their length is about 15 inches. Each of them had a separate mouth-piece (*γλῶσσις*), and besides the hole at the end it has five holes along the top, and one underneath. The circumstance of these three

struments being found together, is in accordance with the fact, that they are very commonly mentioned together by ancient authors (Pind. *Ol.* iii. 9, xi. 97, 98, *Isth.* iv. 30, ed. Büchh; 1 *Cor.* xiv. 7); and the reason of this was, that performances on the double pipe were very frequently accompanied by the music of the lyre. (Hor. *Epod.* ix. 5.) The mouth-pieces of the two pipes often passed through a *CAPISTRUM*. (See woodcut, p. 553.)

Three different kinds of pipes were originally used to produce music in the Dorian, Phrygian, and Lydian modes. [MUSICA, p. 777.] About the third century B. C., Pronomus, the Theban, invented adjustments (*ἀρμολιαι*) by which the same set of pipes might be fitted to all the modes. (Paus. ix. 12. § 4; Athen. xiv. p. 631, e.) In what these adjustments consisted we are not clearly informed. Probably stopples or plugs (*δαμοι*) were used for this purpose. It appears also, that to produce the Phrygian mode the pipe had only two holes above (*biforis*, Virg. *Aen.* ix. 617—620), and that it terminated in a horn bending upwards. (Tibull. ii. 1. 86; Ovid. *Met.* iii. 533.) It thus approached to the nature of a trumpet, and produced slow, grave, and solemn tunes. The Lydian mode was much quicker, and more varied and animating. Horace mentions "Lydian pipes" as a proper accompaniment, when he is celebrating the praise of ancient heroes (*Carm.* iv. 13. 30). The Lydians themselves used this instrument in leading their troops to battle; and the pipes, employed for the purpose, are distinguished by Herodotus (i. 17) as "male and female," i. e. probably bass and treble, corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are *tibia dextra* and *sinistra* (*inaeva*, Plin. *l. c.*): the respective instruments are supposed to have been so called, because the former was more properly held in the right hand and the latter in the left. The "*tibia dextra*" was used to lead or commence a piece of music, and the "*sinistra*" followed it as an accompaniment. Hence the former was called *incantiva*, the latter *succentiva*. (Varro, *de Re Rust.* i. 2.) The comedies of Terence having been accompanied by the pipe, the following notices are prefixed to explain the kind of music appropriate to each: *tibis paribus*, i. e. with pipes in the same mode; *tib. imparibus*, pipes in different modes; *tib. dulcis dextris*, two pipes of low pitch; *tib. par. dextris et sinistris*, pipes in the same mode and of both low and high pitch.

The use of the pipe among the Greeks and Romans was threefold, viz. at sacrifices (*tibiae sacrificae*), entertainments (*iudiciorum*, Plin. *l. c.*; woodcut, p. 308), and funerals. (Ovid. *Fast.* vi. 657.) 1. A sacrifice was commonly attended by a piper (*tibicen*, Varro, *de Re Rust.* iii. 17; woodcut, p. 1045, b), who partook of the food offered, so that "to live like a piper" became a proverb applied to those who maintained themselves at the expense of other people. (Suidas, s. v. *Ἀδληγής*: Aristoph. *Pax*, 952.) The worshippers of Bacchus (Virg. *Aen.* xi. 737), and still more of Cybele, "the Berecynthia mater" (Hor. *Carm.* iv. 1. 23), used the Phrygian pipe, the music of which was on this account denominated τὸ Μυτρώον αἰγλήμα. (Paus. x. 30. § 5.) 2. At public entertainments the *tibicines* wore tunics reaching down to their feet (Ovid. *Fast.* vi. 686), as is exemplified in one of the woodcuts under ΤΥΝΝΑ. In conformity with the use of this kind

of music at public festivals, a band of *tibicines* preceded a Roman general when he triumphed. (Florus, ii. 2.) 3. The gravity and solemnity of the Phrygian pipes, which adapted them to the worship of Cybele, also caused them to be used at funerals. (Statius, *Theb.* vi. 120; compare Joseph. *B. J.* iii. 8. 5; Matt. ix. 23.) The pipe was the instrument principally used to regulate the dance [*SALTATIO*], whether at sacrifices, festivals, or private occasions in domestic life (Herod. vi. 129); by means of it also the rowers kept time in a trireme. (Max. Tyr. 23.)

Notwithstanding the established use of the pipe for these important purposes, it was regarded, more especially by the Athenians, as an inelegant instrument, greatly inferior to the lyre. (Plut. *Alcib.* p. 351; Gellius, *N. A.* xv. 17; Aristot. *Polit.* viii. 6.) Horace, however, represents Clío as performing according to circumstances either on the lyre or the pipe (*Carm.* i. 12. 2; compare Philost. *Sen. Imag.* ii. 5); and it is certain that the pipe was by no means confined anciently, as it is with us, to the male sex, but that αἰγληγίδες, or female *tibicines*, were very common. (Xen. *Symp.* ii. 1; Hor. *Epist.* i. 14. 25.) The Thebans always esteemed this instrument, and excelled greatly in the use of it. (*Anthol.* ed. Jacobs. ii. 633.) [J. Y.]

TIBICEN. [TIBIA.]

TIGNI IMMITTENDI SERVITUS. [SERVITUDES, p. 1031, b.]

TIME'MA (τίμημα). The penalty imposed in a court of criminal justice at Athens, and also the damages awarded in a civil action, received the name of *Τίμημα*, because they were *estimated* or *assessed* according to the injury which the public or the individual might respectively have sustained. The penalty was either fixed by the judge, or merely declared by him according to some estimate made before the cause came into court. In the first case the trial was called ἀγὼν τιμητῆς, in the second case ἀγὼν ἀτιμητῆς, a distinction which applies to civil as well as to criminal trials.

It is obvious that on a criminal charge two inquiries have to be made; first, whether the defendant is guilty, secondly, if he be found guilty, what punishment ought to be inflicted upon him. It may be advisable to leave the punishment to the discretion of the judge, or it may not. In some cases the Athenian law-giver thought that the judge ought to have no discretion. Thus, in cases of murder and high treason sentence of death was imposed by the law and only pronounced by the judge [PHONOS; PRODOSIA], and in many other cases the punishment was likewise fixed by the law. But where the exact nature of the offence could not be foreseen by the lawgiver, or it might so far vary in its character and circumstances as to admit of many degrees of culpability, it might be desirable or even necessary to leave the punishment to the discretion of the judge. The law then directed that the same court which passed sentence on the culprit should forthwith impose the penalty which his crime deserved. Thus in the νόμος βέρεως (Demosth. c. *Mid.* 529) it is enacted: δρουν ἂν καταγνῶ ἢ ἡλιαία, τιμᾶτω περὶ αὐτοῦ παραχρήμα, δρουν ἂν δόξῃ ἄξιος εἶναι παθεῖν ἢ ἀποτίσαι, where ἀποτίσαι refers to pecuniary penalties, παθεῖν to any other sort of penalty, as death, imprisonment, &c. Sometimes a special provision was made as to the means of enforcing the punishment; as in the law last cited, and also

in the laws in Demosth. *c. Timocr.* 733, it is declared, that if a fine be imposed, the party shall be imprisoned until it is paid.

In civil causes the sentence by which the Court awarded redress to the injured party would vary according to the nature of his complaint. Where he sought to recover an estate in land, or a house, or any specific thing, as a ring, a horse, a slave, nothing further was required, than to determine to whom the estate, the house, or the thing demanded, of right belonged. [HERES (GREEK); ΟΙΚΙΑΣ ΔΙΚΗ.] The same would be the case in an action of debt, *χρέους δίκη*, where a sum certain was demanded; as for instance, where the plaintiff had lent a sum of money to the defendant, and at the trial no question was made as to the amount, but the dispute was, whether it was a loan or a gift, or whether it had been paid or not. So, in an action for breach of contract, if by the terms of the contract a certain penalty had been attached to its violation, it would be unnecessary to have an inquiry of damages, they being already liquidated by the act of the parties themselves. (Demosth. *c. Dionys.* 1291, 1296, et argum.) In these and many other similar cases the trial was *ἀπλήγρος*. On the other hand, wherever the damages were in their nature *unliquidated*, and no provision had been made concerning them either by the law or by the agreement of the parties, they were to be assessed by the dicasts.

The following was the course of proceeding in the *τιμητοὶ ἀγῶνες*.

Lest us suppose that on a criminal prosecution the defendant had been found guilty. The superintending magistrate then called upon the prosecutor to say, what punishment he proposed to be inflicted on him, and what he had to say thereupon. The bill of indictment (*ἐγκλημα*) was always superscribed with some penalty by the person who preferred it. He was said *ἐπιγράφειν τὴν τιμὴν*, and the penalty proposed is called *ἐπιγράμμα*. (Demosth. *c. Nausim.* 985.) We find also the expressions *ἐπάγειν τὴν τιμὴν*, *τιμᾶσθαι τῷ φερόντι*, *τιμὴν ποιέσθαι*. When a charge was brought not by a private individual, but by a magistrate ex officio, the law required him in like manner to write down the penalty which he thought the case merited. (Demosth. *c. Macart.* 1076.) The prosecutor was now called upon to support the allegation in the indictment, and for that purpose to mount the platform and address the dicasts (*ἀναβαλεῖν εἰς τὴν τιμὴν*).

Here he said whatever occurred to him as likely to aggravate the charge, or increase the dicasts against his opponents. He was not bound, however, to abide by the proposal made in the bill, but might, if he pleased (with the consent of the court) ask for a lower penalty than he had demanded before. This was often done at the request of the defendant himself, or of his friends; sometimes from motives of humanity; and sometimes from prudential considerations. If the accused submitted to the punishment proposed on the other side, there was no further dispute; if he thought it too severe, he made a counter proposition, naming the penalty (commonly some pecuniary fine) which he considered would satisfy the demands of justice. He was then said *ἀντιτιμᾶσθαι*, or *ἐαυτῷ τιμᾶσθαι*. (Demosth. *c. Timocr.* 743, *c. Nicostr.* 1252; Aesch. *de Fals. Leg.* 29, ed. Steph.) He was allowed to address the court in mitigation of

punishment; or to say what he could in extenuation of his offence, or to appeal to the mercy of his judges. This was frequently done for him by his relations and friends; and it was not unusual for a man, who thought himself in peril of life or freedom, to produce his wife and children in court, to excite compassion. (Demosth. *c. Mid.* 573, 575, *c. Aristocr.* 793, *de Fals. Leg.* 431, 434, *c. Oedtor.* 878, *c. Aphob.* 834; Aristoph. *Vesp.* 560.) After both parties had been heard, the dicasts were called upon to give their verdict.

Here occurs a question, about which there has been much difference of opinion, and which it is impossible to determine with any certainty; viz. whether the dicasts, in giving this verdict, were confined to a choice between the estimates of the opposing parties, or whether they had a discretion to award what punishment they pleased. Without entering upon any controversial discussion, the following appears to the writer the most probable view of the matter.

The dicasts had no power of discussing among themselves, or agreeing upon the fine or penalty to be awarded. Such power was incompatible with their mode of voting by ballot. [PSEPHUS.] At the same time it would be absurd to suppose that the Athenian court had no means of controlling the parties in the exercise of that privilege which the law gave them, or that it was the common practice for the parties to submit widely different estimates to the dicasts, and leave them no alternative but the extreme of severity on the one side, and the extreme of mercy on the other. Many passages in the orators are opposed to such a view, and especially the words of Demosthenes, *c. Timocr.* 737.

The course of proceeding seems to have been as follows. The prosecutor usually superscribed his indictment with the highest penalty which the law or the nature of the case would admit of. In the course of the trial there might be various indications on the part of the dicasts of a disposition to favour one side or the other. They often exhibited their feelings by vehement gestures, clamour, interruption, and questioning of the parties. It was not unusual for the speakers to make allusions to the punishment before the first verdict had been given. (Aesch. *c. Timarch.* 12, *de Fals. Leg.* 48, ed. Steph.; Demosth. *c. Mid.* 523, *c. Boeot. de dot.* 1022, 1024, *c. Spud.* 1033, *c. Macart.* 1060, *c. Steph.* 1128; Platner, *Proc. und Klog.* vol. i. p. 384.) All this enabled both parties to feel the pulse of the court before the time had arrived for the second verdict. If the prosecutor saw that the dicasts were greatly incensed against his opponent, and he himself was not mercifully inclined, he would persist in asking for the highest penalty. If he was himself disposed to be merciful, or thought that the dicasts were, he would relax in his demand. Similar views would prevent the defendant from asking for too small a penalty, or would induce him to effect a compromise (if possible) with his opponent. We may reasonably suppose, that it was competent for the prosecutor to mitigate his demand at any time before the magistrate called on the dicasts to divide; but not after, without the consent of the court. (Demosth. *c. Nicostr.* 1252, 1254, *c. Theocrin.* 1343, *c. Neacr.* 1347.) If the parties were endeavouring to come to an arrangement, the court would give them a reasonable time for that purpose; and there

is reason to believe, that the petitions addressed by the defendant or his friends to the prosecutor were made aloud in the hearing of the dicasts. As to the suggested explanation of *τιμῶν τὴν μέτρην*, see PSAPHUS.

We cannot doubt that in case of heinous offences, or those which immediately concerned the state, the court would not permit of a compromise between the opposing parties; but in ordinary cases, a public prosecutor was looked on by the Athenians much in the light of a plaintiff, especially where his object was to obtain some penalty given by the law to an informer. When the parties could not come to terms, the dicasts, after hearing what each of them had to say, divided on their respective propositions, and the majority of votes determined the penalty. (Platner, *Proc. und Klag.* vol. i. pp. 198–202; Meier, *Att. Proc.* pp. 178–182.)

The course thus pursued at Athens must have led to injustice occasionally, but was, perhaps, the only course that could be adopted with so large a number of judges. Aristotle tells us, that Hippodamus of Miletus (who, no doubt, perceived the evils of this system) proposed that the verdict should not be given by ballot (*διὰ ψήφοφύλαξ*), but that each judge should bring in a tablet with a special statement of his opinion; upon which proposal Aristotle remarks, that its effect would be to make each judge a *διαιτητής*: that it was an object with most of the ancient lawgivers, that the judges should not confer with each other (*κοινολογῶνται*), and then he comments on the confusion that would arise, if the judge were allowed to propose a penalty different from that submitted to him by the parties. (Arist. *Polit.* ii. 5. §§ 3, 8, 9.)

As a general rule, only one penalty could be imposed by the court, though the law sometimes gave more than one. (Demosth. c. *Lept.* 504, c. *Neuer.* 1363.) Sometimes the law expressly empowered the jury to impose an additional penalty (*προστιμῆμα*) besides the ordinary one. Here the proposition emanated from the jury themselves, any one of whom might move that the punishment allowed by the law should be awarded. He was said *προστιμᾶσθαι*, and the whole dicasts, if (upon a division) they adopted his proposal, were said *προστιμᾶν*. (Demosth. c. *Timocr.* 733; Meier, *Att. Proc.* pp. 183, 725.) We may observe, that the preposition *πρὸς* in the verb *προστιμᾶν* does not always imply that a second penalty is imposed, but is sometimes used with reference to other matters, as in Demosth. c. *Aristog.* 790.

In private actions the course of proceeding with respect to the assessment of damages was much the same as described above. In some cases, where the plaintiff's demand was made up of several charges, or arose out of various matters, he would give in his bill of plaint a detailed account, specifying the items, &c., instead of including them in one gross estimate. This seems to have been considered the fairer method, and may be compared to our *bill of particulars*, which the plaintiff delivers to the defendant. (Demosth. c. *Apob.* 853.) The liability of the plaintiff to the *εὐσεβεία*, which was calculated upon the sum demanded, operated as a check upon exorbitant demands, in addition to that which we have already noticed.

The *προστιμῆσις* rarely occurred in private actions, except in those where the wrongful act com-

plained of had the character of a public offence, as in the *δικὴ ψευδομαρτυριῶν*. [MARTYRIA.]

As to the amount of revenue derived by the Athenians from public fines, see Böckh, *Publ. Econ. of Athens*, p. 375, &c. 2d ed.

As to *Τίμημα* in the sense of the *rateable value* of property with reference to the Athenian property tax, see EISPHORA. [C. R. K.]

TIMOCRATIA. [OLIGARCHIA.]

TINTINNA'BULUM (*κῶδων*), a bell. Bells were used for a great variety of purposes among the Greeks and Romans, which it is unnecessary to particularize here. One use, however, of them, for the purpose of keeping watch and ward in the fortified cities of Greece, deserves mention. (Thucyd. iv. 135; Aristoph. *Aves*, 843, 1159; Schol. *in loc.*) A guard (*φύλαξ*) being stationed in every tower, a *περίπολος* (see p. 463, a) walked to and fro on the portion of the wall between two towers. It was his duty to carry the bell, which he received from the guard at one tower, to deliver it to the guard at the next tower, and then to return, so that the bell by passing from hand to hand made the circuit of the city. By this arrangement it was discovered if any guard was absent from his post, or did not answer to the bell in consequence of being asleep. Hence to prove or try a person was called *κῶδωνίζειν* (Aelian, *H. A.* xvi. 25); to perform the office of patrol was *κῶδωνοφορεῖν*.

The forms of bells were various in proportion to the multiplicity of their applications. In the Museum at Naples are some of the form which we call bell-shaped; others are more like a Chinese

gong. The bell, fig. 1 in the annexed woodcut, is a simple disk of bell-metal; it is represented in a painting as hanging from the branch of a tree. (Bartoli, *Sep. Ant.* 13.) Figure 2 represents a bell of the same form, but with a circular hole in the centre, and a clapper attached to it by a chain. This is in the Museum at Naples, as well as the bell, fig. 3, which in form is exactly like those still commonly used in Italy to be attached to the necks of sheep, goats, and oxen. Fig. 4 is represented

on one of Sir W. Hamilton's vases (i. 43) as carried by a man in the garb of Pan, and probably for the purpose of lustration. (Theocrit. ii. 36; Schol. *in loc.*) Fig. 5 is a bell, or rather a collection of twelve bells suspended in a frame, which is preserved in the Antiquarium at Munich. This jingling instrument, as well as that represented by fig. 6 (from Bartoli, *Lac. Sep.* ii. 23), may have been used at sacrifices, in Bacchanalian processions, or for lustration. Fig. 7 is a fragment of ancient sculpture, representing the manner in which bells were attached to the collars of chariot-horses. (Ginzert, *über Wagen*, ii. pl. 57.) [J. Y.]

TIRO was the name given by the Romans to a newly enlisted soldier, as opposed to *veteranus*, one who had had experience in war. (Caesar, *Bell. Civ.* iii. 28.) The mode of levying troops is described under EXERCITUS, pp. 496, 499. The age at which the liability to military service commenced was 17.

From their first enrolment the Roman soldiers, when not actually serving against an enemy, were perpetually occupied in military exercises. They were exercised every day (Veget. i. 1), the *tirones* twice, in the morning and afternoon, and the *veterani* once. The exercises included not only the use of their weapons and tactics properly so called, but also whatever could tend to increase their strength and activity, and especially carrying burthens and enduring toil. Vegetius (i. 9—27) enumerates among the exercises of the *tirones* marching, running, leaping, swimming, carrying the shield, fighting at a post [PALUS], thrusting with the sword in preference to striking, using their armour, hurling spears and javelins, shooting arrows, throwing stones and leaden bullets, leaping on and off their horses, carrying weights, fortifying the camp, and forming the line of battle.

Vegetius also gives rules for choosing *tirones* according to their country, their being rustics or townsmen, their age, stature, personal appearance, and previous occupation (i. 2—8). But these rules refer almost exclusively to the state of things under the emperors, when the army was no longer recruited from the citizens of Rome, but from the inhabitants of the provinces.

At this period, the *tiro*, when approved as fit for the army, was branded or tattooed in the hand with a mark (*stigmata*; *puncta signorum*), which Lipsius conjectures to have been the name of the emperor.

The state of a *tiro* was called *tirocinium*; and a soldier who had attained skill in his profession was then said *tirocinium ponere*, or *deponere*. (Justin. xii. 4, ix. 1.)

(Lipsius, *de Milit. Roman.* in *Oper.* vol. iii. pp. 32, 33, 184, 193—197.)

In civil life the terms *tiro* and *tirocinium* were applied to the assumption of the toga virilis, which was called *tirocinium fori* [TOGA], and to the first appearance of an orator at the rostrum, *tirocinium eloquentias* (Senec. *Proim.* l. 2); and we even have such a phrase as *tirocinium navis* for the first voyage of a ship. (Plin. *H. N.* xxiv. 7. s. 26.) [P. S.]

TIROCINIUM. [TIRO.]

TITHENIDIA (τιθηνῖδια), a festival celebrated at Sparta by the nurses who had the care of the male children of the citizens. On this occasion the nurses (τιτθαί) carried the little boys out of the city to the temple of Artemis surnamed Corythallia, which was situated on the bank of the stream Tiasus in the district of Cleia. Here

TOGA.

the nurses sacrificed sucking pigs on behalf of the children, and then had a feast, probably of the meat of the victims, with which they ate bread baked in an oven (*ἱεῖρας ἄρτους*, Athen. iv. p. 139; comp. Plut. *Synpos.* iii. 9, *Quaest. Gr.* vii. p. 211, Wytttenb.; Hesych. s. v. κορυθαλλοτρυαί.) [L. S.]

TITIES or TITIENSES. [PATRICII.]

TITII SODALES, a sodalitas or college of priests at Rome, who represented the second tribe of the Romans, or the Titias, that is, the Sabines, who after their union with the Ramnes or Latins continued to perform their own ancient Sabine sacra. To superintend and preserve these, T. Tatius is said to have instituted the Titii sodales. (Tacit. *Annal.* i. 54.) In another passage (*Hist.* ii. 95) Tacitus describes this sacerdotium in a somewhat different manner, inasmuch as he says that it was instituted by Romulus in honour of king Tatius, who after his death was worshipped as a god. But this account seems only to mean that Romulus after the death of Tatius sanctioned the institution of his late colleague and made the worship of Tatius a part of the Sabine sacra. From Varro (*de Ling. Lat.* v. 85, ed. Müller), who derives the name Sodales Titii from Titias aves, which were observed by these priests in certain auguries, it appears that these priests also preserved the ancient Sabine auguries distinct from those of the other tribes. During the time of the republic the Titii sodales are no longer mentioned, as the workshops of the three tribes became gradually united into one common religion. (Ambrosch, *Studien u. Aendert.* p. 192, &c.) Under the empire we again meet with a college of priests bearing the name of Sodales Titii or Titienenses, or Sacerdotes Titiales Flaviales; but they had nothing to do with the sacra of the ancient tribe of the Titias, but were priests instituted to conduct the worship of an emperor, like the Augustales. (Gruter, *Inscript.* xix. 4, ccxiv. 9, cccxvi. 1; *Inscript. ap. Murat.* 299. 5; comp. Lucan. *Phars.* i. 602.) [AUGUSTALES.] [L. S.]

TOCOS (τόκος). [FENUS.]

TOCULLIONES. [FENUS.]

TOGA (*τῆστρος*), a gown, the name of the principal outer garment worn by the Romans, is derived by Varro from *tegere*, because it covered the whole body (v. 144, ed. Müller). Gellius (vii. 12) states that at first it was worn alone, without the tunic. [TUNICA.] Whatever may have been the first origin of this dress, which some refer to the Lydians, it seems to have been received by the Romans from the Etruscans, for it is seen on Etruscan works of art as the only covering of the body, and the toga praetexta is expressly said to have been derived from the Etruscans. (Liv. i. 8; Plin. *H. N.* viii. 48. s. 74; Müller, *Etrusker*, vol. i. p. 262.)

The toga was the peculiar distinction of the Romans, who were thence called *togati* or *gens togata*. (Virg. *Aen.* i. 282; Martial. xiv. 124.) It was originally worn only in Rome itself, and the use of it was forbidden alike to exiles and to foreigners. (Plin. *Epist.* iv. 11; Suet. *Claud.* 15.) Gradually, however, it went out of common use, and was supplanted by the PALLIUM and lacerna, or else it was worn in public under the lacerna. (Suet. *Aug.* 40.) [LACERNA.] But it was still used by the upper classes, who regarded it as an honourable distinction (Cic. *Philipp.* ii. 30), in the courts of justice, by clients when they received the SPORULA (Martial. xiv. 125), and in the theatre or at the

games, at least when the emperor was present. (Suet. *Claud.* 6 ; Lamprid. *Commod.* 16.) Under Alexander Severus guests at the emperor's table were expected to appear in the toga. (Lamprid. *Sever.* 1.)

The form of the toga, and the manner of wearing it, are matters which are much disputed, and about which indeed it seems almost impossible, with our present information, to arrive at certainty.

The form was, undoubtedly, in some sense *round* (Quintil. xi. 3. § 137 ; Isid. *Orig.* xix. 24), *semicircular* according to Dionysius (iii. 61), who calls it *περιβάλαιον ἡμικύκλιον*. It seems, however, impossible, from the way in which it was worn, that it could have been always a semicircle. Such may perhaps have been its form as worn in the most ancient times, when it had no great fulness ; but to account for the numerous folds in which it was afterwards worn, we must suppose it to have had a greater breadth in proportion to its length, that is, to have been a smaller segment than a semicircle. Probably the size of the segment which the toga formed (on which its fulness depended) was determined by the fashion of the time or the taste of the wearer. This appears to be the true explanation of Quintilian's words (xi. 3. § 139), "*Ipsam togam rotundam, et apud ceteras velim*," which could have no meaning if nothing more were required than to give the garment the very simple form of a semicircle. The only other point to be noticed respecting the form of the toga, is the question whether, when it came to be worn in many complicated folds, the art of the tailor may not have been employed to keep these folds in their position. This question, however, belongs more properly to the mode of wearing the toga.

On this subject our principal information is derived from Quintilian (xi. 3. §§ 137, &c.) and Tertullian (*de Pallio*), whose statements, however, refer to the later and more complicated mode of wearing the garment, and from statues in Roman costume.

Frequent reference is made to the *Sinus* of the toga. This was a portion of the garment, which hung down in front of the body, like a sling ; it will be more fully explained presently.

We must make a clear distinction between the more ancient and simpler mode of wearing the toga, and the full form, with many complicated folds, in which it was worn at a later period.

Quintilian (xi. 3. § 137) says that the ancients had no *sinus*, and that afterwards the sinuses were very short. The passage in Livy (xxi. 18, *sinu ex toga fucto, iterum sinus effuso*) seems to refer not to the sinus, technically so called, but a sinus which Fabius made at the moment by gathering up some part of his toga.

The ancient mode of wearing the toga is shown in the following cut, which is taken from the *Augusteum*, pl. 117 (Becker, *Gallus*, vol. ii. p. 83), and represents a statue at Dresden.

Let the toga, which in this case was probably not far from an exact semicircle, be held behind the figure, with the curved edge downwards. First, one corner is thrown over the left shoulder ; then the other part of the garment is placed on the right shoulder, thus entirely covering the back and the right side up to the neck. It is then passed over the front of the body, leaving very little of the chest uncovered, and reaching downwards nearly to the feet (in the figure, quite to one of them). The remaining end, or corner, is then thrown back over

the left shoulder, in such a manner as to cover the greater part of the arm. By this arrangement the right arm is covered by the garment, a circumstance noticed by Quintilian (§ 138) ; but it was occasionally released by throwing the toga off the right shoulder, and leaving it to be supported on the left alone. This arrangement is seen in many ancient statues ; an example is shown in the following cut, which represents the celebrated statue of Aulus Metellus (commonly called the Etruscan orator) in the Florence Gallery. (Müller, *Denkmäler*, vol. i. pl. lviii. No. 289.) The portion of the toga which, in

the first figure, hangs down from the chest, if it be a *sinus*, is certainly of the kind described by Quintilian as *perquam brevis*.

The next cut represents the later mode of wearing the toga, and is taken from an engraving in the *Museo Borbonico* (vol. vi. tav. 41) of a statue found at Herculaneum.

By comparing this and other statues with the description of Quintilian, we may conclude that the mode of wearing the toga was something like the following : —

First, as above remarked, the form in this case was a segment less than a semicircle. As before, the curved side was the lower, and one end of the

garment was thrown over the left shoulder, and hung down in front, but much lower than in the former case. This seems to be the part which Quintilian (§ 139) says should reach down halfway between the knee and the ankle. In our figure it reaches to the feet, and in some statues it is even seen lying on the ground. The garment was then placed over the back, as in the older mode of wearing it, but, instead of covering the right shoulder, it was brought round under the right arm to the front of the body. This is the most difficult part of the dress to explain. Quintilian says (§ 140):—"Sinus decentissimus, si aliquanto supra imam togam fuerit, nunquam certe sit inferior. Ille, qui sub humero dextro ad sinistrum oblique ducitur velut balteus, nec strangulet nec fluat." Becker's explanation of this matter seems perfectly satisfactory. He supposes that the toga, when carried under the right arm, was then folded into two parts; one edge (namely, the lower or round edge) was then brought almost close under the arm, and drawn, but not tightly, across the chest to the left shoulder, forming the *velut balteus* of Quintilian, while the other part was allowed to fall gracefully over the lower part of the body, forming the *sinus*, and then the remaining end of the garment was thrown over the left shoulder, and hung down nearly as low as the other end, which was first put on. It is to this part that Quintilian seems to refer when he says (§ 140):—"Pars togae, quae postea imponitur, sit inferior: nam ita et sedet melius, et continetur;" but the true application of these words is very doubtful. By the bottom of the toga (*imam togam*) in the above quotation, he seems to mean the end of the toga first put on. The part last thrown over the left shoulder, as well as the end first put on, covered the arm, as in the older mode of wearing the garment. The outer edge (*extrema ora*) of this part ought not, says Quintilian (§ 140), to be thrown back. He adds (§ 141), "Super quod (i. e. sinistram brachium) ora ex toga duplex aequaliter sedeat," by which he probably means that the edge of this portion should coincide with the edge of the end which was first thrown over the left shoulder, and which is of course covered by this portion of the garment. He says (§ 141) that the shoulder and the whole of the throat ought not to be covered, otherwise the dress will become narrow and

that dignity which consists in width of chest will be lost. This direction appears to mean that the part brought across the chest (*velut balteus*) should not be drawn too tight.

Tassels or balls are seen attached to the ends of the toga, which may have served to keep it in its place by their weight, or may have been merely ornaments.

There is one point which still remains to be explained. In the figure a mass of folds is seen in the middle of the part of the toga drawn across the chest (*velut balteus*). This is the *umbo* mentioned by Tertullian (*de Pallio*, 5), and used by Persius for the toga itself (*Sat.* v. 33). It was either a portion of the *balteus* itself, formed by allowing this part of the garment to hang loose (which perhaps it must have done, as it is the curved, and therefore longer edge that is thus drawn across the chest), and then gathering it up in folds and tucking these folds in, as in the figure, or else the folds which composed it were drawn out from the *sinus*, and either by themselves, or with the loose folds of the *balteus*, formed the *umbo*. It seems to have been secured by passing the end of it under the girdle of the tunic; and perhaps this is what Quintilian means by the words (§ 140), "Subducenda etiam pars aliqua tunicae, ne ad lacertum in actu redeat."

The back of the figure, which is not seen in our engravings, was simply covered with the part of the garment which was drawn across it, and which, in the ancient mode of wearing it, reached down to the heels. (Quintil. § 143). Quintilian states how low it was worn in his time, but the meaning of his words is very obscure (§ 139: "pars ejus prior mediis cruribus optime terminatur, posterior eadem portione altius qua cinctura." See above).

A garment of the supposed shape of the toga, put on according to the above description, has been found by the writer of this article to present an appearance exactly like that of the toga as seen on statues, and Becker states that he has made similar experiments with equally satisfactory results.

Tertullian (*de Pallio*, 5) contrasts the simplicity of the Pallium with the complication of the toga, and his remarks apply very well to the above description. It appears by his account that the folds of the *umbo* were arranged before the dress was put on, and fixed in their places by pins or hooks; but generally speaking it does not seem that the toga was held on by any fastening: indeed the contrary may be inferred from Quintilian's directions to an orator for the management of his toga while speaking (§§ 144—149).

Another mode of wearing the toga was the *cinctus Gabinus*. It consisted in forming a part of the toga itself into a girdle, by drawing its outer edge round the body and tying it in a knot in front, and at the same time covering the head with another portion of the garment. It was worn by persons offering sacrifices (Liv. v. 46; Lucan. i. 596), by the consul when he declared war (Virg. *Aen.* vii. 612), and by devoted persons, as in the case of Decius (Liv. v. 46). Its origin was Etruscan, as its name implies (Servius in Virg. *l. c.*; Müller, *Etrusker*, vol. i. p. 265; Thiersch in *Annot. Acad. Bavar.* vol. i. p. 29, quoted by Müller, *Annot. ad Festum*, p. 225). Festus (*l. c.*) speaks of an army about to fight being girt with the *cinctus Gabinus*. Persons wearing this dress were said to be *prociuncti* (or *iniciuncti*) *cincti* (or *riti*) *Gabinis*.

The colour of the toga worn by men (*ago*

virilis) was generally white, that is, the natural colour of white wool. Hence it was called *pura* or *vestimentum purum*, in opposition to the *praetexta* mentioned below. A brighter white was given to the toga of candidates for offices (*candidati* from their *toga candida*) by rubbing it with chalk. There is an allusion to this custom in the phrase *cretata ambitio*. (Pers. v. 177.) White togas are often mentioned as worn at festivals, which does not imply that they were not worn commonly, but that new or fresh-cleaned togas were first put on at festivals. (See Lipsius, *Elect.* i. 13, in *Oper.* vol. i. pp. 256, 257.) The toga was kept white and clean by the fuller [FULIO]. When this was neglected, the toga was called *sordida*, and those who wore such garments *sordidati*. This dress (with disarranged hair and other marks of disorder about the person), was worn by accused persons, as in the case of Cicero. (Plut. *Cic.* 30, 31; Dion Cass. xxxviii. 16; Liv. vi. 20.) The *toga pulla*, which was of the natural colour of black wool, was worn in private mourning, and sometimes also by artificers and others of the lower orders. (See the passages in Forcellini, s. v. *Pullus*, *Pullatus*.) The *toga picta*, which was ornamented with Phrygian embroidery, was worn by generals in triumphs [TRIUMPHUS], and under the emperors by the consuls, and by the praetors when they celebrated the games. It was also called *Capitolina*. (Lamprid. *Alex. Sever.* c. 40.) The *toga palmata* was a kind of toga *picta*. The *toga praetexta* had a broad purple border. It was worn with the *BULLA*, by children of both sexes. It was also worn by magistrates, both those of Rome, and those of the colonies and municipia, by the sacerdotes, and by persons engaged in sacred rites or paying vows. (Liv. xxxiv. 7; Festus, s. v. *Praetexta pulla*.) Among those who possessed the *jus togas praetextas habendae*, the following may be more particularly mentioned: the dictator, the consuls, the praetors (who laid aside the praetexta when about to condemn a Roman citizen to death), the augurs (who, however, are supposed by some to have worn the *trabea*), the decemviri sacris faciundis [DECEMVIRI], the aediles, the triumviri epulones, the senators on festival days (Cic. *Phil.* ii. 43), the magistri collegii, and the magistri vicorum when celebrating games. [MAGISTER.] In the case of the tribuni plebis, censors, and quaestors there is some doubt upon the subject. The *praetexta pulla* might only be worn at the celebration of a funeral. (Festus, l. c.)

The toga praetexta, as has been above remarked, is said to have been derived from the Etruscans. It is said to have been first adopted, with the *latus clavus* [CLAVUS LATVS], by Tullus Hostilius as the royal robe, whence its use by the magistrates in the republic. (Plin. *H. N.* ix. 39. s. 63.) According to Macrobius (*Sat.* i. 6) the toga introduced by Hostilius was not only *praetexta*, but also *picta*. Pliny states (*H. N.* viii. 48. s. 74) that the *toga regia undulata* (that is, apparently, embroidered with waving lines or bands) which had been worn by Servius Tullius was preserved in the temple of Fortune. The toga praetexta and the *bullae aureae* were first given to boys in the case of the son of Tarquinius Priscus, who at the age of fourteen, in the Sabine war, slew an enemy with his own hand. (Macrobius, l. c., where other particulars respecting the use of the toga praetexta may be found.) Respecting the leaving off of the toga

praetexta and the assumption of the toga virilis, see IMPUBES, BULLA, CLAVUS LATVS. The occasion was celebrated with great rejoicings by the friends of the youth, who attended him in a solemn procession to the Forum and Capitol. (Valer. Max. v. 4. § 4.) This assumption of the toga virilis was called *stirocinium fori*, as being the young man's introduction to public life, and the solemnities attending it are called by Pliny (*Epist.* i. 9) *officium togas virilis*, and by Tertullian (*de Idolol.* c. 16) *solemnitates togas*. The public ceremonies, connected with the assumption of the toga virilis by the sons of the emperors, are referred to by Suetonius (*Oct.* 26, *Tib.* 54, *Calig.* 16, *Ner.* 7). The toga virilis is called *libera* by Ovid (*Fasti*, iii. 771). Girls wore the praetexta till their marriage.

The *trabea* was a toga ornamented with purple horizontal stripes. Servius (*ad Aen.* vii. 612) mentions three kinds of *trabea*; one wholly of purple, which was sacred to the gods, another of purple and white, and another of purple and saffron, which belonged to augurs. The purple and white *trabea* was a royal robe, and is assigned to the Latin and early Roman kings, especially to Romulus. (Plin. *H. N.* viii. 49, ix. 39; Virg. *Aen.* vii. 187, xi. 334; Ovid. *Fast.* ii. 504.) It was worn by the consuls in public solemnities, such as opening the temple of Janus. (Virg. *Aen.* vii. 612; Claudian. *in Rufin.* i. 249.) The equites wore it at the *transvectio* and in other public solemnities. (Valer. Max. ii. 2; Tacit. *Ann.* iii. 2.) Hence the *trabea* is mentioned as the badge of the equestrian order. Lastly, the toga worn by the Roman emperors was wholly of purple. It appears to have been first assumed by Julius Caesar. (Cic. *Philip.* ii. 34.)

The material of which the toga was commonly made was wool. It was sometimes thick and sometimes thin. The former was the *toga densa*, *pinguis*, or *hirta*. (Suet. *Aug.* 82; Quintil. xii. 10.) A new toga, with the nap neither worn off nor cut close, was called *peza*, to which is opposed the *trita* or *rasa*, which was used as a summer dress. (Martian. ii. 85.) On the use of silk for togas see SERICUM.

It only remains to speak of the general use of the toga. It was originally worn by both sexes; but when the stola came to be worn by matrons, the toga was only worn by the meretrices and by women who had been divorced on account of adultery. [STOLA.] Before the use of the toga became almost restricted to the upper classes, their toga was only distinguished from that of the lower classes by being fuller and more expensive. In war it was laid aside and replaced by the *PALUDAMENTUM* and *SAGUM*. Hence *togatus* is opposed to *miles*. The toga was, however, sometimes used by soldiers, but not in battle, nor as their ordinary dress; but rather as a cloak or blanket. It was chiefly worn in Rome, and hence *togatus* is opposed to *rusticus*. The toga was often used as a covering in sleeping; and lastly, as a shroud for the corpse.

(Becker, *Gallus*, vol. ii. pp. 78—88; Ferrarius, *de Re Vestiaria*; Rubenius, *de Re Vest.*) [P. S.]

TONSOR. [BARBA.]

TOPIA'RIOUS. [HORTUS.]

TORA'LIA. [TORUS.]

TORCULUM or TORCULAR (ἀνός), a press for making wine and oil. When the grapes were ripe (σταφυλή), the bunches were gathered, any which remained unripe (ὑμπελ) or had become

dry or rotten were carefully removed (*Geopon.* vi. 11) [FORFEX], and the rest carried from the vineyard in deep baskets (*quaki*, *Virg. Georg.* ii. 241: *ταλάροι*, *Hes. Scut.* 296; *ἀφίχοι*, *Longus*, ii. 1; *κοφίνοι*, *Geopon.* l. c.) to be poured into a shallow vat. In this they were immediately trodden by men, who had the lower part of their bodies naked (*Virg. Georg.* ii. 7), except that they wore drawers [SUBLIGACULUM]. At least two persons usually trod the grapes together. To "tread the wine-press alone" indicated desolation and distress. (Is. lxiii. 3.) The Egyptian paintings (Wilkinson, *Mon. and Cust.* vol. ii. pp. 152—157) exhibit as many as seven treading in the same vat, and supporting themselves by taking hold of ropes or poles placed above their heads. From the size of the Greek and Roman vats there can be no doubt that the company of treaders was often still more numerous. To prevent confusion and to animate them in their labour they moved in time or danced, as is seen in the ancient mosaics of the church of St. Constantia at Rome, sometimes also leaning upon one another. The preceding circumstances are illustrated in the following woodcut, taken from a bas-relief. (*Mon. Matth.* iii. tab. 45.) An antefixa in the British Museum (Combe, *Anc. Terra-cottas*, No. 59) shows a person by the side of the vat performing during this act on the *scabellum* and *tibiae pares*, for the purpose of aiding and regulating the movements of

those in it. Besides this instrumental music they were cheered with a song, called *μέλος ἐπιλήνιον* (*Athen.* v. p. 199, a.) or *ὕμνος ἐπιλήνιος*, specimens of which may be seen in Anacreon (*Od.* xvii. 1 and lii.; and Brunk, *Anac.* ii. 239. See Jacobs, *ad loc.*; compare Theocrit. vii. 25). After the grapes had been trodden sufficiently, they were subjected to the more powerful pressure of a thick and heavy beam [PRÆLUM] for the purpose of obtaining all the juice yet remaining in them. (*Vitr.* x. 1; *Virg. Georg.* ii. 242; *Servius in loc.*; *Hor. Carm.* i. 20. 9.) Instead of a beam acted on by wedges, a press with a screw [COCHLEA] was sometimes used for the same purpose. (*Vitr.* vi. 6; *Plin. H. N.* xviii. 31. s. 74.) A strainer or colander [COLUM] was employed to clear the must from solid particles, as it flowed from the vat.

The preceding woodcut shows the apertures at the bottom of the vat, by which the must (*mustum*, *γλεύκος*) was discharged, and the method of receiving it, when the vat was small, in wide-mouthed jars, which when full were carried away to be emptied into casks (*dolia*, *πίθοι*, *Longus*, ii. 1, 2). [DOLIUM.] When the vineyard was extensive

TORMENTUM.

and the vat large in proportion, the must flowed into another vat of corresponding size, which was sunk below the level of the ground, and therefore called *θραλήνιον* (*Mark.* xii. 1; *Geopon.* vi. l. 11), in Latin *lacus*. (*Ovid. Fast.* v. 888; *Plin. Epist.* ix. 20; *Colum. de Re Rust.* xii. 18.)

From *Ληνός* Bacchus was called *Lenæus* (*Ληνάιος*). The festival of the *Lenæa* was celebrated on the spot where the first Attic wine-press was said to have been constructed. [DIONYSIA.]

Olives as well as grapes were subjected to the *pressum* for the sake of their oil. [OLEA, p. 826.]

The building erected to contain all the vessels and other implements (*torculara vasca*, *Varro, de Re Rust.* iii. 2) for obtaining both wine and oil was called *torcularium* (*Cato, de Re Rust.* 12, 13, 18; *Col. de Re Rust.* xii. 18) and *ἀπρεῖον* (*Geopon.* vi. 1). It was situated near the kitchen and the wine-cellar. (*Vitr.* vi. 6.) [J. Y.]

TOREUTICE. [CARLATURA.]

TORMENTUM (*ἀφελήνιον ὄργανον*), a military engine. All the missiles used in war, except those thrown from the sling [FONDA], are projected either by the hand alone or with the aid of elastic substances. Of elastic instruments the bow [ARCUS] is still used by many nations. But the *tormentum*, so called from the twisting (*torquendo*) of hairs, thongs and vegetable fibres (*Polyb.* iv. 56), has fallen into disuse through the discovery of gunpowder. The word *tormentum* is often used by itself to denote engines of various kinds. (*Cic. ad Fam.* xv. 4; *Cæsar. B. C.* iii. 44, 45, *B. Alex.* 10; *Liv.* xx. 11; *Vell. Pat.* ii. 82; *Curt.* iv. 9. 16.) Often also these engines are specified separately under the names of *Balistæ* and *Catapultæ*, which names however most commonly occur together in the accounts of sieges and other military operations, because the two kinds of engines denoted by them were almost always used in conjunction. [HELIPOLIS.] The balista (*περσέβηλος*) was used to shoot stones (*Ovid. Trist.* i. 2. 48; *Lucan.* vi. 196; *Non. Marc.* p. 555, ed. Merceri), the catapulta (*καταπέλτης, καταπελτικὴ*) to project darts, especially the *Falarica* [HASTA], and a kind of missile, 4½ feet long, called *trifas*. (*Festus*, s. v.) Whilst in besieging a city the ram [ARIES] was employed in destroying the lower part of the wall, the balista was used to overthrow the battlements (*propugnacula*, *Plant. Bacch.* iv. 4. 58—61; *ἐπάλξεις*), and the catapult to shoot any of the besieged who appeared between them. (*Diod.* xvii. 42, 45, xx. 48, 88.) The forms of these machines being adapted to the objects which they were intended to throw, the catapult was long, the balista nearly square, which explains the following humorous enumeration by Plautus (*Capt.* iv. 2. 16) of the three *μηχαναί*, the application of which has just been explained.

"Meus est balista pugnax, cubitus catapultæ est mihi,
Humerus aries."

In the same armament the number of catapults was commonly much greater than the number of balistæ. (*Non. Marc.* p. 552, ed. Merceri; *Liv.* xxvi. 47.) Also these two classes of machines were both of them distinguished into the greater and the less, the number of "the less" being much more considerable than the number of "the greater." When Carthago Nova, which had served the Carthaginians for an arsenal, was taken by the Romans, the bal

lowing were found in it: 120 large and 281 small catapults; 23 large and 52 small balistae. (Liv. l. a.) Three sizes of the balista are mentioned by historians, viz. that which threw stones weighing half a hundred-weight (*τριακοταμναίους λίθους*, Polyb. ix. 34), a whole hundred-weight (*balista centenaria*, Non. Marc. l. a.; *λιθοβόλος τάλανταλος*, Polyb. l. a.; Diod. xx. 86), and three hundred-weight (*πεντοβόλος τριτάλαντος*, Diod. xx. 48). Besides these, Vitruvius (x. 11) mentions many other sizes, even down to the balista which threw a stone of only two pounds weight. In like manner catapults were denominated according to the length of the arrows emitted from them. (Vitruv. x. 10; Schneider, *ad loc.*) According to Josephus, who gives some remarkable instances of the destructive force of the balista, it threw stones to the distance of a quarter of a mile. (B. J. iii. 7. § 19, 23; comp. Procop. *Bell. Goth.* i. 21, 23.) Neither from the descriptions of authors nor from the figures on the column of Trajan (Bartoli, *Col. Traj. tab. 45—47*) are we able to form any exact idea of the construction of these engines. Still less are we informed on the subject of the *Scorpio* or *Onager*, which was also a tormentum. (Vitruv. x. 10; Liv. xxvi. 6, 47; Amm. Marcell. xx. 7, xxiii. 4.) Even the terms *balista* and *catapulta* are confounded by writers subsequent to Julius Caesar, and Diodorus Siculus often uses *καταπέλτης* to include both balistae and catapults, distinguishing them by the epithets *πεντοβόλοι* and *δευτελείς* (xiii. 51, xx. 48, 83, 86, xxi. 4).

The various kinds of tormenta appear to have been invented shortly before the time of Alexander the Great. When horse-hair and other materials failed, the women in several instances cut off their own hair and twisted it into ropes for the engines. (Caes. B. C. iii. 9; Veget. *de Re Mil.* iv. 9.) These machines, with those who had the management of them, and who were called *balistarii* and *ἀφραί* (Polyb. iv. 56), were drawn up in the rear of an advancing army, so as to throw over the heads of the front ranks. In order to attack a maritime city, they were carried on the decks of vessels constructed for the purpose. (Diod. xx. 83—86; Tacit. *Ann.* ii. 6.)

The meaning of *tormentum* as applied to the cordage of ships is explained on p. 790, a. [J. Y.]

TORMENTUM (*βάσανος*), torture. 1. GREEK. By a decree of Scamandrius it was ordained that no free Athenian could be put to the torture (Andoc. *de Myst.* 22; compare Lys. *περὶ τραυμ.* 177, c. *Agorat.* 462); and this appears to have been the general practice, notwithstanding the assertion of Cicero (*Part. Orat.* c. 34) to the contrary (*de Institutis Atheniensium, Rhodiorum* — *apud quos liberi civesque torquentur*). The only two apparent exceptions to this practice are mentioned by Antiphon (*de Herod. caed.* 729) and Lysias (c. *Simon.* 153). But, in the case mentioned by Antiphon, Böckh has shown that the torture was not applied at Athens, but in a foreign country; and in Lysias, as it is a Plataean boy that is spoken of, we have no occasion to conclude that he was an Athenian citizen, since we learn from Demosthenes (c. *Neaer.* 1381) that all Plataeans were not necessarily Athenian citizens. It must, however, be observed that the decree of Scamandrius does not appear to have interdicted the use of torture as a means of execution, since we find Demosthenes (*de Cor.* 271) reminding the judges that they had put

Antiphon to death by the rack (*στρεβλόμενους*). Compare Plut. *Phoc.* c. 35.

The evidence of slaves was, however, always taken with torture, and their testimony was not otherwise received. (Antiph. *Tetral.* i. p. 633.) From this circumstance their testimony appears to have been considered of more value than that of freemen. Thus Isaeus (*De Ciron. Hered.* 202) says, "When slaves and freemen are at hand, you do not make use of the testimony of freemen; but, putting slaves to the torture, you thus endeavour to find out the truth of what has been done." Numerous passages of a similar nature might easily be produced from the orators. (Comp. Demosth. c. *Onetor.* i. p. 874; Antiphon, *De Chorest.* 778; Lycurg. c. *Loocr.* 159—162.) Any person might offer his own slave to be examined by torture, or demand that of his adversary, and the offer or demand was equally called *πρόκλησις εἰς βάσανον*. If the opponent refused to give up his slave to be thus examined, such a refusal was looked upon as a strong presumption against him. The *πρόκλησις* appears to have been generally made in writing (Demosth. c. *Pantaen.* 978), and to have been delivered to the opponent in the presence of witnesses in the most frequented part of the Agora (Demosth. c. *Aphob.* iii. 848); and as there were several modes of torture, the particular one to be employed was usually specified (Demosth. c. *Steph.* i. 1120). Sometimes, when a person offered his slave for torture, he gave his opponent the liberty of adopting any mode of torture which the latter pleased. (Antiph. *De Chorest.* 777.) The parties interested either superintended the torture themselves, or chose certain persons for this purpose, hence called *βασανιστῆς*, who took the evidence of the slaves (*ἐλόμενοι βασανιστῆς, ἀκητῆσθαιεν εἰς τὸ ἑφαστεῖον*, Isocr. *Trop.* c. 9; compare Demosth. c. *Pantaen.* 978, 979; Antiph. *Κατηγορία Φαρμακ.* 609). In some cases, however, we find a public slave attached to the court, who administered the torture (*κατέσται δὲ ἥδη ὁ δημῖος, καὶ βασανίζει ἐναντίον ὁμῶν*, Aesch. *De Leg.* 284, ed. Tayl.); but this appears only to have taken place when the torture was administered in the court, in presence of the judges. (Aesch. l. a.; Demosth. c. *Euryg.* 1144.) This particular mode of administering the torture was, however, certainly contrary to the usual practice (*βασανίζειν οὐκ ἔστιν ἐναντίον ὁμῶν*, Demosth. c. *Steph.* i. 1106). The general practice was to read at the trial the depositions of the slaves, which were called *βασανολ* (Harpocr. *Suid.* s. v.; Demosth. c. *Nicostrat.* 1254), and to confirm them by the testimony of those who were present at the administration of the torture. (Meier, *Att. Process.* p. 680, &c.)

2. ROMAN. During the time of the republic, freemen were never put to the torture, and slaves only were exposed to this punishment. Slaves, moreover, could not be tortured to prove the guilt of their own master, except in the case of incestus, which was a crime against the gods, or unless the senate made an exception in some special instance, as was done in the Catilinarian conspiracy. (Cic. *pro Mil.* 22, *pro Deiot.* 1, *Part. Orat.* 34; Dion Cass. lv. 5; Tac. *Ann.* ii. 30, iii. 67; Dig. 48. tit. 18. s. 1. § 16.) At a later time slaves might be tortured to bear witness against their masters in cases of majestas (Cod. 9. tit. 8. ss. 6, 7) and adultery. (Dig. 48. tit. 18. s. 17; Cod. 9. tit. 9. ss. 3, 6,

32.) Under the emperors even free persons were put to the torture to extract evidence from them in cases of majestas; and although this indignity was confined for the most part to persons in humble circumstances, we read of cases in which even Roman senators and equites were exposed to it. (Dion Cass. ix. 15; Suet. Tib. 58; Dig. 48. tit. 18. s. 10. § 1.) For further information see Dig. 48. tit. 18, *De Quaestionibus*; Walter, *Geschichte des Römischen Rechts*, pp. 875, 876, 1st ed.; Rein, *Das Criminalrecht der Römer*, p. 542.

TORQUES or TORQUIS (σπερρός), an ornament of gold, twisted spirally and bent into a circular form, which was worn round the neck by men of distinction among the Persians (Curt. iii. 3; Themist. *Orat.* 24, p. 306, c.), the Gauls (Florus, i. 13, ii. 4), and other Asiatic and northern nations. (Isid. *Orig.* xix. 30.) *Toro* was the name of it among the Britons and ancient Irish. Virgil (*Aen.* v. 558, 559) thus describes it as part of the attire of the Trojan youths:

"It pectore summo
Flexilis obtorti per collum circulus auri."

Ornaments of this kind have been frequently found both in France and in many parts of Great Britain and Ireland (Petrie, *Trans. of R. Irish Acad.* vol. xviii.; *Antiq.* pp. 181—184), varying in size and weight, but almost always of the form exhibited in the annexed woodcut, which represents a torquis found in Brecknockshire, and now preserved in the British Museum. The same woodcut contains a section of this torquis of the size of the original. It shows, as Mr. Petrie observes concerning some found in the county of Meath, "four equidistant radiations from a common centre." The torquis in the British Museum is four feet and a half in length. Its hooks correspond well to the following description of the fall of a Celtic warrior: "Torquis ab incisa decidit *uoca* gula." (Propert. iv. 10. 44.) A torquis, which instead of being bent into a circular form was turned into a spiral, became a bracelet, as is shown in the lowest figure of the woodcut to ARMILLA. A torquis contrived to answer this purpose, is called *torquis brachialis*. (Vopisc. *Aurel.* 7.) Such bracelets and torques are often found together, having been worn by the same people.

The head in the preceding woodcut is that of a Persian warrior in the mosaic of the battle of Issus, mentioned in p. 431. It illustrates the mode of wearing the torquis, which in this instance ter-

minates in two serpents' heads instead of hooks. It was by taking this collar from a Gallic warrior that T. Manlius obtained the cognomen of *Torquatus*. (Cic. *de Fin.* ii. 22, *de Off.* iii. 31; Gellius, ix. 13; Non. Marc. pp. 227, 228, ed. Merceri.)

Torques, whether in the form of collars or bracelets, no doubt formed a considerable part of the wealth of those who wore them. Hence they were an important portion of the spoil, when any Celtic or Oriental army was conquered, and they were among the rewards of valour bestowed after an engagement upon those who had most distinguished themselves. (Juv. xvi. 60; Plin. *H.N.* xxxiii. 2. s. 10; Sidon. *Apollin. Carm.* xxiii. 424) The monuments erected to commemorate Roman soldiers and to enumerate the honours which they had obtained, often mention the number of torques conferred upon them. (Maffei, *Mus. Veron.* p. 218.) [PHALERA.] [J. Y.]

TORUS, a bed; originally made of straw (Plin. *H.N.* viii. 48. s. 73), hay, leaves, woolly plants (Mart. xiv. 160, 162), sea-weed (*de malibus ulvis*, Ovid. *Met.* viii. 656), also stuffed with wool, and afterwards with feathers (xi. 611), or swans-down (Mart. xiv. 161), so as to be as much raised and as soft as possible. (Virg. *Aen.* vi. 603; Ovid. *Amor.* ii. 4. 14.) It was sometimes covered with the hide of a quadruped (Virg. *Aen.* viii. 177), but more commonly with sheets or blankets, called *Toralia*. (Hor. *Sat.* ii. 4. 84, *Epist.* i. 5. 22.) The torus may be observed on the sofa in the first woodcut, p. 308; and its appearance there may suffice to explain the transference of its name to the larger semi-circular mouldings in the base of columns. TO'XOTAE (τοξόται). [DEMOSIL.]

TRABEA. [TOGA.]

TRADITIO. [DOMINIUM.]

TRAGOEDIA (τραγῳδία), tragedy. 1. GREEK. The tragedy of the ancient Greeks as well as their comedy confessedly originated in the worship of the god Dionysus. It is proposed in this article (1) to explain from what element of that worship Tragedy took its rise, and (2) to trace the course of its development, till it reached its perfect form and character in the drama of the Attic tragedians, Aeschylus, Sophocles, and Euripides.

The peculiarity which most strikingly distinguishes the Greek tragedy from that of modern times, is the lyrical or choral part. This was the offspring of the dithyrambic and choral odes from which, as applied to the worship of Dionysus, Greek tragedy took its rise. This worship, we may observe, was of a twofold character, corresponding to the different conceptions which were anciently entertained of Dionysus as the changeable God of flourishing, decaying, or renovated nature, and the various fortunes to which in that character he was considered to be subject at the different seasons of the year. Hence Müller observes (*Lit. of Greece*, p. 288), "the festivals of Dionysus at Athens and elsewhere were all solemnized in the months nearest to the shortest day, coincidentally with the changes going on in the course of nature, and by which his worshippers conceived the god himself to be affected." His mournful or joyous fortunes (ᾠδὴν), his mystical death, symbolizing the death of all vegetation in winter, and his birth (Plat. *de Leg.* iii. p. 700; Proclus in *Gaisford's Hephaest.* p. 383), indicating the renovation of all nature in the spring,

and his struggles in passing from one state to another, were not only represented and sympathised in by the Dithyrambic singers and dancers, but they also carried their enthusiasm so far, as to fancy themselves under the influence of the same events as the god himself, and in their attempts to identify themselves with him and his fortunes, assumed the character of the subordinate divinities, the Satyrs, Nymphs, and Panes (*Nympharumque leves cum Satyris chori*), who formed the mythological train of the god. Hence, as is explained under DIONYSIA (p. 410, b), arose the custom of the disguise of Satyrs being taken by the worshippers at the festivals of Dionysus, from the choral songs and dances of whom the Grecian tragedy originated, "being from its commencement connected with the public rejoicings and ceremonies of Dionysus in *cities*, while comedy was more a sport and merriment of the country festivals." In fact the very name of Tragedy (*τραγῳδία*), far from signifying anything mournful or pathetic, is most probably derived from the goatlike appearance of the Satyrs who sang or acted with mimetic gesticulations (*ὄρχησις*) the old Bacchic songs, with Silenus, the constant companion of Dionysus, for their leader. (Bode, *Gesch. d. Hellen. Dichtkunst*, vol. iii. p. 81.) From their resemblance in dress and action to goats, they were sometimes called *τράγοι*, and their song *τραγῳδία*. Thus Aeschylus in a fragment of the Prometheus *Πυρφόρος* calls a Satyr *τράγος*, and the Satyric chorus in the Cyclops of Euripides (l. 80) appears in the skin of a goat (*χλαῖνα τράγου*). The word *Σάτυρος* also is apparently the same as *τίτροπος*, a kind of goat. (Phot. *Lex. s. v.*) According to another opinion, the "word Tragedy was first coined from the goat that was the prize of it, which prize was first constituted in Thespia's time." (Bentley, *Phalar.* p. 249.) This derivation, however, as well as another, connecting it with the goat offered on the altar of Bacchus (Müller, *Literat. of Greece*, p. 291), around which the chorus sang, is not equally supported either by the etymological principles of the language, or the analogous instance of *κωμῳδία*, the "revel-song." (*Etymol. Mag.* p. 764; Eurip. *Bacch.* 131; Aelian, *V. H.* iii. 40.)

But the Dionysian dithyrambs were not always of a gay and joyous character: they were capable of expressing the extremes of sadness and wild lamentation as well as the enthusiasm of joy; and it was from the Dithyrambic songs of a mournful cast, probably sung originally in the winter months, that the stately and solemn tragedy of the Greeks arose. That there were Dithyrambs of such a character, expressive of the sufferings of Dionysus (*τὰ τοῦ Διονύσου πᾶσιν*), appears from the statement in Herodotus (v. 67), that at Sicyon in the time of Clisthenes (a. c. 600) it was customary to celebrate (*γελᾶσθαι*) the sufferings of that god with "tragic choruses." But it must be remarked that in the most ancient times the Dithyrambic song was not executed by a regular chorus. Thus Archilochus says in Trochaic verse, "I know how when my mind is inflamed with wine to lead off the Dithyramb, the beautiful song of Dionysus," whence we may infer that in his time (a. c. 700) the Dithyramb was sung by a band of revellers led by a flute-player. Lyrical choruses, indeed, had been even then established, especially in the Dorian states of Greece, in connection with the worship of Apollo, the cithara or *φάρμαξ* being the instrument

to which the choreutae sang and danced. (Müller, *Literat. of Greece*, p. 204; *Dorians*, iv. 7. § 8.) In fact the connection of the Dorian choral poetry with the worship of Apollo, the direct opposite to that of Dionysus, and its consequent subjection to established rules and forms, admitting too, from the Dorian character but little innovation, affords the most obvious explanation of the striking circumstance that nothing decidedly dramatic sprang from it, as from the dithyrambic performances. (Bode, p. 16.) Still there were some points in which the Dorian worship of Apollo resembled that of Dionysus, e. g. the dances with which the former god was honoured, and the kind of mimicry which characterised them. Other circumstances also, on which we cannot here dwell, would probably facilitate the introduction of the Dionysian Dithyramb amongst the Dorian states, especially after the improvements made in it by Arion (a. c. 600), which were so great, that even the invention of that species of poetry is ascribed to him, though it had been known in Greece for a century before his time. The worship of Dionysus was celebrated at his native place, Methymnae in Lesbos, with music and orgiastic rites; and as Arion travelled extensively in the Dorian states of Hellas, he had ample opportunities of observing the varieties of choral worship, and of introducing any improvements which he might wish to make in it. (Bode, p. 22.) He is said to have been the inventor of the "tragic turn" (*τραγικὸν τῶτον*), a phrase of doubtful signification, but which seems to mean, that he was the inventor of a grave and solemn style of music, to which his Dithyrambs were danced and sung. (Hermann, *Opusc.* vol. vii. p. 216.) Suidas (s. v.) adds of him, *λέγεται καὶ πρῶτος χορὸν στήσαι, καὶ διδύραμβον ἔσαι καὶ δρομῶσαι τὸ φθόμενον ἐν τῷ χορῷ, καὶ Σατύρους εἰσενεγκεῖν ἑμμετρα λέγοντας*. From the first clause, in connection with other authorities (Schol. in *Aristoph. Aves*, 1403), we learn that he introduced the cyclic chorus (a fact mythologically expressed by making him the son of *Cyclopus*); i. e. the Dithyramb, instead of being sung as before his time in a wild irregular manner, was danced by a chorus of fifty men around a blazing altar; whence in the time of Aristophanes, a dithyrambic poet and a teacher of cyclican choruses were nearly synonymous. (Müller, p. 204.) As the alteration was made at Corinth, we may suppose that the representation of the Dithyrambic was assimilated in some respects to that of the Dorian choral odes. The clause to the effect that Arion introduced Satyrs, i. e. *τράγοι*, speaking in verse (*trochaic*), is by some thought another expression for the invention of the "tragic style." A simpler interpretation is, that he introduced the Satyrs as an addition and contrast to the dance and song of the cyclic chorus of the Dithyramb, thus preserving to it its old character as a part of the worship of Bacchus. The phrase *δρομῶσαι* (compare Herod. i. 23) alludes to the different titles given by him to his different Dithyrambs according to their subjects, for we need not suppose that they all related directly to Bacchus. (Welcker, *Nachtrag.* p. 233.) As he was the first cithara player of his age (Herod. i. 23), it is probable that he made the lyre the principal instrument in the musical accompaniment.

From the more solemn Dithyrambs then, as improved by Arion, with the company of Satyrs, who probably kept up a joking dialogue, ultimately

sprang the dramatic tragedy of Athens, somewhat in the following manner. The choruses which represented them were under the direction of a leader or exarchus, who, it may be supposed, came forward separately, and whose part was sometimes taken by the poet himself. (Plato, *Rep.* iii. p. 394, c.) We may also conjecture that the exarchus in each case led off by singing or reciting his part in a solo, and that the chorus dancing round the altar then expressed their feelings of joy or sorrow at his story, representing the perils and sufferings of Dionysus, or some hero, as it might be. Accordingly some scholars have recognized in such choral songs, or in a proximate deviation from them, what has been called a "lyrical tragedy," performed without actors distinct from the chorus, and conceived to be a transition step between the Dithyramb and the dramatic Tragedy. The title, however, does not occur in ancient writers, and therefore, if it means anything, can only refer to representations of the character we have just ascribed to the Dithyrambs of Arion, modified from time to time, according to circumstances or the fancy of the writer. That the names τραγῳδία and τραγῳδός are applied, indeed, to works and writers before the time of Thespis, and that the "tragedy" of that age was entirely choral, without any regular formal dialogue, is evident from many authorities. Thus Athenaeus (xiv. p. 630, c), observes that the whole satyrical poetry formerly consisted of choruses, as did the "tragedy" of old times (ἡ τότε τραγῳδία). Again, Diogenes Laërtius (iii. 56) states that formerly the chorus alone acted (διεδραματίζον) or performed a drama, on which Hermann (*Opus.* vii. 218) observes, "after the Dithyramb was sung, some of the chorus in the guise of Satyrs came forward and improvised some ludicrous stories; but in exhibitions of this sort," he adds, "we see rather dramaticæ tragoediae initia, quam ullum lyriæ cujusdam generis vestigium." Lyric poets also seem to have been spoken of as Tragedians; thus according to Suidas (s. v.) Pindar wrote 17 δράματα τραγικὰ ("but not lyrical tragedies," Hermann, l. c.), and Simonides of Ceos wrote tragedies, or a tragedy, as some manuscripts have it. But whatever may be inferred from this, it only proves that Dithyrambic poets were also called Tragedians, just as in the Scholia on Aristophanes (*Plut.* 290) a writer is described as διδυραμβοειδὴς ἢ τραγικιδιδασκαλός. For the arguments on both sides see Hermann, l. c.; and Böckh on the Orchomenian Inscriptions. (*Greek Theatre*, p. 28.)

The choral Dithyrambic songs, accompanied with mimetic action (the lyrical tragedy?), prevailed to some extent, as all choral poetry did, amongst the Dorians of the Peloponnese (Müller, *Dorians*, ii. 10. § 6); whence their derivative, the choral element of the Attic tragedy, was always written in the Dorian dialect, thus showing its origin. The lyrical poetry was, however, especially popular at Sicily and in Corinth. In the latter city Arion made his improvements; in the former "tragic choruses," i. e. dithyrambs of a sad and plaintive character, were very ancient (Herod. v. 67; Welcker, *Nachtrag*, p. 235), and the Sicyonians are also said to have been the inventors of the τραγῳδία (τραγῳδίας εἰρέται μὲν Σικωνῖοι, τελεσιουργοὶ δὲ Ἀττικοὶ ποιηταί, Themist. xxvii. p. 406, Dindorf); but of course this can only mean, that the dramatic tragedy was a derivative,

through many changes, of the old satyirical τραγῳδία, i. e. of the songs sung with mimetic dancing by the goatlike Satyrs, or as others would say, round the altar, on which lay the burnt sacrifice of a goat. It appears then that there is a good and intelligible foundation for the claims which, according to Aristotle (*Poet.* iii. 3), were made by the Peloponnesians, and especially by the Sicyonians, to the invention of "tragedy," understanding by it a choral performance, such as has been described above. Now the subjects of this Dithyrambic tragedy were not always, even in ancient times, confined to Dionysus. Even Arion wrote Dithyrambs, relating to different heroes (Herod. i. 23), a practice in which he was followed by succeeding poets, who wrote Dithyramb-like odes (whence they were classed amongst the τραγικὰ ποιήματα), which they called Centaurs, Ajaxes, or Memnons, as it might be. (Zenob. v. 40.) Thus, Epigenes the Sicyonian is said to have written a tragedy, i. e. a piece of dithyrambic poetry on a subject unconnected with Dionysus, which was consequently received with the cry of οὐδὲν πρὸς τὸν Διόνυσον, or "this has nothing to do with Bacchus." (Apostolius, xv. 13.) If this anecdote be true, and Epigenes preceded Arion, the introduction of the Satyrs into the Dithyrambic chorus by the latter, may possibly have been meant to satisfy the wishes of the people; but whether it was so or not, there is scarcely any doubt that from the time of Arion, the tragic dithyramb gradually became less satyrical and sportive in its character, till the creation of the independent Satyric drama and the Attic dramatic tragedy. (Bode, p. 23.)

As to the steps by which this was effected, Aristotle (*Poet.* iv. 14) says, "Tragedy was at the first an extemporaneous effusion (ἀπ' ἀρχῆς ἀπροσχεδιαστική), and was derived ἀπὸ τῶν ἑταίρων τῶν τὸν Διδυραμβόν, i. e. from the leaders or the chief singers of the Dithyramb, who probably sang or recited their parts in the trochaic metre, while the main body of the ode was written in irregular verse. It is easy to conceive how the introduction of an actor or speaker independent of the chorus might have been suggested by the exarchs or coryphaei coming forward separately and making short off-hand speeches (Welcker, *Nachtrag*, p. 228), whether learnt by heart beforehand, or made on the spur of the moment. [CHORUS.] But it is also possible, if not probable, that it was suggested by the rhapsodical recitations of the epic and gnomic poets formerly prevalent in Greece: the gnomic poetry being generally written in Iambic verse, the metre of the Attic dialogue, and which Aristotle (*Poet.* 4) says was used by Homer in his *Margites*, though its invention is commonly ascribed to Archilochus. In fact the rhapsodists themselves are sometimes spoken of as actors (ὑποκριταί) of the pieces they recited, which they are also said to act (ὑποκρινόμεθα, Athen. xiv. p. 629, d; Müller, *Literature*, &c., p. 34). But if two or more rhapsodes were called upon to go through an episode of a poem, a regulation which obtained at the Panathenaea, and attributed to Solon or Hipparchus (Wolf, *Proleg.* p. 97; Plato, *Hipparch.* p. 228), it is clear that they would present much of a dramatic dialogue. In fact (Bode, p. 6) the principal scenes of the whole Iliad might in this way have been represented as parts of a drama. These recitations then being so common, it was natural to combine with the re-

presentation of the Dithyramb, itself a mixture of recitative and choral song, the additional element of the dialogue, written in Iambic verse, a measure suggested perhaps by the gnomic poetry, and used by Solon about the time of the origin of the dialogue (Solon, *Frag.* 28, Gaisford), more especially as it is the most colloquial of all Greek metres (*λεκτική*) and that into which common conversation most readily falls. It is indeed only a conjecture that the dialogue or the Ionian element of Attic tragedy was connected with the rhapsodical recitations, but it is confirmed by the fact that Homeric rhapsodes were common at Sicily (Herod. v. 67), the cradle of the Dorian tragedy, and also at Brauron in Attica, where the worship of Dionysus existed from ancient times. (Heusy. s. v. *Βραυρωνίους*.) This however is certain, that the union of the Iambic dialogue with the lyrical chorus took place at Athens under Peisistratus, and that it was attributed to Thespis, a native of Icarus, one of the country demes or parishes of Attica where the worship of Dionysus had long prevailed. The introduction of this worship into Attica, with its appropriate choruses, seems to have been partly owing to the commands of the Dorian oracle (Dem. c. *Mid.* p. 531), in very early times. Thus it is stated (Plato, *Ménos*, p. 321; Plut. *Sol.* 29), that tragedy (i. e. the old Dithyrambic and Satyrical tragedy) was very ancient in Attica, and did not originate with Thespis or his contemporaries. This alteration made by him, and which gave to the old tragedy (*ἀρχαίωτον τῶν περὶ θεῶν ἢ τῆς τραγῳδίας κινεῖν*) a new and dramatic character (making it an *ignotum tragicæ genus*, Hor. *Art. Poet.* 275), was very simple but very important. He introduced an actor, as it is recorded, for the sake of giving rest to the chorus (Diog. Laërt. iii. 50) and independent of it, in which capacity he probably appeared himself (Plut. *Sol.* 29), taking various parts in the same piece, under various disguises, which he was enabled to assume by means of the linen masks, the invention of which is attributed to him. Now as a chorus, by means of its leader, could maintain a dialogue with the actor, it is easy to see how with one actor only "a dramatic action might be introduced, continued, and concluded, by the speeches between the choral songs expressive of the joy or sorrow of the chorus at the various events of the drama." Thus Müller observes that in the play of Pentheus, supposed to have been composed by Thespis, "a single actor might appear successively as Dionysus, Pentheus, a messenger, Agave the mother of Pentheus, and in these characters express designs and intentions, or relate events which could not be represented, as the murder of Pentheus by his mother: by which means he would represent the substance of the fable as it appears in the Bacchæ of Euripides." (Müller, p. 29; Bode, p. 57.) With respect to the character of the drama of Thespis there has been much doubt: some writers, and especially Bentley (*Phalar.* p. 218), have maintained that his plays were all satyrical and ludicrous, i. e. the plot of them was some story of Bacchus, the chorus consisted principally of satyrs, and the argument was merry—an opinion indeed which is supported by the fact that in the early part of his time, the satyric drama had not acquired a distinctive character. It may also appear to be confirmed by the statement (Aristot. *Poet.* 4) that at first the Tragedians made use of the tro-

chaic tetrameter, as being better suited to the satyrical and saltatorial nature of their pieces. But perhaps the truth is that in the early part of his career Thespis retained the satyrical character of the older tragedy, but afterwards inclined to more serious compositions, which would almost oblige him to discard the Satyrs from his choruses. That he did write serious dramas is intimated by the titles of the plays ascribed to him, as well as by the character of the fragments of Iambic verse quoted by Plutarch as his (Bentley, *Phalar.* p. 214), and which even if they are forgeries of Heraclides Ponticus, at least prove what was the opinion of a scholar of Aristotle on the subject. Besides the assertion that Sophocles (Suidas, *is vit.*) wrote against the chorus of Thespis seems to show that there was some similarity of character between the productions of the two poets. (Bode, p. 47.) A summary of the arguments in favour of the serious character of the tragedy of Thespis is given by Welcker (*Nacktrag*, pp. 257—276). The invention of the prologus and rhesus of tragedy (an expression clearly in some measure identical with the introduction of an actor) is also ascribed to Thespis by Aristotle. (*Thestet.* p. 382, ed. Dind.) By the former word is meant the first speech of the actor (Aristot. *Poet.* 12), or the prooemium with which he opened the piece; the chorus then sang the first ode or *ᾠδὸς*, after which came the *ῥῆσις* or dialogue between the actor and the principal choreutæ. The invention of this dialogue is also alluded to in the phrase *λέξαι δὲ γενομένης*. (*Id.* 4.) It is evident that the introduction of the dialogue must also have caused an alteration in the arrangement of the chorus, which could not remain cyclic or circular, but must have been drawn up in a rectangular form about the thymele or altar of Bacchus in front of the actor, who was elevated on a platform or table (*ἐλῆός*), the forerunner of the stage. The statement in Pollux (iv. 123), that this was the case before Thespis seems incorrect. (Welcker, *Nacktrag*, p. 268.) If we are right in our notion of the general character of the Thespian drama, the phrase *οὐδὲν πρὸς Διόνυσον*, which was certainly used in his time, was first applied to his plays at Athens, as being unconnected with the fortunes of Dionysus, and as deviations from the *μικροὶ μῦθοι καὶ λέξις γελοία* of his predecessors. Plutarch however (*Symp.* i. 5) supposes that its first application was later: he says "when Phrynichus and Aeschylus continued to elevate tragedy to legends and tales of sufferings (*εἰς μύθους καὶ πρῶτην προαγόμενον*), the people missing and regretting the old Satyric chorus, said, "What is this to Bacchus?" Hence the expression was used to signify what was *mal-à-propos*, or beside the question.

The reader may have observed that we have not noticed the lines of Horace (*Ar. Poet.* 276):

"Dicitur et plaustris vexiæse poemata Thespis,
Quæ canerent agerentque peruncti facibus ora."

The fact is that they are founded on a misconception of the origin of the Attic tragedy, and that the tale about the wagons of Thespis probably arose out of a confusion of the wagon of the comedian Susarion with the *platform* of the Thespian actor. The first representation of Thespis was in B. C. 535. His immediate successors were the Athenian Choerilus and Phrynichus, the former of whom represented

plays as early as B.C. 524. He is said by Suidas to have written 150 pieces: from the title of one of them, the "Alope," its subject seems to have been a legend of Attic origin. (Paus. i. 14. § 3; Bode, p. 60.) That he excelled in the Satyric drama invented by Pratinas, is indicated by the line of an unknown author,

Ἦνικα μὲν βασιλεὺς ἦν Χοῖριλος ἐν Σατύροις,

and if he wrote anything like the number of dramas ascribed to him, it is also evident that the custom of contending with Tetralogies must have been of early origin, for there were only two dramatic festivals during the year.

Phrynichus was a pupil of Thespis, and gained his first victory in the dramatic contests B.C. 511. In his works, the lyric or choral element still predominated over the dramatic, and he was distinguished for the sweetness of his melodies, which in the time of the Peloponnesian war were very popular with the admirers of the old style of music. The esteem in which his "ambrosial songs" were then held is shown in several passages of Aristophanes (*Aves*, 748, *Theos*, 164), and in the line (*Vesp.* 219) where the dicasts are made to chaunt the old Sidonian sweet songs of Phrynichus,

Καὶ μὴν ὀύζοντες μέλη

* Ἀρχαιομελισιδανοφρυνηχάτα.

"Sidonian" being an allusion to the play which he wrote called the *Phoenissae*. The first use of female masks is also attributed to him (Suidas, *in vit.*), and he so far deviated from the general practice of the Attic tragedians as to write a drama on a subject of cotemporary history, the capture of Miletus by the Persians, B.C. 494. (Herod. vi. 21.)

We now come to the first writer of Satyric dramas, Pratinas of Phlius, a town not far from Sicyon, and which laid claim to the invention of tragedy as well as comedy. (Bode, p. 35.) For some time previously to this poet, and probably as early as Thespis, tragedy had been gradually departing more and more from its old characteristics, and inclining to heroic fables, to which the chorus of Satyrs was not a fit accompaniment. But the fun and merriment caused by them were too good to be lost, or displaced by the severe dignity of the Aeschylean drama. Accordingly the Satyric drama, distinct from the recent and dramatic tragedy, but suggested by the sportive element of the old Dithyramb, was founded by Pratinas, who however appears to have been surpassed in his own invention by Choerilus. It was always written by tragedians, and generally three tragedies and one Satyric piece were represented together, which in some instances at least formed a connected whole, called a tetralogy (*τετραλογία*). The Satyric piece was acted last, so that the minds of the spectators were agreeably relieved by a merry after-piece at the close of an earnest and engrossing tragedy. The distinguishing feature of this drama was the chorus of Satyrs, in appropriate dresses and masks, and its subjects seem to have been taken from the same class of the adventures of Bacchus and of the heroes as those of tragedy; but of course they were so treated and selected, that the presence of rustic satyrs would seem appropriate. In their jokes and drollery and naïveté consisted the merriment of the piece; for the kings and heroes who were introduced into their com-

pany were not of necessity thereby divested of their epic and legendary character (Horace, *Ar. Poet.* 222, speaks of the "incolumi gravitate"), though they were obliged to conform to their situation and suffer some diminution of dignity, from their position. Hence Welcker (*Nachtrag*, p. 331) observes, the Satyric drama, which, so to speak, was "the Epos turned into prose, and interspersed with jokes made by the chorus," is well spoken of as a "playful tragedy" (*παίονσα τραγῳδία*), being both in form and materials the same as tragedy. Thus also Horace (*Ar. Poet.* 231) says:

Effutire leves indigna Tragoedia versus
Intererit Satyris paulum pudibunda protervis,

alluding in the first line to the mythic or epic element of the Satyric drama, which he calls *Tragoedia*, and in the second representing it as being rather ashamed of its company. The scene was of course laid in the supposed haunts of the Satyr, as we learn from Vitruvius (v. 8): "*Satyrice scenae ornantur arboribus, montibus reliquique agrestibus rebus*," all in keeping with the incidents of the pieces, and reminding the spectators of the old Dithyramb and the god Dionysus, in whose honour the dramatic contests were originally held. We must however observe that there were some characters and legends, which as not presenting any serious or pathetic aspects, were not adapted for tragedy, and therefore were naturally appropriated to the Satyric drama. Such were Sisyphus, Antolycus, Circe, Callisto, Midas, Omphale, and the robber Skiron. Hercules also, as he appears in Aristophanes (*Ranæ*) and the *Alceste* of Euripides, was a favourite subject of this drama, as being no unfit companion for a drunken Silenus and his crew. (Müller, 295.) The *Odyssee* also, says Lessing (*Loben des Sophocles*, § 115), was in general a rich storehouse of the Satyric plays; but though the Cyclops of Euripides, the only satyric play extant, was taken from it, the list of Satyric pieces given by Welcker (*Nachtrag*, p. 284—322) hardly confirms this assertion.

We now come to the improvements made in tragedy by Aeschylus, of which Aristotle (*Poet.* iv. § 16) thus speaks:—"He first added a second actor and diminished the parts of the chorus, and made the dialogue the principal part of the action" (*τὸν λόγον πρωταγωνιστὴν παρεσκεύασε*). He also availed himself of the aid of Agatharchus, the scene-painter, and improved the costume of his actors by giving them thick-soled boots (*ἐμβάτω*), as well as the masks, which he made more expressive and characteristic. Horace (*Ar. Poet.* 278) thus alludes to his improvements:—

"personae pallaeque repertor honestae
Aeschylus, et modicis instravit pulpita tignis
Et docuit magnumque loqui, nitique cothurno"

The custom of contending with trilogies (*τριλογία*), or with three plays at a time, is said to have been also introduced by him. In fact he did so much for tragedy, and so completely built it up to its "towering height," that he was considered the father of it. The subjects of this drama, as we have before intimated from Plutarch, were not connected with the worship of Dionysus; but rather with the great cycle of Hellenic legends and some of the myths of the Homeric Epos. Accordingly he said of himself (*Athen.* viii. p. 347, e) that his dramas were but scraps and fragments from the great feasts of

Homer. Another instance of his departure from the spirit and form of the old tragedy, as connected with Dionysus, is shown in his treatment of the Dithyrambic chorus of fifty men, which in his trilogy of the *Oresteia* he did not bring on the stage all at once, but divided it into separate parts making a different set of choreutae for each of the three pieces. (Müller, *Emmenid.*) In the latter part of his life Aeschylus made use of one of the improvements of Sophocles, namely the *τριαγωνιστής*, or third actor. This was the finishing stroke to the dramatic element of Attic tragedy, which Sophocles is said to have matured by further improvements in costume and scene-painting. Under him tragedy appears with less of sublimity and sternness than in the hands of Aeschylus, but with more of calm grandeur and quiet dignity and touching incident. His latter plays are the perfection of the Grecian tragic drama, as a work of art and poetic composition in a thoroughly chastened and classic style, written when as he says of himself he had put away the boyish pomp of Aeschylus (*τὸν Αἰσχύλου διαπεραιχὲς ὕκον*), and the harsh obscurity of his own too great refinements, and attained to that style which he thought the best, and most suited for portraying the characters of men. (Plut. *de Pro. V.S.* p. 79, b.) The introduction of the third actor enabled him to do this the more effectually, by showing the principal character on different sides and under different circumstances, both as excited by the opposition of one and drawn out by the sympathies of another. [HISTORIO, p. 611.] Hence though the plays of Sophocles are longer than those of Aeschylus, still there is not a corresponding increase of action, but a more perfect delineation of character. Creon for instance in the *Antigone*, and Ajax are more perfect and minutely drawn characters than any in Aeschylus. The part of the chorus is, on the other hand, considerably diminished in his plays. Another distinguishing feature in them is their moral significance and ethical teaching. Though the characters in them are taken from the old subjects of national interest, still they do not always appear as heroes, or above the level of common humanity, but in such situations and under the influence of such motives, passions, and feelings as fall to the lot of men in general: so that "every one may recognise in them some likeness of himself."

In the hands of Euripides tragedy deteriorated not only in dignity, but also in its moral and religious significance. He introduces his heroes in rags and tatters, and busies them with petty affairs, and makes them speak the language of every-day life. As Sophocles said of him (Arist. *Poet.* 25), he represented men not as they ought to be, but as they are, without any ideal greatness or poetic character—thoroughly prosaic personages. His dialogues too were little else than the rhetorical and forensic language of his day cleverly put into verse: full of sophistry and quibbling distinctions. One of the peculiarities of his tragedies was the *πρόλογος*, an introductory monologue, with which some hero or god opens the play, telling who he is, what is the state of affairs, and what has happened up to the time of his address, so as to put the audience in possession of every fact which it might be necessary for them to know: a very business-like proceeding no doubt, but a poor makeshift for artistical skill. The "*Deus ex machina*," also though not always, in a "*nodus, tali vindice*"

dignus," was frequently employed by Euripides to effect the *dénouement* of his pieces. The chorus too no longer discharged its proper and high functions either as a representative of the feelings of unprejudiced observers, or, "as one of the actors, and a part of the whole," joining in the development of the piece. Many of his choral odes in fact are but remotely connected in subject with the action of the play. Another novelty of Euripides was the use of the "monodies" or lyrical songs, in which not the chorus, but the principal persons of the drama, declare their emotions and sufferings. They were amongst the most brilliant parts of his pieces, and being sung by persons on the stage, are sometimes described as *φῶδες ἀπὸ σκηνῆς*. (Phot. *Lex.* s. v.) Aristophanes often parodied them, and makes Euripides say of himself (*Ranæ*, 944), that he "nurtured tragedy with monodies, introducing Cephisophon" his chief actor, to sing them.

Εἰτ' ἀνέτρεφον μονοῖαις, Κηφισοφῶντα μὲνους.

Euripides was also the inventor of *tragi-comedy*, which not improbably suggested, as it certainly resembled, the *Ἰλαροτραγῳδία* of the Alexandrian age, the latter being a half-tragic, half-comic drama, or rather a parody or travesty of tragical subjects. A specimen of the Euripidean *tragi-comedy* is still extant in the *Alcestis*, acted B. C. 438, as the last of four pieces, and therefore as a substitute for a Satyrical drama. Though tragic in its form and some of its scenes, it has a mixture of comic and satyric characters (*e.g.* Hercules) and concludes happily.

It remains to make some remarks on the nature and object of Greek tragedy in general, and on the parts into which it was divided. According to Plato (*Leg.* vii. p. 817) the truest tragedy is an imitation of the noblest and best life: *μίμησις τοῦ καλλίστου καὶ ἀρίστου βίου*. Aristotle's definition is more comprehensive and perhaps perfect. "Tragedy is an imitation of an action that is important (*σπουδαίας*), and entire, and of a proper magnitude, in pleasurable language, by means of action, not of narration, and effecting through terror and pity the refinement and correction of such passions" (*τὴν τοιοῦτων καθεμάτων κάθαρσιν*). He then adds, Tragedy contains six parts: the story, *i.e.* the combination of incidents or plot, manners, expression, sentiment, decoration, and music (*μῦθος καὶ ᾠή, καὶ λέξις, καὶ διάνοια, καὶ ὅψις, καὶ μελοποιία*). Of these the story is the principal part, developing the character of agents, and being in fact the very soul of tragedy. The manners come next, and manifest the disposition of the speakers. The sentiments take the third place, and comprehend whatever is said, whether proving anything, or expressing some general reflection. Afterwards he adds, Fables are of two sorts, simple and complicated (*οἱ μὲν ἀπλοῖ, οἱ δὲ πεπλεγμένοι*), the catastrophe of the former produced without a revolution or discovery, of the latter with one or both. Now a revolution (*περιπέτεια*) is a change to the reverse of what is expected from the circumstances of the action: a discovery (*ἀναγνώρισις*) is a change from known or unknown, happening between characters whose happiness or unhappiness forms the catastrophe of the drama. The best sort of discovery is accompanied by a revolution, as in the *Oedipus*. Aristotle next enumerates the parts of *quantity* (*κατὰ τὸ πῶσον*) or division in tragedy: these are, the prologue, episode, exode, and choral

songs; the last divided into the parade and stasimon. The *πρόλογος* is all that part of a tragedy which precedes the parodos of the chorus, i. e. the first act. The *ἐπεισόδιον* is all the part between whole choral odes. The *ἔξοδος* that part which has no choral ode after it. Of the choral part the *πρόδος* is the first speech of the whole chorus (not broken up into parts): the stasimon is without anapaests and trochees. These two divisions were sung by all the choreutae (*κοινὰ ἀνδρών*), but the "songs on the stage" and the *κόμμοι* by a part only (*ἴδια δὲ τὰ ἀπὸ τῆς σκηνῆς καὶ κόμμοι*). The *commus*, which properly means a wailing for the dead, was generally used to express strong excitement, or lively sympathy with grief and suffering, especially by Aeschylus. It was common to the actors and a portion only of the chorus (*κομμοὶ δὲ θρήνοι, κοινὸς χοροῦ, καὶ ἀπὸ σκηνῆς*), whence its derivative *κομματιαὶ* is used to designate broken and interrupted songs sung either by individual choreutae or divisions of the chorus. (Müller, *Eumen.* p. 84.) Again the *πρόδος* was so named as being the passage-song of the chorus sung while it was advancing to its proper place in the orchestra, and therefore in anapaestic or marching verse: the *σπράσιμον*, as being chaunted by the chorus when standing still in its proper position. (*Seid.* and *Elym. Magn.*)

With respect to the ends or purposes of Tragedy, Aristotle observes that they are best effected by the representation of a change of fortune from prosperity to adversity, happening to a person neither eminently virtuous nor just, nor yet involved in misfortune by deliberate vice or villany, but by some error of human frailty, and that he should also be a person of high fame and eminent prosperity, like Oedipus or Thyestes. Hence, he adds, Euripides is not censurable, as is generally supposed; for tragedies with an unhappy termination like his, have always the most *tragic* effect; and Euripides is the most tragic of all poets, i. e. succeeds best in producing pity: an expression especially true of some scenes in the *Medea*. In Aeschylus, the feelings of pity and melancholy interest are generally excited by the relation in which his heroes stand to destiny. He mostly represents them as vainly struggling against a blind but irresistible fate, to whose power (according to the old Homeric notion) even the father of gods and men is forced to yield, and it is only occasionally, as in the splendid chorus of the *Eumenides* (522), that we trace in him any intimations of a moral and retributive government of the world. Hence there is a want of moral lessons in his works. In Sophocles, on the contrary, we see indications of a different tone of thought, and the superintendence of a directing and controlling power is distinctly recognized: "the great Zeus in heaven, who superintends and directs all things." (*Electr.* 174; Thirlwall, *Phil. Mus.* vol. ii. p. 492.)

The materials of Greek tragedy were the national mythology,

"Presenting Thebes, or Pelops' line,
Or the tale of Troy divine."

The exceptions to this were the two historical tragedies, the "Capture of Miletus," by Phrynichus, and the "Persians" of Aeschylus; but they belong to an early period of the art. Hence the plot and story of the Grecian tragedy were of necessity known to the spectators, a circumstance

which strongly distinguishes the ancient tragedy from the modern, and to which is owing in some measure the practical and quiet irony in the handling of a subject, described by Thirlwall (*Phil. Mus.* ii. p. 483, &c.) as a characteristic of the tragedy of Sophocles.

The functions of the Chorus in Greek Tragedy were very important, as described by Horace (*Ar. Poet.* 193),

"Actoris partes chorus officiumque virile
Defendat: neu quid medius intercat actus,
Quod non proposito conducat, et haereat apte," &c.

We must conceive of it, says A. W. Schlegel, as the personification of the thought inspired by the represented action; in other words, it often expresses the reflections of a dispassionate and right-minded spectator, and inculcates the lessons of morality and resignation to the will of heaven, taught by the occurrence of the piece in which it is engaged. Besides this, the chorus enabled a poet to produce an image of the "council of elders," which existed under the heroic governments, and under whose advice and in whose presence the ancient princes of the Greek tragedy generally acted. This image was the more striking and vivid, inasmuch as the chorus was taken from the people at large, and did not at all differ from the appearance and stature of ordinary men; so that the contrast or relation between them and the actors was the same as that of the Homeric *λαοί* and *ἄνδρες*. Lastly, the choral songs produced an agreeable pause in the action, breaking the piece into parts, while they presented to the spectator a lyrical and musical expression of his own emotions, or suggested to him lofty thoughts and great arguments. As Schlegel says, the chorus was the spectator idealised. With respect to the number of the chorus, Müller (*Lit. of Greece*, 300) thinks that out of the dithyrambic chorus of 50 a quadrangular chorus of 48 persons was first formed, and that this was divided into sets of 12, one for each play of a tetralogy; but in the time of Sophocles, the tragic chorus amounted to 15, a number which the ancient grammarians always presuppose in speaking of its arrangements, though it might be that the form of the Aeschylean tragedy afterwards became obsolete.

The preceding account should be read in connection with the articles CHORUS, DIONYSIA, HUSTIA, and THEATRUM.

The explanation of the following phrases may be useful.

Παραχορηγημα: this word was used in case of a fourth actor appearing on the stage; probably because the choragus was required to be at an extra expense in supplying him with costume, &c.; sometimes actors so called spoke, as the character of Pylades does (*Aesch. Choeph.* 900—902); sometimes they were mute.

Παρασκήνιον: this phrase was used when one of the choreutae spoke in song, instead of a fourth actor, probably near or behind the side-scenes. *Παραγορηματα* were voices off the stage, and not seen, as the frogs in the *Ranae*. (*Pollux*, iv. 109; *Schol. in Aristoph. Pac.* 113.)

Παραχορηματα, persons who came forward but once, something like the *προσώπων προσωριμῶν*, or introductory persons who open a drama and never appear again; as the watchman in the *Agamemnon*, and Polydorus in the *Hecuba*. Terence also

frequently uses the persona protatica. (Donat. *Ter. Prolog. ad Andr.*)

The *δύοχοια* was a double chorus, formed of the choruses of two separate plays: thus at the end of the *Eumenides* of Aeschylus the Furies of one play and the festal train of another come on the stage together. (Müller, *Literat. &c.* p. 300.)

The principal modern writers on the Greek Tragedy are mentioned in the course of the article. The reader may also consult Wachsmuth, vol. ii. pt. ii. pp. 467, 421; Gruppe, *Ariadne, Die Tragische Kunst der Griechen in ihrer Entwicklung und in ihrem Zusammenhange mit der Volksepik*, Berl. 1834; *Museum Criticum*, vol. ii. p. 69, &c.; Copleston, *Prælectiones Academicæ*; Schneider, *Ueber das Attische Theaterwesen*, an exceedingly valuable book.

2. ROMAN. The tragedy of the Romans was, for the most part, an imitation of, or rather a borrowing from, the Greek, the more imperfect and unnatural, as the construction of the Roman theatre afforded no appropriate place for the chorus, which was therefore obliged to appear on the stage, instead of in the orchestra. The first tragic poet and actor at Rome (Gellius, xxi. 17) was Livius Andronicus, a Greek by birth, who began to exhibit in a. c. 240. From the account in Livy (vii. 2), it would seem that in his monodies (or the lyrical parts sung, not by a chorus, but by one person), it was customary to separate the singing from the mimetic dancing, leaving the latter only to the actor, while the singing was performed by a boy placed near the flute-player (*ante tibicinem*); so that the dialogue only (*disceptatio*) was left to be spoken by the actors. One of the plays written by him was an "Andromeda;" and he also made a Latin prose translation of the *Odyssey*. The next tragic poet at Rome was Naevius, who however appears to have written comedies as well as tragedies (Hieron. in *Euseb. Olymp.* 144. 3), and a history of the first Punic war: so that the writing of tragedies was not a distinct profession at Rome, as at Athens. An "Alceste" seems to have been written by him. To the same epoch as Livius Andronicus, and Naevius, belongs Ennius, who resembled the latter in being an epic poet as well as a tragedian. Amongst the plays written by him are mentioned, a *Medea*, an *Ajax*, a *Phoenissæ*, an *Iphigenia*, an *Andromache*, and a *Hecuba*. The metre used by him and Naevius was iambic or trochaic in the dialogue, and anapaestic for the lyrical parts. (Gellius, xi. 4.) The next distinguished tragedian was Pacuvius, a nephew of Ennius, and a painter also. His style was more remarkable for spirit and vigour of expression than polish or refinement, a deficiency attributable to his age and provincial origin, as he was born at Brundisium. Among his plays occur an *Antiope*, a *Chryses*, and a *Dulorestes* (Quintil. x. 1; Cicero, *Orat.* iii. 39), and his tragedies found admirers even in the time of Persius (i. 77). Cicero (*l. c.*) quotes from him a spirited translation of the concluding lines of the *Prometheus Vinculus* of Aeschylus. Attius or Accius the younger was junior to Pacuvius by about fifty years. His earlier plays were, as he himself admitted, harsh and obscure (Gellius, xiii. 2); but his style probably altered with increasing years. Many fragments of his plays occur in Cicero and the Latin grammarians, Diomedes, Nonius, and Varro. He was also a writer of annals in hexa-

meter verses. (Macrob. *Sat.* i. 7.) The five poets mentioned above belong to the earlier epoch of Roman tragedy, in which little was written but translations and imitations of the Greek, with occasional insertions of original matter. How they imitated the structure of the choral odes is doubtful, perhaps they never attempted it. Ennius, Pacuvius, and Accius are contrasted by Cicero (*de Orat.* iii. 7), with Aeschylus, Sophocles, and Euripides; and of the two last Quintilian (x. 1. § 97) says, "Virium Accio plus tribuitur; Pacuvium videri doctiorem, qui esse docti affectant, volunt."

In the age of Augustus the writing of tragedies, whether original or imitations, seems to have been quite a fashionable occupation. The emperor himself attempted an *Ajax*, but did not succeed; and when his friends asked him, "Quidnam Ajax ageret?" his reply was "Ajacem suum in spongiam incubuisse." (Suet. *Aug.* 85.) One of the principal tragedians of this epoch was Asinius Pollio, to whom the line (Virg. *Eclog.* viii. 10)

"Sola Sophocleo tua carmina digna cothurno,"

is supposed to apply: he also excelled in other literary accomplishments. (Hor. *Carm.* ii. 1.) Ovid (*Trist.* ii. 556) also wrote a tragedy, of which Quintilian (x. 1. § 98) says, "Ovidii Medea videtur mihi ostendere, quantum ille vir præstare potuerit si ingenio suo temperare quam indulgere maluisset." His "armorum iudicium" (*Metamor.* xiii.) between *Ajax* and *Ulysses*, on which Pacuvius and Accius also wrote dramas, proves that he might have rivalled Euripides in rhetorical skill. Quintilian also says of Varius, who was distinguished in epic as well as tragic poetry (Hor. *Carm.* i. 6, *Ar. Poet.* 55; Tacit. *Dial.* xii. 1), that his *Thyestes* might be compared with any of the Greek tragedies. Some fragments of this *Thyestes* are extant, but we have no other remains of the tragedy of the Augustan age. The loss perhaps is not great; for the want of a national and indigenous mythology must have disabled the Roman poets from producing any original counterparts of the Greek tragedy; besides which, in the later days of the republic, and under the empire, the Roman people were too fond of gladiatorial shows, and beast-fights, and gorgeous spectacles, to encourage the drama. Moreover, it is also manifest that a tragedy like that of the Greeks could not have flourished under a despotism.

The only complete Roman tragedies that have come down to us are the ten attributed to the philosopher Seneca. But whether he wrote any of them or not is a disputed point. It is agreed that they are not all from the same hand, and it is doubtful whether they are all of the same age even. In one of them, the *Medea*, the author made his heroine kill her children on the stage, "coram populo," in spite of the precept of Horace. Schlegel (*Lect.* viii.) thus speaks of them: "To whatever age they belong, they are beyond description bombastic and frigid, utterly unnatural in character and action, and full of the most revolting violations of propriety, and barren of all theatrical effect. With the old Grecian tragedies they have nothing in common but the name, the exterior form, and the matter. Their persons are neither ideal nor real men, but misshapen giants of puppets, and the wire that moves them is at one time an unnatural heroism, at another a passion alike

unnatural, which no atrocity of guilt can appal." Still they have had admirers: Heinisius calls the Hippolytus "divine," and prefers the Troades to the Hecuba of Euripides: even Racine has borrowed from the Hippolytus in his Phèdre.

Roman tragedians sometimes wrote tragedies on subjects taken from their national history. Pacuvius, *e. g.* wrote a *Paulus*, L. Accius a *Brutus* and a *Decius*. (Cic. *de Div.* i. 22.) Curatius Maternus, also a distinguished orator in the reign of Domitian, wrote a *Domitius* and a *Cato*, the latter of which gave offence to the rulers of the state (*potentium animos offendit*, Tacit. *Dial.* 2; Lang. *Vind. Trag. Roman.* p. 14). The fragments of the Thyestes of Varius are given by Bothius, *Post. Sess. Lat. Frag.* p. 279. [R. W.]

TRAUMATOS EK PRONOIAS GRAPHE (τραύματος ἐκ προνοίας γραφή). Our principal information respecting this action is derived from two speeches of Lysias, namely, *πρὸς Σίμωνα* and *πρὸς τραύματος ἐκ προνοίας*, though they do not supply us with many particulars. It appears, however, that this action could not be brought by any person who had been wounded or assaulted by another, but that it was necessary to prove that there had been an intention to murder the person who had been wounded; consequently the *πρόνοια* consisted in such an intention. Cases of this kind were brought before the Areiopagus: if the accused was found guilty, he was exiled from the state and his property confiscated. (Compare Dem. *c. Aristocr.* 627. 22, *c. Boeot.* 1018. 9, Aesch. *de Fals. Leg.* 270, *c. Ctes.* 440. 608; Lys. *c. Andoc.* p. 212; Lucian, *Timon*, 46; Pollux, viii. 40; Meier, *Att. Proc.* p. 314.)

TRESVIRI. [TRIUMVIR.]

TRIA'RII. [EXERCITUS, pp. 495—497, 501, b.]

TRI'BULA or TRI'BULUM (τριβόλος), a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints and drawn over the corn by a yoke of oxen, either the driver or a heavy weight being placed upon it, for the purpose of separating the grain and cutting the straw. (Varro, *de Re Rust.* i. 52; Ovid. *Met.* xiii. 803; Plin. *H. N.* xviii. 30; Longus, iii. 22; Bruck, *Anal.* ii. 215; Amos, i. 3.) Together with the *tribula* another kind of drag, called *traha*, was also sometimes used, which it is probable was either entirely of stone or made of the trunk of a tree. (Virg. *Georg.* i. 164; Servius, *ad loc.*; Col. *de Re Rust.* ii. 21.) These instruments are still used in Greece, Asia Minor, Georgia, and Syria, and are described by various travellers in those countries, but more especially by Paul Lucas (*Voyage*, vol. i. p. 182), Sir R. K. Porter (*Travels*, vol. i. p. 158), Jackson (*Journey from India*, p. 249), and C. Fellows, (*Journal*, pp. 70, 383). The corn is threshed upon a circular floor (*area*, *ἄλαν*), either paved, made of hardened clay, or of the natural rock. It is first heaped in the centre, and a person is constantly occupied in throwing the sheaves under the drag as the oxen draw it round. Lucas and Fellows have given prints representing the *tribula* as now

used in the East. The verb *tribulare* (Cato, *de Re Rust.* 23), and the verbal noun *tribulatio* were applied in a secondary sense to denote affliction in general. [J. Y.]

TRIBULUS (τριβόλος), a caltrop, also called *murex*. (Val. Max. iii. 7. § 2; Curt. iv. 13. § 36.) When a place was beset with troops, the one party endeavoured to impede the cavalry of the other party either by throwing before them caltrops, which necessarily lay with one of their four sharp points turned upwards, or by burying the caltrops with one point at the surface of the ground. (Veget. *de Re Mil.* iii. 24; Jul. Afric. 69. *ap. Vet.*

Math. Graec. p. 311.) The annexed woodcut is taken from a bronze caltrop figured by Caylus (*Recueil*, iv. pl. 98). [J. Y.]

TRIBU'NAL (βῆμα), a raised platform, or, to use the term adopted from the French, tribune, on which the praetor and judges sat in the Basilica. It is described under BASILICA (p. 199).

There was a tribunal in the camp, which was generally formed of turf, but sometimes, in a stationary camp, of stone, from which the general addressed the soldiers, and where the consul and tribunes of the soldiers administered justice. When the general addressed the army from the tribunal, the standards were planted in front of it, and the army placed round it in order. The address itself was called *Allocutio*. (Plut. *Pomp.* 41; Lipsius, *de Milit. Rom.* iv. 9; CASTRA.)

A tribunal was sometimes erected in honour of a deceased emperor, as, for example, the one raised to the memory of Germanicus. (Tacit. *Annal.* ii. 83.) Pliny (*H. N.* xvi. 1) applies the term to embankments against the sea. [P. S.]

TRIBUNUS. This word seems originally to have indicated an officer connected with a tribe (*tribus*), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced also in the later officers of this name. We subjoin an account of all the Roman officers known under this name.

1. TRIBUNES OF THE THREE ANCIENT TRIBES. At the time when all the Roman citizens were contained in the three tribes of the Ramnes, Tities, and Luceres, each of them was headed by a tribune (*φύλαρχος*, Dionys. ii. 7; Dig. 1. tit. 2. a. 2. § 20; Serv. *ad Aen.* v. 560), and these three tribunes represented their respective tribes in all civil, religious, and military affairs; that is to say, they

were in the city the magistrates of their tribes, and performed the sacra on their behalf, and in times of war they were their military commanders. (Liv. i. 59; Dionys. ii. 64; Varro, *de Ling. Lat.* v. 81.) Niebuhr (*Hist. of Rome*, i. p. 331) supposes that the *tribunus celerum* was the tribune of the Ramnes, the oldest and noblest among the three tribes, and in this opinion he is followed by Götting (*Gesch. d. Röm. Staatsverf.*, p. 166), though it is in direct contradiction to Dionysius (ii. 13) and Pomponius (*de Orig. Jur. Dig.* 1. tit. 2. a. 2. § 15), according to whom the *tribunus celerum* was the commander of the *celeres*, the king's body-guard, a statement which is rejected by Niebuhr without his being supported by any ancient authority, except that Dionysius in one passage (ii. 64) vaguely speaks of *tribuni celerum* in the plural. That however the *tribunus celerum* was really distinct from the three tribunes of the tribes, is acknowledged by Niebuhr himself in a subsequent part of his work (iii. p. 41). In what manner the *tribunus celerum* was appointed is uncertain, but notwithstanding the statement of Dionysius, that Tarquinius Superbus gave this office to L. Junius Brutus, it is much more probable that he was elected by the tribes or *curiae*; for we find that when the imperium was to be conferred upon the king, the comitia were held under the presidency of the *tribunus celerum*, and in the absence of the king, to whom this officer was next in rank, he convoked the comitia: it was in an assembly of this kind that Brutus proposed to deprive Tarquinius of the imperium. (Liv. i. 59.) A law passed under the presidency of the *tribunus celerum* was called a *lex tribunicia*, to distinguish it from one passed under the presidency of the king. [LEX REGIA.] The tribunes of the three ancient tribes ceased to be appointed when these tribes themselves ceased to exist as political bodies, and when the patricians became incorporated in the local tribes of Servius Tullius. [TRIBUS (ROMAN).]

2. TRIBUNES OF THE SERVIAN TRIBES. When Servius Tullius divided the commonalty into thirty local tribes, we again find that at the head of each of these tribes there was a tribune, whom Dionysius calls *φύλαρχος*, like those of the patrician tribes. (Dionys. iv. 14.) He mentions them only in connection with the city tribes, but there can be no doubt that each of the rustic tribes was likewise headed by a tribune. The duties of these tribunes, who were without doubt the most distinguished persons in their respective districts, appear to have consisted at first in keeping a register of the inhabitants in each district and of their property, for purposes of taxation and for levying the troops for the armies. When subsequently the Roman people became exempted from taxes, the main part of their business was taken from them, but they still continued to exist. Niebuhr (i. p. 421) supposes that the *tribuni aerarii*, who occur down to the end of the republic, were only the successors of the tribunes of the tribes. Varro (*de Ling. Lat.* vi. 86) speaks of *curatores omnium tribuum*, a name by which he probably means the tribunes of the tribes. When in the year 406 B.C. the custom of giving pay (*stipendium*) to the soldiers was introduced, each of the *tribuni aerarii* had to collect the tributum in his own tribe, and with it to pay the soldiers (Varro, *de Ling. Lat.* v. 181), and in case they did not fulfil this duty, the soldiers had the right of *pignoris capio* against them. (Cato,

ap. Gell. vii. 10.) In later times their duties appear to have been confined to collecting the tributum, which they made over to the military quaestors who paid the soldiers. [QUAESTOR.] The *lex Aurelia* (70 B.C.) called the *tribuni aerarii* to the exercise of judicial functions, along with the senators and equites, as these tribunes represented the body of the most respectable citizens. (Orelli, *Onom. Tull.* iii. p. 142; Appian, *de Bell. Civ.* iii. 23.) But of this distinction they were subsequently deprived by Julius Caesar. (Suet. *Caes.* 41.)

3. TRIBUNI PLEBIS. The ancient tribunes of the plebeian tribes had undoubtedly the right of convoking the meetings of their tribes, and of maintaining the privileges granted to them by king Servius and subsequently by the Valerian laws. But this protection was very inadequate against the insatiable ambition and usurpations of the patricians. When the plebeians, impoverished by long wars and cruelly oppressed by the patricians, at last seceded in the year 494 B.C. to the Mons Sacer, the patricians were obliged to grant to the plebeians the right of appointing tribunes (*tribuni plebis*) with more efficient powers to protect their own order than those which were possessed by the heads of the tribes. The purpose for which they were appointed was only to afford protection against any abuse on the part of the patrician magistrates; and that they might be able to afford such protection, their persons were declared sacred and inviolable, and it was agreed that whoever acted against this inviolability should be an outlaw, and that his property should be forfeited to the temple of Ceres. (Liv. ii. 33; Dionys. vi. 89.) This decree seems to contain evidence that the heads of the tribes in their attempts to protect members of their own order had been subject themselves to insult and maltreatment; and that similar things occurred even after the sanctity of the tribunes was established by treaty, may be inferred from the fact, that, some time after the tribuneship was instituted, heavy punishments were again enacted against those, who should venture to annoy a tribune when he was making a proposition to the assembly of the tribes. The law by which these punishments were enacted ordained that no one should oppose or interrupt a tribune while addressing the people, and that whoever should act contrary to this ordinance should give bail to the tribunes for the payment of whatever fine they should affix to his offence in arraigning him before the commonalty: if he refused to give bail, his life and property were forfeited. (Dionys. vii. 17.) It should however be observed that this law belongs to a later date than that assigned to it by Dionysius, as has been shown by Niebuhr (ii. p. 98); it was in all probability made only a short time before its first application in 461 B.C. in the case of Caeso Quinctius. (Liv. iii. 13.) The tribunes were thus enabled to afford protection to any one who appealed to the assembly of the commonalty, or required any other assistance. They were essentially the representatives and the organs of the plebeian order, and their sphere of action was the comitia tributa. With the patricians and their comitia they had nothing to do. The tribunes themselves however were not judges and could inflict no punishments (Gellius, xiii. 12), but could only propose the imposition of a fine to the commonalty (*multam irrogare*). The tribunes were thus in their origin only a protecting magistracy of

the plebs, but in the course of time their power increased to such a degree that it surpassed that of all other magistrates, and the tribunes then, as Niebuhr (i. p. 614) remarks, became a magistracy for the whole Roman people in opposition to the senate and the oligarchical elements in general, although they had nothing to do with the administration or the government. During the latter period of the republic they became true tyrants, and Niebuhr justly compares their college, such as it was in later times, to the national convention of France during the first revolution. But notwithstanding the great and numerous abuses which were made of the tribunitian power by individuals, the greatest historians and statesmen confess that the greatness of Rome and its long duration is in a great measure attributable to the institution of this office.

As regards the number of the tribunes of the people, all the ancient writers agree (see the passages in Niebuhr, i. n. 1356), that at first they were only two, though the accounts differ as to the names of the first tribunes. Soon afterwards, however, the number of tribunes was increased to five, one being taken from each of the five classes. (Ascon. in *Cic. Corn.* p. 56, ed. Orelli; Zonar. vii. 15.) When this increase took place is quite uncertain. According to Dionysius (vi. 89) three new tribunes were added immediately after the appointment of the first two. Cicero (*Fragm. Corn.* p. 451, Orelli) states, that the year after the institution of the tribunes their number was increased to ten; according to Livy (ii. 33) the first two tribunes immediately after their appointment elected themselves three new colleagues; according to Piso (*cp. Liv. ii. 58*) there were only two tribunes down to the time of the Publilian laws. It would be hopeless to attempt to ascertain what was really the case; thus much only is certain, that the number was not increased to ten till the year 457 B. C., and that then two were taken from each of the five classes. (Liv. iii. 30; Dionys. x. 30.) This number appears to have remained unaltered down to the end of the empire.

The time when the tribunes were elected was, according to Dionysius (vi. 89), always on the 10th of December, although it is evident from Cicero (*ad Att. i. 1*) that in his time at least the election took place a. d. xvi. Kal. Sextil. (17th of July.) It is almost superfluous to state that none but plebeians were eligible to the office of tribune; hence when towards the end of the republic patricians wished to obtain the office, they were obliged first to renounce their own order and to become plebeians [PATRICII, p. 876]; hence also under the empire it was thought that the princeps should not be tribune because he was a patrician. (Dion. Cass. liii. 17, 32.) But the influence which belonged to this office was too great for the emperors not to covet it. Hence Augustus received the tribunitia potestas for life. (Suet. *Aug.* 27; Tacit. *Annal.* i. 2; compare Suet. *Tiber.* 9, 23, *Vesp.* 12, *Tiber.* 6.) During the republic, however, the old regulation remained in force even after the tribunes had ceased to be the protectors of the plebs alone. The only instance in which patricians were elected to the tribuneship is mentioned by Livy (iii. 65), and this was probably the consequence of an attempt to divide the tribuneship between the two orders. Although nothing appears to be more natural than that the tribunes should originally

have been elected by that body of the Roman citizens which they represented, yet the subject is involved in considerable obscurity. Cicero (*Fragm. Corn.* l. c.) states that they were elected by the comitia of the curies; the same is implied in the accounts of Dionysius (l. c.) and Livy (ii. 56), according to whom the comitia of the tribes did not obtain this right till the Lex Publilia (472 B. C.; Liv. ii. 56; Dionys. x. 41). Niebuhr thinks (i. p. 618) that down to the Publilian law they were elected by the centuries, the classes of which they represented in their number, and that the curies, as Dionysius himself mentions in another place (vi. 90), had nothing to do with the election except to sanction it. The election in the comitia of the centuries however does not remove the difficulties, whence Götting (p. 289) is inclined to think that the tribunes before the expiration of their office appointed their successors, after a previous consultation with the plebeians. The necessity of the sanction by the curies cannot be doubted, but it appears to have ceased even some time before the Publilian law. (Niebuhr, ii. p. 190.) After this time it is never heard of again, and the election of the tribunes was left entirely to the comitia tributa, which were convoked and held for this purpose by the old tribunes previously to the expiration of their office. (Liv. ii. 56, &c.; Dionys. ix. 43, 49.) One of the old tribunes was appointed by lot to preside at the election. (Liv. iii. 64; Appian, *de Bell. Civ.* i. 14.) As the meeting could not be prolonged after sunset, and the business was to be completed in one day, it sometimes happened that it was obliged to break up before the election was completed, and that those who were elected filled up the legitimate number of the college by cooptatio. (Liv. l. c.) But in order to prevent this irregularity the tribune L. Trebonius in 448 B. C. got an ordinance passed, according to which the college of the tribunes should never be completed by cooptatio, but the elections should be continued on the second day, if they were not completed on the first, till the number ten was made up. (Liv. iii. 64, 65, v. 10; comp. Niebuhr, ii. p. 383.) The place where the election of the tribunes was held was originally and lawfully the Forum, afterwards also the Campus Martius, and sometimes the area of the Capitol.

We now proceed to trace the gradual growth of the tribunitian power. Although its original character was merely auxilium or *βοήθεια* against patrician magistrates, the plebeians appear early to have regarded their tribunes also as mediators or arbitrators in matters among themselves. This statement of Lydus (*de Magistr.* i. 38, 44; Dionys. vii. 58) has been pointed out by Walter (*Geogr. d. Röm. Reichs.* p. 85). The whole power possessed by the college of tribunes was designated by the name *tribunitia potestas*, and extended at no time further than one mile beyond the gates of the city; at a greater distance than this they came under the imperium of the magistrates, like every other citizen. (Liv. iii. 20; Dionys. viii. 87.) As they were the public guardians, it was necessary that every one should have access to them and at any time; hence the doors of their houses were open day and night for all who were in need of help and protection, which they were empowered to afford against any one, even against the highest magistrates. For the same reason a tribune was not allowed to be absent from the city for a whole day,

except during the *Feriae Latinae*, when the whole people was assembled on the Alban Mount. (Macrob. *Sat.* i. 3.)

In the year 456 B. C. the tribunes, in opposition to the consuls, assumed the right to convoke the senate, in order to lay before it a rogation and discuss the same (Dionys. x. 31, 32); for until that time the consuls alone had had the right of laying plebiscita before the senate for approbation. Some years after, 452 B. C., the tribune demanded of the consuls to request the senate to make a *senatus-consultum* for the appointment of persons to frame a new legislation; and during the discussions on this subject the tribunes themselves were present in the senate. (Dionys. x. 50, 52.) The written legislation which the tribunes then wished can only have related to their own order; but as such a legislation would only have widened the breach between the two orders, they afterwards gave way to the remonstrances of the patricians, and the new legislation was to embrace both orders. (Liv. iii. 31; Zonar. vii. 18.) From the second decemvirate the tribuneship was suspended, but was restored after the legislation was completed, and now assumed a different character from the change that had taken place in the tribes. [TRIBUS (ROMAN.)] The tribunes now had the right to be present at the deliberations of the senate (Liv. iii. 69, iv. 1); but they did not sit among the senators themselves, but upon benches before the opened doors of the senate-house. (Val. Max. ii. 2. § 7; F. Hofmann, *Der Röm. Senat*, p. 109, &c.) The inviolability of the tribunes, which had before only rested upon a contract between the two estates, was now sanctioned and confirmed by a law of M. Horatius. (Liv. iii. 55.) As the tribes now also included the patricians and their clients, the tribunes might naturally be asked to interpose on behalf of any citizen, whether patrician or plebeian. Hence the patrician ex-decemvir, Appius Claudius, implored the protection of the tribunes. (Liv. iii. 56; comp. also viii. 33, 34; Niebuhr, ii. p. 374.) About this time the tribunes also acquired the right to take the auspices in the assemblies of the tribes. (Zonaras, vii. 19.) They also assumed again the right which they had exercised before the time of the decemvirate, to bring patricians who had violated the rights of the plebeians before the comitia of the tribes, as is clear from several instances. (Liv. iii. 56, &c., iv. 44, v. 11, &c.) Respecting the authority which a plebiscitum proposed to the tribes by a tribune received through the *lex Valeria*, see *PLEBISCITUM*. While the college thus gained outwardly new strength every day, a change took place in its internal organisation, which to some extent paralyzed its powers. Before the year 394 B. C. every thing had been decided in the college by a majority (Liv. ii. 43, 44; Dionys. ix. 1, 2, 41, x. 31); but about this time, we do not know how, a change was introduced, which made the opposition (*intercessio*) of one tribune sufficient to render a resolution of his colleagues void. (Zonar. vii. 15.) This new regulation does not appear in operation till 394 and 393 B. C. (Liv. v. 25, 29); the old one was still applied in A. C. 421 and 415. (Liv. iv. 42, 48; comp. Niebuhr, ii. p. 438.) From their right of appearing in the senate, and of taking part in its discussions, and from their being the representatives of the whole people, they gradually obtained the right of intercession against any

action which a magistrate might undertake during the time of his office, and this even without giving any reason for it. (Appian, *de Bell. Civ.* i. 23.) Thus we find a tribune preventing a consul convoking the senate (Polyb. vi. 16), preventing the proposal of new laws or elections in the comitia (Liv. vi. 35, vii. 17, x. 9, xxvii. 6); and they interceded against the official functions of the censors (Dion Cass. xxxvii. 9; Liv. xliii. 16); and even against a command issued by the praetor. (Liv. xxxviii. 60; Gell. vii. 19.) In the same manner a tribune might place his veto upon an ordinance of the senate (Polyb. vi. 16; Dion Cass. xli. 2); and thus either compel the senate to submit the subject in question to a fresh consideration, or to raise the session. (Caes. *de Bell. Civ.* i. 2; Appian, *de Bell. Civ.* i. 29.) In order to propose a measure to the senate they might themselves convoke a meeting (Gellius, xiv. 7), or when it had been convoked by a consul they might make their proposal even in opposition to the consul, a right which no other magistrates had in the presence of the consuls. The senate, on the other hand, had itself, in certain cases, recourse to the tribunes. Thus, in 431 B. C. it requested the tribunes to compel the consuls to appoint a dictator, in compliance with a decree of the senate, and the tribunes compelled the consuls, by threatening them with imprisonment, to appoint A. Postumius Tubertus dictator. (Liv. iv. 26.) From this time forward we meet with several instances in which the tribunes compelled the consuls to comply with the decrees of the senate, *si non essent in auctoritate senatus*, and to execute its commands. (Liv. v. 9, xxviii. 45.) In their relation to the senate a change was introduced by the *Plebiscitum Atinium*, which ordained that a tribune, by virtue of his office, should be a senator. (Gellius, xiv. 8; Zonar. vii. 15.) When this plebiscitum was made is uncertain; but we know that in 170 B. C. it was not yet in operation. (Liv. xlv. 15.) It probably originated with C. Atinius, who was tribune in A. C. 132. (Liv. *Epit.* 59; Plin. *H. N.* vii. 45.) But as the quaestorship, at least in later times, was the office which persons held previously to the tribuneship, and as the quaestorship itself conferred upon a person the right of being present and expressing his opinion in the senate, the law of Atinius was in most cases superfluous.

In their relation to other magistrates we may observe, that the right of intercession was not confined to stopping a magistrate in his proceedings, but they might even command their *viatores* [VIATOR] to seize a consul or a censor, to imprison him, or to throw him from the Tarpeian rock. (Liv. ii. 56, iv. 26, v. 9, ix. 34, *Epit.* 48, 55, 59; Cic. *de Leg.* iii. 9, *in Vatini*. 9; Dion Cass. xxxvii. 50.) It is mentioned by Laëlius and Varro (*ap. Gell.* xiii. 12) that the tribunes, when they brought an accusation against any one before the people, had the right of *prohænio*, but not the right of *vocatio*, that is, they might command a person to be dragged by their *viatores* before the comitia, but could not summon him. An attempt to account for this singularity is made by Gellius (l. c.). They might, as in earlier times, propose a fine to be inflicted upon the person accused before the comitia, but in some cases they dropped this proposal and treated the case as a capital one. (Liv. viii. 33, xxv. 4, xxvi. 3.) The college of tribunes had also the power of making edicts, as

that mentioned by Cicero (*in Verr.* ii. 41; comp. Gell. iv. 14; Liv. xxxviii. 52). In cases in which one member of the college opposed a resolution of his colleagues nothing could be done, and the measure was dropped; but this useful check was removed by the example of C. Tiberius Gracchus, in which a precedent was given for proposing to the people that a tribune obstinately persisting in his veto should be deprived of his office. (Appian, *de Bell. Civ.* i. 12; Plut. *Tib. Gracch.* 11, 12, 15; Cic. *de Leg.* iii. 10; Dion Cass. xxxvi. 13.)

From the time of the Hortensian law the power of the tribunes had been gradually rising to such a height that there was no other in the state to equal it, whence Velleius (ii. 2) even speaks of the imperium of tribunes. They had acquired the right of proposing to the comitia tributa or the senate measures on nearly all the important affairs of the state, and it would be endless to enumerate the cases in which their power was manifested. Their proposals were indeed usually made *ex auctoritate senatus*, or had been communicated to and approved by it (Liv. xlii. 21); but cases in which the people itself had a direct interest, such as a general legal regulation (Liv. xxi. 63, xxxiv. 1), the granting of the franchise (Liv. xxxviii. 36), the alteration of the attributes of a magistrate (Liv. xxii. 25, &c.), and others, might be brought before the people, without their having previously been communicated to the senate, though there are also instances of the contrary. (Liv. xxxv. 7, xxvii. 5.) Subjects belonging to the administration could not be brought before the tribes without the tribunes having previously received through the consuls the *auctoritas* of the senate. This however was done very frequently, and hence we have mention of a number of plebiscita on matters of administration. (See a list of them in Walter, p. 132, n. 11.) It sometimes even occurs that the tribunes brought the question concerning the conclusion of a peace before the tribes, and then compelled the senate to ratify the resolution as expressing the wish of the whole people. (Liv. xxx. 43, xxxiii. 25.) Sulla, in his reform of the constitution on the early aristocratic principles, left to the tribunes only the *jus auxilii*, but deprived them of the right of making legislative or other proposals, either to the senate or the comitia, without having previously obtained the sanction of the senate. [TRIBUNUS (ROMAN).] But this arrangement did not last, for Pompey restored to them their former rights. (Zachariae, *L. Corn. Sulla, als Ordner des Röm. Freistaates*, ii. p. 12, &c. and p. 99, &c.)

During the latter period of the republic, when the office of quaestor was in most cases held immediately before that of tribune, the tribunes were generally elected from among the senators, and this continued to be the same under the empire. (Appian, *de Bell. Civ.* i. 100.) Sometimes, however, equites also obtained the office, and thereby became members of the senate (Suet. *Aug.* 10, 40), where they were considered of equal rank with the quaestors. (Vell. Pat. ii. 111.) Tribunes of the people continued to exist down to the fifth century of our aera, though their powers became naturally much limited, especially in the reign of Nero. (Tacit. *Annal.* iii. 28.) They continued however to have the right of intercession against decrees of the senate, and on behalf of injured individuals. (Tacit. *Annal.* xvi. 26, *Hist.* ii. 91,

iv. 9; Plin. *Epist.* i. 23, ix. 13; comp. Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 247, &c.)

4. TRIBUNI MILITUM CUM CONSULARI POTESTATE. When in 445 B.C. the tribune C. Camilleus brought forward the rogation that the consulship should not be confined to either order (Liv. iv. 1; Dionys. xi. 52), the patricians evaded the attempt by a change in the constitution: the powers which had hitherto been united in the consulship were now divided between two new magistrates, viz. the *Tribuni militum cum consulari potestate* and the censors. Consequently, in 444 B.C. three military tribunes, with consular power, were appointed, and to this office the plebeians were to be equally eligible with the patricians. (Liv. iv. 7; Dionys. xi. 60, &c.) For the years following however, the people were to be at liberty, on the proposal of the senate, to decide whether consuls were to be elected according to the old custom, or consular tribunes. Henceforth, for many years, sometimes consuls and sometimes consular tribunes were appointed, and the number of the latter varied from three to four, until in 405 B.C. it was increased to six, and as the censors were regarded as their colleagues, we have sometimes mention of eight tribunes. (Liv. iv. 61, v. 1; Diodor. xv. 50; Liv. vi. 27; Diodor. xv. 51; Liv. vi. 30.) At last, however, in 367 B.C. the office of these tribunes was abolished by the Licinian law, and the consulship was restored. The consular tribunes were elected in the comitia of the centuries, and undoubtedly with less solemn auspices than the consuls. Concerning the irregularity of their number, see Niebuhr, ii. p. 325, &c., p. 389, &c.; comp. Götting, p. 326, &c.; Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 136, &c.

5. TRIBUNI MILITARES. [EXERCITUS, pp. 503, 504.]

6. TRIBUNUS VOLUPTATUM, was an officer who does not occur till after the time of Diocletian, and who had the superintendence of all public amusements, especially of theatrical performances. (Cassiodor. *Variar.* vii. 10.) [L. S.]

TRIBUS (φύλον, φυλή). 1. GREEK. In the earliest times of Greek history mention is made of people being divided into tribes and clans. Homer speaks of such divisions in terms which seem to imply that they were elements that entered into the composition of every community. Nestor advises Agamemnon to arrange his army *κατὰ φύλα, κατὰ φρήτρας*, so that each may be encouraged by the presence of its neighbours. (*Il.* ii. 362.) A person not included in any clan (*ἀφρήτρας*), was regarded as a vagrant or outlaw. (*Il.* ix. 63.) These divisions were rather natural than political, depending on family connection, and arising out of those times, when each head of a family exercised a patriarchal sway over its members. The bond was cemented by religious communion, sacrifices and festivals, which all the family or clansmen attended, and at which the chief usually presided. The aggregate of such communities formed a political society. (Aristot. *Pol.* i. l. § 7.) In the ages succeeding the heroic tribes and clans continued to exist, though in the progress of civilisation they became more extended, and assumed a territorial or political, rather than a fraternal character. The tribes were not in general distinctions between nobles and commons, unless the people were of different races, or unless there had been an accession of foreigners, who were not blended with the

original inhabitants. It is true, that in the common course of things, nobles, or privileged classes, sprang up in various countries, by reason either of wealth, or of personal merit, or of descent from the ancient kings; and that in some cases all the land was possessed by them, as by the Gamori of Syraous (Herod. vii. 155); sometimes their property was inalienable, as under our feudal law (Arist. Pol. ii. 4. § 4); and the Bacchiadae are an instance of a noble family, who intermarried only among themselves. (Herod. v. 92.) Still, however, as a general rule, there was no decided separation of tribe, much less of caste, between nobles and commons of the same race. Nor was there any such distinction of a sacerdotal order. The priestly function was in early times united to that of the king (Arist. Pol. iii. 9. § 7); afterwards the priesthood of particular deities became hereditary in certain families, owing either to a supposed transmission of prophetic power, as in the case of the Eumolpidae, Branchidae, Iamidae; or to accidental circumstances, as in the case of Telines of Gela (Herod. vii. 153); but the priests were not separated, as an order, from the rest of the people. (Wachsmuth, *Hell. Alt.* vol. i. pt. i. pp. 76, 149, 1st. ed.; Schömann, *Ant. jur. pub. Gr.* p. 79.) The most important distinctions of a class-like nature, between people living under the same government, arose in those countries that were conquered by the migratory hordes of Thessalians, Boeotians, and Dorians, in the century subsequent to the heroic age. The revolutions which they effected, though varying in different places according to circumstances, had in many respects a uniform character. The conquering body took possession of the country, and became its lords; the original inhabitants, reduced to subjection, and sometimes to complete vassalage or servitude, remained a distinct people or tribe from the conquerors. The former built cities, usually at the foot of some citadel that had belonged to the ancient princes, where they resided, retaining their military discipline and martial habits; while a rural population, consisting principally of the former natives, but partly also of the less warlike of the invaders, and partly of fresh emigrants invited or permitted by them to settle, dwelt in the surrounding villages, and received the name of *Πελοιοίκοι*. The condition of the Lacedaemonian *πελοιοίκοι* is spoken of under *PERIOECI*. A similar class arose in most of the countries so colonized, as in Argos, Corinth, Elis, Crete, &c. (Herod. viii. 73; Thucyd. ii. 25; Xenoph. *Hell.* iii. 2. § 23, 30; Pausan. iii. 8. § 3, viii. 27. § 1; Arist. Pol. ii. 6. § 1, v. 2. § 8.) But their condition varied according to the manner in which the invaders effected their settlement, and other circumstances and events prior or subsequent to that time. In many places the new comer was received under a treaty, or upon more equitable terms, so that a union of citizenship would take place between them and the original inhabitants. This was the case in Elis, Messenia, Phlius, Troezen. (Pausan. ii. 13. § 1, v. 4. § 1; Thirlwall, *Hist. of Greece*, vol. i. p. 342.) So the Cretans, who invaded Miletus, mingled with the ancient Carians, and the Ionians with the Cretans and Carians of Colophon. (Pausan. vii. 2. § 5, vii. 8. § 1.) In Megara, the ruling class, after a lapse of some time, amalgamated with the lower. (Thirlwall, vol. i. p. 430.) In other places the *πελοιοίκοι* were more degraded. Thus, in Sicyon they were

compelled to wear sheep-skins, and called *κατανακρόφοι* (Athenaeus vi. 271); in Epidaurus they were styled *κοπρόδες*, *dusty-footed*, a name which denoted their agricultural occupation, but was meant as a mark of contempt. (Müller, *Dor.* iii. 4. § 2.) But in general they formed a sort of middle order between the ruling people and the serf or slave. Thus, in Argos, there was a class of persons called *Gymnesii* or *Gymnetes*, corresponding to the Helots. [GYMNESII.] So in Thessaly, in the districts not immediately occupied by the Thessalian invaders, there dwelt a population of ancient Aeolians, who were not serfs, like the Penestae [PENESTAE], but only tributary subjects, who retained their personal liberty, though not admitted to the rank of citizens. (Thirlwall, vol. i. p. 438; Schömann, *Id.* p. 401.) So also in Crete, there were the Dorian freemen, the *πελοιοίκοι*, or old inhabitants, similar to the Lacedaemonians, and the slaves. [COSMI.] We may observe that the term *πελοιοίκοι* is sometimes used in rather a different sense; as when Xenophon gives that name to the Thespians, who were not subjects of the Thebans, as the Achaeans were of the Spartans. (*Hell.* v. 4. § 46.) In some of the maritime states the condition of the subject classes was somewhat different; they were suffered to reside more in the town; as in Corinth, where they were artisans, at Tarentum, where they were fishermen. (Wachsmuth, vol. i. pt. i. p. 162; Schömann, *Id.* pp. 80, 107.)

The ruling people, thus remaining distinct from the rest, were themselves divided into tribes and other sections. Of the Dorian race there were originally three tribes, traces of which are found in all the countries which they colonized. Hence they are called by Homer *Δωριεὺς τριχόκες*. (*Od.* xix. 177.) These tribes were the *Ἰλλεῖς*, *Πύρραιοι*, and *Δυμναῖοι* or *Δυμνῆες*. The first derived their name from Hyllus, son of Hercules, the two last from Pamphylus and Dymas, who are said to have fallen in the last expedition when the Dorians took possession of the Peloponnesus. The Hyllean tribe was perhaps the one of highest dignity; but at Sparta there does not appear to have been much distinction, for all the freemen there were by the constitution of Lycurgus on a footing of equality. To these three tribes others were added in different places, either when the Dorians were joined by other foreign allies, or when some of the old inhabitants were admitted to the rank of citizenship or equal privileges. Thus the Cadmean Aegeids are said by Herodotus to have been a great tribe at Sparta, descended (as he says) from Aegeus, grandson of Theras (Herod. iv. 149), though others have thought they were incorporated with the three Doric tribes. (Thirlwall, vol. i. pp. 257, 268, 314.) At Argos, Aegina, and Epidaurus there was an Hymethian tribe besides the three Doric. (Müller, *Aegis*, p. 140.) In Sicyon Cleisthenes having changed the names of the Doric tribes, to degrade and insult their members, and given to a fourth tribe, to which he himself belonged, the name of Archelai, sixty years after his death the Doric names were restored, and a fourth tribe added, called *Ἀργαεῖς*, from Aegialeus, son of the Argive hero Adrastus. (Herod. v. 68.) Eight tribes are mentioned in Corinth (Suidas, s. v. *Πάτρα ἑκτώ*), four in Tegea. (Pausan. viii. 53. § 6.) In Elis there were twelve tribes, that were afterwards reduced to eight by a war with the Arcadians (Paus. v. 9. § 6), from which they appear

to have been geographical divisions. (Wachsmuth, vol. ii. pt. i. p. 17.) Sometimes we find mention of only one of the Doric tribes, as of the Hylleans in Cydonia (Hesych. s. v. Ὑλλεῖς), the Dymanes in Halicarnassus; which probably arose from colonies having been founded by the members of one tribe only. (Wachsmuth, vol. ii. pt. i. p. 15.)

Of all the Dorian people the Spartans kept themselves the longest unmixed with foreign blood. So jealous were they to maintain their exclusive privileges, that they had only admitted two men into their body before the time of Herodotus. (Herod. ix. 33, 35.) Afterwards their numbers were occasionally recruited by the admission of Laconians, Helots, and foreigners; but this was done very sparingly, until the time of Agis and Cleomenes, who created large numbers of citizens. But we cannot further pursue this subject. (Schömann, *Id.* p. 114.)

The subdivision of tribes into *φαστρίαι* or *πάτραι*, *γένη*, *τρίττες*, &c. appears to have prevailed in various places. (Wachsmuth, vol. ii. pt. i. p. 18.) A Sparta each tribe contained ten *ᾠδαι*, a word, like *κάμαι*, denoting a local division or district; each *ᾠδὴ* contained ten *τριακτῆς*, communities containing thirty families. But very little appears to be known of these divisions, how far they were local, or how far genealogical. After the time of Cleomenes the old system of tribes was changed; new ones were created corresponding to the different quarters of the town, and seem to have been five in number. (Schömann, *Ant. Jur. Pub.* p. 115; Müller, *Dor.* iii. 5.)

The four Ionian tribes, Teleontes or Geleontes, Hopletes, Argadenses, Aegicoresnes, who are spoken of below in reference to Attica, were found also in Cysicum. In Samos a *φυλὴ Αἰγυριωνίη* is mentioned by Herodotus (iii. 26), which was probably a Carian race that mingled with the Ionians. In Ephesus five tribes are mentioned, of different races. With respect to these the reader is referred to Wachsmuth, vol. ii. pt. i. p. 16.

The first Attic tribes that we read of are said to have existed in the reign, or soon after the reign, of Cecrops, and were called *Cecropiis* (Κεκροπίς), *Autocithon* (Αὐτοκίθων), *Actaea* (Ἀκταία), and *Paralia* (Παραλία). In the reign of a subsequent king, Cranaus, these names were changed to *Cranaeis* (Κραναις), *Atthis* (Ἀθῆναις), *Mesogaea* (Μεσόγαια), and *Diacris* (Διακρίσις). Afterwards we find a new set of names; *Dias* (Διάς), *Athenais* (Ἀθηναίς), *Posidonias* (Ποσειδωνιάς), and *Hephaestias* (Ἡφαιστιάς); evidently derived from the deities who were worshipped in the country. (Compare Pollux, viii. 109.) Some of those secondly mentioned, if not all of them, seem to have been geographical divisions; and it is not improbable that, if not independent communities, they were at least connected by a very weak bond of union. But all these tribes were superseded by four others, which were probably founded soon after the Ionic settlement in Attica, and seem (as before observed) to have been adopted by other Ionic colonies out of Greece. The names *Geleontes* (Γελεόντες), *Hopletes* (Ὅπλητες), *Argades* (Ἀργαδεῖς), *Aegicores* (Αἰγικορεῖς), are said by Herodotus (v. 66) to have been derived from the sons of Ion, son of Xuthus. (Compare Eurip. *Ion*, 1596, &c.; Pollux, l. c.) Upon this, however, many doubts have been thrown by modern writers, who have suggested various theories of their own, more

or less ingenious, to which reference will be found in the books cited below. It is impossible within our limits to discuss the question at any length. The etymology of the three last names would seem to suggest, that the tribes were so called from the occupations which their respective members followed; the Hopletes being the armed men, or warriors; the Argades, labourers or husbandmen; the Aegicores, goatherds or shepherds. It is difficult, however, to discover in the first name any such meaning, unless *Τελεόντες*, and not *Γελεόντες*, be the true reading, in which case it has been supposed that this tribe might be a sacerdotal order, from *τελεῖν*, used in its religious sense; or a peasantry who paid rent to the lords of the soil, from *τελεῖν*, in the sense of *to pay*. Against the former of these interpretations it may be objected, that no trace of a priestly order is to be found in later times of Attic history; and against the latter, that the Argades and the Teleontes would denote a similar class of people, unless we resort to another interpretation of the word Argades, viz. *aristoi*, who would hardly constitute a distinct tribe in so early a period of society. It may be observed, however, that Argades and Aegicores may be taken to signify a local distribution of inhabitants, the former being the tillers of the ground, dwelling in the plain, the latter mountaineers; and this agrees very well, not only with the known character of the country of Attica, but also with the divisions above mentioned as having existed in the reign of Cranaus, viz. *Mesogaea* and *Diacris*. There is no more difficulty in the one case than in the other, in supposing that some of the tribes were denominated from their localities or occupations, while others owed their names to other circumstances. Argades and Aegicores might be the old inhabitants, according to their previous division; while the other two tribes might be the Ionic settlers, Hopletes the most warlike portion of them, Geleontes the great body, so called from a son of Ion. Or the last might, as Schömann thinks, be the ancient nobility, as distinguished from the Ionic settlers. Whatever be the truth with respect to the origin of these tribes, one thing is more certain, that, before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various people who inhabited the country continued to be disunited and split into factions.

Theseus in some measure changed the relations of the tribes to each other, by introducing a gradation of ranks in each; dividing the people into *Εὐκωπρίδαι*, *Γεωμέτροι*, and *Δημιούργοι*, of whom the first were nobles, the second agriculturists or yeomen, the third labourers and mechanics. At the same time, in order to consolidate the national unity, he enlarged the city of Athens, with which he incorporated several smaller towns, made it the seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The Tribes or Phylae were divided, either in the age of Theseus or soon after, each into three *φαστρίαι* (a term equivalent to fraternities, and analogous in its political relation to the Roman *Curiae*), and each *φαστρία* into thirty *γένη* (equivalent to the Roman *Gentes*), the members of a *γένος* being called *γενεῖται* or *δμογενεῖς*. Each *γένος* was distinguished by a particular name of a patronymic form, which was derived from some hero or mythic ancestor. We

learn from Pollux (viii. 111) that these divisions, though the names seem to import family connection, were in fact artificial; which shows that some advance had now been made towards the establishment of a closer political union. The members of the *φρατρίαι* and *γένη* had their respective religious rites and festivals, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved. (Compare Niebuhr, *Hist. of Rome*, vol. i. p. 311, &c.)

The relation between the four Ionic tribes and the three classes, into which Theseus divided the nation, is a difficult and perplexing question. It would appear from the statements of ancient writers on the subject that each of the four tribes was divided into Eupatridae, Geomori, and Demiurgi; which is confirmed by the fact that the four *φυλοδασίλει*, who were the assessors of the sovereign, were all taken from the Eupatridae, but at the same time one from each tribe. [PHYLOBASILEIS.] This, as Thirlwall (*Hist. of Greece*, vol. ii. p. 10) has remarked, can only be conceived possible on the supposition, that the distinctions which originally separated the tribes had become merely nominal; but Malden (*Hist. of Rome*, p. 140), who rejects the notion that the four Ionic tribes were castes deriving their name from their employment, supposes that the Tribes or Phylae consisted of the Eupatridae alone, and that the latter were divided into four Phylae like the patricians at Rome into three. The Geomori and Demiurgi had therefore, according to his supposition, nothing to do with the tribes. This view of the subject would remove many difficulties and is most in accordance with the subsequent history and political analogies in other states, but seems hardly supported by sufficient evidence to warrant us in receiving it.

After the age of Theseus, the monarchy having been first limited and afterwards abolished, the whole power of the state fell into the hands of the Eupatridae or nobles, who held all civil offices, and had besides the management of religious affairs, and the interpretation of the laws. Attica became agitated by feuds, and we find the people, shortly before the legislation of Solon, divided into three parties, *Πεδίαιοι* or lowlanders, *Διδακτοί* or highlanders, and *Πόραιοι* or people of the sea coast. The two first remind us of the ancient division of tribes, Mesogaea and Diacris; and the three parties appear in some measure to represent the classes established by Theseus: the first being the nobles, whose property lay in the champaign and most fertile part of the country; the second, the smaller landowners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance. To appease their discords, Solon was applied to; and thereupon framed his celebrated constitution and code of laws. Here we have only to notice, that he retained the four tribes as he found them, but abolished the existing distinctions of rank, or at all events greatly diminished their importance, by introducing his property qualification, or division of the people into *Πενηκτοσιμόδιμοι*, *Ἰππεῖς*, *Ζευγῆται*, and *Θῆτες*. The enactments of Solon continued to be the law at Athens, though in great measure suspended by the tyranny, until the democratic reform effected by Cleisthenes. He abolished the old tribes, and created ten new ones, according to a geographical divi-

sion of Attica, and named them after ten of the ancient heroes: *Erechtheis*, *Aegeis*, *Pandionis*, *Leontis*, *Acamantis*, *Oeneis*, *Cecropis*, *Hippothontis*, *Acanthis*, *Antiochis*. These tribes were divided each into ten *δῆμοι*, the number of which was afterwards increased by subdivision; but the arrangement was so made, that several *δῆμοι* not contiguous or near to one another were joined to make up a tribe. [DEMUS.] The object of this arrangement was, that by the breaking of old associations a perfect and lasting revolution might be effected, in the habits and feelings, as well as the political organization of the people. He allowed the ancient *φρατρίαι* to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a Phyle and Demus, but not in a Phratría or Genos; whence Aristophanes (*Ranæ*, 419, *Aves*, 765) says, as a taunting mode of designating new citizens, that they have no phratras, or only barbarous ones (quoted by Niebuhr, vol. i. p. 312). The functions which had been discharged by the old tribes were now mostly transferred to the *δῆμοι*. Among others, we may notice that of the forty-eight *ναυκραρίαι* into which the old tribes had been divided for the purpose of taxation, but which now became useless, the taxes being collected on a different system. The reforms of Cleisthenes were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the Senate of five hundred, fifty were chosen from each tribe. The allotment of *δικασταί* was according to tribes; and the same system of election may be observed in most of the principal offices of state, judicial and magisterial, civil and military; as that of the *διακτηταί*, *λογισταί*, *πρωκταί*, *ταμίαι*, *τειχοποιοί*, *φύλαρχοι*, *στρατηγοί*, &c. In B.C. 307 Demetrius Poliorcetes increased the number of tribes to twelve by creating two new ones, namely *Αντιγονίας* and *Δημητριάς*, which afterwards received the names of *Ptolemæis* and *Attalis*; and a thirteenth was subsequently added by Hadrian, bearing his own name. (Plut. *Demetr.* 10; Paus. i. 5. § 5; Pollux, viii. 110.)

The preceding account is only intended as a brief sketch of the subject, since it is treated of under several other articles, which should be read in connection with this. [CIVITAS (GREEK); DEMUS; PHYLARCHI; PHYLOBASILEIS, &c.]

(See Wachsmuth, vol. i. pt. i. pp. 224—240; Hermann, *Lehrbuch d. Griech. Staats.* §§ 24, 93, 94, 111, 175, 176; Schömann, *Ant. jur. pub.* pp. 165, 178, 200, 395; Thirlwall, vol. ii. pp. 1—14, 32, 73.)

[C. R. K.]

2. ROMAN. The three ancient Romulan tribes, the Ramnes, Tities, and Luceres, or the Ramnenses, Titienses, and Lucerenses, to which the patricians alone belonged, must be distinguished from the thirty plebeian tribes of Servius Tullius, which were entirely local, four for the city, and twenty-six for the country around Rome. The history and organization of the three ancient tribes is spoken of under PATRICII. They continued of political importance almost down to the time of the decemviral legislation; but after this time they no longer occur in the history of Rome, except as an obsolete institution.

The institution and organization of the thirty plebeian tribes, and their subsequent reduction to

twenty by the conquests of Porsenna, are spoken of under **PLEBES**. The four city tribes were called by the same name as the regions which they occupied, viz. *Suburana, Esquilina, Collina, and Palatina*. (Varro, *De Ling. Lat.* v. 56.; Festus, s. v. *Urbanas tribus*.) The names of the sixteen country tribes which continued to belong to Rome after the conquest of Porsenna, are in their alphabetical order as follow: *Aemilia, Camilia, Cornelia, Fabia, Galeria, Horatia, Lemonia, Menenia, Papiria, Pollia* (which Niebuhr, i. n. 977, thinks to be the same as the *Poblilia*, which was instituted at a later time), *Papiria, Papiria, Romilia, Sergia, Veturia, and Voltinia*. (Compare Götting, *Geach. d. Röm. Staatsv.* p. 238.) As Rome gradually acquired possession of more of the surrounding territory, the number of tribes also was gradually increased. When Appius Claudius, with his numerous train of clients, emigrated to Rome, lands were assigned to them in the district where the Anio flows into the Tiber, and a new tribe, the *tribus Claudia*, was formed. This tribe, which Livy (ii. 16, if the reading is correct) calls *vetus Claudia tribus*, was subsequently enlarged, and was then designated by the name *Crustumina* or *Clustumina*. (Niebuhr, i. n. 1236.) This name is the first instance of a country tribe being named after a place, for the sixteen older ones all derived their names from persons or heroes who were in the same relation to them, as the Attic heroes called *εὐρύνομαι* were to the Attic phylæ. In B. C. 387, the number of tribes was increased to twenty-five by the addition of four new ones, viz. *Stellatina, Tromentina, Sabatina, and Arniensis*. (Liv. vi. 5.; Niebuhr, ii. p. 575.) In 358 B. C. two more, the *Pompina* and *Publilia*, were formed of Volscians. (Liv. vii. 15.) In B. C. 332, the Censors Q. Publilius Philo and Sp. Postumius increased the number of tribes to twenty-nine, by the addition of the *Maccia* and *Scaptia*. (Liv. viii. 17.) In B. C. 318 the *Ufentina* and *Falerina* were added. (Liv. ix. 20.) In B. C. 299 two others, the *Aniensis* and *Terentina* were added by the censors (Liv. x. 9), and at last, in B. C. 241, the number of tribes was augmented to thirty-five, by the addition of the *Quirina* and *Velina*. This number was never afterwards increased, as none of the conquered nations were after this incorporated with the sovereign Roman state. (Liv. *Epit.* 19, i. 43.) When the tribes, in their assemblies, transacted any business, a certain order (*ordo tribunum*) was observed, in which they were called upon to give their votes. The first in the order of succession was the *Suburana*, and the last the *Arniensis*. (Cic. *de Leg. Agr.* ii. 29.) Any person belonging to a tribe had in important documents to add to his own name that of his tribe, in the ablative case. (NOMEN, p. 802, b. Compare Becker, *Handb. der Röm. Alterth.* vol. ii. pt. i. p. 164, &c.)

Whether the local tribes, as they were established by the constitution of Servius Tullius, contained only the plebeians, or included the patricians also, is a point on which the opinions of modern scholars are divided. Niebuhr, Walter, and others, think that the patricians were excluded, as they had already a regular organization of their own; Wachsmuth, Gerlach, Rein, Becker, and others, on the contrary, maintain that the patricians also were incorporated in the Servian tribes; but they allow, at the same time, that by far the majority of the people in the assemblies of the tribes were plebeians, and

TRIBU'TA
TRIBUTUM
TRIBUTUM
of Rome, i. p. 4
by the plebeians

the ancients in connection with the Servian tribes; for Varro (*de Ling. Lat.* v. 181) says "tributum dictum a tribubus," and Livy (i. 43) "tribus appellatae a tributo." But this seems to be only partially correct, as Livy (iv. 60) expressly states that the patres also paid the same tax. It is indeed true, that the patricians had little real landed property, and that their chief possessions belonged to the ager publicus, which was not accounted in the census as real property, and of which only the tithes had to be paid, until at a late period an alteration was attempted by the Lex Thoria. (Appian, *de Bell. Civ.* i. 27.) But there is no reason for supposing that the patricians did not pay the tributum upon their real property, although the greater part of it naturally fell upon the plebeians. (Livy. iv. 60, v. 10.) The impost itself varied according to the exigencies of the state, and was partly applied to cover the expenses of war, and partly those of the fortifications of the city. (Livy. vi. 32.) The usual amount of the tax was one for every thousand of a man's fortune (Livy. xxiv. 15, xxxix. 7, 44), though in the time of Cato it was raised to three in a thousand. The tributum was not a property tax in the strict sense of the word, for the accounts respecting the plebeian debtors clearly imply, that the debts were not deducted in the valuation of a person's property, so that he had to pay the tributum upon property which was not his own, but which he owed, and for which he had consequently to pay the interest as well. It was a direct tax upon objects without any regard to their produce, like a land or house tax, which indeed formed the main part of it. (Niebuhr, i. p. 581.) That which seems to have made it most oppressive, was its constant fluctuation. It was raised according to the regions or tribes instituted by Servius Tullius, and by the tribunes of these tribes subsequently called tribuni aerarii (Dionys. iv. 14, 15.) Dionysius, in another passage (iv. 19) states that it was imposed upon the centuries according to their census, but this seems to be a mistake, as the centuries contained a number of juniores who were yet in their fathers' power, and consequently could not pay the tributum. It was not like the other branches of the public revenue let out to farm, but being fixed in money it was raised by the tribunes, unless (as was the case after the custom of giving pay to the soldiers was introduced) the soldiers, like the equites, demanded it from the persons themselves who were bound to pay it. [AES EQUESTRE and HORDEARIUM.] When this tax was to be paid, what sum was to be raised, and what portion of every thousand asses of the census, were matters upon which the senate alone had to decide. But when it was decreed, the people might refuse to pay it when they thought it too heavy, or unfairly distributed, or hoped to gain some other advantage by the refusal. (Livy. v. 12.) In later times the senate sometimes left its regulation to the censors, who often fixed it very arbitrarily. No citizen was exempt from it, but we find that the priests, augurs, and pontiffs made attempts to get rid of it, but this was only an abuse which did not last. (Livy. xxxiii. 42.) In cases of great distress, when the tributum was not raised according to the census, but to supply the momentary wants of the republic, it was designated by the name of *Tributum Temerarium*. (Fest. s. v. *Tributorum colationem*.) After the war with Macedonia (B. C.

147), when the Roman treasury was filled with the revenues accruing from conquests and from the provinces, the Roman citizens became exempted from paying the tributum (Cic. *de Off.* ii. 22; Plin. *H. N.* xxxiii. 17), and this state of things lasted down to the consulship of Hirtius and Pansa (43 B. C.; Plut. *Aem. Paul.* 38), when the tributum was again levied on account of the exhausted state of the aerarium. (Comp. Cic. *ad Fam.* xii. 30, *Philipp.* ii. 37.) After this time it was imposed according to the discretion of the emperors.

Respecting the tributum paid by conquered countries and cities, see VERTIGALIA. Comp. Hegewisch, *Versuch über die Röm. Finanzen*, Altona 1804; Bosse, *Grundzüge des Finanzwesens im Röm. Staat*, Braunschweig 1803. [L. S.]

TRICLINIUM, the dining-room of a Roman house, the position of which, relatively to the other parts of the house, is explained in p. 428. It was of an oblong shape, and according to Vitruvius (vi. 3. § 8) ought to be twice as long as it was broad. The same author (§ 10) describes triclinia, evidently intended to be used in summer, which were open towards the north, and had on each side a window looking into a garden. The "house of the Tragic Poet" at Pompeii, and also that of Actaeon, appear to have had summer dining-rooms opening to the viridarium. The woodcut at p. 562 shows the arrangement of the three couches (*lecti*, κλῖναι), from which the triclinium derived its name. They also remain in the "House of Actaeon," being built of stone.

The articles LECTUS, TORUS and PULVINAR, contain accounts of the furniture used to adapt these couches for the *accubatio*, i. e. for the act of reclining during the meal. When so prepared for an entertainment they were called *triclinia strata* (Cæsar. *B. C.* iii. 92; comp. Athen. ii. pp. 47, 48), and they were made to correspond with one another in substance, in dimensions, and in shape. (Varro, *L. L.* ix. 47, ed. Müller.) As each guest leaned during a great part of the entertainment upon his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of the man who lay behind him, and he was therefore said to lie in the bosom of the other. (Plin. *Epist.* iv. 22.) Among the Romans, the usual number of persons occupying each couch was three, so that the three couches of a triclinium afforded accommodation for a party of nine. It was the rule of Varro (Gellius xiii. 11), that the number of guests ought not to be less than that of the Græces, nor to exceed that of the Muses. Sometimes however, as many as four lay on each of the couches. (Hor. *Sat.* i. 4. 86.) Among the Greeks it was usual for only two persons to recline on each couch. [CORNÆ, p. 305, a.]

In such works of ancient art as represent a symposium, or drinking-party, we always observe that the couches are elevated above the level of the table. This circumstance throws some light upon Plutarch's mode of solving the problem respecting the increase of room for the guests as they proceeded with their meal. (*Sympos.* v. 6.) Each man in order to feed himself lay flat upon his breast or nearly so, and stretched out his hand towards the table; but afterwards, when his hunger was satisfied, he turned upon his left side, leaning on his elbow. To this Horace alludes in describing a person sated with a particular dish, and turning

in order to repose upon his elbow. (*Sat.* ii. 4. 39.)

We find the relative positions of two persons who lay next to one another, commonly expressed by the prepositions *super* or *supra* and *infra*. A passage of Livy (xxxix. 43), in which he relates the cruel conduct of the consul L. Quintius Flamininus, shows that *infra aliquem cubare* was the same as *in sinu alicujus cubare*, and consequently that each person was considered as *below* him to whose breast his own head approached. On this principle we are enabled to explain the denominations both of the three couches, and of the three places on each couch.

		lectus medius				
		imus	medius	summus		
lectus imus	summus	6	5	4	imus	lectus summus
	medius	7		3	medius	
	imus	8		2	summus	
		9		1		

Supposing the annexed arrangement to represent the plan of a Triclinium, it is evident that, as each guest reclined on his left side, the countenances of all when in this position were directed, first, from No 1 towards No 3, then from No. 4 towards No. 6, and lastly, from No 7 towards No. 9; that the guest No. 1 lay, in the sense explained, *above* No. 2, No. 3 *below* No. 2, and so of the rest; and that, going in the same direction, the couch to the right hand was *above* the others, and the couch to the left hand *below* the others. Accordingly the following *fragment* of Sallust (*ap. Serv. in Virg. Aen.* i. 698) contains the denominations of the couches as shown on the plan: "Igitur discubere: Sertorius (*i.e.* No. 6) inferior in medio; super eum L. Fabius Hispaniensis senator ex proscriptis (No. 5): in summo Antonius (No. 1); et infra scriba Sertorii Versius (No. 2): et alter scriba Maecenas (No. 8) in imo, medius inter Tarquinium (No. 7) et dominum Perpernam (No. 9)." On the same principle, No. 1 was the highest place (*Locus summus*) on the highest couch; No. 3 was *Locus imus* in lecto summo; No. 2 *Locus medius* in lecto summo; and so on. It will be found that in the following passage (*Hor. Sat.* ii. 8. 20—23) the guests are enumerated in the order of their acubation—an order exhibited in the annexed diagram.

	Vibidius Maecenas Servilius	
Nomentanus	Menas	Varius
Nasidienus		Viscus
Porcius		Fundanius

Fundanius, one of the guests, who was at the top relatively to all the others, says,

"Summus ego, et prope me Viscus Thurinus, et infra,

Si memini, Varius: cum Servilio Balatrone Vibidius, quos Maecenas adduxerat umbras. Nomentanus erat super ipsum, Porcius infra."

TRIERARCHIA.

It is possible that Maecenas ought to be in the place No. 4 instead of No 5, since the entertainment was given more especially in honour of him, and No. 4 was an honourable place. The host himself, Nasidienus, occupies the place No. 8, which was usually taken by the master of the feast, and was a convenient situation for giving directions and superintending the entertainment. Unless there be an exception in the instance of No. 4, it is to be observed that at each table the most honourable was the middle place. (*Virg. Aen.* i. 698.)

The general superintendence of the dining-room in a great house was intrusted to a slave called *tricioinarcha*, who, through the instrumentality of other slaves of inferior rank, took care that every thing was kept and proceeded in proper order. [*J. Y.*]

TRIDENS. [*FUSCINA.*]

TRIENS. [*AA.*]

TRIERARCHIA (*τριεραρχια*). This was one of the extraordinary war services or liturgies [*Λειτουργια*] at Athens, the object of which was to provide for the equipment and maintenance of the ships of war belonging to the state. The persons who were charged with it were called *Τριεραρχοι*, or Trierarcha, as being the captains of Triremes, though the name was also applied to persons who bore the same charge in other vessels. It existed from very early times in connection with the forty-eight naucrarias of Solon, and the fifty of Cleisthenes: each of which corporations appears to have been obliged to equip and man a vessel. (*Comp. NAUCRARIA: Lex Rhét.* p. 283.) Under the constitution of Cleisthenes the ten tribes were at first severally charged with five vessels. This charge was of course superseded by the later forms of the Trierarchy, explained in the course of this article.

I. *The services to which the Trierarchs were liable.* What these were previously to 358 B. C. there can be no doubt; the vessel was furnished by the state, though sometimes a wealthy and patriotic individual served in his own ship. Cleisthenes, for instance, did so at Artemisium (*Herod.* viii. 17), but as it is particularly recorded that this ship was his own, we may infer, that he supplied at his own cost what the state was bound to provide. The same custom prevailed during the Peloponnesian war also. The 100 ships prepared and reserved at the beginning of the war, for any critical emergency, were supplied by the state. (*Thucyd.* ii. 24.) In the expedition against Sicily (*Id.* vi. 31) the state furnished the hull of the vessel (*καὶ τὸ σκαῦλον*), and the pay of the crews, a drachma per day for each man: but the equipment of the ships was at the cost of the Trierarcha, who also gave *τριεραρχαί* (*Pollux.* iii. 94), or additional pay to secure the best men. The same conclusions are also deducible from the credit which a Trierarch takes to himself for saving his vessel, when the city lost her ships at Aegospotami (*Isocr.* c. *Callim.* 382): and from the further statement that he paid the sailors out of his own pocket. From the threat of Cleon (*Aristoph.* *Equit.* 916) that he would (as *τριεραρχὸς*) make an adversary a Trierarch, and give him an old ship with a rotten mast (*λοτρίον σκαῦλον*), it appears that the state furnished the hull and mast also, but that the Trierarch was bound to keep and return them in good repair: an obligation expressed in the inscriptions quoted by Böckh (*Urkunden über das Seewesen des Attischen Staates*, p. 197), by the phrase, *δεῖ τῆς*

ναὺν δόκιμον καὶ ἐντελὴ παραδοῖναι. Consequently the statement in the oration against Midias (p. 564. 22) that when Demosthenes was quite young (B. C. 364) the Trierarchs paid all the expenses themselves (τὰ ἀναλώματα ἐκ τῶν ἰδίων) only implies that they defrayed the expenses which were customary at that time, and which were afterwards diminished by the regulation of the *symmorai*; but not that they supplied the ship, or pay and provisions for the crew. The whole expenditure, says Böckh, means nothing more than the equipment of the vessel, the keeping it in repair, and the procuring the crew which was attended with much trouble and expense, as the Trierarchs were sometimes obliged to give bounties in order to induce persons to serve, foreign sailors not being admissible. From the oration of Demosthenes against Polycles (B. C. 361), we learn the following particulars about the Trierarchy of that time. The Trierarchs were obliged to launch their ship; the sailors were supplied from particular parishes (*δημοί*), through the agency of the demarchi; but those supplied to Apollodorus the client of Demosthenes were but few and inefficient, consequently he mortgaged his estate (*ὑποθεῖναι τὴν οὐσίαν*), and hired the best men he could get, giving great bounties and premiums (*προδόσεις*). He also equipped the vessel with his own tackle and furniture, taking nothing from the public stores (*ἐκ τῶν δημοσίων οὐδὲν λαβεῖν*). Compare the Speech on the Crown of the Trierarchy, p. 1229. Moreover in consequence of his sailors deserting when he was out at sea, he was put to additional and heavy expenses in hiring men at different ports. The provision money for the sailors (*συντρέσιον*) was provided by the state, and paid by the strateg, and so generally speaking was the pay for the marines (*ἐπιβάται*): but Demosthenes' client only received it for two months, and as he served for five months more than his time, (from the delay of his successor elect,) he was obliged to advance it himself for fifteen months, with but an uncertain prospect of repayment. Other circumstances are mentioned which made his Trierarchy very expensive, and the whole speech is worth reading, as showing the unfairness and hardship to which a rich man was sometimes subjected as a Trierarch. The observation that he took no furniture from the public stores, proves that at that time (B. C. 361), the triremes were fitted out and equipped from the public stores, and consequently by the state; but as we learn from other passages in Demosthenes, and the inscriptions in Böckh (*Urkunden*, No. iii.), the Trierarchs were obliged to return in good condition any articles which they took; in default of doing so they were considered debtors to the state.

That the ship's furniture was either wholly or in part supplied by the state, also appears from another speech (c. *Euryg. et Mnesh.* 1146): but Trierarchs did not always avail themselves of their privilege in this respect, that they might have no trouble in settling with the state. It is evident then, that at the time referred to (about B. C. 360), the only expenses binding upon the Trierarchs were those of keeping in repair the ship and the ship's furniture; but even these might be very considerable, especially if the ship were old, or exposed to hard service and rough weather. Moreover, some Trierarchs, whether from ambitious or patriotic motives, put themselves to unnecessary expense in fitting out and rigging their ships, from which the

state derived an advantage. Sometimes, on the other hand, the state suffered, by the Trierarchs performing their duties at the least possible expense, or letting out their Trierarchy (*μισθῶσαι τὴν λειτουργίαν*) to the contractor who offered the lowest tender. (Dem. *de Coron. Trierar.* 1230.) One consequence of this was, that the duties were inadequately performed; but there was a greater evil connected with it, namely, that the contractors repaid themselves by privateering on their own account, which led to reprisals and letters of marque being granted against the state. (SYLAE: Dem. *Id.* 1231.) It seems strange that the Athenians tolerated this, especially as they were sometimes inconsistent enough to punish the Trierarchs who had let out their Trierarchy, considering it as a desertion of post (*λειπορδῶν*, *Id.* 1230).

We may here observe, that the expression in Isaeus (*de Apoll. Hered.* 67), that a Trierarch "had his ship made himself" (*τὴν ναὺν ποιεῖσθαι*), does not mean that he was at the cost of building it (*ναυπηγεῖσθαι*), but only of fitting it up and getting it ready for sea. That the ships always belonged to the state, is further evident from the fact that the senate was intrusted with the inspection of the ship-building (Dem. *c. Androt.* 599. 13); and is placed beyond all doubt by the "Athenian Navy List" of the inscriptions in Böckh. (*Urkunden*, &c.) Some of the ships there mentioned are called *ἀντικλήρωτοι*, whence it appears that the public vessels were assigned by lot to the respective Trierarchs. A *τρίηρης ἐπιδοτός* was a ship presented to the state as a free gift, just as *τρίηρη ἐπιδιδόναι* means to present the state with a trireme (Dem. *c. Mid.* 566, 568). The duration of a Trierarchy was a year, and if any Trierarch served longer than his legal time, he could charge the extra expenses (*τὸ ἐπιτρίηραρχημα*) to his successor. To recover these expenses an action (*ἐπιτρίηραρχήματος δίκη*) might be brought against the successor, of which we have an example in the speech of Apollodorus against Polycles, composed by Demosthenes for the former.

II. *On the expenses of the Trierarchy.* These would of course depend upon circumstances; but except in extraordinary cases, they were not more than 60, nor less than 40 minae: the average was about 50. Thus about the year B. C. 360, a whole Trierarchy was let out for 40 minae; in later times the general amount of a contract was 60. (Dem. *c. Mid.* 539, 564. 20, *de Coron.* 260, 262.)

III. *On the different forms of the Trierarchy.* In ancient times one person bore the whole charge, afterwards it was customary for two persons to share it, who were then called Syntrierarchs (*συντρίηραρχοι*). When this practice was first introduced is not known, but Böckh conjectures that it was about the year 412 B. C., after the defeat of the Athenians in Sicily, when the union of two persons for the Choregia was first permitted. The most ancient account of a syntrierarchy is later than 410 (Lys. *c. Diogil.* 907, 909), and we meet with one so late as B. C. 358, the year of the Athenian expedition into Euboea. (Dem. *c. Mid.* 566. 24.) The syntrierarchy to which we allude was indeed a voluntary service (*ἐπίδοσις*), but there can be little doubt that it was suggested by the ordinary practice of that time; and even under the next form of the service, two Trierarchs were sometimes employed for the immediate direction of the Trierarchy. The syntrierarchy, however, did

not entirely supersede the older and single form, being only meant as a relief in case of emergency, when there was not a sufficient number of wealthy citizens to bear the expense singly. Numerous instances in fact occur of single Trierarchies, between 410 and 358 B. C., and in two passages of Isaeus (*de Diaecog. Her. 54, de Apoll. 67*), referring to this period, the single and double Trierarchy are mentioned as cotemporaneous. Apollodorus also was sole Trierarch (Dem. c. *Folyd.*) so late as B. C. 361. In the case of a syntrierarchy the two Trierarchs commanded their vessel in turn, six months each (Id. 1219), according as they agreed between themselves.

The third form of the Trierarchy was connected with, or suggested by, the syntrierarchy. In B. C. 358, the Athenians were unable to procure a sufficient number of legally appointed Trierarchs, and accordingly they summoned the volunteers. This, however, was but a temporary expedient; and as the actual system was not adequate to the public wants, they determined to manage the Trierarchy somewhat in the same way as the property taxes [*EISPHORA*], namely, by classes or symmoriae, according to the law of Periander passed, as Böckh shows, in the year 358, and which was the primary and original enactment on the subject. With this view 1200 *συντελείς*, or partners (Dem. c. *Mid. 564*) were appointed, who were probably the wealthiest individuals of the state, according to the census or valuation. These were divided into 20 *συμμορίαι*, or classes; out of which a number of persons (*σώματα*) joined for the equipment or rather the maintenance and management of a ship, under the title of a *συντέλεια* (Harpocr. s. v.) or union. Sometimes, perhaps, by special enactment, when a great number of ships was required, a *synteleia* of this kind consisted of four or five wealthy individuals, who bore jointly the expenses of one trireme (Harpocr. s. v. *Συμμορία*); but generally to every ship there was assigned a *synteleia* of fifteen persons of different degrees of wealth, as we may suppose, so that four only were provided for by each symmoria of sixty persons.

These *synteleiae* of fifteen persons each seem to have been also called symmoriae by Hyperides. (Harpocr. s. v.; compare Dem. *de Symmor. 183.*) It appears, however, that before Demosthenes carried a new law on this subject (B. C. 340), it had been customary for sixteen persons to unite in a *synteleia* or company for a ship (Dem. *pro Cor. 261*), who bore the burden in equal shares. This being the case it follows, either that the members of the symmoriae had been by that time raised from 1200 to 1280, or that some alterations had taken place in their internal arrangements, of which no account has come down to us. (Böckh, *Urkunden*, &c. p. 181.) From the phrase *ἐκ τῶν ἐν τοῖς λόχοις συντελειῶν*, used in the *κατάλογος* (*de Cor. 261*), it would also seem that the word *λόχοι* was used of civil as well as military divisions, and, in this instance, of the symmoriae. The superintendence of the whole system was in the hands of the 300 wealthiest members, who were therefore called the "leaders of the symmoriae" (*ἡγεμόνες τῶν συμμοριῶν*), on whom the burdens of the trierarchy chiefly fell, or rather ought to have fallen. (Dem. *pro Cor. 329, c. Euerg. et Mnesib. 1145.*) The services performed by individuals under this system appear to have been the same as before: the state still provided the ship's tackle (i. e. the

δόδια καὶ ὀπλίσματα) and some strings to help the Trierarch in his inventory taken either at Athens or the symmoriae. The ship was equipped by Demosthenes (*de Synteleia*) against the system of the state, and the crews, and the Trierarch of the Trierarchy, their vessels in received them. to escape: for the serve for their s for a talent, and partners (*συντελείς*) next to nothing ought to have done was a ground of does not appear *synteleiae* appointed take charge of the left to themselves legal enactment the symmoriae described by Dem going to ruin, cost, and personal property, and the action, and the sufficient time to I proposed a law effect by it are the symmoriae proposed to add the whole 2000, could claim ex there might always to serve. in time; and as Demosthenes (*Phil.* 50) complains of this, in B. C. 352, we may conclude that his proposal fell to the ground. But these evils were too serious to remain without a remedy; and therefore when the orator was the *ἐπιστάτης τοῦ ναυτικοῦ* or the superintendent of the Athenian navy, he brought forward and carried a law for altering and improving the system of the symmoriae and companies, the members of which no longer called themselves Trierarchs, but partners (*συντελεῖς*) (*Id. de Cor.* 260), thereby introducing the "Fourth form of the Trierarchy." The provisions of the law were as follow. The naval services required from every citizen were to depend upon and be proportional to his property, or rather to his taxable capital (*τίμημα*, see *ΕΙΣΦΟΡΑ*), as registered for the symmoriae of the property taxes, the rate being one trireme for every ten talents of taxable capital, up to three trimeres and one auxiliary vessel (*ὑπηρέσιον*) for the largest properties; i. e. no person, however rich, could be required to furnish more. Those who had not ten talents in taxable capital were to club together in syntelesiae till they had made up that amount; and if the valuation of the year of Nausinicus (B. C. 379) was still in force, the taxable capital (for the highest class) was one-fifth of the whole. By this law great changes were effected. All persons paying taxes were rated in proportion to their property, so that the poor were benefitted by it, and the state likewise: for, as Demosthenes (*de Cor.* 261) says, those who had formerly contributed one-sixteenth to the Trierarchy of one ship were now Trierarchs of two, in which case they must either have served by proxy, or done duty in successive years. He adds that the consequences were highly beneficial. During the whole war, carried on after the law was in force, no Trierarch implored the aid of the people (*ἰκετηλαί ᾔηκε*), or took refuge in a temple, or was put into prison by the persons whose duty it was to dispatch the fleet (*οἱ ἀποστολεῖς*), nor was any trireme lost at sea, or lying idle in the docks for want of stores and tackle, as under the old system, when the service (*τὸ λειτούργημα*) fell on the poor. The duties and services to which the Trierarchs were subject under the new law were probably the same as under the third form of the Trierarchy, the symmoriae.

On the relation which, in this system, the cost of a Trierarchy bore to the property of a Trierarch Böckh makes the following remarks, which may be verified by a reference to *ΕΙΣΦΟΡΑ*. "If we reckon that, as formerly, it cost about a talent, the total expense of the Trierarchs, for 100, 200, or 300 trimeres amounted to an equal number of talents, or a sixtieth, a thirtieth, and a twentieth of the valuation of Attica: i. e. for the first class one-third, two-thirds, and one per cent. of their property: for the poorer a proportionally less amount: and of the annual incomes, taken as a tenth part of the property, 3%, 6%, and 10 per cent. for the most wealthy. But we may reckon that Athens at that time had not more than 100 or 200 trimeres at sea, very seldom 300; so that this war-tax did not for the richest class amount on an average to more than one-third, and two-thirds per cent. of their property."

This arrangement of Demosthenes was calculated for 300 trimeres, for which number 300 persons serving in person would be necessary; so that the chief burden must have fallen upon the leaders of

the former symmoriae. The year of passing this law Böckh fixes at B. C. 340 or 339. How long it remained in force is uncertain. In the speech for the crown (B. C. 380), where much is said on the subject of the Trierarchy, it is neither mentioned that the law was in existence, nor that it was repealed; but Demosthenes (p. 329) says that Aeschines had been bribed by the leaders of the symmoriae to nullify it.

It appears then that the Trierarchy, though the most expensive of the liturgies, was not of necessity oppressive, if fairly and economically managed, though this, as has been before observed, was not always the case. (*Demosth. c. Polyc.*)

With respect to the amount of property which rendered a man liable to serve a Trierarchy or syntrierarchy, Böckh observes, "I am aware of no instance of liability arising from a property of less value than 500 minae, and as an estate of one or two talents never obliged the possessor to the performance of any liturgy (*Dem. c. Aphob.* p. 833), the assertion of Isaeus (*de Dicaeog. Hered.* p. 54) that many had served the office of Trierarch whose property was not more than 80 minae, obliges us (if true) to suppose that public-spirited individuals were sometimes found to contribute to a Trierarchy (rather perhaps to a syntrierarchy) out of a very small property."

The disadvantages which in later times resulted from the Trierarchs not being ready for sea by the time for sailing, were in early times prevented by their appointments being made beforehand; as was the case with the Trierarchs appointed to the 100 ships which were reserved at the beginning of the Peloponnesian war against an attack upon Athens by sea.

The appointment to serve under the first and second forms of the Trierarchy was made by the strategi (*Demosth. c. Lacr.* 940. 16), and in case any person was appointed to serve a Trierarchy, and thought that any one else (not called upon) was better able to bear it than himself, he offered the latter an exchange of his property [*ΑΝΤΙΔΟΣΙΣ*] subject to the burden of the Trierarchy.

In cases of extreme hardship, persons became suppliants to the people, or fled to the altar of Artemis at Munychia. If not ready in time, they were sometimes liable to imprisonment (*ἐντοχοὶ δεσμοί*, *Dem. de Cor.* 262. 15). Thus on one occasion (*Dem. de Cor. Trier.* 1229. 6), the Trierarchs were by a special decree subjected to imprisonment, if they were not off the pier (*χάμα*) by the end of the month; on the contrary, whoever got his ship ready first, was to be rewarded with the "crown of the Trierarchy;" so that in this way considerable emulation and competition were produced. Moreover, the Trierarchs were *ἀνέσθουσι*, or liable to be called to account for their expenditure; though they applied their own property to the service of the state. (*Dem. c. Polyc.* 1222. 11; *Aeschin. c. Ctesiph.* 56.) But they also received money out of the treasury for various disbursements, as the pay of the soldiers and sailors, and the extra hands (*ὑπηρεσία*): thus, on one occasion, each Trierarch is stated to have received 30 minae, *εἰς ἐπιπλοῦν*. (*Dem. de Cor. Trier.* 1231. 14.) The Trierarchs may also have been considered *ἀνέσθουσι*, from being required to show that they had performed their duties properly. The Sacred Trimerae, the Paralus and the Salamis, had special treasurers [*ΤΑΜΙΑΣ*] appointed to them (*Pollux,*

viii. 116); and, on the authority of Ulpian (*ad Dem. c. Mid.* 686), it has been believed that the state acted as Trierarch for each of them; but in the inscriptions quoted by Böckh (*Urkunden*, &c., p. 169), no difference is made between the Trierarchs of the *Paralus* and other vessels, and therefore it would seem that the state appointed Trierarchs for them as well as for other vessels, and provided out of the public funds for those expenses only which were peculiar to them.

IV. *On the exemptions from the Trierarchy.*—By an ancient law, in force A. C. 355 (*Dem. c. Lept.*), no person (but minors or females) could claim exemption from the Trierarchy, who were of sufficient wealth to perform it, not even the descendants of Harmodius and Aristogiton. But from Isæus (*De Apoll. Herod.* 67) it appears that in the time of the single Trierarchy no person could be compelled to serve a second time within two years after a former service (*δύο ἐτη διαλειπών*). The nine archons also were exempt, and the Trierarchy was a ground of exemption from the other liturgies, any of which, indeed, gave an exemption from all the rest during the year next following that of its service. (*Dem. c. Lept.* 459, 464.)

But all property was not subject to the service, as we learn from Demosthenes (*De Symm.* 182. 14), who tells us that a person was exempt, if *δδωvας*, or unable to serve from poverty; so also were "wards, heiresses, orphans, cleruchi, and corporate bodies." Of course an heiress could only claim exemption while unmarried. Wards also were free from *all liturgies*, during their minority, and for a year after their *δοκιμασία*. (*Lysias, c. Diogen.* 908.) By *κληροδοχοί*, are meant colonists, who, while absent by the command of the state, could not perform a Trierarchy. The *τὰ κοινωτικά* admits of a doubt, but it probably means the property of joint tenants, as brothers or coheirs, which had not yet been apportioned to them (*Pollux*, viii. 184), or it may refer to monies invested in partnership. Moreover, though the proper duration of a Trierarchy was a year, it was legally dissolved if the general furnished no pay to the soldiers, or if the ship put into the Peiræus, it being then impossible to keep the sailors together. (*Dem. c. Polyc.* 1209.)

V. *On the legal proceedings connected with the Trierarchy.*—These were either between individual Trierarchs, or between Trierarchs and the state, and therefore in the form of a *DIADICASIA*. They generally arose in consequence of a Trierarch not delivering up his ship and her rigging in proper order, either to his successor or to the state. If he alleged that the loss or damage of either happened from a storm, he was said *σκηψάσθαι κατὰ χειμῶνα ἀπολωλέναι*, and if his plea were substantiated, *ἔδοξεν ἐν τῷ δικαστηρίῳ κ. τ. λ.* Vessels or furniture on which a trial of this kind had been held, were said to be *διαδικασμένα*.

The presidency of the courts which tried matters of this sort was vested in the strategæ, and sometimes in the superintendents of the dockyard, in conjunction with the *ἀποστολεῖς*. The senate also appears to have had a judicial power in these matters: e.g. we meet in various inscriptions with the phrase *οἶδε τῶν τριηράρχων, ὃν ἐδίπλωσεν ἡ βουλὴ τὴν τριήρη*. Böckh conjectures that the Trierarchs of whom this is said had returned their ships in such a condition, that the state might have called upon them to put them in thorough repair, or

to rebuild them. 5000 drachmæ. leased from this of justice, and pleted, he competent (in a cle to have inflicted 5000 drachmæ, "doubling the

published by K. O. Müller (Röttiger's *Amalthea*, i. p. 119), founded upon numerous ancient au-

thorities, and designed to show the appearance of the oracular tripod at Delphi. Besides the parts already mentioned, viz. the three legs, the three handles, and the vessel or caldron, it shows a flat, round plate, called *δαμος*, on which the Pythia seated herself in order to give responses, and on which lay a laurel wreath at other times. This figure also shows the position of the *CORTINA*, which, as well as the caldron, was made of very thin bronze, and was supposed to increase the prophetic sounds which came from underneath the earth. (Virg. *Aen.* iii. 92.)

The celebrity of this tripod produced innumerable imitations of it (Diod. xvi. 26), called "Delphic tripods." (Athen. v. p. 199.) They were made to be used in sacrifice, and still more frequently to be presented to the treasury both in that and in many other Greek temples. (Athen. vi. pp. 231, f.—232, d.; Paus. iv. 32. § 1.) [DONARIA.] Tripods were chiefly dedicated to Apollo (Paus. iii. 18. § 5) and to Bacchus. Partly in allusion to the fable of the rape of a tripod from Apollo by Hercules, and the recovery of it by the former (Paus. iii. 21. § 7, x. 13. § 4), the tripod was one of his usual attributes, and therefore occurs continually on coins and ancient marbles which have a relation to him. Of this we have an example in the bas-relief engraved on p. 117, which also exhibits two more of his attributes, the lyre and the serpent. In conformity with the same ideas it was given as a prize to the conquerors at the Pythian and other games, which were celebrated in honour of Apollo. (Herod. i. 144.) On the other hand, the theatre at Athens being considered sacred to Bacchus, the successful Chorus received a bronze tripod as the appropriate prize. The choragic monuments of Thraacyllus and Lysicrates, the ornamental fragments of which are now in the British Museum, were erected by them to preserve and display the tripods awarded to them on such occasions. We find also that a tripod was sometimes consecrated to the Muses (Hes. *Op. et Dies*, 658) and to Hercules. (Paus. x. 7. § 3.)

A tripod, scarcely less remarkable than that from which the Pythia delivered oracles, and consecrated to Apollo in the same temple at Delphi, was that made from the spoils of the Persian army

after the battle of Plataea. It consisted of a golden bowl, supported by a three-headed bronze serpent. (Herod. ix. 81; Thucyd. i. 132; Schol. in loc.; Paus. x. 13. § 5; Gyllius, *Top. Const.* ii. 13; Banduri, *Imp. Orient.* t. ii. p. 614.) The golden bowl having been removed, the bronze serpent was taken to Constantinople, and is probably the same which was seen there by Spon and Wheler in 1675. The first figure in the annexed wood-cut is copied from Wheler's engraving of it. (*Journey into Greece*, p. 185.) He says it was about fourteen or fifteen feet high.

The use of bronze tripods as altars evidently arose in a great degree from their suitableness to be removed from place to place. We have an example of this mode of employing them in the scene which is represented in the woodcut on p. 1045. To accommodate them as much as possible to this purpose, they are sometimes made to fold together into a small compass by a contrivance, which may be understood from an inspection of the preceding woodcut. The right-hand figure represents a tripod in the British Museum. A patera, or a plain metallic disk, was laid on the top, when there was occasion to offer incense. Many of these movable folding tripods may be seen in Museums, proving how common they were among the Romans.

Another species of tripods deserving of notice are those made of marble or hard stone. One was discovered in the villa of Hadrian, five feet high, and therefore unsuitable to be used in sacrifice. It is very much ornamented, and was probably intended merely to be displayed as a work of art. (Caylus, *Recueil*, ii. pl. 53.) [J. Y.]

TRITTYS (τρίττυς). [TRIBUS, p. 1154.]

TRIUMPHUS, a solemn procession in which a victorious general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, was followed by his troops, and after passing in state along the Via Sacra, ascended the Capitol to offer sacrifice in the temple of Jupiter.

Such displays have been so universal among all warlike tribes from the earliest times, and are so immediately connected with some of the strongest passions of the human heart, that it would be as useless as it is impossible to trace their origin historically. It is scarcely necessary to advert to the fancies of those ancient writers, who refer their first institution to the mythic conquests of Bacchus in the East (Diodor. iv. 5; Plin. *H. N.* vii. 57), nor need we attach much importance to the connection between *triumphus* and *Σπλαῦσος*, according to the etymology doubtfully proposed by Varro (*L. L.* vi. 68, ed. Müller). Rejoicings after a victory, accompanied by processions of the soldiery with their plunder, must have been coeval with the existence of the Romans as a nation, and accordingly the return of Romulus with spolia opima after he had defeated the Caeninenses and slain Acro their king, is described by Dionysius (ii. 34; compare Prop. iv. 1. 32) with all the attributes of a regular triumph. Plutarch (*Rom.* 16) admits that this event was the origin of and first step towards the triumph of after times, but censures Dionysius for the statement that Romulus made his entrance in a quadriga, which he considers disproved by the fact that all the triumphal (τρωαιοφόρους) statues of that king, as seen in his day, represented him on foot. He adds that Tarquinius Priscus, according to some, or Poplicola, according to others, first triumphed in a chariot; and in corroboration of this we find that the first triumph recorded by Livy (i. 38; compare Flor. i. 5; Eutrop. i. 6) is that over the Sabines by Tarquinius, who according to Verrius (Plin. *H. N.* xxxiii. 19) wore upon this occasion a robe of cloth or gold. Whatever conclusion we may form upon these points, it is certain that from the first dawn of authentic history down to the extinction of liberty a regular triumph (*justus triumphus*) was recognized as the summit of military glory, and was the cherished object of ambition to every Roman general. A triumph might be granted for successful achievements either by land or sea, but the latter were comparatively so rare that we shall for the present defer the consideration of the naval triumph.

After any decisive battle had been won, or a province subdued by a series of successful operations, the Imperator forwarded to the senate a laurel-wreathed despatch (*litterae laureatae*, Zonar. vii. 21; Liv. xlii. 1; Plin. *H. N.* xv. 40) containing an account of his exploits. If the intelligence proved satisfactory the senate decreed a public thanksgiving. [SUPPLICATIO.] This supplication was so frequently the forerunner of a triumph, that Cato thinks it necessary to remind Cicero that it was not invariably so. (Cic. *ad Fam.* xv. 5.) After the war was concluded the general with his army repaired to Rome, or ordered his army to meet him there on a given day, but did not enter the city. A meeting of the senate was held without the walls, usually in the temple of Bellona (e.g. Liv. xxvi. 21, xxxvi. 39) or Apollo (Liv. xxxix. 4), that he might have an opportunity of urging his pretensions in person, and these were then scrutinized and discussed with the most jealous care. The following rules and restrictions were for the most part rigidly enforced, although the senate assumed the discretionary power of relaxing them in special cases.

1. That no one could be permitted to triumph unless he had held the office of dictator, of consul,

or of praetor. (That a triumph was had expelled the he had commanded magistratu." The honours given in his 24th year any of the great years afterwards altogether unpro *pro Leg. Man.* viii. 15. § 8; xxxvi. 8.)

2. That the n in office both w when the triumph regulation was in the ages of the com menced with Q whom the senat perii" after the viii. 26), and t praetors were pe (Liv. xxxix. 45, derable time the was long held, the "prorogatio upon the term triumph was refe P. 3. That the or the battle fou province and win ing the triumph Max. ii. 8. § 2) praetor Furius regular and im gained by the le from the army, t the former, but the auspices.

4. That at lea been slain in a that the advanta not merely a co aster (Oros. v. 4) the Romans sho that of their adv law of the tribu ties were impos be found guilty senate, and it w returned to the attest the correct before the city

clear that these provisions could never have existed during the petty contests with which Rome was fully occupied for some centuries; and even when wars were waged upon the most extensive scale we find many instances of triumphs granted for general results, without reference to the numbers slain in any one engagement (e. g. Liv. viii. 26, xl. 38).

5. That the war should have been a legitimate contest against public foes (*justis hostilibusque bellis*, Cic. *pro Deiot.* 5), and not a civil contest. Hence Catulus celebrated no triumph over Lepidus, nor Antonius over Catiline, nor Cinna and Marius over their antagonists of the Sullan party, nor Caesar after Pharsalia, and when he did subsequently triumph after his victory over the sons of Pompey it caused universal disgust. Hence the line in Lucan (l. 12):

"Bella geri placuit nullos habitura triumphos."

(See Val. Max. ii. 8. § 7; Dion Cass. xliii. 42; Plut. *Caes.* 56.) [OVATIO.]

6. That the dominion of the state should have been extended and not merely something previously lost regained. Hence Fulvius, who won back Capua after its revolt to Hannibal, did not receive a triumph. (Val. Max. l. c.; compare Liv. xxxi. 5, xxxv. 1.) The absolute acquisition of territory does not appear to have been essential. (Duker, *ad Liv.* xxxi. 5.)

7. That the war should have been brought to a conclusion and the province reduced to a state of peace so as to permit of the army being withdrawn, the presence of the victorious soldiers being considered indispensable in a triumph. In consequence of this condition not being fulfilled an ovation only was granted to Marcellus after the capture of Syracuse (Liv. xxvi. 21, compare xxviii. 29, xxx. 48) and to L. Manlius upon his return from Spain. (Liv. xxxix. 29.) We find an exception in Liv. xxxi. 48, 49, but this and similar cases must be regarded as examples of peculiar favour. (See also Tacit. *Ann.* i. 55, compared with ii. 41.)

The senate claimed the exclusive right of deliberating upon all these points and giving or withholding the honour sought (Liv. iii. 63; Polyb. vi. 13), and they for the most part exercised the privilege without question, except in times of great political excitement. The sovereignty of the people, however, in this matter was asserted at a very early date, and a triumph is said to have been voted by the tribes to Valerius and Horatius, the consuls of B. C. 446, in direct opposition to the resolution of the fathers (Liv. iii. 63; Dionys. xi. 50), and in a similar manner to C. Marcus Rutilus the first plebeian dictator (Liv. vii. 17), while L. Postumius Megellus, consul A. C. 294, celebrated a triumph, although resisted by the senate and seven out of the ten tribunes. (Liv. x. 37.) Nay more, we read of a certain Appius Claudius, consul B. C. 143, who having persisted in celebrating a triumph in defiance of both the senate and people, was accompanied by his daughter (or sister) Claudia, a vestal virgin, and by her interposition saved from being dragged from his chariot by a tribune. (Oros. v. 4; Cic. *pro Coel.* 14; Val. Max. v. 4. § 6; Suet. *Tib.* 2.) A disappointed general, however, seldom ventured to resort to such violent measures, but satisfied himself with going through the forms on the Alban Mount, a practice first introduced by C. Papirius Maso, and thus noticed in the Capitoline Fasti: C. PAPIRIUS MASO COS. DE CONSULIBUS

PRIMUS IN MONTE ALBANO III. NONAS MAR. AN. DXXII. (Plin. *H.N.* xv. 38.) His example was followed by Marcellus (Liv. xxvi. 21; Plut. *Marc.* 22), by Q. Minucius (Liv. xxxiii. 23), and by many others, so that Livy (xlii. 21) after mentioning that the senate had refused a triumph to Cicereius (praetor B. C. 173) adds, "in monte Albano, quod jam in morem venerat, triumphavit." (See also Liv. xlv. 38.)

If the senate gave their consent they at the same time voted a sum of money towards defraying the necessary expenses (Polyb. vi. 13), and one of the tribunes "ex auctoritate senatus" applied for a plebiscitum to permit the Imperator to retain his imperium on the day when he entered the city. (Liv. xlv. 35, xxvi. 21.) This last form could not be dispensed with either in an ovation or a triumph, because the imperium conferred by the comitia curiata did not include the city itself, and when a general had once gone forth "paludatus" his military power ceased as soon as he re-entered the gates, unless the general law had been previously suspended by a special enactment; and in this manner the resolution of the senate was, as it were, ratified by the plebs. [IMPERIUM; PALUDAMENTUM.] For this reason no one desiring a triumph ever entered the city until the question was decided, since by so doing he would ipso facto have forfeited all claim. We have a remarkable example of this in the case of Cicero, who after his return from Cilicia lingered in the vicinity of Rome day after day, and dragged about his lictors from one place to another, without entering the city, in the vain hope of a triumph.

Such were the preliminaries, and it only now remains to describe the order of the procession. This in ancient days was sufficiently simple. The leaders of the enemy and the other prisoners were led along in advance of the general's chariot, the military standards were carried before the troops who followed laden with plunder, banquets were spread in front of every door, and the populace brought up the rear in a joyous band, filled with good cheer, chanting songs of victory, jeering and bantering as they went along with the pleasantries customary on such occasions. (Liv. iii. 29.) But in later times these pageants were marshalled with extraordinary pomp and splendour, and presented a most gorgeous spectacle. Minute details would necessarily be different according to circumstances, but the general arrangements were as follow. When the day appointed had arrived the whole population poured forth from their abodes in holiday attire, some stationed themselves on the steps of the public buildings in the forum and along the Via Sacra, while others mounted scaffoldings erected for the purpose of commanding a view of the show. The temples were all thrown open, garlands of flowers decorated every shrine and image, and incense smoked on every altar. (Plut. *Dem.* *Paul.* 32; Dion Cass. lxxiv. 1.) Meanwhile the Imperator called an assembly of his soldiers, delivered an oration commending their valour, and concluded by distributing rewards to the most distinguished and a sum of money to each individual, the amount depending on the value of the spoils. He then ascended his triumphal car and advanced to the Porta Triumphalis (where this gate was is a question which we cannot here discuss; see Cic. *in Pis.* 23; Suet. *Octav.* 101; Josephus, *B. J.* vii. 24), where he was met by the whole body of the senate

headed by the magistrates. The procession then defiled in the following order.

1. The Senate headed by the magistrates. (Dion Casa. li. 21 ; Serv. *ad Virg. Aen.* 543.)
2. A body of trumpeters.
3. A train of carriages and frames (Josephus, *B. J.* vii. 24) laden with spoils, those articles which were especially remarkable either on account of their beauty or rarity being disposed in such a manner as to be seen distinctly by the crowd. (Suet. *Jul.* 37.) Boards were borne aloft on ferula, on which were painted in large letters the names of vanquished nations and countries. Here, too, models were exhibited in ivory or wood (Quintil. vi. 3) of the cities and forts captured (Plin. v. 5), and pictures of the mountains, rivers, and other great natural features of the subjugated region, with appropriate inscriptions. Gold and silver in coin or bullion, arms, weapons, and horse furniture of every description, statues, pictures, vases, and other works of art, precious stones, elaborately wrought and richly embroidered stuffs, and every object which could be regarded as valuable or curious.
4. A body of flute-players.
5. The white bulls or oxen destined for sacrifice, with gilded horns, decorated with infusae and sarta, attended by the slaughtering priests with their implements, and followed by the Camilli bearing in their hands paternae and other holy vessels and instruments.
6. Elephants or any other strange animals, natives of the conquered districts.
7. The arms and insignia of the leaders of the foe.
8. The leaders themselves, and such of their kindred as had been taken prisoners, followed by the whole band of inferior captives in fetters.
9. The coronae and other tributes of respect and gratitude bestowed on the Emperor by allied kings and states.
10. The lictors of the Emperor in single file, their fasces wreathed with laurel. (Plin. *H. N.* v. 40.)
11. The Emperor himself in a circular chariot of

a peculiar form (Zonar. vii. 21) drawn by four horses, which were sometimes, though rarely, white. (Plut. *Camill.* 7 ; Serv. *L. c.* ; Dion Casa. xliii. 14.) The circular form of the chariot is seen in the preceding cut, copied from a marble formerly in the possession of the Duke d'Alcala at Seville (Montfaucon, *Ant. Exp.* vol. iv. pl. cv.), and also in the following cut, which represents the reverse of one of the coins of the Antonines. He was attired in a gold embroidered robe (*toga picta*) and flowered tunic (*tunica palmata*), he bore in his right hand a laurel bough (Plut. *Paul.* 32), and in his left a sceptre (Dionys. v. 47 ; Val. *Max.* iv. 4. § 5), his

brows were encircled (Plin. *H. N.* xv. 116, 117), of ancient times, (Plin. *H. N.* x. 116, 117), in his chariot

(Liv. xiv. 40 ; Zonar. vii. 21) drawn by four horses, which were sometimes, though rarely, white. (Plut. *Camill.* 7 ; Serv. *L. c.* ; Dion Casa. xliii. 14.) The circular form of the chariot is seen in the preceding cut, copied from a marble formerly in the possession of the Duke d'Alcala at Seville (Montfaucon, *Ant. Exp.* vol. iv. pl. cv.), and also in the following cut, which represents the reverse of one of the coins of the Antonines. He was attired in a gold embroidered robe (*toga picta*) and flowered tunic (*tunica palmata*), he bore in his right hand a laurel bough (Plut. *Paul.* 32), and in his left a sceptre (Dionys. v. 47 ; Val. *Max.* iv. 4. § 5), his

above is taken, with the addition of Onuphrius Paganus, in volume of the *Triumphus*, transmitted to us by such as that of 116, 117), of Aeneas (32) and in Livy in Josephus (*B. J.* vii. 24) in Julius in Zonaras (v. 47) of Dionysius (ii. 47), and Juvenal (iv. 543), and Juvenal. Just as the poet hill some of the the adjoining prior barbarous that existed in a civil

the most unquestionable evidence. (Cic. *in Verr.* v. 50; Liv. xxvi. 13; Joseph. vii. 24.) Pompey, indeed, refrained from perpetrating this atrocity in his third triumph (Appian, *Bell. Mith.* 117), and Aurelian on like occasion spared Zenobia, but these are quoted as exceptions to the general rule. When it was announced that these murders had been completed (Joseph. *l. c.*) the victims were then sacrificed, an offering from the spoils was presented to Jupiter, the laurel wreath was deposited in the lap of the god (Senec. *Consol. ad Helv.* 10; Plin. *H. N.* xv. 40; Plin. *Paneg.* 8; Stat. *Sylv.* iv. l. 41), the Emperor was entertained at a public feast along with his friends in the temple, and returned home in the evening preceded by torches and pipes, and escorted by a crowd of citizens. (Flor. ii. l.) Plutarch (*Q. R.* 77) and Valerius Maximus (ii. 8. § 6) say that it was the practice to invite the consuls to this banquet, and then to send a message requesting them not to come, in order, doubtless, that the Emperor might be the most distinguished person in the company.

The whole of the proceedings, generally speaking, were brought to a close in one day, but when the quantity of plunder was very great, and the troops very numerous, a longer period was required for the exhibition, and thus the triumph of Flaminius continued for three days in succession. (Liv. xxxix. 52; Plut. *Aemil. Paull.* 32.)

But the glories of the Emperor did not end with the show nor even with his life. It was customary (we know not if the practice was invariable) to provide him at the public expense with a site for a house, such mansions being styled *triumphales domus*. (Plin. xxxvi. 24. § 6.) After death his kindred were permitted to deposit his ashes within the walls (such, at least, is the explanation given to the words of Plutarch, *Q. R.* 78), and laurel-wreathed statues standing erect in triumphal cars, displayed in the vestibulum of the family mansion, transmitted his fame to posterity.

A TRIUMPHUS NAVALIS appears to have differed in no respect from an ordinary triumph except that it must have been upon a smaller scale, and would be characterized by the exhibition of beaks of ships and other nautical trophies. The earliest upon record was granted to C. Duilius, who laid the foundation of the supremacy of Rome by sea in the first Punic war (Liv. *Epit.* xvii.; Fast. Capit.); and so elated was he by his success, that during the rest of his life, whenever he returned home at night from supper, he caused flutes to sound and torches to be borne before him. (Flor. ii. l.; Cic. *Cat. Maj.* 13.) A second naval triumph was celebrated by Lutatius Catulus for his victory off the Insulae Aegates, B.C. 241 (Val. Max. ii. 8. § 2; Fast. Capit.); a third by Q. Fabius Labeo, B.C. 189, over the Cretans (Liv. xxvii. 60), and a fourth by C. Octavius over King Perseus (Liv. xlv. 42) without captives and without spoils.

TRIUMPHUS CASTRENSIS was a procession of the soldiers through the camp in honour of a tribune or some officer, inferior to the general, who had performed a brilliant exploit. (Liv. vii. 36.)

After the extinction of freedom the Emperor being considered as the commander-in-chief of all the armies of the state, every military achievement was understood to be performed under his auspices, and hence, according to the forms of even the

ancient constitution, he alone had a legitimate claim to a triumph. This principle was soon fully recognised and acted upon, for although Antonius had granted triumphs to his legati (Dion Cass. xlix. 42), and his example had been freely followed by Augustus (Suet. *Octav.* 38; Dion Cass. liv. 11, 12) in the early part of his career, yet after the year B.C. 14 (Dion Cass. liv. 24), he entirely discontinued the practice, and from that time forward triumphs were rarely, if ever, conceded to any except members of the imperial family. But to compensate in some degree for what was then taken away, the custom was introduced of bestowing what were termed *Triumphalia Ornamenta*, that is, permission to receive the titles bestowed upon and to appear in public with the robes worn by the Emperors of the commonwealth when they triumphed, and to bequeath to their descendants triumphal statues. These *triumphalia ornamenta* are said to have been first bestowed upon Agrippa (Dion Cass. *l. c.*) or upon Tiberius (Suet. *Octav.* 9), and ever after were a common mark of the favour of the prince. (Tacit. *Ann.* i. 72, ii. 52, iii. 72, &c., *Hist.* i. 79, ii. 78, &c.)

The last triumph ever celebrated was that of Belisarius, who entered Constantinople in a quadriga, according to the fashion of the olden time, after the recovery of Africa from the Vandals. The total number of triumphs upon record down to this period has been calculated as amounting to 350. Orosius (vii. 9) reckons 320 from Romulus to Vespasian, and Pitiscus (*Lexic. Antiq. a. v. Triumphus*) estimates the number from Vespasian to Belisarius at 30.

[W. R.]

TRIUMVIRI or TRESVIRI, were either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. The following is a list of the most important of both classes, arranged in alphabetical order.

1. TRIUMVIRI AGRO DIVIDUNDO. [TRIUMVIRI COLONIAE DEDUCENDAE.]

2. TRIUMVIRI CAPITALIAE were regular magistrates first appointed about B.C. 292. (Liv. *Epit.* 11; Dig. 1. tit. 2. a. 2. § 30.) The institution of their office is said to have been proposed by L. Papirius, whom Festus (a. v. *Sacramentum*) calls tribune of the plebs, but whom Niebuhr (*Hist. of Rome*, vol. iii. pp. 407, 408) supposes to be L. Papirius Cursor, who was praetor in B.C. 292. They were elected by the people, the comitia being held by the praetor. (Festus, *l. c.*) They succeeded to many of the functions of the Quaestores Paritidii. (Varro, *L. L.* v. 81, ed. Müller; QUAESTOR.) It was their duty to inquire into all capital crimes, and to receive informations respecting such (Varro, *l. c.*; Plant. *Asin.* i. 2. l. *Asinul.* iii. 2. 2; Cic. *pro Cluent.* 13), and consequently they apprehended and committed to prison all criminals whom they detected. (Liv. xxxix. 17; Val. Max. vi. l. § 10; Cic. *l. c.*) In conjunction with the Aediles, they had to preserve the public peace, to prevent all unlawful assemblies, &c. (Liv. xxv. l., xxxix. 14.) They enforced the payment of fines due to the state (Fest. *l. c.*) They had the care of public prisons, and carried into effect the sentence of the law upon criminals. (Liv. xxxii. 26; Val. Max. v. 4. § 7, viii. 4. § 2; Sall. *Cat.* 55; Tacit. *Ann.* v. 9.) In these points they resembled the magistracy of the Eleven at Athens. [HENDRICK.] They had the power of inflicting summary punishment upon

slaves and persons of lower rank: their court appears to have been near the Maenian column. (Festus, l. c.; Gell. iii. 3; Plaut. *Amphitr.* i. l. 3; Cic. *pro Cluent.* 13.) Niebuhr (l. c.), who is followed by Arnold (*Hist. of Rome*, vol. ii. p. 389), supposes that they might inflict summary punishment on all offenders against the public peace who might be taken in the fact; but the passage of Festus, which Niebuhr quotes, does not prove this, and it is improbable that they should have had power given them of inflicting summary punishment upon a Roman citizen, especially since we have no instance recorded of their exercising such a power. (Walter, *Gesch. d. Röm. Rechts*, pp. 165, 858, 1st ed.; Götting, *Gesch. d. Röm. Staatsv.* p. 378.)

3. TRIUMVIRI COLONIAE DEDUCENDAE were persons appointed to superintend the formation of a colony. They are spoken of under COLONIA, p. 315, b. Since they had besides to superintend the distribution of the land to the colonists, we find them also called *Triumviri Coloniae Deducendae Agroque Dividendo* (Liv. viii. 16), and sometimes simply *Triumviri Agro Dando* (Liv. iii. 1).

4. TRIUMVIRI EPULONES. [EPULONES.]

5. TRIUMVIRI EQUITUM TURMAS RECOGNOSCENDI, or LEGENDIS EQUITUM DECURIIS, were magistrates first appointed by Augustus to revise the lists of the Equites, and to admit persons into the order. This was formerly part of the duties of the censors. (Suet. *Aug.* 37; Tacit. *Ann.* iii. 30.)

6. TRIUMVIRI MENSARII. [MENSARII.]

7. TRIUMVIRI MONETALES. [MONETA.]

8. TRIUMVIRI NOCTURNI, were magistrates elected annually, whose chief duty it was to prevent fires by night; and for this purpose they had to go round the city during the night (*vigilias circumire*). If they neglected their duty they were sometimes accused before the people by the tribunes of the plebs. (Val. Max. viii. l. § 5, 6.) The time at which this office was instituted is unknown, but it must have been previously to the year B. C. 304. (Liv. ix. 46.) Augustus transferred their duties to the Praefectus Vigiliis. (Dig. l. tit. 15. a. 1.) [PRAEFECTUS VIGILIUM.]

9. TRIUMVIRI REFIICIENDIS AEDIBUS, extraordinary officers elected in the Comitia Tributa in the time of the second Punic war, were appointed for the purpose of repairing and rebuilding certain temples. (Liv. xxv. 7.)

10. TRIUMVIRI REIPUBLICAE CONSTITUENDAE. Niebuhr (*Hist. of Rome*, vol. iii. p. 43) supposes that magistrates under this title were appointed as early as the time of the Licinian Rogations, in order to restore peace to the state after the commotions consequent upon those Rogations. (Lydia, *de Mag.* i. 35.) Niebuhr also thinks that these were the magistrates intended by Varro, who mentions among the extraordinary magistrates, that had the right of summoning the senate, Triumvirs for the regulation of the republic, along with the Decemvirs and Consular Tribunes. (Gell. xiv. 7.) We have not, however, any certain mention of officers or magistrates under this name, till towards the close of the republic, when the supreme power was shared between Caesar (Octavianus), Antonius, and Lepidus, who administered the affairs of the state under the title of *Triumviri Reipublicae Constituendae*. This office was conferred upon them in B. C. 43 for five years (Liv. *Epit.* 120;

Appian, *B. C.* iv. 2—12; Dion Cass. xlv. 54—56; Vell. Pat. ii. 65; Plut. *Cic.* 46); and on the expiration of the term, in B. C. 38, was conferred upon them again, in B. C. 37, for five years more. (Appian, *B. C.* v. 95; Dion Cass. xlviii. 54.) The coalition between Julius Caesar, Pompeius, and Crassus, in B. C. 60 (Vell. Pat. ii. 44; Liv. *Epit.* 103) is usually called the first triumvirate, and that between Octavianus, Antony, and Lepidus, the second; but it must be borne in mind that the former never bore the title of triumviri, nor were invested with any office under that name, whereas the latter were recognized as regular magistrates under the above-mentioned title.

11. TRIUMVIRI SACRIS CONQUIRENDIS DONISQUE PERSIGNANDIS, extraordinary officers elected in the Comitia Tributa in the time of the second Punic war, seem to have had to take care that all property given or consecrated to the gods was applied to that purpose. (Liv. xxv. 7.)

12. TRIUMVIRI SENATUS LEGENDI were magistrates appointed by Augustus to admit persons into the senate. This was previously the duty of the censors. (Suet. *Aug.* 37.)

TROCHILUS. [SPIRA.]

TROCHUS (τροχός), a hoop. The Greek boys used to exercise themselves like ours with trundling a hoop. It was a bronze ring, and had sometimes bells attached to it. (Mart. xi. 22, 2, xiv. 168, 169.) It was impelled by means of a hook with a wooden handle, called *clavis* (Propert. iii. 12), and *κλῆρις*. From the Greeks this custom passed to the Romans, who consequently adopted the Greek term. (Hor. *Carm.* iii. 24. 57.) The hoop was used at the GYMNASIUM (Propert. l. c.; Ovid. *Trist.* ii. 485); and, therefore, on one of the gems in the Stosch collection at Berlin, which is engraved in the annexed woodcut, it is accompanied by the jar of oil and the laurel branch, the signs of effort and of victory. On each side of this we have represented another gem from the same collection. Both of these exhibit naked youths trundling the hoop by means of the hook or key. These show the size of the hoop, which in the middle figure has also three small rings or bells on its circumference. (Winckelmann, *Desc. des Pierres Gravées*, pp. 452—455.)

In a totally different manner hoops were used in the performances of tumblers and dancers. Xenophon describes a female dancer who receives twelve hoops in succession, throwing them into the air and catching them again, her motions being regulated by another female playing on the pipe (*Sympos.* ii. 7, 8.)

On the use of τροχός, to denote the potter's wheel, see FICTILE.

[J. Y.]

TROJAE LUDUS. [CIRCUS, p. 288, b.]

TROPÆUM (τρόπαιος, Att. τροπαιοίος, Schol. ad Aristoph. *Plut.* 453), a trophy, a sign and memorial of victory, which was erected on the field

of battle where the enemy had turned (*τρέπω, τρέπη*) to flight, and in case of a victory gained at sea, on the nearest land. The expression, for raising or erecting a trophy, is *τροπαίων στήσαι* or *στήσασθαι*, to which may be added *δῶδ* or *κατὰ τῶν ποταμῶν*. (Wolf, *ad Dem. in Lept.* p. 296.)

When the battle was not decisive, or each party considered it had some claims to the victory, both erected trophies. (Thucyd. i. 54, 105, ii. 92.) Trophies usually consisted of the arms, shields, helmets, &c., of the enemy that were defeated; and from the descriptions of Virgil and other Roman poets, which have reference to the Greek rather than to the Roman custom, it appears that the spoils and arms of the vanquished were placed on the trunk of a tree, which was fixed on an elevation. (Virg. *Æn.* xi. 5; Serv. *ad loc.*; Stat. *Theb.* iii. 707; Juv. x. 133.) It was consecrated to some divinity with an inscription (*ἐπιγραφή*), recording the names of the victors and of the defeated party (Eurip. *Phœn.* 583; Schol. *ad loc.*; Paus. v. 27. § 7; Virg. *Æn.* iii. 288; Ovid. *Ar.* ii. 744; Tacit. *Ann.* ii. 22); whence trophies were regarded as inviolable, which even the enemy were not permitted to remove. (Dion Cass. xlii. 58.) Sometimes, however, a people destroyed a trophy, if they considered that the enemy had erected it without sufficient cause, as the Milesians did with a trophy of the Athenians. (Thucyd. viii. 24.) That ranking and hostile feelings might not be perpetuated by the continuance of a trophy, it seems to have been originally part of Greek international law that trophies should be made only of wood and not of stone or metal, and that they should not be repaired when decayed. (Plut. *Quæst. Rom.* c. 37, p. 273. c.; Diod. xiii. 24.) Hence we are told that the Lacedæmonians accused the Thebans before the Amphictyonic-council, because the latter had erected a metal trophy. (Cic. *de Invent.* ii. 23.) It was not however uncommon to erect such trophies. Plutarch (*Alcib.* 29. p. 207, d.) mentions one raised in the time of Alcibiades, and Pausanias (ii. 21. § 9, iii. 14. § 7, v. 27. § 7) speaks of several which he saw in Greece. (Wachsmuth, *Hell. Alt.* vol. ii. pt. i. p. 424, 1st ed.; Schömann, *Ant. Jur. Publ. Græc.* p. 370.)

The trophies erected to commemorate naval victories were usually ornamented with the beaks or acroteria of ships [ACROTERIUM; ROSTRUM]; and were generally consecrated to Poseidon or Neptune. Sometimes a whole ship was placed as a trophy. (Thucyd. ii. 84, 92.)

The following woodcut taken from a painting found at Pompeii (*Mus. Borbon.* vol. vii. t. 7) contains a very good representation of a tropæum, which Victory is engaged in erecting. The conqueror stands on the other side of the trophy with his brows encircled with laurel.

The Macedonian kings never erected trophies, for the reason given by Pausanias (ix. 40. § 4), and hence the same writer observes that Alexander raised no trophies after his victories over Darius and in India. The Romans too, in early times, never erected any trophies on the field of battle (Florus, iii. 2), but carried home the spoils taken in battle, with which they decorated the public buildings, and also the private houses of individuals. [SPOLIA.] Subsequently, however, the Romans adopted the Greek practice of raising trophies on the field of battle: the first trophies of this kind were erected by Domitius Ahenobarbus and Fabius Maximus in

B. C. 121, after their conquest of the Allobroges, when they built at the junction of the Rhone and

the Isara towers of white stone, upon which trophies were placed adorned with the spoils of the enemy. (Florus, l. a.; Strabo, iv. p. 185.) Pompey also raised trophies on the Pyrenees after his victories in Spain (Strabo, iii. p. 156; Plin. *H. N.* iii. 3; Dion Cass. xli. 24; Sall. *ap. Serv. in Virg. Æn.* xi. 6); Julius Caesar did the same near Ziela, after his victory over Pharnaces (Dion Cass. xlii. 48), and Drusus, near the Elbe, to commemorate his victory over the Germans. (Dion Cass. li. 1; Florus, iv. 12.) Still, however, it was more common to erect some memorial of the victory at Rome than on the field of battle. The trophies raised by Marius to commemorate his victories over Jugurtha and the Cimbri and Teutoni, which were cast down by Sulla and restored by Julius Caesar, must have been in the city. (Suet. *Jul.* 11.) In the later times of the republic, and under the empire, the erection of triumphal arches was the most common way of commemorating a victory, many of which remain to the present day. [ARCUS.] We find trophies on the Roman coins of several families. The annexed coin of M. Furius Philus is an example; on the reverse, Victory or Rome is represented crowning a trophy.

TROSSULI. [EQUITUS, p. 472, n.]

TRUA, *dim.* TRULLA (*τρούνη*), derived from *τρέπω, τρέπη*, &c., to perforate; a large and flat spoon or ladle pierced with holes; a trowel. The annexed woodcut represents such a ladle, adapted to stir vegetables or other matters in the pot (Schol. in *Aristoph.* *Av.* 78), to act as a strainer

when they were taken out of the water, or to dispel the froth from its surface. (Non. Marcell. p. 19, ed. Merceri.) The ladle here drawn was found in the kitchen of "the house of Pansa," at Pompeii.

The *trulla vinaria* (Varro, *L. L.* v. 118, ed. Müller) seems to have been a species of colander [COLUM], used as a wine-strainer. (Cic. *Verr.* iv. 27; Hor. *Sat.* ii. 3. 144.) Though generally applied to these domestic and culinary purposes (Eupolis, p. 174, ed. Runkel) the *trulla* was found to be convenient for putting bees into a hive. (Col. *de Re Rust.* ix. 12.) It was also commonly used to plaster walls (Pallad. *de Re Rust.* i. 13, 15), and thus gave rise to the verb *trulliare*. [PARIES.]

Fellows (*Exc. in Asia Minor*, p. 153) explains the Eastern method of using a kind of colander in washing the hands. It is placed as a cover upon the jar [OLLA], which receives the dirty water. This may therefore be the *trullum*, which the ancients used, together with the basin and ewer, to wash their hands. (Non. Marcell. p. 547, ed. Merceri.) [J. Y.]

TRUBLION. [COTYLA.]

TRUTINA (*τρύτην*), a general term including both LIBRA, a balance, and *statera*, a steelyard. (Non. Marc. p. 180.) Payments were originally made by weighing, not by counting. Hence a balance (*trutina*) was preserved in the temple of Saturn at Rome. (Varro, *L. L.* v. 183, ed. Müller.) The balance was much more ancient than the steelyard, which according to Isidore of Seville (*Orig.* xvi. 24) was invented in Campania, and therefore called by way of distinction *Trutina Campana*. Consistently with this remark, steelyards have been found in great numbers among the ruins of Herculaneum and Pompeii. The construction of some of them is more elaborate and complicated than that of modern steelyards, and they are in some cases much ornamented. The annexed woodcut represents a remarkably beautiful *statera* which is preserved in the Museum of the Capitol at Rome. Its support is the trunk of a tree, round which a serpent is entwined. The equipoise is a head of

Minerva. This the stand, designed for the occasion requiring.

Vitruvius (x. 1) of the steelyard's constituent parts, from the head revolution (centrum) the other side beam (*scopus*) (*pondium*), which (per puncta) exact objects that are.

The invention ancient writers 82; Pollux, iv. *Virg.* *Aen* viii. 306), and the ep- trumpeters, Pho- l. c.) would seem famous by their that Homer ne- narrative but in xxi. 388; Eus- infer that altho- been but recent certain that not character, it was armies of the le- Tuscan origin w- chylus orders the trumpet to sound- cles (*Aj.* 17) de- goddess fell up- brzen-mouthed bell-shaped ap- epithets are app-

Heracld. 830), and other Greek (Auctor. *Rhes.* 988; Brunnck, *Anal.* tom. ii. p. 142) and Roman writers (*Tyrrhenus clangor*, Virg. *Aen.* viii. 526; Stat. *Theb.* iii. 650; *Tyrrhenae clangore tubae*, Silius, ii. 19). According to one account it was first fabricated for the Tyrrhenians by Athena, who in consequence was worshipped by the Argives under the title of Σάλπιγξ (Schol. ad *Hom. Il.* xviii. 219, e. cod. Vict.; Pausan. ii. 21. § 3); while at Rome the *tubilustrum*, or purification of sacred trumpets, was performed on the last day of the Quinquatrus. [QUINQUATRUS.] In another legend the discovery is attributed to a mythical king of the Tyrrhenians, Maleus, son of Hercules and Omphale (Lutat. ad Stat. *Theb.* iv. 224, vi. 404; Hygin. *Fab.* 274; Schol. ad *Hom. l. c.*), in a third to Piseus the Tyrrhenian (Plin. *H. N.* vii. 57; Photina, s. v.), and Silius has preserved a tradition (viii. 490), according to which the origin of this instrument is traced to Vetulonii. (Müller, *Die Etrusker*, iv. 1, 3, 4, 5.)

There appears to have been no essential difference in form between the Greek and Roman or Tyrrhenian trumpets. Both were long, straight, bronze tubes gradually increasing in diameter, and terminating in a bell-shaped aperture. They pre-

sent precisely the same appearance on monuments of very different dates, as may be seen from the cuts annexed, the former of which is from Trnjan's column, and the latter from an ancient fictile vase. (Hope, *Costumes of the Ancients*, pl. 156.)

The scholiast on the *Iliad* (l. c.) reckons six varieties of trumpets; the first he calls the Grecian Σάλπιγξ which Athena discovered for the Tyrrhenians, and the sixth, termed by him κατ' ἐξόχην, the τυρσηνική σάλπιγξ, he describes as bent at the extremity (καθῶνα κεκλασμένον ἔχουσα); but by this we must unquestionably understand the sacred trumpet (ἱερατική σάλπιγξ, Lydus, de *Mens.* iv. 6), the *lituus* already noticed at the beginning of this article. (Compare Lucan, i. 431.) [W. R.]

TUBILUSTRUM. [QUINQUATRUS.]

TUBUS, TUBULUS. [FISTULA.]

TULLIANUM. [CARCER.]

TUMULTUARIUM. [TUMULTUS.]

TUMULTUS was the name given to a sudden or dangerous war in Italy or Cisalpine Gaul, and the word was supposed by the ancients to be a contraction of *timor multus*. (Cic. *Phil.* viii. 1; *tumultus dictus, quasi timor multus*, Serv. ad *Virg. Aen.* ii. 486, viii. 1; Festus, s. v. *Tumultuarii*.) It was however sometimes applied to a sudden or dangerous war elsewhere (Liv. xxxv. 1, xli. 6; Cic. *Phil.* v. 12); but this does not appear to have been a correct use of the word. Cicero (*Phil.* viii. 1) says that there might be a war without a tumultus, but not a tumultus without a war; but it must be recollected that the word was also applied to any sudden alarm respecting a war; whence we find a tumultus often spoken of as of less importance than a war (e. g. Liv. ii. 26), because the results were of less consequence, though the fear might have been much greater than in a regular war.

In the case of a tumultus there was a cessation from all business (*justitium*), and all citizens were obliged to enlist without regard being had to the exemptions (*vacationes*) from military service, which were enjoyed at other times. (Cic. *ll. cc.*; Liv. vii. 9, 11, 28, viii. 20, xxxiv. 56.) As there was not time to enlist the soldiers in the regular manner, the magistrate appointed to command the army displayed two banners (*vevillae*) from the capitol, one red, to summon the infantry, and the other green, to summon the cavalry, and said, "Qui rempublicam salvam vult, me sequatur." Those that assembled took the military oath together, instead of one by one, as was the usual practice, whence they were called *conjurati*, and their service *conjuratio*. (Serv. ad *Virg. Aen.* viii. 1.) Soldiers enlisted in this way were called *Tumultuarii* or *Subitarii*. (Festus, s. v.; Liv. iii. 30, x. 21, xl. 26.)

TUNICA (χιτών, dim. χιτῶνίσκος, χιτῶνιον), the under-garment of the Greeks and Romans.

1. GREEK. The Chiton was the only kind of ἔνδυμα, or under-garment worn by the Greeks. Of this there were two kinds, the Dorian and Ionian. The Dorian Chiton, as worn by males, was a short woollen shirt, without sleeves; the Ionian was a long linen garment, with sleeves. The under-garment, afterwards distinguished as the Dorian, seems to have been originally worn in the whole of Greece. Thucydides (i. 6) speaks as if the long linen garment worn at Athens a little before his time was the most ancient kind, since he attributes the adoption of a simpler mode of dress to the Lacedaemonians, but we know with tolerable certainty that this dress was brought over to Athens by the Ionians of Asia. (Müller, de *Minerva Poëtiade*, p. 41, *Dor.* iv. 2. § 4.) It was commonly worn at Athens during the Persian wars, but appears to have entirely gone out of fashion about the time of Pericles, from which time the Dorian Chiton was the under-garment universally adopted by men through the whole of Greece. (Athen. xii. p. 512, c; Eustath. p. 954. 47; Thucyd. l. c.; Aristoph. *Equit.* 1330.)

The distinction between the Doric and Ionic Chiton still continued in the dress of women. The Spartan virgins only wore this one garment, and had no upper kind of clothing, whence it is sometimes called *Himation* [PALLIUM] as well as *Chiton*.

ton. (Compare Herod. v. 87; Schol. ad Eurip. *Hecub.* 933.) Euripides (*Hecub.* l. c., *Androm.* 598) incorrectly calls this Doric dress Peplos, and speaks of a Doric virgin as *μονόπτελος*. From the circumstance of their only wearing one garment, the Spartan virgins were called *γυμναί* (Plut. *Lyc.* 14) [Nudus], and also *μονοχίτωνες*. (Schol. ad Eurip. l. c.; Athen. xiii. p. 589, f.) They appeared in the company of men without any further covering; but the married women never did so without wearing an upper garment. This Doric Chiton was made, as stated above, of woollen stuff; it was without sleeves, and was fastened over both shoulders by clasps or buckles (*κόρραι, περόναι*), which were often of considerable size. (Herod. Schol. ad Eurip. ll. cc.) It was frequently so short as not to reach the knee (Clem. Alex. *Paed.* ii. 10, p. 258), as is shown in the figure of Diana, on p. 276, who is represented as equipped for the chase. It was only joined together on one side, and on the other was left partly open or slit up (*σχιστός χίτων*, Pollux, vii. 55), to allow a free motion of the limbs: the two skirts (*πτέρυγες*) thus frequently flew open, whence the Spartan virgins were sometimes called *φαινομηρίδες* (Pollux, l. c.), and Euripides (*Androm.* l. c.) speaks of them as with

γυμνοῖσι μῆροῖς καὶ πέπλοις ἀνεμένους.

Examples of this *σχιστός χίτων* are frequently seen in works of art: the following cut is taken from a bas-relief in the British Museum, which represents an Amazon with a Chiton of this kind: some parts of the figure appear incomplete, as the original is mutilated. (See also *Mus. Borbon.* vol. iv. t. 21.)

The Ionic Chiton, on the contrary, was a long and loose garment, reaching to the feet (*ποδήρης*), with wide sleeves (*κόρραι*), and was generally made of linen. The sleeves, however, appear usually to have covered only the upper part of the arm; for in ancient works of art we seldom find the sleeves extending further than the elbow, and sometimes not so far. The sleeves were sometimes slit up, and fastened together with an elegant row of brooches (Aelian, *V. H.* i. 18), and it is to this kind of garment that Böttiger (*Kleine Schrift.* vol. iii. p. 56) incorrectly gives the name of *σχιστός χίτων*. The Ionic Chiton, according to Herodotus (v. 87, 88), was originally a Carian dress, and passed over to Athens from Ionia. The women at Athens originally wore the Doric Chiton, but were compelled to change it for the Ionic after they had killed,

with the buckles or clasps of their dresses, the single Athenian who had returned alive from the expedition against Aegina, because there were no buckles or clasps required in the Ionic dress. The Muse are generally represented with this Chiton. The woodcut annexed, taken from a statue in the British Museum, represents the Muse Thalia wearing an Ionic Chiton. The Peplum has fallen off her shoulders, and is held up by the left hand. The right arm holding a Pedum is a modern restoration.

Both kinds of dress were fastened round the middle with a girdle [ZONA], and as the Ionic Chiton was usually longer than the body, part of it was drawn up so that the dress might not reach further than the feet, and the part which was so drawn up overhanging or overlapped the girdle, and was called *κόλπος*.

There was a peculiar kind of dress, which seems to have been a species of double Chiton, called *ἑπτάπλοτος*, *δικοπλόδιον*, and *ἡμιδικοπλόδιον*. Some writers suppose that it was a kind of little cloak thrown over the Chiton, in which case it would be an Amictus, and could not be regarded as a Chiton; but Becker and others maintain that it was not a separate article of dress, but was merely the upper part of the cloth forming the Chiton, which was larger than was required for the ordinary Chiton, and was therefore thrown over the front and back. The following cuts (*Mus. Borbon.* vol. ii. t. 4, 6) will give a clearer idea of the form of this garment than any description.

It seems impossible to determine with certainty whether the Diploidion formed part of the Chiton, or was a separate piece of dress. Those writers who maintain the former view, think that it is quite proved by the left-hand figure in the preceding cut; but this is not conclusive evidence, since the Chiton may have terminated at the waist. In the right-hand figure we see that the Chiton is girded round the middle of the body, as described above, and that the fold which overhangs (*κόλπος*) forms, with the end of the Diploidion, a parallel line, which was always the case. This is also plainly seen in the woodcut to the article *UMBRA-CULUM*. Since the Diploidion was fastened over the shoulders by means of buckles or clasps, it was called *ἐπώμυς*, which Müller (*Archäol. d. Kunst*, § 339. 4) supposes from Eurip. *Hecub.* 553, and Athen. xiii. p. 608, b, to have been only the end of the garment fastened on the shoulder; but these passages do not necessarily prove this, and Pollux (vii. 49) evidently understands the word as meaning a garment itself.

Besides the word *χιτών*, we also meet with the diminutives *χιτωνίσκος* and *χιτώνιον*, the former of which is generally applied to a garment worn by men, and the latter to one worn by women, though this distinction is not always preserved. A question arises whether these two words relate to a different garment from the Chiton, or mean merely a smaller one. Many modern writers think that the Chiton was not worn immediately next the skin, but that there was worn under it a shirt (*χιτωνίσκος*) or chemise (*χιτώνιον*). In the dress of men, however, this does not appear to have been the case; since we find *χιτωνίσκος* frequently used as identical with *χιτών*, and spoken of as the only under garment worn by individuals. (*Τὸ ὑμῖον καὶ τὸν χιτωνίσκον*, Plat. *Hipp. Min.* p. 368; Dem. in *Mid.* p. 583. 21; Aesch. in *Tim.* p. 143; Athen. xii. p. 545, a.) It appears, on the contrary, that females were accustomed to wear a chemise (*χιτώνιον*) under their Chiton, and a representation of such an one is given in p. 185. (Compare Athen. xiii. p. 590, f.; Aristoph. *Lysistr.* 48, 150.)

It was the usual practice among the Greeks to wear an Himation, or outer garment, over the Chiton, but frequently the Chiton was worn alone. A person who wore only a Chiton was called *μυοχιτών* (*ολοχιτών* in Homer, *Od.* xiv. 489), an epithet given to the Spartan virgins, as explained above. In the same way, a person who wore only an Himation, or outer garment, was called *ἐχιτών*. (Xen. *Mem.* i. 6. § 2; Aelian, *V. H.* vii. 13; Diod. Sic. xi. 26.) The Athenian youths, in the earlier times, wore only the Chiton, and when it became the fashion, in the Peloponnesian war, to wear an outer garment over it, it was regarded as a mark of effeminacy. (Aristoph. *Nub.* 964, compared with 987.)

Before passing on to the Roman under garment, it remains to explain a few terms which are applied to the different kinds of Chiton. In later times, the Chiton worn by men was of two kinds, the *ἀμφιμάσχαλος* and the *ἐπηρεμάσχαλος*, the former the dress of freemen, the latter that of slaves. (Pollux, vii. 47.) The *ἀμφιμάσχαλος* appears to have signified not only a garment which had two sleeves, but also one which had openings for both arms; while the *ἐπηρεμάσχαλος*, on the contrary, had only a sleeve, or rather an opening for the left arm, leaving the right, with the shoulder and a

part of the breast uncovered, whence it is called *ἐξώμυς*, a representation of which is given on p. 512. When the sleeves of the Chiton reached down to the hands, it seems to have been properly called *χειριδωτός* (Gell. vii. 12, see woodcut, p. 329), though this word seems to have been frequently used as equivalent to *ἀμφιμάσχαλος*. (Hesych. s. v. *Ἀμφιμάσχαλος*.)

A *χιτών ὀρθοστάθιος* was one which was not fastened round the body with a girdle (Pollux, vii. 48; Phot. *Lex.* p. 346, Pora): a *χιτών στολιδωτός* seems to have had a kind of flounce at the bottom. (Pollux vii. 54; Xenoph. *Cyrop.* vi. 4. § 2.)

On the subject of the Greek Chiton in general, see Müller, *Doriana*, iv. 2. § 3, 4, *Archäologie der Kunst*, § 337, 339; Becker, *Charikles*, vol. ii. p. 309, &c.

2. ROMAN. The *Tunica* of the Romans, like the Greek Chiton, was a woollen under garment, over which the Toga was worn. It was the *Indumentum* or *Indutus*, as opposed to the *Amictus*, the general term for the toga, pallium, or any other outer garment. [AMICTUS.] The Romans are said to have had no other clothing originally but the toga; and when the Tunic was first introduced, it was merely a short garment without sleeves, and was called *Colobium*. (Gell. vii. 12; Serv. ad *Virg. Aen.* ix. 616.) It was considered a mark of effeminacy for men to wear Tunics with long sleeves (*manicatae*) and reaching to the feet (*talares*). (Cic. *Cat.* ii. 10.) Julius Caesar was accustomed to wear one which had sleeves, with fringes at the wrist (*ad manus fimbriata*, Suet. *Jul.* 45), and in the later times of the empire, tunics with sleeves, and reaching to the feet, became common.

The Tunic was girded (*cincta*) with a belt or girdle around the waist, but was usually worn loose, without being girded, when a person was at home, or wished to be at his ease. (Hor. *Sat.* ii. 1. 73; Ovid, *Am.* i. 9. 41.) Hence we find the terms *cinctus*, *præcinctus*, and *succinctus*, applied, like the Greek *εὔζωνος*, to an active and diligent person, and *discinctus* to one who was idle or dissolute. (Hor. *Sat.* i. 5. 6, ii. 6. 107, *Epod.* i. 84.)

The form of the Tunic, as worn by men, is represented in many woodcuts in this work. In works of art it usually terminates a little above the knee; it has short sleeves, covering only the upper part of the arm, and is girded at the waist (see cuts, pp. 90, 808): the sleeves sometimes, though less frequently, extend to the hands (out, p. 141).

Both sexes usually wore two tunics, an outer and an under, the latter of which was worn next the skin, and corresponds to our shirt and chemise. Varro (*ap. Non.* xiv. 36) says, that when the Romans began to wear two tunics, they called them *Subucula* and *Indusium*, the former of which Böttiger (*Sabina*, vol. ii. p. 113) supposes to be the name of the under tunic of the men, and the latter of that of the women. But it would appear from another passage of Varro (*L. L.* v. 131, ed. Müller) referred to by Becker (*Gallus*, vol. ii. p. 89), as if Varro had meant to give the name of *Subucula* to the under tunic, and that of *Indusium* or *Intusium* to the outer, though the passage is not without difficulties. It appears, however, that *Subucula* was chiefly used to designate the under tunic of men. (Suet. *Aug.* 82; Hor. *Epist.* i. 1. 95.) The word *interula* was of later origin, and seems to have been applied equally to the under tunic of both sexes.

(Apul. *Florid.* ii. p. 32; *Metam.* viii. p. 533, ed. Oud.; Vopisc. *Prob.* 4.) The *Supparus* or *Supparum* is said by Festus (s. v.) to have been a linen vest, and to have been the same as the *Subucula*; but Varro (v. 131), on the contrary, speaks of it as a kind of outer garment, and contrasts it with *Subucula*, which he derives from *subtus*, while *supparus* he derives from *supra*. The passage of Lucan (ii. 364) in which it is mentioned does not enable us to decide whether it was an outer or under garment, but would rather lead us to suppose that it was the former. Persons sometimes wore several tunica, as a protection against cold: Augustus wore four in the winter, besides a *Subucula*. (Suet. *Aug.* 82.)

As the dress of a man usually consisted of an under tunic, an outer tunic, and the toga, so that of a woman, in like manner, consisted of an under tunic (*Tunica intima*, Gell. x. 15), an outer tunic, and the palla. The outer tunic of the Roman matron was properly called *Stola* [*STOLA*], and is represented in the woodcut on p. 1073; but the annexed woodcut, which represents a Roman empress in the character of Concordia, or Abundantia, gives a better idea of its form. (Visconti, *Monumenti Gabini*, n. 34; Böttiger, *Sabina*, tav. x.) Over the Tunic or Stola the Palla is thrown in many folds, but the shape of the former is still distinctly shown.

The tunica of women were larger and longer than those of men, and always had sleeves; but in ancient paintings and statues we seldom find the sleeves covering more than the upper part of the arm. An example of the contrary is seen in the *Museo Borbonico*, vol. vii. tav. 3. Sometimes the tunics were adorned with golden ornaments called *Leria*. (Festus, s. v.; Gr. *Ληροί*, Hesych. Suid. s. v.)

Poor people, who could not afford to purchase a toga, wore the tunic alone, whence we find the common people called *Tunicati*. (Cic. in *Rull.* ii. 34; Hor. *Epist.* i. 7. 65.) Persons at work laid aside the toga; thus, in the woodcut on p. 808, a man is represented ploughing in his tunic only. A person who wore only his tunic was frequently called *Nudus*.

Respecting the *Clavus Latus* and the *Clavus Angustus*, worn on the tunics of the Senators and Equites respectively, see *CLAVUS*.

When a triumphe wore, together with the *Stola* (*Stola picta*), a flower called *Tunica* in the temple of Jupiter vii. 1; Juv. x. 34 of this kind worn by the senate.

TURMA.

TURRIS (from which corresponding to Dion surrounded by the Pelasgians that the same was called Tyrsenia habitants of to Latin language wrbs. (Polyb. *Staatso.* p. 17.) and Romans were

I. *Stationary* are frequently forming by the defence. This Africa. (Diod. with Wesseling the tower of Acholla and T

regio of Jugurtha (Sallust. *Jug.* 103), the tower of a private citizen without the walls of Carthage, by the help of which Scipio took the city (Appian. *Pun.* 117); and, in Spain, the tower in which Cn. Scipio was burnt. (Appian. *Hisp.* 16.) Such towers were common in the frontier provinces of the Roman empire. (Ammian. Marcell. xxviii. 2.)

2. They were erected within cities, partly to form a last retreat in case the city should be taken, and partly to overawe the inhabitants. In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of *Acropolis* was given, as at Athens, Corinth, Argos, Messene, and many other places. The Capitolium at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Agathocles at Utica (Appian. *Pun.* 14), and that of Antonia at Jerusalem. (Joseph. *Bell. Jud.* v. 5. § 8, *Act. Apostol.* xxi. 31.)

3. The fortifications both of cities and camps were strengthened by towers, which were placed at intervals on the murus of the former [MURUS] and the vallum of the latter; and a similar use was made of them in the lines (*circumvallatio*) drawn round a besieged town. [VALLUM.] They were generally used at the gates of towns and of static camps. [PORTA.] The use of temporary towers on walls to repel an attack will be noticed below.

II. *Moveable Towers.* These were among the most important engines used in storming a fortified place. They were of two kinds. Some were made so that they could be taken to pieces and carried to the scene of operations: these were called folding towers (*πρότοις πτερόσις ἐκτυγμένοις*, *turres plicatiles*, or portable towers, *φορητοὶ πύργοι*). The other sort were constructed on wheels, so as to be driven up to the walls; and hence they were called *turres ambulatoriae* or *subrotatae*. But the *turres plicatiles* were generally made with wheels, so that they were also *ambulatoriae*.

The first invention or improvement of such towers is ascribed by Athenaeus the mechanician (quoted by Lipsius, *Oper.* vol. iii. p. 297) to the Greeks of Sicily in the time of Dionysius I. (B.C. 405.) Diodorus (xiv. 51) mentions towers on wheels as used by Dionysius at the siege of Motya. He had before (xiii. 54) mentioned towers as used at the siege of Selinus (B.C. 409), but he does not say that they were on wheels. According to others, they were invented by the engineers in the service of Philip and Alexander, the most famous of whom were Polydus, a Thessalian, who assisted Philip at the siege of Byzantium, and his pupils Chaereas and Diades. (Vitruv. x. 19. s. 13.) Heron (c. 13) ascribes their invention to Diades and Chaereas, Vitruvius (*L.c.*) to Diades alone, and Athenaeus (*l.c.*) says that they were improved in the time of Philip at the siege of Byzantium. Vitruvius states that the towers of Diades were carried about by the army in separate pieces. Respecting the towers used by Demetrius Poliorcetes at the siege of Rhodes, see *HELEPOLIS*.

Appian mentions the *turres plicatiles* (*Bell. Civ.* v. 36, 37), and states that at the siege of Rhodes Cassius took such towers with him in his ships, and had them set up on the spot. (*Id.* iv. 72.)

Besides the frequent allusions in ancient writers

to the moveable towers (*turres mobiles*, Liv. xxi. 11), we have particular descriptions of them by Vitruvius (x. 19. s. 13), and Vegetius (iv. 17).

They were generally made of beams and planks, and covered, at least on the three sides which were exposed to the besieged, with iron, not only for protection, but also, according to Josephus, to increase their weight and thus make them steadier. They were also covered with raw hides and quilts, moistened, and sometimes with alum, to protect them from fire. The use of alum for this purpose appears to have originated with Sulla at the siege of Athens. (Amm. Marc. xx. and Claud. Quadrig. *ap. Lips.* p. 300.) Their height was such as to overtop the walls, towers, and all other fortifications of the besieged place. (Liv. xxi. 11.) Vitruvius (*l.c.*), following Diades, mentions two sizes of towers. The smallest ought not, he says, to be less than 60 cubits high, 17 wide, and one-fifth smaller at the top; and the greater 120 cubits high and 28½ wide. Heron (c. 13), who also follows Diades, agrees with Vitruvius so far, but adds an intermediate size, half-way between the two, 90 cubits high. Vegetius mentions towers of 30, 40, and 50 feet square. They were divided into stories (*tabulata* or *tecta*), and hence they are called *turres contabulatæ*. (Liv. xxi. 34.) Towers of the three sizes just mentioned consisted respectively of 10, 15, and 20 stories. The stories decreased in height from the bottom to the top. Diades and Chaereas, according to Heron, made the lowest story 7 cubits and 12 digits, those about the middle 5 cubits, and the upper 4 cubits and one-third of a cubit.

The sides of the towers were pierced with windows, of which there were several to each story.

These rules were not strictly adhered to in practice. Towers were made of 6 stories, and even fewer. (Diod. xiv. 51.) Those of 10 stories were very common (Hirt. *Bell. Gall.* viii. 41; Sil. Ital. xiv. 300), but towers of 20 stories are hardly, if ever, mentioned. Plutarch (*Lucull.* 10) speaks of one of 100 cubits high used by Mithridates at the siege of Cyzicus.

The use of the stories was to receive the engines of war [TORMENTA], and slingers and archers were stationed in them and on the tops of the towers. (Liv. xxi. 11.) In the lowest story was a battering-ram [ARIES]; and in the middle one or more bridges (*pontes*) made of beams and planks, and protected at the sides by hurdles. Scaling-ladders (*scalæ*) were also carried in the towers, and when the missiles had cleared the walls, these bridges and ladders enabled the besiegers to rush upon them.

The towers were placed upon wheels (generally 6 or 8), that they might be brought up to the walls. These wheels were placed for security inside of the tower.

The tower was built so far from the besieged place as to be out of the enemy's reach, and then pushed up to the walls by men stationed inside of and behind it. (Caesar, *B. G.* ii. 30, 31; Q. Curt. viii. 10.) The attempt to draw them forward by beasts of burthen was sometimes made, but was easily defeated by shooting the beasts. (Procop. *Bell. Goth.* i. *ap. Lips.* p. 298.) They were generally brought up upon the AGGER (Hirtius, *l.c.*), and it not unfrequently happened that a tower stuck fast or fell over on account of the softness of the agger. (Liv. xxxii. 17; Q. Curt. iv. 6. § 9.) They

were placed on the agger before it was completed, to protect the soldiers in working at it. (Sall. *Jugurth.* 76; Caesar, *B. G.* vii. 22.) When the tower was brought up to the walls without an agger, the ground was levelled before it by means of the MUSCULUS.

These towers were accounted most formidable engines of attack. They were opposed in the following ways.

1. They were set on fire, either by sallies of the besieged, or by missiles carrying burning matter, or by letting men down from the walls by ropes, close to the towers, while the besiegers slept. (Veget. iv. 18; Sil. Ital. xiv. 305.)

2. By undermining the ground over which the tower had to pass, so as to overset it. (Veget. iv. 20.)

3. By pushing it off by main force by iron-shod beams, *asseris* or *trabes*. (Veget. l. c.)

4. By breaking or overturning it with stones thrown from catapults, when it was at a distance, or, when it came close to the wall, by striking it with an iron-shod beam hung from a mast on the wall, and thus resembling an Aries.

5. By increasing the height of the wall; first with masonry, and afterwards with beams and planks, and also by the erection of temporary wooden towers on the walls. (Caesar, *B. G.* vii. 22; Veget. iv. 19.) This mode of defence was answered by the besiegers in two ways. Either the agger on which the tower stood was raised, as by Caesar at the siege of Avaricum (*B. G. l. c.*), or a smaller tower was constructed within the upper part of the tower, and when completed was raised by screws and ropes. (Veget. l. c.) On these towers in general see Lipsius, *Poliorcest. in Oper.* vol. iii. pp. 296—356.

III. Caesar (*B. C.* ii. 8—9) describes a peculiar sort of tower, which was invented at the siege of Massilia, and called *turris latericia*, or *laterculum*. It partook somewhat of the character both of a fixed and of a besieging tower. It was built of masonry near the walls of the town to afford the besiegers a retreat from the sudden sallies of the enemy; the builders were protected by a moveable cover; and the tower was pierced with windows for shooting out missiles.

IV. Towers in every respect similar to the *turres ambulatores* (excepting of course the wheels) were constructed, on ships, for the attack of fortified places by sea. (Caes. *Bell. Civ.* iii. 40, where, respecting the term *ad librā*, see the commentators; Liv. xxiv. 34; Appian. *Mith.* 73, *Bell. Civ.* v. 106; Amm. Marc. xxi. 12.)

V. Small towers carrying a few armed men were placed on the backs of elephants used in battle. (Liv. xxxvii. 40.)

VI. The words *πύργος* and *turris* are applied to an army drawn up in a deep oblong column. (Gell. x. 9; Cato, *de Re Milit. ap. Fest. s. v. Serra proclauri*, p. 344, ed. Müller; Eustath. *ad Hom. Il.* xii. 43.)

TUTE/LA. [TUTOR.]

TUTE/LAE ACTIO. [TUTOR.]

TUTOR. The difference between a Tutor and Tutela, and Curator and Curatio or Cura, is explained in the article CURATOR. In the Roman system there might be persons who were under no potestas, and had property of their own, but by reason of their age or sex required protection for their own interest, and for the interest of those who

might be their heredes. This protection was given by the tutela to Impuberes and women.

A Tutor derived his name a "tuen-do" from protecting another (*quasi Tutor*). His power and office were "Tutela," which is thus defined by Servius Sulpicius (Dig. 26. tit. 1. s. 1): "Tutela est ut ac potestas in capite libero ad tuendum eum quod propter aetatem suam (*sua*) sponte se defendere nequit jure civili data ac permessa." After the word "suam" it has been suggested by Roderf that something like what follows has been omitted by the copyists: "eamve quae propter aetatem," a conjecture which seems very probable. Tutela expresses both the status of the Tutor and that of the person who was In Tutela. The tutela of Impuberes was a kind of Potestas, according to the old law; that of Mulieres was merely a Jus.

As to the classification of the different kinds (*genera*) of Tutela, the jurists differed. Some made five genera, as Quintus Mucius; others three, as Servius Sulpicius; and others two, as Labes. The most convenient division is into two genera, the tutela of IMPUBERES (*pupilli, pupillae*), and the tutela of Women. The pupillus or the pupilla is the male or the female who is under Tutela.

Every paterfamilias had power to appoint by testament a Tutor for his children who were in his power: if they were males, only in case they were Impuberes; if they were females, also in case they were marriageable (*nubiles*), that is above twelve years of age. Therefore if a tutor was appointed for a male, he was released from the Tutela on attaining puberty (fourteen years of age), but the female still continued in tutela, unless she was released from it by the Jus Liberorum under the Lex Julia et Papia Poppaea. A man could only appoint a Tutor for his grandchildren, in case they would not upon his death come into the power of their father. A father could appoint a tutor for Postumi, provided they would have been in his power, if they had been born in his life-time. A man could appoint a tutor for his wife in manum, and for his daughter-in-law (*sororis*) who was in the manus of his son. The usual form of appointing a Tutor was this: "Lucium Titium Liberis meis tutorem do." A man could also give his wife in manu the power of choosing a tutor (*tutori optio*); and the optio might be either plena or angusta. She who had the plena optio might choose (and consequently change) her tutor any number of times: she who had the angusta optio was limited in her choice to the number of times which the testator had fixed. [TESTAMENTUM.]

The power to appoint a tutor by will was either given or confirmed by the Twelve Tables. The earliest instance recorded of a testamentary Tutor is that of Tarquinius Priscus being appointed by the will of Ancus (Liv. i. 34), which may be taken to prove this much at least, that the power of appointing a tutor by will was considered by the Romans as one of their oldest legal institutions. The nearest kinsmen were usually appointed Tutores, and if a testator passed over such, it was a reflection on his character (Cic. *pro P. Sextio*, 52), that is, we must suppose, if the testator himself was a man in good repute. Persons named and appointed Tutores by a will were Tutores Dativi: those who were chosen under the power given by a will were Tutores Optivi. (Gaius, i. 154.)

If the testator appointed no tutor by his will, the tutela was given by the Twelve Tables to the

nearest Agnati, and such Tutores were called Legitimi. The nearest Agnati were also the heredes in case of the immediate heredes of the Testator dying intestate and without issue, and the tutela was therefore a right which they claimed as well as a duty imposed on them. Persius (ii. 12) alludes to the claim of the Tutor as heres to his pupillus. A son who was pubes, was the legitimus tutor of a son who was impubes; and if there was no son who was pubes, the son who was impubes had his father's brother (*patruus*) for his tutor. The same rule applied to females also, till it was altered by a Lex Claudia. If there were several agnati in the same degree, they were all tutores. If there were no Agnati, the tutela belonged to the Gentiles, so long as the Jus Gentilicium was in force. (Gaius, iii. 17, and i. 164.) The tutela in which a freedman was with respect to his Patronus was also Legitima; not that it was expressly given by the words (*lex*) of the Twelve Tables, but it flowed from the lex as a consequence (*per consequentiam*, Ulp. *Frag.* tit. 11); for as the hereditates of intestate liberti and libertae belonged to the patronus, it was assumed that the tutela belonged to him also, since the Twelve Tables allowed the same persons to be tutors in the case of an ingenuus, to whom they gave the hereditas in case there was no suus heres. (Gaius, i. 165.)

If a free person had been mancipiated to another either by the parent or coemptionator, and such other person manumitted the free person, he became his tutor fiduciarius by analogy to the case of freedman and patron. (Compare Gaius, i. 166 with Ulp. *Frag.* tit. 11. s. 5.) [EMANCIPATIO; FIDUCIA.]

If an impubes had neither a tutor Dativus nor Legitimus, he had one given to him, in Rome, under the provisions of the Lex Atilia by the Praetor Urbanus and the major part of the Tribuni Plebis; in the provinces in such cases a tutor was appointed by the Praesides under the provisions of the Lex Julia et Titia. [LEX JULIA ET TITIA.] If a tutor was appointed by testament either sub condicione or ex die certo, a tutor might be given under these Leges so long as the condition had not taken effect or the day had not arrived; and even when a tutor had been appointed absolutely (*pure*), a tutor might be given under these Leges so long as there was no heres; but the power of such tutor ceased as soon as there was a tutor under the testament, that is, as soon as there was a heres to take the hereditas. If a tutor was captured by the enemy, a tutor was also given under these Leges, but such tutor ceased to be tutor, as soon as the original tutor returned from captivity, for he recovered his tutela Jure Postliminii.

Before the passing of the Lex Atilia tutors were given by the praetor in other cases, as for instance, when the legis actiones were in use, the Praetor appointed a tutor if there was any action between a tutor and a woman or ward, for the tutor could not give the necessary authority (*auctoritas*) to the acts of those whose tutor he was, in a matter in which his own interest was concerned. Other cases in which a tutor was given are mentioned by Ulpian, *Frag.* tit. 11.

Ulpian's division of Tutores is into Legitimi, Senatusconsulti constituti, Moribus introducti. His legitimi tutores comprehend all those who become tutores by virtue of any Lex, and specially by the Twelve Tables: accordingly it comprises tutores in the case of intestacy, tutores appointed

by testament, for they were confirmed by the Twelve Tables, and tutores appointed under any other Lex as the Atilia. Various Senatusconsulta declared in what cases a tutor might be appointed; thus the Lex Julia de maritandis ordinibus (Papiae et Poppaeae) enacted that the Praetor should appoint a tutor for a woman or a virgin, who was required to marry by this law, "ad dotem dandam, dicendam, promittendamve," if her Legitimus tutor was himself a Pupillus: a Senatusconsultum extended the provision to the provinces, and enacted that in such case the praesides should appoint a tutor; and also that if a tutor was mutus or furiosus another should be appointed for the purposes of the Lex. The case above mentioned of a tutor being given in the case of an action between a tutor and his ward, is a case of a tutor Moribus datus. In the Imperial period from the time of Claudius tutores extra ordinem were appointed by the consuls also.

Only those could be Tutores who were sui juris. A person could not be named Tutor in a Testament, unless he had the Testamentum factum with the Testator, a rule which excluded such persons as Peregrini. The Latini Juniani were excluded by the Lex Junia. (Gaius, i. 23.) Women could not be Tutores. Many persons who were competent to be Tutores, might excuse themselves from taking the office: these grounds of excuse (*excusationes*) were, among others, age, absence, the being already Tutor in other cases, the holding of particular offices and other grounds which are enumerated in the Fragmenta Vaticana (123—247). In the system of Justinian the tutela is viewed as a Publicum munus.

The power of the Tutor was with respect to the property and pecuniary interests, not the person of the Pupillus, and the passage of the Twelve Tables which gives or confirms to a testator the power of disposing of his property, uses the phrase, *Uti legasset super pecunia tutelae suae rei*, that is the Tutela of the property. It was not absolutely essential to the notion of Tutela that the Tutor should have the administration of property; and he had it not in the case of Mulieres. It might happen that the Tutores from their nearness of blood and other causes might have the guardianship of the Impubes; but then the protection of the property of the Impubes was the special office of the Tutor, and the care of the infant belonged to the mother, if she survived (*custodia matrum*, Hor. *Ep.* i. 1. 22). In a case mentioned by Livy (iv. 9), where the mother and the Tutores could not agree about the marriage of the mother's daughter, the magistratus decided in favour of the mother's power (*secundum parentis arbitrium*). As to the later law, see Dig. 27. tit. 2. s. 1. § 6.

A pupillus could do no act by which he diminished his property, but any act to which he was a party was valid, so far as concerned the pupillus, if it was for his advantage. Consequently a pupillus could contract obligationes, which were for his advantage, without his Tutor. (Gaius, iii. 107.) The Tutor's office was "negotia gerere et auctoritatem interponere." Thus the natural act of the pupillus became by auctoritatis interpositio of the Tutor, a legal act; and thus the pupillus and his Tutor formed one complete person, as to legal capacity to act. No particular form was required for the expression of the tutor's auctoritas, and his presence, when the act was done by the pupillus,

was enough, if he made no opposition to it. (Ulp. *Frag.* tit. 11. s. 25.) The *Negotiorum Gestio* in which the Tutor acted alone took place when the Pupillus was an *Infans*, or absent, or *Furiosus*: it was his duty to preserve and improve the property and to do all necessary acts for that purpose. When the Pupillus was no longer *Infans*, he could do various acts with the *Auctoritas* of his Tutor: the *auctoritas* was the consent of the Tutor to the act of the Pupillus, which was necessary in order to render it a legal act. Thus it was a rule of law that neither a woman nor a pupillus could alienate a *Res mancipi* without the *auctoritas* of a Tutor: a woman could alienate a *Res nec mancipi* without such consent, but a pupillus could not. (Gaius, ii. 80.) The incapacity of the pupillus is best shown by the following instance: if his debtor paid a debt to the pupillus, the money became the property of the pupillus, but the debtor was not released, because a pupillus could not release any duty that was due to himself without the *auctoritas* of his Tutor, for he could alienate nothing without such *auctoritas*, and to release his debtor was equivalent to parting with a right. Still if the money really became a part of the property of the pupillus, or, as it was expressed according to the phraseology of the Roman Law, *si ex ea pecunia locupletior factus sit*, and he afterwards sued for it, the debtor might answer his demand by an *Exceptio doli mali*. (Gaius, ii. 84; Cic. *Top.* 11.) The subject of the incapacity of *Impuberes* and the consequent necessity of the *auctoritas* of a Tutor is further explained in the articles *IMPUBER* and *INFANS*.

The *tutela* was terminated by the death or *capitis deminutio maxima* and *media* of the Tutor. The case of a Tutor being taken prisoner by the enemy has been stated. (Gaius, i. 187.) A *legitimus* Tutor became disqualified to be Tutor *legitimus* if he sustained a *capitis deminutio minima*, which was the case if he allowed himself to be adopted (Gaius, i. 195; Ulp. *Frag.* tit. 11. s. 13); but this was not the case with a *testamentary* Tutor. The *tutela* ceased by the death of the pupillus or pupilla, or by a *capitis deminutio*, as for instance the pupilla coming in *manum viri*. It also ceased when the pupillus or pupilla attained the age of Puberty, which in the male sex was fourteen and in the female was twelve. [*IMPUBER*.] The *tutela* ceased by the *abdication* of the *testamentary* Tutor, that is, when he declared "*nolle se tutorem esse*." The Tutor *legitimus* could only get rid of the *Tutela*, in such cases as he could get rid of it, by *In jure cessio*, a privilege which the *Testamentary* tutor had not. The person to whom the *tutela* was thus transferred was called *Cessicius* Tutor. If the *Cessicius* Tutor died, or sustained a *Capitis deminutio*, or transferred the *tutela* to another by the *In jure cessio*, the *tutela* reverted to the *legitimus* tutor. If the *legitimus* tutor died, or sustained a *capitis deminutio*, the *cessicia* became extinguished. Ulpian adds (*Frag.* tit. xi. s. 8): "as to what concerns *agnati*, there is now no *cessicia tutela*, for it was only permitted to transfer by the *In jure cessio* the *tutela* of females, and the *legitima tutela* of females was done away with by a *Lex Claudia*, except the *tutela patronorum*." The power of the *legitimus* tutor to transfer the *tutela*, is explained when we consider what was his relation to the female. [*TESTAMENTUM*.]

The *tutela* of a tutor was terminated, when he

was removed from his *excusatio* w of these cases, (Gaius, i. 182.)

The tutor, s moved from him himself: this v pecti, which is (Gaius, i. 182; *Tafeln*, 599—6

The *Tutela* of a separate con Potestas or In Tutela.

It was an old could do nothing tutor to give to (Liv. xxxiv. 2, Oppia.) The r Cicero (*pro M* 11. s. 1) and by siders the usual on the inferiority women who are their own affair interpose his auc he is compelled to (Gaius, i. 190.) 11. s. 25): "in tutores both ma auctoritas (et a pount); but the is women who a

ritas." There were other cases also in which the capacity of a Mulier was greater than that of a Pupillus or Pupilla. The object of this rule seems to have been the same as the restriction on the Testamentary power of women, for her Agnati who were a woman's Legitimi Tutores were interested in preventing the alienation of her property.

A Mulier might have a Tutor appointed by her father's Testament; or by the Testament of her husband in whose hand she was (tutor dativus). She might also receive from her husband's will the Tutoris Optio (tutor optivus). Women who had no testamentary Tutor, were in the tutela of their Agnati, until this rule of law was repealed by a Lex Claudia, which Gaius (i. 157) illustrates as follows: "a masculus impubes has his frater pubes or his patruus for his tutor; but women (feminae) cannot have such a tutor." This old tutela of the Twelve Tables (*legitima tutela*) and that of manumissores (*patronorum tutela*) could be transferred by the *In jure cessio*, while that of pupilli could not, "being," as Gaius observes, "not onerous, as it terminated with the period of puberty." But, as already suggested, there were other reasons why the Agnati could part with the tutela, which in the case of Patroni are obvious. The tutela of Patroni was not included within the Lex Claudia. The Tutela fiduciaria was apparently a device of the lawyers for releasing a woman from the tutela legitima (Cic. *pro Murena*, c. 12); though it seems to have been retained, after the passing of the Lex Claudia, which took away the tutela of Agnati over women, as a general mode by which a woman changed her Tutor. (Gaius, i. 115.) To effect this, the woman made a "comptio fiduciae causa;" she was then remancipated by the comptionator to some person of her own choice: this person manumitted her by Vindicta, and thus became her Tutor fiduciarius. Thus the woman passed from her own familia to another, and her Agnati lost all claims upon her property, and her Tutor fiduciarius might be compelled by the Praetor to give his auctoritas to her acts. (Gaius, i. 190, ii. 122.)

A tutor dativus was given to women under the Lex Atilia, when there was no tutor; and in other cases which have been already mentioned. (Gaius, i. 173, &c.; Ulp. *Frag.* tit. 11.) The Vestal Virgins were exempt from tutela; and both Ingenuae and Libertinae were exempted from tutela by the Jus Liberorum. (Gaius, i. 145, 194.) Octavia, the sister of Caesar Octavianus, and his wife Livia, were released from Tutela by a special enactment. (Dion Cass. xlix. 38.) The tutela of feminae was determined by the death of the Tutor, or that of the woman; and by her acquiring the Jus Liberorum, either by bearing children, or from the Imperial favour. The abdication of the Tutor, and the *In jure cessio* (so long as the *In jure cessio* was in use) merely effected a change of Tutor.

Mulieres differed from pupilli and pupillae in having a capacity to manage their affairs, and only requiring in certain cases the Auctoritas of a Tutor. If the woman was in the legitima tutela of patroni or parentes, the Tutores could not be compelled, except in certain very special cases, to give their auctoritas to acts which tended to deprive them of the woman's property, or to diminish it before it might come to their hands. (Gaius, 192.) Other Tutores could be compelled to give their auctoritas.

The special cases in which the auctoritas of a Tutor was required were, if the woman had to sue "lege," or in a legitimus judicium, if she was going to bind herself by a contract, if she was doing any Civil act, or permitting her freedwoman to be in contubernium with the slave of another person, or alienating a Res Mancipi. Among Civil Acts (*civilia negotia*) was the making of a Testament, the rules as to which are stated in the article TESTAMENTUM. Libertae could not make a will without the consent of their Patroni, for the will was an act which deprived the Patron of his rights (Gaius, iii. 43) as being a Legitimus tutor. Gaius mentions a Rescript of Antoninus, by which those who claimed the bonorum possessio secundum tabulas non jure factas, could maintain their right against those who claimed it ab intestato. He adds, this Rescript certainly applies to the wills of males, and also of feminae who had not performed the ceremony of Mancipatio or Nuncupatio; but he does not decide whether it applies to the testaments of women made without the auctoritas of a tutor; and by tutor he means not those who exercised the legitima tutela of parents or Patroni; but Tutors of the other kind (*alterius generis*, compare ii. 123 and i. 194, 195) who could be compelled to give their auctoritas. It would be a fair conclusion, however, that a woman's will made without the auctoritas of such tutores, ought to be valid under the Rescript.

A payment made to a mulier was a release to the debtor, for a woman could part with Res nec Mancipi without the auctoritas of a Tutor: if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him. (Cic. *Top.* 11; Gaius, ii. 83, 85, iii. 171.) She could not manumit without the auctoritas of a tutor. (Ulp. *Frag.* tit. i. s. 17; compare Cic. *pro M. Coel.* c. 29.) Gaius (ii. 47) states that no alienation of a Res Mancipi by a mulier in agnatorum tutela was valid unless it was delivered with the auctoritas of a Tutor, which he expresses by saying that her Res Mancipi could not otherwise be the object of Usucapion, and that this was a provision of the Twelve Tables (ii. 47). In other cases, if a Res Mancipi was transferred by tradition, the purchaser acquired the Quiritarian ownership by Usucapion [USUCAPIO]; but in the case of a woman's Res Mancipi, the auctoritas of the Tutor was required in order that Usucapion might be effected. In another passage (ii. 80) Gaius observes that a woman cannot alienate her Res Mancipi without the auctoritas of her tutor, which means that the formal act of mancipatio is null without his auctoritas; and such act could not operate as a traditio for want of his auctoritas as appears from the other passage (ii. 47). The passage of Cicero (*pro Flacco*, c. 34) is in accordance with Gaius; but another (*ad Att.* i. 5) is expressed so vaguely, that though the explanation is generally supposed to be clear, it seems exceedingly doubtful, if it can be rightly understood. The possibility of Usucapion, when there was the auctoritas of the Tutor, appears from Gaius; but it does not appear why Cicero should deny, generally, the possibility of Usucapion of a woman's property, when she was in Legitima Tutela. The passage, however, is perfectly intelligible on the supposition of there having been a transfer without the auctoritas of a Tutor, and on the further supposition of Cicero thinking it unnecessary to state

the particular facts of a case which must have been known to Atticus. (See Casaubon's note on Cic. *ad Att.* i. 5.)

The auctoritas of a Tutor was not required in the case of any Obligatio by which the woman's condition was improved; but it was necessary in cases where the woman became bound. (Gaius, i. 192, iii. 108; Ulp. *Frag.* tit. 11. a. 27; Cic. *pro Caelin.* 25.) If the woman wished to promise a Dos, the auctoritas of a Tutor was necessary. (Cic. *pro Flacc.* 35.) By the Lex Julia, if a woman was in the legitima tutela of a pupillus, she might apply to the Praetor Urbanus for a Tutor who should give the necessary auctoritas in the case of a Dos constituenda. (Gaius, i. 178; Ulp. *Frag.* 11. tit. 20.) As a woman could alienate Res nec mancipi without the consent of a Tutor, she could contract an obligation by lending money, for by delivery the money became the property of the receiver. A senatusconsultum allowed a woman to apply for a Tutor in the absence of her Tutor, unless the Tutor was a Patronus; if he was a Patronus, the woman could only apply for a Tutor in order to have his auctoritas for taking possession of an hereditas (*ad hereditatem adeundam*) or contracting a marriage.

The Tutela of a woman was terminated by the death of the Tutor or that of the woman; by a marriage by which she came in manum viri; by the privilege of children (*jus liberorum*); by abdication, and also by the in jure cessio, so long as the Agnatorum tutela was in use; but in these two last cases there was only a change of Tutor.

A woman had no right of action against her Tutor in respect of his Tutela, for he had not the Negotiorum gestio, or administration of her property, but only interposed his Auctoritas. (Gaius, i. 191.)

The tutela mulierum existed at least as late as Diocletian, A. D. 293 (*Vat. Frag.* § 325). There is no trace of it in the Code of Theodosius, or in the legislation of Justinian.

(The most recent and the most complete work on the Roman Tutela is said to be by Rudorff (*Das Recht der Vormundschaft*, 1832—1834), the substance of which appears to be given by Rein, *Das Röm. Privatrecht*, p. 239, &c.; Gaius, i. 142—200; Ulp. *Frag.* xi. xii.; Inst. i. tit. 13—26; Dig. 26 and 27; Cod. 5. tit. 28—75.) [G. L.]

TUTULUS was the name given to a pile of hair on a woman's head. Great pains were taken by the Roman ladies to have this part of the hair dressed in the prevailing fashion, whence we read in an inscription of an *ornatrix a tutulo*. (Gruter, 579. 3.) Sometimes the hair was piled up to an enormous height. (Lucan, ii. 358; Juv. vi. 503; Stat. *Silv.* i. 2. 114.) The Tutulus seems to have resembled very much the Greek κόρυμβος, of which a representation is given in the first woodcut on p. 329, a.

The Flaminica always wore a Tutulus, which was formed by having the hair plaited up with a purple band in a conical form. (Festus, s. v.)

TYMPANUM (τύμπανον), a small drum carried in the hand. Of these, some resembled in all respects a modern tambourine with bells. Others presented a flat circular disk on the upper surface and swelled out beneath like a kettledrum, a shape which appears to be indicated by Pliny when he describes a particular class of pearls in the following terms: "Quibus una tantum est facies, et ab

ea rotunditas, aversa planities, ob id tympana vocantur." (*H. N.* ix. 54.) Both forms are represented in the cuts below. That upon the left is from a painting found at Pompeii (*Mus. Borbon.* tom. vii. tav. 37), that on the right from a fictile vase (Millin, *Peintures de Vases Antiques*, pl. 56), and here the convexity on the under side is distinctly seen. Tympana were covered with the

hides of oxen (Ovid. *Fast.* iv. 342; Stat. *Thib.* ii. 78) or of asses (Phaedr. iii. 20. 4), were beaten (Suet. *Aug.* 68) with a stick (Phaedr. l. c.) with the hand (Ovid. *Met.* iv. 30; see cuts), and were much employed in all wild enthusiastic religious rites (Aristoph. *Lysistr.* i. 387), especially the orgies of Bacchus and of Cybele (Catull. lxiv. 262; Claud. *de Cons. Stilic.* iii. 365; Lucr. ii. 618; Catull. lxiii. 8; Virg. *Aen.* ix. 619; Claud. *Eutrop.* i. 278; compare Lobeck, *Aglaophamus*, pp. 630, 652), and hence Plautus (*Truc.* ii. 7. 49) characterises an effeminate coxcomb as "Moechum malacum, cincinnatum, umbraticolam, tympanisibam." According to Justin (xli. 2) they were used by the Parthians in war to give the signal for the onset.

2. A solid wheel without spokes for heavy waggons (Virg. *Georg.* iv. 444), such as is shown in the cut on page 923. These are to this day common in the rude carts of southern Italy and Greece, and Sir C. Fellows (*Excursions in Asia Minor*, p. 72), from whose work the figure below is copied, found them attached to the farm vehicles of Mysia. "The wheels are of solid blocks of wood, or thick planks, generally three, held together by an iron hoop or tire; a loud creaking noise is made by the friction of the galled axle," a satisfactory commentary on the "stridentia plaustra" of Virgil (*Georg.* iii. 536).

3. Hence, wheels of various kinds, a sort of crane worked by a wheel for raising weights (Lucret. iv. 903; Vitruv. x. 4; ANTLIA), a wheel for drawing water (Vitruv. x. 14), a solid toothed wheel forming part of the machinery of a mill (Vitruv. x. 9, 10), and the like.

4. An ancient name for round plates or chargers, such as were afterwards called *lancces* and *astatera*. (Plin. *H. N.* xxxiii. 52.)

5. An architectural term signifying the flat surface or space within a pediment, and also the square panel of a door. (Vitruv. iii. 3, iv. 6.)

6. A wooden cudgel for beating malefactors, and also a beating post to which they were tied when flogged; hence the Greek verbs τυμπανίζειν and ἀποτυμπανίζειν are formed. (Schol. ad Aristoph. *Plut.* 476; St. Paul, *Ep. to Hebrews*, xi. 35; *Polux*, viii. 70.) [W. R.]

ΤΥΠΟΣ (τύπος), which properly means a *blow*, and hence the effect of a blow, and specifically a mark or impress made by a blow, is applied in the arts to any die or mould, and to any figure formed by striking from a die, or by casting in a mould, or even by cutting, as a cameo or intaglio, and, more generally, to any figure whatever, as being the type or facsimile of the thing represented by it. (See the Lexicons.) By the *typi* which Cicero (*ad Att.* i. 10) commissions Atticus to obtain for him to work into the plastering of his atrium, he probably means reliefs of any sort. The different specific meanings included in the word are more exactly expressed by certain compounds, such as ἀντίτυπος, the copy or impress of a τύπος, a die or mould; ἐντύπος and ἐντόπιωμα, a sunken pattern or intaglio; ἑκτύπος, a relief of any kind, especially a cameo, and, more specifically, a high-relief, as opposed to πρόστυπος, a low-relief. Comp. FICTILIS, p. 532, a; FORMA. [P. S.]

TYRANNUS (τύραννος). In the heroic age all the governments in Greece were monarchical, the king uniting in himself the functions of the priest, the judge, and military chief. These were the πατρικαὶ βασιλειαὶ of Thucydides. (i. 13.) In the first two or three centuries following the Trojan war various causes were at work, which led to the abolition, or at least to the limitation, of the kingly power. Emigrations, extinctions of families, disasters in war, civil dissensions, may be reckoned among these causes. Hereditary monarchies became elective; the different functions of the king were distributed; he was called ἄρχων, κόσμος, or πρύτανης, instead of βασιλεὺς, and his character was changed no less than his name. Noble and wealthy families began to be considered on a footing of equality with royalty; and thus in process of time sprang up oligarchies or aristocracies, which most of the governments that succeeded the ancient monarchies were in point of fact, though not as yet called by such names. These oligarchies did not possess the elements of social happiness or stability. The principal families contended with each other for the greatest share of power, and were only unanimous in disregarding the rights of those whose station was beneath their own. The people, oppressed by the privileged classes, began to regret the loss of their old paternal form of government; and were ready to assist any one who would attempt to restore it. Thus were opportunities afforded to ambitious and designing men to raise themselves, by starting up as the champions of popular right. Discontented nobles were soon found to prosecute schemes of this sort, and they had a greater chance of success, if descended from the ancient royal family. Peisistratus is an example; he was the more acceptable to the people of Athens, as being a descendant of the family of Codrus. (Herod. v. 65.) Thus in many cities arose that species of monarchy which the Greeks called τυραννίς, which meant only a despotism, or irresponsible dominion of one man; and which frequently was nothing more than a revival of the ancient government, and, though unaccompanied with any recognized hereditary title, or the reverence

attached to old name and long prescription, was hailed by the lower orders of people as a good exchange, after suffering under the domination of the oligarchy. All tyrannies, however, were not so acceptable to the majority; and sometimes we find the nobles concurring in the elevation of a despot, to further their own interests. Thus the Syracusan Gamori, who had been expelled by the populace, on receiving the protection of Gelon, sovereign of Gela and Camarina, enabled him to take possession of Syracuse, and establish his kingdom there. (Herod. vii. 154, 155.) Sometimes the conflicting parties in the state, by mutual consent, chose some eminent man, in whom they had confidence, to reconcile their dissensions; investing him with a sort of dictatorial power for that purpose, either for a limited period or otherwise. Such a person they called αἰσυμνήτης. [ΑΣΥΜΝΗΤΗΣ.]

A similar authority was conferred upon Solon, when Athens was torn by the contending factions of the Διδκρίοι, Πεδίαιοι, and Πέραιοι, and he was requested to act as mediator between them. Solon was descended from Codrus, and some of his friends wished him to assume the sovereignty; this he refused to do, but, taking the constitutional title of Archon, framed his celebrated form of polity and code of laws. (Herod. i. 29; *Plut. Solon.* c. 13, &c.; Schömann, *Antiq. Jur. publ. Gr.* p. 173.) The legislative powers conferred upon Draco, Zaleucus, and Charondas, were of a similar kind, investing them with a temporary dictatorship.

The τύραννος must be distinguished, on the one hand, from the αἰσυμνήτης, inasmuch as he was not elected by general consent, but commonly owed his elevation to some coup d'état, some violent movement or stratagem, such as the creation of a body-guard for him by the people, or the seizure of the citadel (Herod. i. 59; Thucyd. i. 126); and on the other hand, from the ancient king, whose right depended, not on usurpation, but on inheritance and traditional acknowledgment. The power of a king might be more absolute than that of a tyrant; as Pheidon of Argos is said to have made the royal prerogative greater than it was under his predecessors; yet he was still regarded as a king; for the difference between the two names depended on title and origin, and not on the manner in which the power was exercised. (Aristot. *Polit.* v. 8.) The name of tyrant was originally so far from denoting a person who abused his power, or treated his subjects with cruelty, that Peisistratus is praised by Thucydides (vi. 54) for the moderation of his government; and Herodotus says, he governed οὐτε τιμὰς τὰς ἐόβτας συνταρξάς, οὐτε δόγμα μεταλλάξας, ἐπὶ τε τοῖσι κατεστῶσι ἐνεμε τὴν πόλιν κομμένον καλῶς τε καὶ εὖ. (i. 59.) Therefore we find the words βασιλεὺς and τύραννος used promiscuously by the Attic tragedians *passim* (see the *Argument* of the Oedipus Tyrannus); and even by prose authors. Thus Herodotus calls the Lydian Candaules τύραννος (i. 7), the kingdom of Macedonia τυραννίς (viii. 137), and Periander of Corinth βασιλεὺς. (iii. 52; compare v. 27, 92.) Afterwards, when tyrants themselves had become odious, the name also grew to be a word of reproach, just as rex did among the Romans. (Wachsmuth, *Hellen. Alt.* vol. i. pt. i. pp. 279—288, 1st ed.; Thirlwall, *Hist. of Greece*, vol. i. pp. 401, 404.)

Among the early *tyrants* of Greece those most worthy of mention are:—Cleisthenes of Sicyon, grandfather of the Athenian Cleisthenes, in whose family the government continued for a century since its establishment by Orthagoras, about B.C. 672 (Herod. v. 67, 69); Cypselus of Corinth, who expelled the Bacchiadae, B.C. 656, and his son Periander, both remarkable for their cruelty; their dynasty lasted between seventy and eighty years (Herod. v. 92); Procles of Epidaurus (Herod. iii. 50, 52); Pantaleon of Pisa, who celebrated the thirty-fourth Olympiad, depriving the Eleans of the presidency (Pausan. vi. 21, 22); Theagenes of Megara, father-in-law to Cylon the Athenian (Thucyd. i. 126); Peisistratus, whose sons were the last of the early *tyrants* on the Grecian continent.

In Sicily, where *tyranny* most flourished, the principal were Phalaris of Agrigentum, who established his power in B.C. 568, concerning whose supposed epistles Bentley wrote his famous treatise; Theron of Agrigentum; Gelon, already mentioned, who, in conjunction with Theron, defeated Hamilcar the Carthaginian, on the same day on which the battle of Salamis was fought; and Hiero, his brother: the last three celebrated by Pindar. (See Herod. vii. 156, 165, 166.) In Grecian Italy we may mention Anaxilaus of Rhegium, who reigned B.C. 496 (Herod. vi. 23, vii. 165); Cleinias of Croton, who rose after the dissolution of the Pythagorean league; (as to which see Polyb. ii. 39; Athen. xii. p. 522, xiv. p. 623; Thirlwall, *Id.* vol. ii. p. 154.) The following also are worthy of notice: Polycrates of Samos (Herod. iii. 39, 56, 120, 125; Thucyd. i. 13); Lygdamis of Naxos (Herod. i. 61, 64); Histiaeus and Aristagoras of Miletus. (Herod. iv. 137, v. 23, 30, 37, vi. 29.) Perhaps the last mentioned can hardly be classed among the *Greek tyrants*, as they were connected with the Persian monarchy. (Wachsmuth, *Id.* vol. i. pt. i. p. 274.)

The general characteristics of a *tyranny* were, that it was bound by no laws, and had no recognized limitation to its authority, however it might be restrained in practice by the good disposition of the *tyrant* himself, or by fear, or by the spirit of the age. It was commonly most odious to the wealthy and noble, whom the *tyrant* looked upon with jealousy as a check upon his power, and whom he often sought to get rid of by sending them into exile or putting them to death. The advice given by Thrasylbulus of Miletus to Periander affords an apt illustration of this. (Herod. v. 92.) The *tyrant* usually kept a body-guard of foreign mercenaries, by aid of whom he controlled the people at home; but he seldom ventured to make war, for fear of giving an opportunity to his subjects to revolt. The Sicilian sovereigns form an exception to this observation. (Thucyd. i. 17.) He was averse to a large congregation of men in the town, and endeavoured to find rustic employments for the populace; but was not unwilling to indulge them with shows and amusements. A few of the better sort cultivated literature and the arts, adorned their city with handsome buildings, and even passed good laws. Thus, Peisistratus commenced building the splendid temple of Jupiter Olympus, laid out the garden of the Lyceum, collected the Homeric poems, and is said to have written poetry himself. Tribute was imposed on the people, to raise a revenue for the *tyrant*, to pay his mercenaries, and

maintain his state. Peisistratus had the tide of land, which his sons reduced to the twentieth [TELOS.]

The causes which led to the decline of *tyranny* among the Greeks were partly the degeneracy of the *tyrants* themselves, corrupted by power, indolence, flattery, and bad education; for even when the father set a good example, it was seldom followed by the son; partly the cruelties and excesses of particular men, which brought them all into disrepute; and partly the growing spirit of inquiry among the Greek people, who began to speculate upon political theories, and soon became dissatisfied with a form of government, which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies, which flourished before the Persian war, are said to have been overthrown by the exertions of Sparta, jealous probably of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred. (Thucyd. i. 18.) Upon the fall of *tyranny*, the various republican forms of government were established, the Dorian states generally favouring oligarchy, the Ionian democracy. (Wachsmuth, vol. i. pt. i. p. 289; Schömann, *Id.* pp. 84, 88—91.)

As we cannot in this article pursue any historical narrative, we will shortly refer to the *revival* of *tyranny* in some of the Grecian states after the end of the Peloponnesian war. In Thessaly Jason of Pherae raised himself, under the title of *Tyrant*, B.C. 374, to the virtual sovereignty of his native city, and exercised a most extensive sway over most of the Thessalian states, but this power ceased with Lycophron, B.C. 353. [TAGUS.] In Sicily, the corruption of the Syracusans, their intestine discord, and the fear of the Carthaginian invader, led to the appointment of Dionysius to the chief military command, with unlimited powers; by means of which he raised himself to the throne, B.C. 406, and reigned for 38 years, leaving his son to succeed him. The younger Dionysius, far inferior in every respect to his father, was expelled by Dion, afterwards regained the throne, and was again expelled by Timoleon, who restored liberty to the various states of Sicily. (For their history the reader is referred to Xenoph. *Hell.* ii. 2 § 24; Diod. xiv. 7, 46, 66, 72, 109, xv. 73, 74, xvi. 3, 16, 36, 68, 69, &c.; Plut. *Dion.* and *Timol.* Wachsmuth, vol. i. pt. ii. pp. 316—326.) With respect to the dynasty of the Archaenactidae in the Cimmerian Bosphorus, and some of the towns on the coast of the Euxine, see Wachsmuth, vol. i. pt. ii. p. 329. Lastly, we may notice Evagoras of Cyprus, who is panegyrized by Isocrates; Phalaris of Eretria, Callias and Taurosthenes of Chalcia, who were partisans of Philip against the Athenians. (Plut. *Phoc.* 12; Isocr. *Evag.*; Wachsmuth, vol. i. pt. ii. p. 330.) The persons commonly called the *thirty tyrants* at Athens, who obtained the supreme power at the close of the Peloponnesian war, do not fall within the scope of the present subject. With respect to the Athenian laws against *tyranny*, and the general feelings of the people, see PRODOSIA. [C. R. K.]

TYRANNIDOS GRAPHE (τυραννίδος γραφή). [PRODOSIA.]

VACANTIA BONA. [BONA VACANTIA.]

VACATIO. [EXERCITUS, p. 499.]

VADIMONIUM. [ACTIO, p. 11; PRAES.]

VAGINA. [GLADIUS.]

VALLUM, a term applied either to the whole or a portion of the fortifications of a Roman camp. It is derived from *vallus* (a stake), and properly means the palisade which ran along the outer edge of the top of the agger, but it very frequently includes the agger also. The *vallum*, in the latter sense, together with the *fossa* or ditch which surrounded the camp outside of the *vallum*, formed a complete fortification. [AGGER.]

The *vallis* (χάρακας), of which the *vallum*, in the former and more limited sense, was composed, are described by Polybius (xviii. i. 1, *Excerpt. Antiq.* xvii. 14) and Livy (xxxiii. 5), who make a comparison between the *vallum* of the Greeks and that of the Romans, very much to the advantage of the latter. Both used for *valli* young trees or arms of larger trees, with the side branches on them; but the *valli* of the Greeks were much larger and had more branches than those of the Romans, which had either two or three, or at the most four branches, and these generally on the same side. The Greeks placed their *valli* in the agger at considerable intervals, the spaces between them being filled up by the branches; the Romans fixed theirs close together, and made the branches interlace, and sharpened their points carefully. Hence the Greek *vallus* could easily be taken hold of by its large branches and pulled from its place, and when it was removed a large opening was left in the *vallum*. The Roman *vallus*, on the contrary, presented no convenient handle, required very great force to pull it down, and even if removed left a very small opening. The Greek *valli* were cut on the spot; the Romans prepared theirs beforehand, and each soldier carried three or four of them when on a march. (Polyb. l. c.; Virg. *Georg.* iii. 346, 347; Cic. *Tusc.* ii. 16.) They were made of any strong wood, but oak was preferred.

The word *vallus* is sometimes used as equivalent to *vallum*. (Caesar, *Bell. Civ.* iii. 63.)

A fortification like the Roman *vallum* was used by the Greeks at a very early period. (Hom. *Il.* ix. 349, 350.)

Varro's etymology of the word is not worth much (L. L. v. 117, ed. Müller).

In the operations of a siege, when the place could not be taken by storm, and it became necessary to establish a blockade, this was done by drawing defences similar to those of a camp round the town, which was then said to be *circumvallatum*. Such a circumvallation, besides cutting off all communication between the town and the surrounding country, formed a defence against the sallies of the besieged. There was often a double line of fortifications, the inner against the town, and the outer against a force that might attempt to raise the siege. In this case the army was encamped between the two lines of works.

This kind of circumvallation, which the Greeks called ἀποτειχισμός and περιτειχισμός, was employed by the Peloponnesians in the siege of Plataeae. (Thucyd. ii. 78, iii. 20—23.) Their lines consisted of two walls (apparently of turf) at the distance of 16 feet, which surrounded the city in

the form of a circle. Between the walls were the huts of the besiegers. The walls had battlements (ἐνδάλξεις), and at every tenth battlement was a tower, filling up by its depth the whole space between the walls. There was a passage for the besiegers through the middle of each tower. On the outside of each wall was a ditch (ράδιος). This description would almost exactly answer for the Roman mode of circumvallation, of which some of the best examples are that of Carthage by Scipio (Appian, *Punic.* 119, &c.), that of Numantia by Scipio (Appian, *Hispan.* 90), and that of Alesia by Caesar (*Bell. Gall.* vii. 72, 73). The towers in such lines were similar to those used in attacking fortified places, but not so high, and of course not moveable. [TURRIS.]

(Lipseius, *de Milit. Rom.* v. 5, in *Oper.* iii. pp. 156, 157; *Polyor.* ii. 1, in *Oper.* iii. 283.) [P. S.]

VALLUS. [VALLUM.]

VALVAE. [JANUA, p. 625, b.]

VANNUS (ἄικυβος, ἄικνον), a winnowing-fan, i. e. a broad basket, into which the corn mixed with chaff (*acus*, ἄχυρα) was received after thrashing, and was then thrown in the direction of the wind. (Col. *de Re Rust.* ii. 21; Virg. *Georg.* iii. 134.) It thus performed with greater effect and convenience the office of the *pala lignea*, or winnowing-shovel. [PALA.] Virgil (*Georg.* i. 166) dignifies this simple implement by calling it *mystica vannus Iacchi*. The rites of Bacchus, as well as those of Ceres, having a continual reference to the occupations of rural life, the *vannus* was borne in the processions celebrated in honour of both these divinities. Hence Ἀικυβότης (Hezych. s. v.) was one of the epithets of Bacchus. In an ANTEPIXA in the British Museum (see the annexed woodcut) the infant Bacchus is carried in a *vannus* by two dancing bacchantes clothed in skins, the one male and carrying a THYRSUS, the other female and carrying a torch [FAX]. Other divinities were

sometimes conceived to have been cradled in the same manner. (Callim. *Jov.* 48; Schol. in *loc.*; Hom. *H. in Merc.* 254.) The *vannus* was also used in the processions to carry the instruments of sacrifice and the first fruits or other offerings, those who bore them being called the ἄικνοφόροι. (Callim. *Cer.* 127.) [J. Y.]

VAPPA. [VINUM.]

VAS. [ACTIO, p. 11; PRAES.]

VAS (pl. *vasa*), a general term for any kind of vessel. Thus we read of *vas vinarium* (Cic. *Verr.* iv. 27), *vas argenteum* (Cic. l. c.; Hor. *Sat.* ii. 7. 72), *vasa Corinthia et Deliaea* (Cic. *pro Rose. Am.*

46), *vasa Samia*, that is, made of Samian earthenware (Cic. *pro Mur.* 36), *vasa Murrhina* (Plin. *H. N.* xxxvii. 2. s. 7). [MURRHINA VASA.] The word *vas* was used in a still wider signification, and was applied to any kind of utensil used in the kitchen, agriculture, &c. Thus Plautus says (*Aulul.* i. 3. 17):—

“Cultrum, securim, pistillum, mortarium,
Quae utenda vasa semper vicini rogant,
Fures venisse, atque abstulisse dicito.”

(Comp. Dig. 33. tit. 7. s. 8; 34. tit. 2. s. 20). The utensils of the soldiers were called *vasa*, and hence *vasa colligere* and *vasa conclamare* signify to pack up the baggage, to give the signal for departure (Cic. *Verr.* iv. 19; Liv. xxi. 47, xxvii. 47; Caes. *B. C.* i. 66, iii. 37).

UDO, a sock of goats-hair or felt. (Mart. xiv. 140.) Hesiod (*Op. et Dies*, 542) advises countrymen to wear brogues (*perones, κατάρτλαι*) made of ox-hide, with socks of the above description within them. Socks of a finer felt were sometimes worn by the Athenians. (Cratinus, p. 29, ed. Runkel.) [J. Y.]

VECTIGALIA, the general term for all the regular revenues of the Roman state. (Cic. *pro Leg. Manil.* 6.) The word is derived from *veho*, and is generally believed to have originally signified the duties paid upon things imported and exported (*quae vehebantur*). If this were true, it would necessarily imply that these duties were either the most ancient or the most important branch of the Roman revenues, and that for either of these reasons the name was subsequently used to designate all the regular revenues in general. But neither point is borne out by the history of Rome, and it seems more probable that vectigal means anything which is brought (*vehitur*) into the public treasury, like the Greek *φόρος*. The earliest regular income of the state was in all probability the rent paid for the use of the public and pastures. This revenue was called *pascua*, a name which was used as late as the time of Pliny (*H. N.* xviii. 3), in the tables or registers of the censors for all the revenues of the state in general.

The senate was the supreme authority in all matters of finance, but as the state itself did not occupy itself with collecting the taxes, duties, and tributes, the censors were entrusted with the actual business. These officers, who in this respect may not unjustly be compared to modern ministers of finance, used to let the various branches of the revenue to the publicani for a fixed sum, and for a certain number of years. [CENSOR; PUBLICANI.]

As most of the branches of the public revenues of Rome are treated of in separate articles, it is only necessary to give a list of them here, and to explain those which have not been treated of separately.

1. The tithes paid to the state by those who occupied the ager publicus. [DECUMAE; AGRARIAE LEGES.]
2. The sums paid by those who kept their cattle on the public pastures. [SCRIPTURA.]
3. The harbour duties raised upon imported and exported commodities. [PORTORIUM.]
4. The revenue derived from the salt-works. [SALINAE.]
5. The revenues derived from the mines (*metalla*). This branch of the public revenue cannot have

been very productive until the Romans had become masters of foreign countries. Until that time the mines of Italy appear to have been worked, but this was forbidden by the senate after the conquest of foreign lands. (Plin. *H. N.* xxxiii. 4, xxxvii. 13.) The mines of conquered countries were treated like the salinae, that is, they were partly left to individuals, companies, or towns on condition of a certain rent being paid (Plin. *H. N.* xxxiv. 1; Cic. *Philip.* ii. 19), or they were worked for the direct account of the state, or were farmed by the publicani. In the last case, however, it appears always to have been fixed by the lex censoria how many labourers or slaves the publicani should be allowed to employ in a particular mine, as otherwise they would have been able to derive the most enormous profits. (Plin. *H. N.* xxxiii. 4.) Among the most productive mines belonging to the republic we may mention the rich gold-mines near Aquileia (Polyb. xxxiv. 10), the gold-mines of Ictimuli near Vercelli, in which 25,000 men were constantly employed (Plin. *H. N.* xxxiii. 4; Strab. v. p. 151), and lastly the silver-mines in Spain in the neighbourhood of Carthago Nova, which yielded every day 25,000 drachmas to the Roman aerarium. (Polyb. xxxiv. 9; comp. Liv. xxxiv. 21.) Macedonia, Thrace, Illyricum, Africa, Sardinia, and other places also contained very productive mines, from which Rome derived considerable income.

6. The hundredth part of the value of all things which were sold (*centesima rerum venalium*). This tax was not instituted at Rome until the time of the civil wars; the persons who collected it were called *coactores*. (Cic. *Ep. ad Brut.* i. 18, *pro Rab. Post.* 11.) Tiberius reduced this tax to a two-hundredth (*ducentesima*), and Caligula abolished it for Italy altogether, whence upon several coins of this emperor we read *a. c. c.*, that is, *Remissa Ducentesima*. (Tacit. *Annal.* i. 78, ii. 42; Suet. *Calig.* 16.) According to Dion Cassius (lviii. 16, lix. 9) Tiberius restored the centesima, which was afterwards abolished by Caligula. (Comp. Dig. 50. tit. 16. s. 17. § 1.) Respecting the tax raised upon the sale of slaves see QUINQUAGESIMA.

7. The vicesima hereditarium et manumissionum. [VICESIMA.]

8. The tribute imposed upon foreign countries was by far the most important branch of the public revenue during the time of Rome's greatness. It was sometimes raised at once, sometimes paid by instalments, and sometimes changed into a poll-tax, which was in many cases regulated according to the census. (Cic. *a. Verr.* ii. 53, 55, &c.; Paus. vii. 16.) In regard to Cilicia and Syria we know that this tax amounted to one per cent. of a person's census, to which a tax upon houses and slaves was added. (Cic. *ad Fam.* iii. 8, *ad Att.* v. 16; Appian, *de Reb. Syr.* 50.) In some cases the tribute was not paid according to the census, but consisted in a land-tax. (Appian, *de Bell. Civil.* v. 4; comp. Walter, *Gesch. des Röm. Rechts*, p. 224, &c.)

9. A tax upon bachelors. [AES UXORIIUM.]

10. A door-tax. [OSTIARIUM.]

11. The *octavo*. In the time of Caesar all liberti living in Italy and possessing property of 200 sestertia, and above it, had to pay a tax consisting of the eighth part of their property. (Dion Cass. l. 10.)

It would be interesting to ascertain the amount of income which Rome at various periods derived

from these and other sources; but our want of information renders it impossible. We have only the general statement that previously to the time of Pompey the annual revenue amounted to fifty millions of drachmas, and that it was increased by him to eighty-five millions. (Plut. *Pomp.* 45.) Respecting the sums contained at different times in the *asarium* at Rome, see Pliny, *H. N.* xxxiii. 17.

(Burmman, *de Vectig. Pop. Romani*; Hegewisch, *Versuch über die Röm. Finanzen*; Boese, *Grundzüge des Finanzwesens im Röm. Staat*; Dureau de la Malle, *Economis Politiques des Romains*, Paris, 2 vols. 8vo.) [L. S.]

VEHES (ἔχρημα), a load of hay, manure, or anything which was usually conveyed in a cart. [PLAUSTRUM.] Pliny speaks of "a large load of hay" (*vehem foeni large onustam*, Plin. *H. N.* xxxvi. 15. s. 24), which shows that this term did not always denote a fixed quantity. With the Romans, however, as with us, the load was likewise used as a measure, a load of manure being equal to eighty modii, which was about twenty bushels. (Col. *de Re Rust.* ii. 15, 16, xi. 2.) The trunk of a tree, when squared, was also reckoned a load, the length varying according to the kind of timber, viz. 20 feet of oak, 25 of fir, &c. (Col. *L. a.*) A load was also called *CARPENTUM*. [J. Y.]

VELA'RIUM. [VELUM.]

VELA'TI was a name given to the Accensi in the Roman army, who were only supernumerary soldiers ready to supply any vacancies in the legion. [ACCENSI.] They were called Velati, because they were only clothed (*velati*) with the toga, and were not regularly armed. (Festus, s. v. *Velati, Adscripticii*.)

VE'LITES. [EXERCITUS, pp. 503, a, 506, b.]

VELUM (ἀνλία, Theophrast. *Char.* 5; Athen. v. p. 196, c; Pollux, iv. 122; παρατέτασμα, Plato, *Polit.* p. 294, ed. Bekker; Synes. *Epist.* 4; παρατέτασμα, Matt. xxvii. 51), a curtain; (*lorlor*), a sail. In private houses curtains were either hung as coverings over doors (Sueton. *Claud.* 10), or they served in the interior of the house as substitutes for doors. (Sen. *Epist.* 81.) [JANUA.] In the palace of the Roman emperor a slave, called *velarius*, was stationed at each of the principal doors to raise the curtain when any one passed through. (Inscript. *ap. Pignor. de Servis*, p. 470.) Window-curtains were used in addition to window-shutters. (Juv. ix. 80.) Curtains sometimes formed partitions in the rooms (Plin. *Epist.* iv. 19), and, when drawn aside, they were kept in place by the use of large brooches (*fibulae*). Iron curtain-rods have been found extending from pillar to pillar in a building at Herculaneum. (Gell, *Pompeiana*, vol. i. p. 160, Lon. 1832.)

In temples curtains served more especially to veil the statue of the divinity. They were drawn aside occasionally so as to discover the object of worship to the devout. (Apuleius, *Met.* xi. p. 127, ed. Aldi.) [ΠΑΣΤΟΡΗΟΥΣ.] Antiochus presented to the temple of Jupiter at Olympia a woollen curtain of Assyrian manufacture, dyed with the Tyrian purple and interwoven with figures. When the statue was displayed, this curtain lay upon the ground, and it was afterwards drawn up by means of cords; whereas in the temple of Diana at Ephesus the corresponding curtain or veil was attached to the ceiling, and was let down in order to conceal the statue. (Paus. v. 12. § 2.) The an-

nexed woodcut is from a bas-relief representing two females engaged in supplication and sacrifice before the statue of a goddess. The altar is adorned for the occasion [SERTUM], and the curtain is drawn aside and supported by a terminus. (Guattani, *Mon. Ined. per* 1786, Nov. T. iii.)

In the theatres there were hanging curtains to decorate the scene. (Virg. *Georg.* iii. 25; Propert. iv. 1. 15.) The SIPARIUM was extended in a wooden frame. The *velarium* was an awning stretched over the whole of the caves to protect the spectators from the sun and rain. (Juv. iv. 121; Sueton. *Calig.* 26.) These awnings were in general either woollen or linen; cotton was used for this purpose a little before the time of Julius Caesar. (Plin. *H. N.* xix. 1. s. 6; Dion Cass. xliii. 24; Lucret. vi. 108.) This vast extent of canvass was supported by masts (*mali*, Lucret. *l. c.*) fixed into the outer wall. The annexed woodcut shows the form and position of the great rings, cut out of lava, which remain on the inside of the wall of the Great Theatre at Pompeii near the top, and which are placed at regular distances, and one of them above another, so that each mast was fixed into two rings. Each ring is of one piece with

the stone behind it. At Rome we observe a similar contrivance in the Coliseum; but the masts were in that instance ranged on the outside of the wall, and rested on 240 consoles, from which

they rose so as to pass through holes cut in the cornice. The holes for the masts are also seen in the Roman theatres at Orange and other places.

Velum, and much more commonly its derivative *velamen*, denoted the veil worn by women. (Prudent. *c. Symm.* ii. 147.) That worn by a bride was specifically called *flammeum* [MATRIMONIUM, p. 743, a]: another special term was *RICA*. Greek women, when they went abroad, often covered their heads with the shawl [PEPLUM], thus making it serve the purpose of a veil. But they also used a proper head-dress, called *καλύπτρα* (Apolod. ii. 6. § 6; Aelian, *V. H.* vii. 9), which besides serving to veil their countenances, whenever they desired it, was graceful and ornamental, and was therefore attributed to Venus (Paus. iii. 15. § 8; Brunn, *Anal.* ii. 459) and Pandora (Hea. *Theog.* 573). The veil of Ilione, the eldest daughter of Priam, was one of the seven objects preserved at Rome as pledges of the permanency of its power. (Serv. in *Virg. Aen.* vii. 188.)

Velum also meant a sail (*ιστιον*, *NAVIS*, p. 790, a; *λαῖφος*, Callim. *Epig.* v. 4; Eurip. *Hec.* 109). Sail-cloth was commonly linen, and was obtained in great quantities from Egypt; but it was also woven at other places, such as Tarquinii in Etruria. (Liv. xxviii. 45.) But cotton sail-cloth (*carbasa*) was also used, as it is still in the Mediterranean. The separate pieces (*linthea*) were taken as they came from the loom, and were sewed together. This is shown in ancient paintings of ships, in which the seams are represented as distinct and regular. [J. Y.]

VENABULUM, a hunting-spear. This may have been distinguished from the spears used in warfare by being barbed; at least it is often so formed in ancient works of art representing the story of Meleager (Bartoli, *Admir.* 84) and other hunting scenes. It was seldom, if ever, thrown, but held so as to slant downwards and to receive the attacks of the wild boars and other beasts of chase. (Virg. *Aen.* iv. 131, ix. 553; Varr. *L. L.* viii. 53, ed. Müller; Apul. *Met.* viii. pp. 78, 83, ed. Aldi; Plin. *Ep.* i. 6.) [J. Y.]

VENALICIA'RII. [SERVUS, p. 1040, a.]

VENATIO, hunting, was the name given among the Romans to an exhibition of wild beasts, which fought with one another and with men. These exhibitions originally formed part of the games of the Circus. Julius Caesar first built a wooden amphitheatre for the exhibition of wild beasts, which is called by Dion Cassius (xliii. 22) *θέατρον κυνηγετικόν*, and the same name is given to the amphitheatre built by Statilius Taurus (Id. li. 23), and also to the celebrated one of Titus (Id. lxxi. 24); but even after the erection of the latter we frequently read of Venationes in the Circus. (Spart. *Hadr.* 19; Vopisc. *Prob.* 19.) The persons who fought with the beasts were either condemned criminals or captives, or individuals who did so for the sake of pay and were trained for the purpose. [BESTIARII.]

The Romans were as passionately fond of this entertainment as of the exhibitions of gladiators, and during the latter days of the republic and under the empire an immense variety of animals was collected from all parts of the Roman world for the gratification of the people, and many thousands were frequently slain at one time. We do not know on what occasion a venatio was first exhibited at Rome; but the first mention we find of any

thing of the kind is in L. Metellus Creticus, who, after his victory over the Cretans, was killed in the Cretan war. (Plin. *H. N.* v. 16.) Other writers regard it as an amusement introduced into Italy by the Aetolians, who were exhibited as a proof of their valor. (Plin. *H. N.* vi. 16.) That in the Lucan games, the aediles P. Corn. Scipio and C. C. 168, there were bears and elephants, and that this time combats were introduced as a regular part of the games, the curule aediles, and curious animal fights, the first of their kind, were exhibited by Cicero, *ad Fam.* ix. 10. They have first fought in the ship of Claudius, 10 years afterwards, two Luculli, the first in 108, viii. 7.) A hunt in his praetorship, in which the men sent by king Antiochus was the first to loose in the Circus, tied up. (Seneca, *de ira*, i. 1. 58 surpassed all among other nations, potamos and fish, or trench (*curia*), venatio given by a. c. 55, upon Venus Victrix, (Cic. *ad Fam.* ix. 10.) Number of animals mentioned of 6000, latter fought against them, and the railings (*claustra*) from the spectators. To guard against the round the trenches (*curia*). In the games of consulship, a. c. 100, days and was a. c. 100. Camelopard, first time seen. (Suet. *Jul.* 39; ii. 102; Vell. Paterculus, introduced bull-fight, pursued the beasts, latter were tired, killed them. spectacle; it was (Plin. *H. N.* vi. lxi. 9.) In the a. c. 29, the first

first exhibited, according to Dion Cassius (li. 22), but the hippopotamus is spoken of by Pliny, as mentioned above, in the games given by Scaurus. Augustus also exhibited a snake 50 cubits in length (Suet. Aug. 43), and thirty-six crocodiles, which are seldom mentioned in the spectacles of later times. (Dion Cass. lv. 10.)

The occasions on which Venationes were exhibited have been incidentally mentioned above. They seem to have been first confined to the Ludi Circenses, but during the later times of the republic, and under the empire, they were frequently exhibited on the celebration of triumphs, and on many other occasions, with the view of pleasing the people. The passion for these shows continued to increase under the empire, and the number of beasts sometimes slaughtered seems almost incredible. At the consecration of the great amphitheatre of Titus, 5000 wild beasts and 4000 tame animals were killed (Suet. Tit. 7; Dion Cass. lvi. 25), and in the games celebrated by Trajan, after his victories over the Dacians, there are said to have been as many as 11,000 animals slaughtered. (Dion Cass. lxxviii. 15.) Under the emperors we read of a particular kind of Venatio, in which the beasts were not killed by bestiarii, but were given up to the people, who were allowed to rush into the area of the circus and carry away what they pleased. On such occasions a number of large trees, which had been torn up by the roots, was planted in the circus, which thus resembled a forest, and none of the more savage animals were admitted into it. A Venatio of this kind was exhibited by the elder Gordian in his aedileship, and a painting of the forest with the animals in it is described by Julius Capitolinus. (Gordian, 3.) One of the most extraordinary venationes of this kind was that given by Probus, in which there were 1000 ostriches, 1000 stags, 1000 boars, 1000 deer, and numbers of wild goats, wild sheep, and other animals of the same kind. (Vopisc. Prob. 19.) The more savage animals were slain by the bestiarii in the amphitheatre, and not in the circus. Thus, in the day succeeding the venatio of Probus just mentioned, there were slain in the amphitheatre 100 lions, and the same number of lionesses, 100 Libyan and 100 Syrian leopards, and 300 bears. (Vopisc. l.c.) It is unnecessary to multiply examples, as the above are

sufficient to give an idea of the numbers and variety of animals at these spectacles; but the list of beasts which were collected by the younger Gordian for his triumph, and were exhibited by his successor Philip at the Secular Games, deserve mention on account of their variety and the rarity of some of them. Among these we find mention of 32 elephants, 10 elks, 10 tigers (which seem to have been very seldom exhibited), 60 tame lions, 30 tame leopards, 10 hyaenas, an hippopotamus and rhinoceros, 10 archoleontes (it is unknown what they were), 10 cameloparda, 20 onagri (wild asses, or perhaps zebras), 40 wild horses, and an immense number of similar animals. (Vopisc. Gordian, 33.)

How long these spectacles continued is uncertain, but they were exhibited after the abolition of the shows of gladiators. There is a law of Honorius and Theodosius, providing for the safe convoy of beasts intended for the spectacles, and inflicting a penalty of five pounds of gold upon any one who injured them. (Cod. 11. tit. 44.) They were exhibited at this period at the praetorian games, as we learn from Symmachus. (Epist. ix. 70, 71, 126, &c.) Wild beasts continued to be exhibited in the games at Constantinople as late as the time of Justinian. (Procop. Hist. Arc. c. 9.)

Combats of wild beasts are sometimes represented on the coins of Roman families, as on the annexed coin of M. Livineius Regulus, which probably refers to the venatio of Julius Caesar mentioned above.

In the bas-reliefs on the tomb of Scaurus at Pompeii, there are representations of combats with wild beasts, which are copied in the following woodcuts from Masoio (*Pomp.* i. pl. 32, 33). On the same tomb gladiatorial combats are represented, which are figured on p. 576 of the present work.

The first represents a man naked and unarmed in a defenceless state had of course only their agility to trust to in order to escape from the beasts. In the

second cut we see a similar person against whom a wild boar is rushing, and who appears to be preparing for a spring to escape from the animal. In the same relief there is a wolf running at full speed, and also a stag with a rope tied to his horns who has been pulled down by two wolves or dogs. The

third relief is supposed by Mazois to represent the training of a bestiarius. The latter has a spear in each hand; his left leg is protected by greaves, and he is in the act of attacking a panther, whose movements are hampered by a rope, which fastens him to the bull behind him, and which accordingly places the bestiarius in a less dangerous position, though more caution and activity are required than if the beast were fixed to a single point. Behind the bull another man stands with a spear, who seems to be urging on the animal. The fourth woodcut represents a man equipped in the same way as the matador in the Spanish bull-fights in the present day, namely, with a sword in one hand and a veil in the other. The veil was first em-

ployed in the arena in the time of the emperor Claudius. (Plin. *H. N.* viii. 21.)

VENEFCIUM, the crime of poisoning, is frequently mentioned in Roman history. Women were most addicted to it; but it seems not improbable that this charge was frequently brought against females without sufficient evidence of their guilt, like that of witchcraft in Europe, in the middle ages. We find females condemned to death for this crime in seasons of pestilence, when the popular mind is always in an excited state and ready to attribute the calamities under which they suffer to the arts of evil-disposed persons. Thus the Athenians, when the pestilence raged in their city during the Peloponnesian war, supposed the wells to have been poisoned by the Peloponnesians (Thucyd. ii. 48), and similar instances occur in the history of almost all states. Still however the crime of poisoning seems to have been much more frequent in ancient than in modern times; and this circumstance would lead persons to suspect it in cases when there was no real ground for the suspicion. Respecting the crime of poisoning at Athens, see PHARMACON GRAPHE.

The first instance of its occurrence at Rome in any public way was in the consulship of M. Claudius Marcellus and C. Valerius, a. c. 331, when the city was visited by a pestilence. After many of the leading men of the state had died by the same kind of disease, a slave-girl gave information to the curule aediles that it was owing to prisons prepared by the Roman matrons. Following her information they surprised about twenty matrons, among whom were Cornelia and Sergia, both belonging to Patrician families, in the act of preparing certain drugs over a fire; and being compelled by the magistrates to drink these in the forum, since they asserted that they were not poisonous, they perished by their own wickedness. Upon this further informations were laid, and as

many as a hundred and seventy matrons were condemned. (Liv. viii. 18; compare Val. Max. ii. § 3; August. *De Civ. Dei*, iii. 17.) We next read of poisoning being carried on upon an extensive scale as one of the consequences of the introduction of the worship of Bacchus. (Liv. xxxix. 8.) [DIONYSIA, p. 413.] In a. c. 184, the praetor, Q. Naevius Mada, was commanded by the senate to investigate such cases (*de veneficiis quaerere*): he spent four months in the investigation, which was principally carried on in the municipia and conciliabula, and, according to Valerius of Antium, he condemned 2000 persons. (Liv. xxxix. 38. 41.) We again find mention of a public investigation into cases of poisoning by order of the senate, in a. c. 184, when a pestilence raged at Rome, and many of the magistrates and other persons of high rank had perished. The investigation was conducted in the city and within ten miles of it by the praetor C. Claudius, and beyond the ten miles by the praetor C. Maenius. Hostilia, the widow of the consul C. Calpurnius, who had died in that year, was accused of having poisoned her husband, and condemned on what appears to have been mere suspicion. (Liv. xl. 37.) Cases of what may be called private poisoning, in opposition to those mentioned above, frequently occurred. The speech of Cicero in behalf of Cluentius supplies us with several particulars on this subject. Under the Roman emperors it was carried on to a great extent, and some females, who excelled in the art, were in great request. One of the most celebrated of these was Locusta, who poisoned Claudius at the command of Agrippina, and Britannicus at that of Nero, the latter of whom even placed persons under her to be instructed in the art. (Tacit. *Annal.* xii. 66, xiii. 15; Suet. *Ner.* 33; *Juv.* i. 71.)

The first legislative enactment especially directed against poisoning was a law of the dictator Sulla—*Lex Cornelia de Sicariis et Veneficiis*—passed in a. c. 82, which continued in force, with some alterations, to the latest times. It contained provisions against all who made, bought, sold, possessed, or gave poison for the purpose of poisoning. (Cic. *pro Cluent.* 54; Marcian, *Dig.* 48. tit. 8. a. 3; Inst. 4. tit. 18. a. 5.) The punishment fixed by this law was, according to Marcian, the deportatio in insulam and the confiscation of property; but it was more probably the interdictio aquae et ignis, since the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the time of the writers or compilers. [LEX CORNELIA, p. 687.] By a senatusconsultum passed subsequently, a female, who gave drugs or poison for the purpose of poisoning, conception even without any evil intent, was punished (*relegatus*), if the person to whom she administered them died in consequence. By another senatusconsultum all druggists (*pigmentarii*), who administered poisons carelessly “purgationis causa,” were liable to the penalties of this law. In the time of Marcian (that of Alexander-Severus) this

crime was punished capitally in the case of persons of lower rank (*humiliores*), who were exposed to wild beasts, but persons of higher rank (*altiores*) were condemned to the deportatio in insulam. (Dig. l. c.)

The word *Veneficium* was also applied to potions, incantations, &c. (Cic. *Brut.* 60; Petron. 118); whence we find *Veneficus* and *Veneficos* used in the sense of a sorcerer and sorceress in general.

VER SACRUM (*eros lepor*). It was a custom among the early Italian nations, especially among the Sabines, in times of great danger and distress, to vow to the deity the sacrifice of every thing born in the next spring, that is between the first of March and the last day of April, if the calamity under which they were labouring should be removed. (Fest. s. v. *Ver sacrum*; Liv. xxii. 9, 10, xxxiv. 44; Strab. v. p. 172; Sisenna *op. Nov.* xii. 18; Serv. *ad Aen.* vii. 796.) This sacrifice in the early times comprehended both men and domestic animals, and there is little doubt that in many cases the vow was really carried into effect. But in later times it was thought cruel to sacrifice so many innocent infants, and accordingly the following expedient was adopted. The children were allowed to grow up, and in the spring of their twentieth or twenty-first year they were with covered faces driven across the frontier of their native country, whereupon they went whithersoever fortune or the deity might lead them. Many a colony had been founded by persons driven out in this manner; and the Mamertines in Sicily were the descendants of such devoted persons. (Fest. l. c. and s. v. *Mamertini*; compare Dionys. i. 16; Plin. *H. N.* iii. 18; Justin. xxiv. 4; Liv. xxxiii. 44.)

In the two historical instances in which the Romans vowed a *ver sacrum*, that is, after the battle of lake Trasimenna and at the close of the second Punic war, the vow was confined to domestic animals, as was expressly stated in the vow. (Liv. l. c.; Plut. *Fab. Maz.* 4.) [L. S.]

VESPAE, VESPILLO'NES. [FUNUS, p. 559, a.]

VESTA'LES, the virgin priestesses of Vesta who ministered in her temple and watched the eternal fire. Their existence at Alba Longa is connected with the earliest Roman traditions, for Silvia the mother of Romulus was a member of the sisterhood (Liv. i. 20; Dionys. i. 76); their establishment in the city, in common with almost all other matters connected with state religion, is generally ascribed to Numa (Dionys. ii. 65; Plut. *Num.* 10), who selected four (their names are given in Plutarch), two from the Titienses and two from the Ramnes (Dionys. ii. 67; Festus, s. v. *Ses Vestales*), and two more were subsequently added from the Luceres, by Tarquinius Priscus according to one authority (Plut. *Num.* l. c.), by Servius Tullius according to another. (Dionys. iii. 37.) This number of six remained unchanged at the time when Plutarch wrote, and the idea that it was afterwards increased to seven rests upon very unsatisfactory evidence. (See *Mémoires de l'Académie des Inscriptions*, vol. iv. p. 167; Ambros.

Epist. v. 31, c. *Symmach.* and the remarks of Lipsius.)

They were originally chosen (*capere* is the technical word) by the king (Liv. i. 3. 20; Dionys. l. c.) and during the republic and empire by the Pontifex Maximus. It was necessary that the maiden should not be under six nor above ten years of age, perfect in all her limbs, in the full enjoyment of all her senses, patrima et matrima [PATRIMI], the daughter of free and freeborn parents who had never been in slavery, who followed no dishonourable occupation, and whose home was in Italy. (Gell. i. 12.) The lex Papia ordained that when a vacancy occurred the Pontifex Maximus should name at his discretion twenty qualified damsels, one of whom was publicly (*in concione*) fixed upon by lot, an exemption being granted in favour of such as had a sister already a vestal and of the daughters of certain priests of a high class. (Gell. l. c.) The above law appears to have been enacted in consequence of the unwillingness of fathers to resign all control over a child, and this reluctance was manifested so strongly in later times that in the age of Augustus *libertinas* were declared eligible. (Dion Cass. iv. 22; Suet. *Octav.* 31.) The casting of lots moreover does not seem to have been practised if any respectable person came forward voluntarily and offered a daughter who fulfilled the necessary conditions. As soon as the election was concluded the Pontifex Maximus took the girl by the hand and addressed her in a solemn form preserved by Aulus Gellius from Fabius Pictor. SACERDOTE' VESTALEM. QUAE SACRA. FACIAT. QUAE IOVS. SIET. SACERDOTE' VESTALEM. FACERE. PRO. POPULO. ROMANO. QUIRITIUM. UTEL QUAE OPTIMA. LEGE. FOVIT. ITA. TE. AMATA. CAPIO. where the title AMATA seems simply to signify "beloved one," and not to refer as Gellius supposes to the name of one of the original Vestals, at least no such name is to be found in the list of Plutarch alluded to above. After these words were pronounced she was led away to the atrium of Vesta, and lived thenceforward within the sacred precincts under the special superintendence and control of the pontifical college. (Dionys. ii. 67; Liv. iv. 44, viii. 15; Plin. *Ep.* iv. 11; Suet. *Octav.* 31; Gell. i. 12.)

The period of service lasted for thirty years. During the first ten the priestess was engaged in learning her mysterious duties, being termed *discipula* (Val. Max. i. 1. § 7), during the next ten in performing them, during the last ten in giving instructions to the novices (Dionys. l. c.; Plut. l. c.; Senec. *de vit. beat.* 29), and so long as she was thus employed she was bound by a solemn vow of chastity. But after the time specified was completed she might, if she thought fit, throw off the emblems of her office (Dionys. l. c.), unconsecrate herself (*seasgurare*, Gell. vi. 7), return to the world and even enter into the marriage state. (Plut. l. c.) Few however availed themselves of these privileges; those who did were said to have lived in sorrow and remorse (as might indeed have been expected from the habits they had formed); hence such a proceeding was considered ominous, and the priestesses for the most part died as they had lived in the service of the goddess. (Tacit. *Ann.* ii. 86; Inscrip. quoted by Gronov. *ad Tacit.* *Ann.* iii. 64.)

The senior sister was entitled *Vestalis Maxima*, or *Virgo Maxima* (Ovid. *Fast.* iv. 639; Suet. *Jul.*

83, *Domit.* 8; Orell, *Inscript.* n. 2233, &c.; ἡ ὑπερβόουσα, Dion Cass. liv. 24; ἡ ἀρχιεπεία, lxxix. 9), and we find also the expressions *Vestulum vetustissimum* (Tacit. *Ann.* xi. 82) and *tres maximae*. (Serv. *ad Virg. Ecl.* viii. 82.)

Their chief office was to watch by turns, night and day, the everlasting fire which blazed upon the altar of Vesta (VIRGINESQUE VESTALES IN URBE CUSTODIUNTO IGNUM POCI PUBLICI SEMPERNITERNUM, Cic. *de Leg.* ii. 8. 12; Liv. xxviii. 11; Val. Max. i. 1. § 6; Senec. *de Prov.* 5), its extinction being considered as the most fearful of all prodigies, and emblematic of the extinction of the state. (Dionys. ii. 67; Liv. xxvi. 1.) If such misfortune befell and was caused by the carelessness of the priestess on duty, she was stripped and scourged by the Pontifex Maximus, in the dark and with a screen interposed, and he rekindled the flame by the friction of two pieces of wood from a *felix arbor*. (Dionys., Plut., Val. Max. *ll. cc.*; Festus, s. v. *Ignis*.) Their other ordinary duties consisted in presenting offerings to the goddess at stated times, and in sprinkling and purifying the shrine each morning with water, which according to the institution of Numa was to be drawn from the Egerian fount, although in later times it was considered lawful to employ any water from a living spring or running stream, but not such as had passed through pipes. When used for sacrificial purposes it was mixed with *muries*, that is, salt which had been pounded in a mortar, thrown into an earthen jar and baked in an oven. (Ovid. *Fast.* iii. 11; Propert. iv. 4. 15; Plut. *Num.* 13; Fest. s. v. *Muries*.) They assisted moreover at all great public holy rites, such as the festivals of the Bona Dea (Dion Cass. xxxvii. 45) and the consecration of temples (Tacit. *Hist.* iv. 53), they were invited to priestly banquets (Macrob. ii. 9; Dion Cass. xlvii. 19), and we are told that they were present at the solemn appeal to the gods made by Cicero during the conspiracy of Catiline. (Dion Cass. xxxvii. 35.) They also guarded the sacred relics which formed the *fatale pignus imperii*, the pledge granted by fate for the permanency of the Roman sway, deposited in the inmost adytum (*pomus Vestae*, see Festus, s. v.) which no one was permitted to enter save the virgins and the chief pontifex. What this object was no one knew, some supposed that it was the Palladium, others the Samothracian gods carried by Dardanus to Troy and transported from thence to Italy by Aeneas, but all agreed in believing that something of awful sanctity was here preserved, contained, it was said, in a small earthen jar closely sealed, while another exactly similar in form, but empty, stood by its side. (Dionys. i. 69, ii. 66; Plut. *Camill.* 20; Liv. xxvi. 27; Lamprid. *Elagab.* 6; Ovid. *Fast.* vi. 365; Lucan, ix. 994.)

We have seen above that supreme importance was attached to the purity of the Vestals, and a terrible punishment awaited her who violated the vow of chastity. According to the law of Numa she was simply to be stoned to death (Cedrenus, *Hist. Comp.* p. 148, or p. 259, ed. Bekker), but a more cruel torture was devised by Tarquinius Priscus (Dionys. iii. 67; Zonaras, vii. 8) and inflicted from that time forward. When condemned by the college of pontifices, she was stripped of her vittae and other badges of office, was scourged (Dionys. ix. 40), was attired like a corpse, placed in a close litter and borne through the forum at-

tended by her weeping kindred, with all the ceremonies of a real funeral, to a rising ground called the *Campus Sceleratus*, just within the city walls, close to the Colline gate. There a small vault underground had been previously prepared, containing a couch, a lamp, and a table with a little food. The Pontifex Maximus, having lifted up his hands to heaven and uttered a secret prayer, opened the litter, led forth the culprit, and placing her on the steps of the ladder which gave access to the subterranean cell, delivered her over to the common executioner and his assistants, who conducted her down, drew up the ladder, and having filled the pit with earth until the surface was level with the surrounding ground, left her to perish deprived of all the tributes of respect usually paid to the spirits of the departed. In every case the paramour was publicly scourged to death in the forum. (Plut. *Nem.* 10, *Fab. Max.* 18, *Quaest. Rom.* vol. vii. p. 154, ed. Reiske; Dionys. ii. 67, iii. 67, viii. 83, ix. 40; Liv. iv. 44, viii. 15, xxii. 57; Plin. *Ep.* iv. 11; Suet. *Dom.* 8; Dion Cass. lxxvii. 3, lxxvii. 16, and fragg. xci. xcii.; Festus s. v. *Probrum et Sceleratus Campus*.)

But if the labours of the Vestals were unremitting and the rules of the order rigidly and pitilessly enforced, so the honours they enjoyed were such as in a great measure to compensate for their privation. They were maintained at the public cost and from sums of money and land bequeathed from time to time to the corporation. (Suet. *Octav.* 31, *Tib.* 76; Sicul. *Flacc.* 23, ed. Goes.) From the moment of their consecration they became as it were the property of the goddess alone, and were completely released from all parental sway without going through the form of *emancipatio* or suffering any *capitis deminutio*. (Gell. i. 11.) They had a right to make a will, and to give evidence in a court of justice without taking an oath (Gell. x. 15), distinctions first conceded by an Horatian law to a certain Caia Tarratia or Fufetia, and afterwards communicated to all. (Gell. i. 12; Gaius, i. 145; compare Plin. *H. N.* xxxiv. 11.) From the time of the triumviri each was preceded by a licitor when she went abroad (Dion Cass. xlvii. 19), consuls and praetors made way for them, and lowered their fasces (Senec. *Controv.* vi. 8; compare Plut. *Tib. Gracch.* 15), even the tribunes of the plebs respected their holy character (Oros. v. 4; Suet. *Tib.* 2; compare Cic. *pro Cael.* 14; Val. Max. v. 4. § 6), and if any one passed under their litter he was put to death. (Plut. *Nem.* 10.) Augustus granted to them all the rights of matrons who had borne three children (Dion Cass. lvi. 10; Plut. *L. c.*), and assigned them a conspicuous place in the theatre (Suet. *Octav.* 44; Tacit. *Ann.* iv. 16), a privilege which they had enjoyed before at the gladiatorial shows. (Cic. *pro Murm.* 35.) Great weight was attached to their intercession on behalf of those in danger and difficulty, of which we have a remarkable example in the entreaties which they addressed to Sulla on behalf of Julius Caesar (Suet. *Jul.* 1; compare Cic. *pro Font.* 17; Suet. *Vitell.* 16, Dion Cass. lrv. 18; Tacit. *Ann.* iii. 69, xi. 32, *Hist.* iii. 81), and if they chanced to meet a criminal as he was led to punishment they had a right to demand his release, provided it could be proved that the encounter was accidental. Willa, even those of the emperors were committed to their charge (Suet. *Jul.* 83, *Octav.* 101; Tacit. *Ann.* i. 8), for when in such

keeping they were considered inviolable (Plut. *Anton.* 58); and in like manner very solemn treaties, such as that of the triumvirs with Sextus Pompeius, were placed in their hands. (Appian, *B. C.* v. 73; Dion Cass. xlviii. 37 and 46; compare xlviii. 12.) That they might be honoured in death as in life, their ashes were interred within the pomerium. (Serr. *ad Virg. Aen.* xi. 206.)

They were attired in a stola over which was an upper vestment made of linen (Val. Max. i. 1. § 7; Dionys. ii. 68; Plin. *Ep.* iv. 11), and in addition to the Infula and white woollen Vitta they wore when sacrificing a peculiar head-dress called *suffibulum*, consisting of a piece of white cloth bordered with purple, oblong in shape, and secured by a clasp. (Festus, s. v. *Suffibulum*.) In dress and general deportment they were required to observe the utmost simplicity and decorum, any fanciful ornaments in the one or levity in the other being always regarded with disgust and suspicion. (Liv. iv. 44, viii. 15; Plin. *Ep.* iv. 11; Ovid. *Fast.* iv. 285.) We infer from a passage in Pliny (*H. N.* xvi. 85) that their hair was cut off, probably at the period of their consecration; whether this was repeated from time to time does not appear, but they are never represented with flowing locks. The first of the following cuts, copied from a gem (Montfaucon, *Ant. Exp.* i. pl. xxviii., *Supplem.* i. pl. xxiii.), represents the Vestal Tuccia who when wrongfully accused appealed to the goddess to vindicate her honour, and had power given her to carry a sieve full of water from the Tiber to the temple. (Val. Max. viii. 1. § 5; Plin. *H. N.* xxviii. 2.) The form of the upper garment is

here well seen. The second is from a denarius of the gens Clodia, representing upon the reverse a female priestess with a simpulum in her hand, and bearing the legend *VESTALIS*; on the obverse is a head of Flora with the words *C. CLODIVS C. F.* Two Vestals belonging to this gens were celebrated in the Roman Annals. (See Ovid. *Fast.* iv. 279; Suet. *Tib.* 2; Augustin. *de Civ. Dei.* x. 16; Herodian. i. 11.) [TRIUMPHUS, p. 1165, a.] The coin seems to have been struck to commemorate the splendour of the Floralia as exhibited during the famous aedileship of C. Clodius Pulcher B. C. 99. (Cic. *de Off.* ii. 16, c. *Verr.* iv. 2; Plin. *H. N.* xxxv. 4.)

(Lipatus, *de Vesta et Vestalibus Syntagma*, and Noehden, "On the worship of Vesta, &c. Clas-

sical Journal, vol. xv. 123, vol. xvi. 321," have collected most of the authorities on this subject; Götting, *Geschichte der Römisch. Staatsverfassung*, p. 189.) [W. R.]

VIAE. Three words are employed by the Roman jurists to denote a road, or a right of road, *Iter, Actus, Via*. The different meanings of these three words are given under *SERVITUTES*, p. 1032.

We next find *Viae* divided into *privatas* or *agrarias* and *publicas*, the former being those the use of which was free while the soil itself remained private property, the latter those of which the use, the management, and the soil were alike vested in the state. *Viae Vicinales* (*quas in vicis sunt vel quas in vicis ducunt*), being country cross-roads merging in the great lines, or at all events not leading to any important terminus, might be either *publicas* or *privatas* according as they were formed and maintained at the cost of the state or by the contributions of private individuals. (Dig. 43. tit. 8. s. 2. § 21, 22; tit. 7. s. 3; Sicul. Flacc. *de Cond. Agr.* p. 9, ed. Goes.) The *Viae publicas* of the highest class were distinguished by the epithets *militares*, *consulares*, *praetoriae*, answering to the terms *δοδοι βασιλικαί* among the Greeks and *king's highway* among ourselves.

That public roads of some kind must have existed from the very foundation of the city is manifest, but as very little friendly intercourse existed with the neighbouring states for any length of time without interruption, they would in all probability not extend beyond the narrow limits of the Roman territory, and would be mere muddy tracks used by the peasants in their journeys to and from market. It was not until the period of the long protracted Samnite wars that the necessity was strongly felt of securing an easy, regular, and safe communication between the city and the legions, and then for the first time we hear of those famous paved roads, which, in after ages, keeping pace with the progress of the Roman arms, connected Rome with her most distant provinces, constituting not only the most useful, but the most lasting of all her works. (Strabo, v. p. 235.) The excellence of the principles upon which they were constructed is sufficiently attested by their extraordinary durability, many specimens being found in the country around Rome which have been used without being repaired for more than a thousand years, and are still in a high state of preservation.

The Romans are said to have adopted their first ideas upon this subject from the Carthaginians (Isidor. xv. 16. § 6), and it is extremely probable that the latter people may, from their commercial activity, and the sandy nature of their soil, have

been compelled to turn their attention to the best means of facilitating the conveyance of merchandise to different parts of their territory. It must not be imagined, however, that the Romans employed from the first the elaborate process which we are about to describe. The first step would be from the *Via Terrena* (Dig. 43. tit. 11. s. 2), the mere track worn by the feet of men and beasts and the wheels of waggons across the fields, to the *Via Glareata*, where the surface was hardened by gravel; and even after pavement was introduced the blocks seem originally to have rested merely on a bed of small stones. (Liv. xli. 27; compare Liv. x. 23. 47.)

Livy has recorded (ix. 29) that the censorship of Appius Caecus (B.C. 312) was rendered celebrated in after ages from his having brought water into the city and paved a road (*quod viam munivit et aquam in urbem perduxit*), the renowned *Via Appia*, which extended in the first instance from Rome to Capua, although we can scarcely suppose that it was carried so great a distance in a single lustrum. (Niebuhr, *Röm. Gesch.* iii. p. 356.) We undoubtedly hear long before this period of the *Via Latina* (Liv. ii. 39), the *Via Gabina* (Liv. ii. 11, iii. 6, v. 49), and the *Via Salaria* (Liv. vii. 9), &c.; but even if we allow that Livy does not employ these names by a sort of prolepsis, in order to indicate conveniently a particular direction (and that he does speak by anticipation when he refers to milestones in some of the above passages is certain), yet we have no proof whatever that they were laid down according to the method afterwards adopted with so much success. (Compare Liv. vii. 89.)

Vitruvius enters into no details with regard to road-making, but he gives most minute directions for pavements, and the fragments of ancient pavements still existing and answering to his description correspond so exactly with the remains of the military roads, that we cannot doubt that the processes followed in each case were identical, and thus Vitruvius (vii. 1), combined with the poem of Statius (Silv. iv. 3), on the *Via Domitiana*, will supply all the technical terms.

In the first place, two shallow trenches (*sulci*) were dug parallel to each other, marking the breadth of the proposed road; this in the great lines, such as the *Via Appia*, the *Via Flaminia*, the *Via Valeria*, &c., is found to have been from 13 to 15 feet, the *Via Tusculana* is 11, while those of less importance, from not being great thoroughfares, such as the *Via* which leads up to the temple of Jupiter Latiaris, on the summit of the Alban Mount, and which is to this day singularly perfect, seem to have been exactly 8 feet wide. The loose earth between the *sulci* was then removed, and the excavation continued until a solid foundation (*gremium*) was reached, upon which the materials of the road might firmly rest; if this could not be attained, in consequence of the swampy nature of the ground or from any peculiarity in the soil, a basis was formed artificially by driving piles (*fistulationibus*). Above the *gremium* were four distinct strata. The lowest course was the *statumen*, consisting of stones not smaller than the hand could just grasp; above the *statumen* was the *rudus*, a mass of broken stones cemented with lime, (what masons call *rubble-work*), rammed down hard and nine inches thick; above the *rudus* came the *nucleus*, composed of fragments of bricks and pottery, the

pieces being smaller than in the *rudus*, cemented with lime and six inches thick. Uppermost was the *pavimentum*, large polygonal blocks of the hardest stone (*silex*), usually, at least in the vicinity of Rome, basaltic lava, irregular in form but fitted and jointed with the greatest nicety (*apud iungitur arte silex*, Tibull. i. 7. 60) so as to present a perfectly even surface, as free from gaps or irregularities as if the whole had been one solid mass, and presenting much the same external appearance as the most carefully built polygonal walls of the old Pelasgian towns. The general aspect will be understood from the cut given below of a portion of the street at the entrance of Pompeii. (Massie, *Les Ruines de Pompéi*, vol. i. pl. xxxvii.)

The centre of the way was a little elevated so as to permit the water to run off easily, and hence the terms *aggor vias* (Isidor. xv. 16. § 7; Ammian. Marcellin. xix. 16; compare Virg. *Aen.* v. 273); and *summam dorsum* (Stat. l. c.), although both may be applied to the whole surface of the pavement. Occasionally, at least in cities, rectangular slabs of softer stone were employed instead of the irregular polygons of *silex*, as we perceive to have been the case in the forum of Trajan, which was paved with travertine, and in part of the great forum under the column of Phocas, and hence the distinction between the phrases *silex sternere* and *saxo quadrato sternere*. (Liv. x. 23, xli. 27.) It must be observed, that while on the one hand recourse was had to piling, when a solid foundation could not otherwise be obtained, so, on the other hand, when the road was carried over rock, the *statumen* and the *rudus* were dispensed with altogether, and the *nucleus* was spread immediately on the stony surface previously smoothed to receive it. This is seen to have been the case, we are informed by local antiquaries, on the *Via Appia*, below Albano, where it was cut through a mass of volcanic peperino.

Nor was this all. Regular foot-paths (*Margines*, Liv. xli. 27, *crepidines*, Petron. 9; Orelli, *Inscrip.* n. 3844; *ambones*, Stat. Silv. iv. 3. 47) were raised upon each side and strewn with gravel, the different parts were strengthened and bound together with *gompfi* or stone wedges (Stat. l. c.), and stone blocks were set up at moderate intervals

on the side of the foot-paths, in order that travellers on horseback might be able to mount without the aid of an ἀναβάλευς to hoist them up. (Plut. C. Gracch. 7.) [STRATORES.]

Finally, C. Gracchus (Plut. L. c.) erected milestones along the whole extent of the great highways, marking the distances from Rome, which appear to have been counted from the gate at which each road issued forth. The passage of Plutarch, however, may only mean that Gracchus erected milestones on the roads which he made or repaired; for it is probable that milestones existed much earlier. [MILLIARE.] Augustus, when appointed inspector of the viae around the city, erected in the forum a gilded column (χρυσοῦν μίλιον—*χρυσοῦς κίλιον*, *milliarium aureum*, Dion Cass. liv. 8; Plin. H. N. iii. 5; Suet. Oth. 6; Tacit. Hist. i. 27), on which were inscribed the distances of the principal points to which the viae conducted. Some have imagined, from a passage in Plutarch (*Galb.* 24), that the distances were calculated from the *milliarium aureum*, but this seems to be disproved both by the fact that the roads were all divided into miles by C. Gracchus nearly two centuries before, and also by the position of various ancient milestones discovered in modern times. (See Holsten. *de Milliaro Aureo* in Græv. *Thes. Antiq. Rom.* vol. iv. and Fabretti *de Aquis et Aqueductis*, Diss. iii. n. 25.)

It is certain that during the earlier ages of the republic the construction and general superintendence of the roads without, and the streets within, the city, were committed like all other important works to the censors. This is proved by the law quoted in Cicero (*de Leg.* iii. 3), and by various passages in which these magistratus are represented as having first formed and given their names to great lines, such as the Via Appia and the Via Flaminia, or as having executed important improvements and repairs. (Liv. ix. 29, 43, *Epit.* 20, xxii. 11, xli. 27; Aurel. Vict. *de Viris illust.* c. 72; Lipsæ. *Excurs. ad Tac. Ann.* iii. 31.) These duties, when no censors were in office, devolved upon the consuls, and in their absence on the Prætor Urbanus, the Aediles, or such persons as the senate thought fit to appoint. (Liv. xxxix. 2; Cic. *a. Verr.* i. 48, 50, 59.) But during the last century of the commonwealth the administration of the roads, as well as of every other department of public business, afforded the tribunes a pretext for popular agitation. C. Gracchus, in what capacity we know not, is said to have exerted himself in making great improvements, both from a conviction of their utility and with a view to the acquirement of popularity (Plut. C. Gracch. 7), and Curio, when tribune, introduced a *Lex Viaria* for the construction and restoration of many roads and the appointment of himself to the office of inspector (ἐπιστάτης) for five years. (Appian. B. C. ii. 26; Cic. *ad Fam.* viii. 6.) We learn from Cicero (*ad Att.* i. 1), that Thermus, in the year a. c. 65, was *Curator* of the Flaminian Way, and from Plutarch (*Cæs.* 5), that Julius Caesar held the same office (ἐπιμελητής) with regard to the Appian Way, and laid out great sums of his own money upon it, but by whom these appointments were conferred we cannot tell. During the first years of Augustus, Agrippa, being ædile, repaired all roads at his own proper expense; subsequently the emperor, finding that the roads had fallen into disrepair through neglect, took upon himself the

restoration of the Via Flaminia as far as Ariminum, and distributed the rest among the most distinguished men in the state (*triumphalibus viris*), to be paved out of the money obtained from spoils (*ex manubiali pecunia sternendas*, Suet. Octav. 30; Dion Cass. liii. 22). In the reign of Claudius we find that this charge had fallen upon the quaestors, and that they were relieved of it by him, although some give a different interpretation to the words. (Suet. Claud. 24.) Generally speaking, however, under the empire, the post of inspector-in-chief (*curator*),—and each great line appears to have had a separate officer with this appellation,—was considered a high dignity (Plin. *Ep.* v. 15), inasmuch that the title was frequently assumed by the emperors themselves, and a great number of inscriptions are extant, bearing the names of upwards of twenty princes from Augustus to Constantine, commemorating their exertions in making and maintaining public ways. (Gruter, *Corp. Inscript.* cxlix. cxlix.)

These *curatores* were at first, it would appear, appointed upon special occasions, and at all times must have been regarded as honorary functionaries rather than practical men of business. But from the beginning of the sixth century of the city there existed regular commissioners, whose sole duty appears to have been the care of the ways, four (*quatuorviri viarum*) superintending the streets within the walls, and two the roads without. (Dig. 1. tit. 2. a. 2. § 30, compared with Dion Cass. liv. 26.) When Augustus remodelled the inferior magistracies he included the former in the vigintivirate, and abolished the latter; but when he undertook the care of the viae around the city, he appointed under himself two *road-makers* (δοκοποιούς, Dion Cass. liv. 8), persons of praetorian rank, to whom he assigned two lictors. These were probably included in the number of the new superintendents of public works instituted by him (Suet. Octav. 37), and would continue from that time forward to discharge their duties, subject to the supervision and control of the *curatores* or inspectors-general.

Even the contractors employed (*manicipes*, Tacit. Ann. ii. 31) were proud to associate their names with these vast undertakings, and an inscription has been preserved (Orell. *Inscript.* n. 3221) in which a wife, in paying the last tribute to her husband, inscribes upon his tomb MANCIPI VIAE APPIAE. The funds required were of course derived, under ordinary circumstances, from the public treasury (Dion Cass. liii. 22; Sicul. Flacc. *de cond. agr.* p. 9, ed. Goes.), but individuals also were not unfrequently found willing to devote their own private means to these great national enterprises. This, as we have already seen, was the case with Caesar and Agrippa, and we learn from inscriptions that the example was imitated by many others of less note. (e. g. Gruter, clxi. n. 1 and 2.) The *Viae Vicinales* were in the hands of the rural authorities (*magistri pagorum*), and seem to have been maintained by voluntary contribution or assessment, like our parish roads (Sicul. Flacc. p. 9), while the streets within the city were kept in repair by the inhabitants, each person being answerable for the portion opposite to his own house. (Dig. 43. tit. 10. a. 3.)

Our limits preclude us from entering upon so large a subject as the history of the numerous military roads which intersected the Roman dominions. We shall content ourselves with simply mentioning those which issued from Rome, together with their

most important branches within the bounds of Italy, naming at the same time the principal towns through which they passed, so as to convey a general idea of their course. For all the details and controversies connected with their origin, gradual extensions, and changes, the various stations upon each, the distances, and similar topics, we must refer to the treatises enumerated at the close of this article, and to the researches of the local antiquaries, the most important of whom, in so far as the southern districts are concerned, is Romanelli.

Beginning our circuit of the walls at the *Porta Capena*, the first in order, as in dignity, is,

I. The *VIA APPIA*, the *Great South Road*. It was commenced, as we have already stated, by Appius Claudius Caecus, when censor, and has always been the most celebrated of the Roman Ways. It was the first ever laid down upon a grand scale and upon scientific principles, the natural obstacles which it was necessary to overcome were of the most formidable nature, and when completed it well deserved the title of *Queen of Roads* (*regina viarum*, Stat. Sil. ii. 2, 12). We know that it was in perfect repair when Procopius wrote (*Bell. Goth.* i. 14), long after the devastating inroads of the northern barbarians; and even to this day the cuttings through hills and masses of solid rock, the filling up of hollows, the bridging of ravines, the substructions to lessen the rapidity of steep descents, and the embankments over swamps, demonstrate the vast sums and the prodigious labour that must have been lavished on its construction. It issued from the *Porta Capena*, and passing through *Aricia*, *Tres Tabernae*, *Appii Forum*, *Tarracina*, *Fundi*, *Formiae*, *Minturnae*, *Sinuessae*, and *Casilinum*, terminated at *Capua*, but was eventually extended through *Colatiae* and *Caudium* to *Beneventum*, and finally from thence through *Venusia*, *Tarentum*, and *Uria*, to *Brundisium*.

The ramifications of the *Via Appia* most worthy of notice, are.

(1.) The *VIA SETINA*, which connected it with *Setia*. Originally it would appear that the *Via Appia* passed through *Velitras* and *Setia*, avoiding the marshes altogether, and travellers, to escape this circuit, embarked upon the canal, which in the days of Horace traversed a portion of the swamps.

(2.) The *VIA DOMITIANA* struck off at *Sinuessae*, and keeping close to the shore passed through *Liternum*, *Cumae*, *Puteoli*, *Neapolis*, *Herculanum*, *Oplonti*, *Pompeii*, and *Stabiae* to *Surrentum*, making the complete circuit of the bay of Naples.

(3.) The *VIA CAMPANA* or *CONSULARIS* from *Capua* to *Cumae* sending off a branch to *Puteoli* and another through *Atella* to *Neapolis*.

(4.) The *VIA AQUILLIA* began at *Capua* and ran south through *Nola* and *Nuceria* to *Salernum*, from thence, after sending off a branch to *Paestum*, it took a wide sweep inland through *Eburi* and the region of the *Mons Alburnus* up the valley of the *Tanager*; it then struck south through the very heart of *Lucania* and *Bruttium*, and passing *Nerulum*, *Interamnia* and *Cosentia*, returned to the sea at *Vibo*, and thence through *Medma* to *Rhegium*. This road sent off a branch near the sources of the *Tanager*, which ran down to the sea at *Blanda* on the *Laus Sinus* and then continued along the whole line of the *Bruttian* coast through *Laus* and *Terina* to *Vibo*, where it joined the main stem.

(5.) The *VIA EGNATIA* began at *Beneventum*, struck north through the country of the *Hirpini* to

Equotium, entered *Apulia* at *Adcae*, and passing through *Herdonia*, *Canusium*, and *Rubi*, reached the *Adriatic* at *Barium* and followed the coast through *Egnatia* to *Brundisium*. This was the route followed by Horace. It is doubtful whether it bore the name given above in the early part of its course.

(6.) The *VIA TRAJANA* began at *Vesuvius* and ran in nearly a straight line across *Lucania* to *Heraclea* on the *Sinus Tarentinus*, thence following southwards the line of the east coast it passed through *Thuri*, *Oroto*, and *Scyllacium*, and completed the circuit of *Bruttium* by meeting the *Via Aquillia* at *Rhegium*.

(7.) A *VIA MINUCIA* is mentioned by Cicero (*ad Att.* ix. 6), and a *VIA NUMICIA* by Horace (*Epist.* i. 18. 20), both of which seem to have passed through *Sannium* from north to south, connecting the *Valerian* and *Aquillian* and cutting the *Appian* and *Latin* ways. Their course is unknown. Some believe them to be one and the same.

Returning to Rome, we find issuing from the *porta Capena*, or a gate in its immediate vicinity

II. The *VIA LATINA*, another great line leading to *Beneventum*, but keeping a course farther inland than the *Via Appia*. Soon after leaving the city it sent off a short branch (*VIA TUSCULANA*) to *Tusculum*, and passing through *Compitum Anagninum*, *Ferentinum*, *Frasino*, *Fregellae*, *Fabratia*, *Aquinum*, *Casinum*, *Venafrum*, *Teanum*, *Alifanum*, and *Telesia*, joined the *Via Appia* at *Beneventum*.

A cross-road called the *VIA HADRIANA*, running from *Minturnae* through *Suessa Aurunca* to *Teanum*, connected the *Via Appia* with the *Via Latina*.

III. From the *Porta Esquilina* issued the *VIA LABICANA*, which passing *Labicum* fell into the *Via Latina* at the station *ad Bivium* 30 miles from Rome.

IV. The *VIA PRAENESTINA*, originally the *VIA GABINA*, issued from the same gate with the former. Passing through *Gabii* and *Prænestae*, it joined the *Via Latina* just below *Anagnina*.

V. Passing over the *VIA COLLATINA* as of little importance, we find the *VIA TIBURTINA*, which issued from the *Porta Tiburtina*, and proceeding N. E. to *Tiber*, a distance of about 20 miles, was continued from thence, in the same direction, under the name of the *VIA VALERIA*, and traversing the country of the *Sabines* passed through *Caracoli* and *Corfinium* to *Aternum* on the *Adriatic*, thence to *Adria*, and so along the coast to *Castrum Truentinum*, where it fell into the *Via Salaria*.

A branch of the *Via Valeria* led to *Sublaqueum*, and was called *VIA SUBLACENSIS*. Another branch extended from *Adria* along the coast southwards through the country of *Frentani* to *Larinum*, being called, as some suppose, *VIA FRENTANA APPULA*.

VI. The *VIA NONENTANA*, anciently *FULCINENSIS*, ran from the *porta Collina*, crossed the *Anio* to *Nomentum*, and a little beyond fell into the *Via Salaria* at *Eretum*.

VII. The *VIA SALARIA*, also from the *porta Collina* (passing *Fidenae* and *Crustumerium*) ran north and east through *Sabinum* and *Picenum* to *Reate* and *Aculum Picenum*. At *Castrum Truentinum* it reached the coast, which it followed until it joined the *Via Flaminia* at *Ancona*.

VIII. Next comes the *VIA FLAMINIA*, the *Great North Road* commenced in the censorship of C. Flaminius and carried ultimately to *Ariminum*.

It issued from the *Porta Flaminia* and proceeded nearly north to *Oriculum* and *Narnia* in Umbria. Here a branch struck off, making a sweep to the east through *Interamna* and *Spolegium*, and fell again into the main trunk (which passed through *Mevania*) at *Fulginea*. It continued through *Fanum Flaminii* and *Nuceria*, where it again divided, one line running nearly straight to *Fanum Fortunae* on the Adriatic, while the other diverging to *Ancona* continued from thence along the coast to *Fanum Fortunae*, where the two branches uniting passed on to *Ariminum* through *Pisaurum*. From thence the *Via Flaminia* was extended under the name of the *VIA AEMILIA* and traversed the heart of Cisalpine Gaul through *Bononia*, *Mutina*, *Parma*, *Placentia* (where it crossed the Po) to *Mediolanum*. From this point branches were sent off through *Bergomum*, *Brixia*, *Verona*, *Vicentia*, *Patavium* and *Aquileia* to *Tergeste* on the east, and through *Novaria*, *Vercelli*, *Eporedia* and *Augusta Praetoria* to the *Alpis Graia* on the west, besides another branch in the same direction through *Viennam* and *Indutrium* to *Augusta Taurinorum*. Nor must we omit the *VIA POSTUMIA*, which struck from *Verona* right down across the Apennines to *Genoa*, passing through *Mantua* and *Cremona*, crossing the Po at *Placentia* and so through *Iria*, *Dertona* and *Libarna*, sending off a branch from *Dertona* to *Asta*.

Of the roads striking out of the *Via Flaminia* in the immediate vicinity of Rome the most important is the *VIA CASSIA*, which diverging near the *Pons Mulvius* and passing not far from *Veii* traversed Etruria through *Baccanæ*, *Sutrium*, *Vulsinii*, *Clusium*, *Arretium*, *Florentia*, *Pistoria*, and *Luca*, joining the *Via Aurelia* at *Luna*.

(a) The *VIA AMERINA* broke off from the *Via Cassia* near *Baccanæ*, and held north through *Falerii*, *Tuder*, and *Perusia*, re-uniting itself with the *Via Cassia* at *Clusium*.

(b) Not far from the *Pons Mulvius* the *VIA CLODIA* separated from the *Via Cassia*, and proceeding to *Sabate* on the *Lacus Sabatinus* there divided into two, the principal branch passing through central Etruria to *Rusellæ* and thence due north to *Florentia*, the other passing through *Tarquinius* and then falling into the *Via Aurelia*.

(c) Beyond *Baccanæ* the *VIA CIMINA* branched off, crossing the *Mons Ciminus* and rejoining the *Via Cassia* near *Fanum Voltumnae*.

IX. The *VIA AURELIA*, the Great Coast Road, issued originally from the *Porta Janiculensis* and subsequently from the *Porta Aurelia*. It reached the coast at *Alisum* and followed the shore of the lower sea along Etruria and Liguria by *Genoa* as far as *Forum Julii* in Gaul. In the first instance it extended no farther than *Pisa*.

X. The *VIA PORTUENSIS* kept the right bank of the Tiber to *Portus Augusti*.

XI. The *VIA OSTIENSIS* originally passed through the *Porta Trigemina*, afterwards through the *Porta Ostiensis*, and kept the left bank of the Tiber to *Ostia*. From thence it was continued under the name of *VIA SEVERIANA* along the coast southward through *Laurentum*, *Antium*, and *Circaei*, till it joined the *Via Appia* at *Tarracina*. The *VIA LAURENTINA*, leading direct to *Laurentum*, seems to have branched off from the *Via Ostiensis* at a short distance from Rome.

XII. Lastly, the *VIA ARDEATINA* from Rome to *Ardea*. According to some this branched off from the *Via Appia*.

Alphabetical Table of the Viae described above.

1. Via Aemilia VIII.	20. Via Labicana III.
2. " Appia I.	21. " Latina II.
3. " Aquilia I. (4.)	22. " Laurentina XI.
4. " Amerina VIII. (a.)	23. " Minucia I. (7.)
5. " Ardeatina XII.	24. " Nomentana VI.
6. " Aurelia IX.	25. " Numicia I. (7.)
7. " Campana I. (8.)	26. " Ostiensis XI.
8. " Cassia VIII.	27. " Portuensis X.
9. " Cimina VIII. (c.)	28. " Postumia VIII.
10. " Clodia VIII. (d.)	29. " Praenestina IV.
11. " Collatina V.	30. " Salaria VII.

18. " Gabina IV.	37. " Valeria V.
19. " Hadriana II.	

The most elaborate treatise upon Roman Roads is Bergier, *Histoire des Grands Chemins de l'Empire Romain*, published in 1622. It is translated into Latin in the tenth volume of the *Thesaurus* of Graevius, and with the notes of Henninius occupies more than 800 folio pages. In the first part of the above article the essay of Nibby, *Delle Vie degli Antichi dissertazione*, appended to the fourth volume of the fourth Roman edition of Nardini, has been closely followed. Considerable caution, however, is necessary in using the works of this author, who although a profound local antiquary, is by no means an accurate scholar. To gain a knowledge of that portion of the subject so lightly touched upon at the close of the article, it is necessary to consult the various commentaries upon the *Tabula Peutingeriana* and the different ancient Itineraries, together with the geographical works of Collarius, Cluverius, and D'Anville. [W. R.]

VIA TICUM (ἡφθίον) is, properly speaking, every thing necessary for a person setting out on a journey, and thus comprehends money, provisions, dresses, vessels, &c. (*Plant. Epid.* v. l. 9; *Plin. Epist.* vii. 12; *Cic. de Senect.* 18.) When a Roman magistrate, praetor, proconsul, or quaestor went to his province, the state provided him with all that was necessary for his journey. But as the state in this as in most other cases of expenditure preferred paying a sum at once to having any part in the actual business, the state engaged contractors (*redemptores*), who for a stipulated sum had to provide the magistrates with the viaticum, the principal parts of which appear to have been beasts of burden and tents (*mulæ et tabernacula*). Julius Caesar introduced some modification of this system, by his *Lex De Repetundis* [*REPETUNDÆ*]; and Augustus once for all fixed a certain sum to be given to the proconsuls (probably to other provincial magistrates also) on setting out to their provinces, so that the redemptores had no more to do with it. (*Cic. ad Fam.* xii. 3; *Suet. Aug.* 36; *Gellius*, xvii. 2, 13; comp. *Signonius, de Antiq. Jure Provinc.* iii. 11; *Casaubon ad Theophrast.* 11.) [L. S.]

VIA TOR was a servant who attended upon and executed the commands of certain Roman magistrates, to whom he bore the same relation as the lictor did to other magistrates. The name *viator* was derived from the circumstance of their being chiefly employed on messages either to call upon senators to attend the meeting of the senate, or to summon the people to the comitia, &c. (*Cic. de Senect.* 16.) In the earlier times of the republic we find viatores as ministers of such magistrates also as had their lictors: viatores of a dictator and of the consuls are mentioned by Livy (vi. 15, xxii.

11; comp. Plin. *H. N.* xviii. 4; Liv. viii. 18). In later times however viatores are only mentioned with such magistrates as had only potestas and not imperium, such as the tribunes of the people, the censors, and the aediles. They were, in short, the attendants of all magistrates who had the *jus prendendi*. (Gell. xiii. 12; Liv. ii. 56, xxx. 39, xxxix. 34; Lydus, *de Magistr.* i. 44.) How many viatores attended each of these magistrates is not known; one of them is said to have had the right at the command of his magistrate to bind persons (*ligare*), whence he was called lictor. (Gell. xii. 3.) It is not improbable that the ancient writers sometimes confound viatores and lictores. (Sigonius, *de Ant. Jur. Civ. Romanorum*, ii. 15; Becker, *Handb. der Röm. Alterth.* vol. ii. pt. ii. p. 379.) [L. S.]

VICARII SERVI. [SARVUS, p. 1037, b.]

VICARIUS. [EXERCITUS, p. 504, a.]

VICESIMA, a tax of five per cent. Every Roman, when he manumitted a slave, had to pay to the state a tax of one-twentieth of his value, whence the tax was called *vicesima manumissionis*. This tax appears to have been levied from the earliest times, and was not abolished when all other imposts were done away with in Rome and Italy. (Liv. vii. 16, xxvii. 10; Cic. *Ad Att.* ii. 16.) Caracalla raised this tax to a *decima*, that is, ten per cent., but Macrinus again reduced it to the old standard. (Dion. Cass. lxxvii. 9, lxxviii. 12.) The persons employed in collecting it were called *Vicisimarii*. (Petron. *Fragm. Tragur.* 65; Orelli, *Inscript.* n. 3333, &c.)

A tax called *vicesima hereditatum et legatorum* was introduced by Augustus (*Lex Julia Vicesimariorum*): it consisted of five per cent. which every Roman citizen had to pay to the aerarium militare, upon any inheritance or legacy left to him, with the exception of such as were left to a citizen by his nearest relatives, and such as did not amount to above a certain sum. (Dion. Cass. lv. 25, lvi. 28; Plin. *Paneg.* 37, &c.; Capitol. *M. Antonin.* 11.) Peregrini and Latini who had become Roman citizens had, in a legal sense, no relative, and were therefore obliged in all cases to pay the *vicesima hereditatum*. (Plin. *Paneg.* l. c.) As only citizens had to pay this tax, Caracalla, in order to make it more productive, granted the franchise to all the subjects of the empire, and at the same time raised it to ten per cent. (*decima*), but Macrinus again reduced it to five (Dion. Cass. lxxvii. 9, lxxviii. 12), and at last it was abolished entirely. It was levied in Italy and the provinces by procurators appointed for the purpose, and who are mentioned in many inscriptions as PROCURATORES XX HEREDITATIUM, or AD VECTIGAL XX HEREDIT. But these officers generally sold it for a round sum to the publicani, which the latter had to pay in to the praefects of the aerarium militare. (Plin. *Epist.* vii. 14, *Paneg.* 37.) [L. S.]

VICOMAGISTRI. [VICUS.]

VICTIMA. [SACRIFICIUM.]

VICTORIATUS. [DENARIUS.]

VICUS is the name of the subdivisions into which the four regions occupied by the four city tribes of Servius Tullius were divided, while the country regions, according to an institution ascribed to Numa, were subdivided into Pagi. (Dionys. ii. 76.) This division, together with that of the four regions of the four city tribes, remained down to the time of Augustus, who made the vici subdivisions of the fourteen regions into which he divided

the city. (Suet. *Aug.* 30.) In this division each vicus consisted of one main street, including several smaller by-streets; their number was 424, and each was superintended by four officers, called *vicomagistri*, who had a sort of local police, and who, according to the regulation of Augustus, were every year chosen by lot from among the people who lived in the vicus. (Suet. l. c.; Dion. Cass. lv. 8.) On certain days, probably at the celebration of the compitalia, they wore the praetexta, and each of them was accompanied by two lictors. (Dion. Cass. l. c.; Ascon. *ad Cic. in Pison.* p. 7. ed. Orelli.) These officers, however, were not a new institution of Augustus, for they had existed during the time of the republic, and had had the same functions as a police for the vici of the Servian division of the city. (Liv. xxxiv. 7; Festus, s. v. *Magistrare*; comp. Sextus Rufus, *Breviarium de Regionibus Urbis Romae*; and P. Victor, *de Regionibus Urbis Romae*.) [L. S.]

VICUS. [UNIVERSITAS, p. 1216, a.]

VIGILES. [EXERCITUS, p. 510, a.]

VIGILIAE. [CASTRAS, p. 250, b.]

VIGINTISEXVIRI were twenty-six magistratus minores, among whom were included the triumviri capitales, the triumviri monetales, the quatuorviri viarum curandarum for the city, the two curatores viarum for the roads outside the city, the decemviri litibus (*stilibus*) judicandis, and the four praefects who were sent into Campania for the purpose of administering justice there. Augustus reduced the number of officers of this college to twenty (*vigintiviri*), as the two curatores viarum for the roads outside the city and the four Campanian praefects were abolished. (Dion. Cass. liv. 26.) Down to the time of Augustus the sons of senators had generally sought and obtained a place in the college of the vigintisexviri, it being the first step towards the higher offices of the republic; but in a. n. 13 a senatusconsultum was passed ordaining that only equites should be eligible to the college of the vigintiviri. The consequence of this was that the vigintiviri had no seats in the senate, unless they had held some other magistracy which conferred this right upon them. (Dion. Cass. l. c.) The age at which a person might become a vigintivir appears to have been twenty. (Compare Dion. Cass. lx. 5; Tacit. *Annal.* iii. 29, with Lipsius' note; Spart. *Did. Julian.* 1.) An account of the magistrates forming this college has been given in separate articles. [L. S.]

VIGINTIVIRI. [VIGINTISEXVIRI.]

VILLA, a farm or country-house. The Roman writers mention two kinds of villa, the *villa rustica* or farm-house, and the *villa urbana* or *parado-urbana*, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the *villa rustica*, in which the produce of the farm was kept, is distinguished by Columella by a separate name, *villa fructuaria*.

1. The *villa rustica* is described by Varro (*R. R.* i. 11, 13), Vitruvius (vi. 9), and Columella (i. 4 § 5).

The villa, which must be of size corresponding to that of the farm, is best placed at the foot of a wooded mountain, in a spot supplied with running water, and not exposed to severe winds nor to the effluvia of marshes, nor (by being close to a public

road) to a too frequent influx of visitors. The villa attached to a large farm had two courts (*cohortes, skortes, cortes*, Varro, i. 13). At the entrance to the outer court was the abode of the *villicus*, that he might observe who went in and out, and over the door was the room of the *procurator*. (Varro, l. c.; Colum. i. 6.) Near this, in as warm a spot as possible, was the kitchen, which, besides being used for the preparation of food, was the place where the slaves (*familias*) assembled after the labours of the day, and where they performed certain in-door work. Vitruvius places near the kitchen the baths and the press (*torcular*) for wine and oil, but the latter, according to Columella, though it requires the warmth of the sun, should not be exposed to artificial heat. In the outer court were also the cellars for wine and oil (*cellae vinarias et olearias*), which were placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These store-rooms form the separate *villa fructuaria* of Columella; Varro places them in the *villa rustica*, but Vitruvius recommends that all produce which could be injured by fire should be stored without the villa.

In both courts were the chambers (*cellae*) of the slaves, fronting the south; but the *ergastulum* for those who were kept in chains (*vincti*) was underground, being lighted by several high and narrow windows.

The inner court was occupied chiefly by the horses, cattle, and other live stock, and here were the stables and stalls (*stabilia, equilia, ovilia*).

A reservoir of water was made in the middle of each court, that in the outer court for soaking pulses and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

2. The *Villa urbana* or *pseudo-urbana* was so called because its interior arrangements corresponded for the most part to those of a town-house. [HOUSE.] Vitruvius (vi. 8) merely states that the description of the latter will apply to the former also, except that in the town the atrium is placed close to the door, but in the country the peristyle comes first, and afterwards the atrium, surrounded by paved porticoes, looking upon the palestra and ambulation.

Our chief sources of information on this subject are two letters of Pliny, in one of which (ii. 17) he describes his Laurentine villa, in the other (v. 6) his Tuscan, with a few allusions in one of Cicero's letters (*ad Quint.* iii. 1), and, as a most important illustration of these descriptions, the remains of a suburban villa at Pompeii. (*Pompeii*, ii. c. 11, Lond. 1832.)

The clearest account is that given by Pliny in the first of the two letters mentioned above, from which, therefore, the following description is for the most part taken.

The villa was approached by an avenue of plane trees leading to a portico, in front of which was a *xytus* divided into flower-beds by borders of box. This *xytus* formed a terrace, from which a grassy slope, ornamented with box-trees cut into the figures of animals, and forming two lines opposite to one another, descended till it was lost in the plain, which was covered with acanthus. (Plin. v. 6.) Next to the portico was an atrium, smaller and plainer than the corresponding apartment in a town-house. In this respect Pliny's description is

at variance with the rule of Vitruvius; and the villa at Pompeii also has no atrium. It would appear from Cicero (*l. c.*) that both arrangements were common. Next to the atrium in Pliny's Laurentine villa was a small elliptic peristyle (*porticus in O literas similitudinem circumactae*, where, however, the readings D and Δ are also given instead of O). The intervals between the columns of this peristyle were closed with tall windows (*specularibus*, see *Domus*, p. 432), and the roof projected considerably, so that it formed an excellent retreat in unfavourable weather. The open space in the centre of this peristyle seems often to have been covered with moss and ornamented with a fountain. Opposite to the middle of this peristyle was a pleasant *cavaedium*, and beyond it an elegant triclinium, standing out from the other buildings, with windows or glazed doors in the front and sides, which thus commanded a view of the grounds and of the surrounding country, while behind there was an uninterrupted view through the *cavaedium*, peristyle, atrium, and portico into the *xytus* and the open country beyond.

Such was the principal suite of apartments in Pliny's Laurentine villa. In the villa at Pompeii the arrangement is somewhat different. The entrance is in the street of the tombs. The portico leads through a small vestibule into a large square peristyle paved with *opus signinum*, and having an impluvium in the centre of its uncovered area. Beyond this is an open hall, resembling in form and position the *tablinum* in a town-house. Next is a long gallery extending almost across the whole width of the house, and beyond it is a large cysicene oecus, corresponding to the large triclinium in Pliny's villa. This room looks out upon a spacious court, which was no doubt a *xytus* or garden, and which is surrounded on all sides by a colonnade composed of square pillars, the top of which forms a terrace. In the farthest side of this court is a gate leading out to the open country. As the ground slopes downward considerably from the front to the back of the villa, the terrace just spoken of is on a level with the cysicene oecus, the windows of which opened upon it; and beneath the oecus itself is a range of apartments on the level of the large court, which were probably used in summer, on account of their coolness.

The other rooms were so arranged as to take advantage of the different seasons and of the surrounding scenery. Of these, however, there is only one which requires particular notice, namely, a state bed-chamber, projecting from the other buildings in an elliptic or semicircular form, so as to admit the sun during its whole course. This apartment is mentioned by Pliny, and is also found in the Pompeian villa. In Pliny's Laurentine villa its wall was fitted up as a library.

The villa contained a set of baths, the general arrangement of which was similar to that of the public baths. [BALNEAE.]

Attached to it were a garden, *ambulatio*, *gestatio*, *hippodromus*, *sphaisterium*, and in short all necessary arrangements for enjoying different kinds of exercise. [HORTUS; GYMNASIUM.]

(Becker, *Gallus*, vol. i. p. 268; Schneider's notes on Columella and Varro, and Gierig's on Pliny, contain many useful remarks.) [P. S.]

VILLICUS (*τίτροπος* in Greek writers, Plut. *Crass.* 4), a slave who had the superintendence

of the *villa rustica*, and of all the business of the farm, except the cattle, which were under the care of the *magister pecoris*. (Varro, *R. R.* i. 2.) The duties of the *villicus* were to obey his master implicitly, and to govern the other slaves with moderation, never to leave the villa except to go to market, to have no intercourse with soothsayers, to take care of the cattle and the implements of husbandry, and to manage all the operations of the farm. (Cato, *R. R.* 5. 142.) His duties are described at great length by Columella (xi. 1, and i. 8), and those of his wife (*villica*) by the same writer (xii. 1), and by Cato (c. 143).

The word was also used to describe a person to whom the management of any business was entrusted. (See the passage quoted in Forcellini's Lexicon.) [P. S.]

VINALIA. There were two festivals of this name celebrated by the Romans: the *Vinalia urbana* or *prioria*, and the *Vinalia rustica* or *altera*. The *vinalia urbana* were celebrated on the 23rd of April (ix. *Calend. Mai*). This festival answered to the Greek *πρωγία*, as on this occasion the wine casks which had been filled the preceding autumn were opened for the first time, and the wine tasted. (Plin. *H. N.* xviii. 69. § 3.) But before men actually tasted the new wine, a libation was offered to Jupiter (Fest. s. v. *Vinalia*), which was called *calpar*. (Fest. s. v. *Calpar*.)

The rustic *vinalia*, which fell on the 19th of August (xiv. *Calend. Sept.*) and was celebrated by the inhabitants of all Latium, was the day on which the vintage was opened. On this occasion the *flamen dialis* offered lambs to Jupiter, and while the flesh of the victims lay on the altar, he broke with his own hands a bunch of grapes from a vine, and by this act he, as it were, opened the vintage (*vindemiam auspicari*; Varro, *de Ling. Lat.* vi. 20), and no must was allowed to be conveyed into the city until this solemnity was performed. (Plin. *H. N.* xviii. 69. § 4.) This day was sacred to Jupiter, and Venus too appears to have had a share in it. (Varro, *l. c.*; *de Re Rust.* i. 1; Macrob. *Sat.* i. 4; Ovid, *Fast.* iv. 897, &c.) An account of the story which was believed to have given rise to the celebration of this festival is given by Festus (s. v. *Rustica vinalia*) and Ovid (*Fast.* iv. 863, &c.; compare Aurel. Vict. *de Orig. Gent. Rom.* 15). [L. S.]

VINDEMIA/LIS FERIA. [FERIAE, p. 530, a.]

VINDEX. [ACTIO, p. 11, a; MANUS INJECTIO.]

VINDICATIO. *Actiones In Rem* were called *Vindicationes*: *Actiones in Personam*, "quibus dari fieri oportere intendimus," were called *Conditiones*. (Gaius, iv. 5.) *Vindicationes* therefore were actions about the title to *res Corporales*, and to *Jura in re*. (Gaius, iv. 3.) The distinction between *Vindicationes* and *Conditiones* was an essential distinction which was not affected by the change in the form of procedure from the *Legis Actiones* to that of the *Formulae*. The *Legis Actiones* fell into disuse (Gaius, iv. 31) except in the case of *Damnum Infectum* and a *Judicium Centumvirale*, and from this time both *Vindicationes* and *Conditiones* were prosecuted by the *Formulae*. [ACTIO.] The peculiar process of the *Vindicatio* belonged to the period when the *Legis Actiones* were in force.

The five modes of proceeding *Lege* (Gaius, iv.

12), were *Sacramento*; *Per judicis postulationem*; *Per conditionem*; *Per manus injectionem*; *Per pignoris capionem*. [PER JUDICIS POSTULATIONEM; PER CONDITIONEM; MANUS INJECTIO; PER PIGNORIS CAPIONEM.]

A man might proceed *Sacramento* either in the case of an *Actio in personam* or an *Actio in rem*. The part of the process which contained the *sacramento contendere*, or the challenge to the deposit of a sum of money originally, and afterwards to the engagement to pay a penalty, was applicable both to an action in *personam* and an action in *rem*. The condition of the penalty was in fact the existence or non-existence of the right claimed by the plaintiff, whatever the right might be; and the process thus assumed the form of a suit for the penalty. It was the *Sacramentum* which gave to this form of action its peculiar character. When the parties were in *judicio*, they briefly stated their cases severally, which was called *causae coniectio*. If it was an *Actio in rem*, that is a *Vindicatio*, moveable things and moving things (*mobilia et moventia*) which could be brought before the Praetor (*in jus*), were claimed before the Praetor (*in jure vindicabatur*) thus: he who claimed a thing as his property (*qui vindicabat*), held a rod in his hand, and laying hold of the thing, it might be a slave or other thing, he said; "Hunc ego hominem ex jure Quiritium Meum esse aio secundum causam sicut dixi. Ecce tibi Vindicatam imposui;" and saying this he placed the rod on the thing. The other claimant (*adversarius*) did and said the same. This claiming of a thing as property by laying the hand upon it, was "in jure manum consecrare," a phrase as old as the XII Tables. (Gell. xx. 10.) The Praetor then said: "Mittite ambo hominem," and the claimants obeyed. Then he who had made the first *vindicatio* thus addressed his opponent: "Postulo anne dicas qua ex causa vindicaveris." The opponent replied: "Jus peregi sicut Vindicatam imposui." Then he who had made the first *vindicatio* proceeded to that part of the process called the *Sacramentum*, which was in the form of a wager as to the Right; he said: "Quando tu injuria vindicavisti D Aeris sacramento te provooco." The opponent replied by giving the *Similiter*; "Similiter ego te."

The process of the *Sacramentum*, as already observed, was applicable to an action in *personam*; but as that was founded on an obligation, there was of course no specific object to claim. In the case of a *Vindicatio* the Praetor declared the *Vindicatio* in favour of one of the parties, that is, in the meantime he established one of the parties as *Possessor*, and compelled him to give security to his opponent for the thing in dispute and the means profits, or as it was technically expressed, "jubebat pignus adversario dare litis et vindictiarum."

The Praetor took security from both for the amount of the *Sacramentum*; for the party who failed paid the amount of the *Sacramentum* as a penalty (*poenae nomine*) which penalty belonged to the state (*in publicum cedebat*). The sums of money were originally deposited in *sacro*: the successful party took his money back, and the deposit of the unsuccessful party was paid into the *aerarium*. (Varro, *de L. L.* 180, Müller; Festus, s. v. *Sacramentum*.)

The Poena of the *Sacramentum* was *quingenaria*, that is, *quingenti asses*, in cases when the property in dispute was of the value of a thousand asses and

upwards; and in cases of smaller value it was fifty asseæ. This was a provision of the XII. Tables; but if a man's freedom (*libertas*) was in issue, the poena was only fifty asseæ.

If the property claimed was a piece of land, the claimants appeared *In iure* and challenged each other to go on the land in the presence of witnesses (*superstites*, Festus, s. v.; Cic. *pro Murena*, 12), where each made his claim. In the time of the Twelve Tables says Gellius (xx. 10) the Magistratus who presided in the court accompanied the parties to the land in order to perfect the process *in iure*; but this mode of procedure, which might do in very early times and within a small territory, must have become inconvenient. Accordingly it became the practice for one of the claimants to go through the form of ejecting the other from the land, which was called the *Vis Civilis*. (Compare Gellius, xx. 10; Cic. *pro Caecina*, 1, 7, 32, *pro Tullio*, 20.) In course of time it became the practice to bring into court a clod of earth, or a bit of a column, as a sign of the thing; and even in the case of moveable objects, a part was often brought into court to represent the whole; and the *Vindicatio* was made as if the whole thing was there. It seems that the process might also be begun by the parties performing the ceremony of the *Deductio* on the ground before they came *In ius*, where however they performed the fiction of going to the premises and returning. The change in the form of procedure, which change was accomplished "contra Duodecim Tabulas, tacito consensu," led to the phrase "*ex iure manum conserere*" (Gell. xx. 10), which is explained thus: one party called the other out of court (*ex iure*) "*ad conserendam manum in rem de qua agebatur*:" the parties, he says, then went together to the land in dispute, and brought a clod of earth from it, "*in ius in urbem ad Praetorem*;" and the clod of earth was viewed as the whole "ager."

When the *Legis Actiones* fell into disuse, the process of the *Vindicatio* was altered and became that of the *Sponsio*. The term *Sponsio* is best explained by giving the substance of a passage in Gaius (iv. 91, &c.). In the case of an *actio in rem*, a man might proceed either *Per formulam petitoriam*, in which the *Intentio* of the plaintiff was, that a certain thing was his property; or he might proceed *Per sponsionem* which did not contain such an *Intentio*. The defendant was challenged to a *Sponsio* in such terms as these: "*Si homo quo de agitur ex iure Quiritium meus est sestertios xxv. Nummos dare spondes?*" The *Intentio* in the formula was that if the slave belonged to the plaintiff, the sum of money contained in the *Sponsio* ought to be paid to the plaintiff (*sponsionis summam actori dari debere*). The *Sponsio* evidently took its name from the verb *Spondeo*. If the plaintiff proved the slave to be his property, he was intitled to a judgment. Yet the sum of money was not paid, though it was the object of the *Intentio*, for, says Gaius, "it is not poenalis, but praejudicialis, and the *sponsio* is introduced merely as a means of trying the right to the property, and this explains why the defendant has no *restipulatio*." The *sponsio* was said to be "*pro praedicta litis et vindictiarum*," because it took the place of the praedium, which when the *Legis actiones* were in use, was given "*pro lite et vindictia*," that is, "*pro re et fructibus*" by the possessor to the plaintiff. [*PRÆJUDICIUM*; *PRÆS.*]

This *Sponsio Praejudicialis* was merely a technical mode of converting an *actio in rem* into an *actio in personam*, and we must suppose that there was some good reason for the practice. It might be conjectured that it was introduced in order to obviate the trouble and difficulties attendant on the old process of the *Vindicatio*.

From the expression of Gaius, it appears that there was also a *Sponsio Poenalis*, that is both the defendant made a *sponsio* and the plaintiff made a *restipulatio*. Thus in the case of "*certa pecunia credita*," the defendant's *sponsio* was made at the risk of losing the sum, if he could not sustain his denial of the plaintiff's claim; and the plaintiff's *restipulatio* was made at the like risk if he could not support his claim. The poena of the *Sponsio* and *restipulatio* belonged to the successful party. (Gaius, iv. 13.) There was also a *Poenalis sponsio* in the case of *Interdicts* (Gaius, iv. 141, 165, &c.), and *Pecunia Constituta*. In the case of *Certa Pecunia* the *sponsio* was to the amount of one-third of the sum demanded, which was called *legitima pars*. (Cic. *pro Rosc. Com.* 4, 5.) In the case of *Constituta Pecunia* the *sponsio* was to the amount of one-half. (Gaius, iv. 171.) These stipulations were fixed by law; in other cases they were fixed by the Edict.

These *sponsiones* were introduced probably partly with a view to check litigation, and partly with a view to give compensation to the party who ultimately obtained a verdict; for otherwise there do not appear in the Roman law to be any direct provisions as to the costs of suits. Thus Gaius (iv. 174) enumerates four modes in which the *Actoris calumnia* is checked; the *Calumniae iudicium*, *Contrarium iudicium*, *Iusjurandum*, and the *Restipulatio*. The *Restipulatio*, he says, "is allowed in certain cases; and as in the *Contrarium iudicium* the plaintiff has in all cases judgment against him, if he cannot sustain his case, and it matters not whether or not he knows that his claim was not good, so in all cases the plaintiff (that is if he cannot sustain his case) is condemned in the penalty of the *restipulatio*."

As to the form of the *Sponsio* the passage of Gaius already referred to is an example; and there is another in the oration of Cicero, *pro P. Quinctio* (8. 27). The use of the word *Si* or *Ni* in the *Sponsio* would depend on the fact which was affirmed or rather on the mode of affirmation and the party affirming. Cicero (*pro Caecina*. 23) alludes to the use of these words (*sive, neve*). Brissonius (*de Formulis*, &c. v. 7. p. 348) has collected instances of them.

The other mode of procedure in the case of *Vindicatio*, that was in use after the *Legis Actiones* fell into disuse was, *Per Formulam Petitoriam*, in which the plaintiff (*actor*) claimed the thing as his property (*intendit rem suam esse*). In this form of proceeding there was the *Stipulatio* called *Judicatum solvi*, by which the defendant engaged to obey the decree of the *Judex*. (Gaius, iv. 91.) This formula was adapted also to the cases of *Praetorian ownership* and the *Actio Publiciana*. (Gaius, iv. 34, 36.) In cases which were brought before the *Centumviri*, it was the practice, at least in the Imperial period, to come first before the *Praetor Urbanus* or *Peregrinus* in order that the matter might be put in the old form of the *Sacramentum*. (Gaius, iv. 31, 95; Gell. xx. 10.)

An *hereditas* was sued for like any other thing

either by the Sacramentum, so long as it was in use, or the Sponsio, or the Petitoria Formula. (Gaius, iv. 11, 31; Walter, *Geschichte des Röm. Rechts*; Puchta, *Inst.* ii. § 161.) [G. L.]

VINDICTIAE. [VINDICATIO.]

VINDICTA. [MANUMISSIO; VINDICATIO.]

VINDICTA. A class of actions in the Roman Law have reference to Vindicta as their object, which is thus expressed: *ad ultionem pertinet, in sola vindicta constitutum est, Vindictam continet.* (Dig. 47. tit. 12. s. 6. 10; 29. tit. 2. a. 20. § 5.) Some of these actions had for their object simply compensation, as the *Actio doli*. Others had for their object to give the complainant something more (*poena*) than the amount of his injury, as in the *Furti actio*, and sometimes in addition to this compensation also as in the *Vi Bonorum raptorum actio*. A third class of actions had for its immediate object money or property, but this was not the ultimate object as in the cases already mentioned, but merely a means; the real object was Vindicta. This Vindicta consists in the re-establishment of a right which has been violated in the person of the complainant, in which case the individual discharges the office which the State discharges generally in matters of Crime. Those actions of which Vindicta is the object, are distinguished from other actions by forming exceptions to the general rules as to the legal capacity of those who may institute them, such as a *filiusfamilias* and one who has sustained a *capitis deminutio*.

The following are actions of this kind:—

1. *Actio Injuriarum*. When a *filiusfamilias* was injured, a wrong was done both to him and to his father. The injury done to the son is the only one that belongs to the head of Vindicta. The father generally brought the action, for he could acquire through his son all rights of action. But the son could bring an action in his own name with the permission of the Praetor, if the father was absent, or was in any way prevented from bringing the action; and in some cases, if the father refused to bring the action. The pecuniary damages which were the immediate object of the action belonged to the father, so that the son appeared in the double capacity of suing in his own name in respect of the Vindicta, and as the representative of his father in respect of the damages. If the son was emancipated, the right of action passed to him and was not destroyed by the *capitis deminutio*.

2. *Actio sepulcri violati*, which could be brought by the children of the deceased, even if they refused the hereditas, or by the heredes. The object was Vindicta, which was effected by giving the plaintiff damages to the amount of the wrong (*quantum ob eam rem aequum videbitur*, &c. Dig. 47. tit. 12. s. 3). The action was consequently in *bonum et aequum concepta*, and the right was not affected by a *capitis deminutio*. If those who had a right to bring the action neglected to do so, any person might bring the action; but in that case the damages were limited to 100 auri by the Edict.

3. *Actio de effusis*. When a free person was injured by anything being poured or thrown from a house, he had an *actio in bonum et aequum concepta*, the ultimate object of which was Vindicta.

4. An action for mischief done to a man by any dangerous animal belonging to another, when it happened through the want of proper caution on the part of the owner. (Dig. 21. tit. 1. s. 40—43.)

5. *Interdictum quod vi aut clam*. This is a

plaint which could be instituted by a *filiusfamilias* in his own name, because the object was Vindicta. The ground of this capacity of a *filiusfamilias* was an injury done to him personally by a person who acted in opposition to his remonstrance. If for instance the son inhabited a house belonging to his father or one hired from a stranger, and was disturbed in his enjoyment by some act of his neighbour, the *filiusfamilias* might have an action for the amount of the damage, but the pecuniary satisfaction would belong to the father as in the case of the *Actio Injuriarum*. But the action was not in *bonum et aequum concepta*, since it had a definite object, which was either the restoration of things to their former condition, which might be immediately for the benefit of the *filiusfamilias*, or to ascertain the value of the wrong done (*quod interest*).

6. The action against a *Libertus* in respect of an *In Jus vocatio*. [PATRONUS.] If the *Libertus* had proceeded against the son of his patron, and the father was absent, the son could institute the suit himself, as in the case of the *Actio Injuriarum*.

7. *Querela Inofficiosa*. [TESTAMENTUM.]

8. *Actiones Populares*, which are actions in which the plaintiff claims a sum of money, but not as a private individual: he comes forward as a kind of representative of the State. If the act complained of be such as affects the interests of individuals as such, they can bring an action in preference to any other person and the action is not purely popular: to this class belong such actions as the *Actio sepulcri violati*. But if there are no persons who are individually interested in the matter complained of, or none such bring an action, any person (*quis ex populo*) may bring the action as the Procurator of the State, and he is not bound to give the security which an ordinary procurator must give. A *filiusfamilias* can bring such action. By virtue of the *Litis contestatio* the action becomes the same as if it were founded on an obligatio, and this right of action as well as the money which may arise from it is acquired by the *filiusfamilias* for his father. These actions being for fixed sums of money are not in *bonum et aequum conceptae*.

With the *populares actiones* may be classed as belonging to the same kind, the *Interdicta Publica* or *Popularia*, and that *Novi operis nuntiatio* which is for the protection of *Publicum Jus*; with this distinction, that the proceedings have not for their object the recovery of a sum of money. But in the general capacity of all persons to bring such actions, independent of the usual rules as to legal capacity, all these modes of proceeding agree.

(Savigny, *System des heut. Röm. Rechts*, ii. 121.) [G. L.]

VINEA, in its literal signification, is a bower formed of the branches of vines, and from the protection which such a leafy roof affords, the name was applied by the Romans to a roof under which the besiegers of a town protected themselves against darts, stones, fire, and the like, which were thrown by the besieged upon the assailants. The description which Vegetius (*de Re Mil.* iv. 15) gives of such a machine perfectly agrees with what we know of it from the incidental mention of other writers. The whole machine formed a roof, resting upon posts eight feet in height. The roof itself was generally sixteen feet long and seven broad. The wooden frame was in most cases light, so that it

could be carried by the soldiers; sometimes, however, when the purpose which it was to serve required great strength, it was heavy and then the whole fabric probably was moved by wheels attached to the posts. The roof was formed of planks and wicker-work, and the uppermost layer or layers consisted of raw hides or wet cloth as a protection against fire, by which the besieged frequently destroyed the vineae. (Liv. ii. 17, v. 7, xxi. 61.) The sides of a vinea were likewise protected by wicker-work. Such machines were constructed in a safe place at some distance from the besieged town, and then carried or wheeled (*agere*) close to its walls. Here several of them were frequently joined together, so that a great number of soldiers might be employed under them. When vineae had taken their place close to the walls the soldiers began their operations, either by undermining the walls, and thus opening a breach, or by employing the battering-ram (*aries*, Liv. xxi. 7, 8). In the time of Vegetius the soldiers used to call these machines *causiae*. (J. Lipsius, *Polioreet.* i. dial. 7.) [L. S.]

VINUM (*olvos*). The general term for the fermented juice of the grape.

The native country of the vine was long a vexata quaestio among botanists, but, although many points still remain open for debate, it seems now to be generally acknowledged that it is indigenous throughout the whole of that vast tract which stretches southward from the woody mountains of Masanderán on the Caspian to the shores of the Persian Gulf and the Indian sea, and eastward through Khorasan and Cabul to the base of the Himalaya,—the region to which history and philology alike point as the cradle of the human race. Hence, when we consider the extreme facility of the process in its most simple form, we need little wonder that the art of making wine should have been discovered at a very remote epoch.

In the earliest of profane writers the cultivation of the grape is represented as familiar to the Heroic Greeks, some of his most beautiful and vivid pictures of rural life being closely connected with the toils of the vineyard. It is worth remarking that the only wine upon whose excellence Homer dilates in a tone approaching to hyperbole is represented as having been produced on the coast of Thrace, the region from which poetry and civilization spread into Hellas, and the scene of several of the more remarkable exploits of Bacchus. Hence we might infer that the Pelasgians introduced the culture of the vine when they wandered westward across the Hellespont, and that in like manner it was conveyed to the valley of the Po, when at a subsequent period they made their way round the head of the Adriatic. It seems certain from the various legends that wine was both rare and costly in the earlier ages of Italian and Roman history. Thus, a tradition preserved by Varro (*ap. Plin. H. N.* xiv. 14) told that when Mezentius agreed to aid the Rutilians he stipulated that the produce of the Latian vineyards should be his recompense. Romulus is said to have used milk only in his offerings to the gods (Plin. l. c.): Numa, to check extravagance, prohibited the sprinkling of wine upon the funeral pyre, and, to stimulate the energies of the rustic population, he ordained that it should be held impious to offer a libation to the gods of wine which had flowed from an unpruned stock. So scarce was it at a much later period

that Papirius the dictator, when about to join in battle with the Samnites, vowed to Jupiter a small cupful (*vinis pocillum*) if he should gain the victory. That wine was racked off into amphorae and stored up in regular cellars as early as the era of the Gracchi Pliny considers proved by the existence in his own day of the *Vinum Optimianum*, described hereafter. But even then no specific appellation was given to the produce of different localities, and the jar was marked with the name of the consul alone. For many years after this foreign wines were considered far superior to native growths, and so precious were the Greek vintages esteemed in the times of Marius and Sulla that a single draught only was offered to the guests at a banquet. The rapidity with which luxury spread in this matter is well illustrated by the saying of M. Varro, that Lucullus when a boy never saw an entertainment in his father's house, however splendid, at which Greek wine was handed round more than once, but when in manhood he returned from his Asiatic conquests he bestowed on the people a largess of more than a hundred thousand cadi. Four different kinds of wine are said to have been presented for the first time at the feast given by Julius Caesar in his third consulship (a. c. 46), these being Falernian, Chian, Lesbian, and Mamertine, and not until after this date were the merits of the numerous varieties, foreign and domestic, accurately known and fully appreciated. But during the reign of Augustus and his immediate successors the study of wines became a passion, and the most scrupulous care was bestowed upon every process connected with their production and preservation. (Plin. *H. N.* xiv. 28.) Pliny calculates that the number of wines in the whole world deserving to be accounted of high quality (*nobilis*) amounted to eighty, of which his own country could claim two-thirds (xiv. 13); and in another passage (xiv. 29) he asserts that 195 distinct kinds might be reckoned up, and that if all the varieties of these were to be included in the computation, the sum would be almost doubled. (Plin. *H. N.* xiv. 6. 29.)

The process followed in wine-making was essentially the same among both the Greeks and the Romans. After the grapes had been gathered, they were first trodden with the feet and afterwards submitted to the action of the press. This part of the process of wine-making is described in the article TORCULUM.

The sweet unfermented juice of the grape was termed *γλεύκος* by the Greeks and *mustum* by the Romans, the latter word being properly an adjective signifying *new* or *fresh*. Of this there were several kinds distinguished according to the manner in which each was originally obtained and subsequently treated. That which flowed from the clusters, in consequence merely of their pressure upon each other before any force was applied, was known as *πρόχυμα* (Geopon. vi. 16) or *protropyum* (Plin. *H. N.* xiv. 11), and was reserved for manufacturing a particular species of rich wine described by Pliny (l. c.) to which the inhabitants of Mytilene gave the name of *πρόδρομος* or *πρότροπος*. (Athen. i. p. 30, b, ii. p. 45, e.) That which was obtained next, before the grapes had been fully trodden, was the *mustum laticivium*, and was considered best for keeping. (Geopon. vi. 16; Colum. xii. 41.) After the grapes had been fully trodden and pressed, the mass was taken out, the edges of the huaks cut,

and the whole again subjected to the press; the result was the *mustum tortivum* or *circumcinctum* (Cato, *R. R.* 23; Varr. i. 54; Colum. xii. 36), which was set apart and used for inferior purposes.

A portion of the must was used at once, being drunk fresh after it had been clarified with vinegar. (Geopon. vi. 15.) When it was desired to preserve a quantity in the sweet state, an amphora was taken and coated with pitch within and without; it was filled with *mustum lividum*, and corked so as to be perfectly air-tight. It was then immersed in a tank of cold fresh water or buried in wet sand, and allowed to remain for six weeks or two months. The contents after this process were found to remain unchanged for a year, and hence the name *del γλευκος*, i. e. *semper mustum*. (Geopon. vi. 16; Plut. *Q. N.* 26; Cato, *R. R.* 120; Colum. xii. 29; Plin. *H. N.* xiv. 11.) A considerable quantity of must from the best and oldest vines was inspissated by boiling, being then distinguished by the Greeks under the general names of *θήγμα* or *γλέξις* (Athen. i. 31, e.), while the Latin writers have various terms according to the extent to which the evaporation was carried. Thus, when the must was reduced to two-thirds of its original volume it became *coctum* (Pallad. Octobr. tit. xviii.), when one-half had evaporated, *defrutum* (Plin. *H. N.* xiv. 9), when two-thirds, *sapa* (known also by the Greek names *στραγμα* and *hepsema*, Plin. *l. c.*), but these words are frequently interchanged. (See Varr. *ap. Nov.* c. 17, n. 14; Colum. xii. 19.) Similar preparations are at the present time called in Italy *musto cotto* and *sapa*, and in France *sabe*. The process was carried on in large caldrons of lead (*vasa defrutaria*), iron or bronze being supposed to communicate a disagreeable flavour, over a slow fire of chips, on a night when there was no moon (Plin. xviii. 74), the scum being carefully removed with leaves (Plin. *l. c.*; Virg. *Georg.* i. 269, iv. 296), and the liquid constantly stirred to prevent it from burning. (Plin. xxiii. 2; Cato, *R. R.* 105; Colum. xii. 19, 20, 21; Pallad. xi. 18; Dioscorid. v. 9.) These grape-jellies, for they were nothing else, were used extensively for giving body to poor wines and making them keep, and entered as ingredients into many drinks, such as the *burranica potio*, so called from its red colour, which was formed by mixing *sapa* with milk (Festus, s. v. *Burranica*; compare Ovid. *Fast.* iv. 782), and others described hereafter.

The whole of the *mustum* not employed for some of the above purposes was conveyed from the *lacus* to the *cella vinaria* (*οἰνοθήκη, πιδεῶν*, Geopon. vi. 2, 12), an apartment on the ground-floor or a little below the surface, placed in such a situation as to secure a moderate and equable temperature, and at a distance from dunghills or other objects emitting a strong odour. (Varr. *R. R.* i. 13; Geopon. *l. c.*) Here were the *dolia* (*πίλοι*), otherwise called *serias* or *capae*, long bell-mouthed vessels of earthenware (hooped tube of wood being employed in cold climates only, Plin. xiv. 21) very carefully formed of the best clay and lined with a coating of pitch (*πισσώδεντα, picata*), the operation (*πισσωσις, picatio*) being usually performed while they were hot from the furnace. They were usually sunk (*depressa, defossa, demersa*) one-half or two-thirds in the ground; to the former depth if the wine to be contained was likely to prove strong, to the latter if weak, and attention was paid that they should repose upon a dry bed. They were

moreover sprinkled with sea-water, fumigated with aromatic plants and rubbed with their ashes, all rank smelling substances, such as rotten leather, garlic, cheese, and the like, being removed, lest they should impart a taint to the wine. (Geopon. vi. 2, 3, 4; Cato, *R. R.* 23; Varro, i. 13; Colum. xii. 18, 25; Dig. 33. tit. 6. a. 3.) In these *dolia* the process of fermentation took place. They were not filled quite full, in order that the scum only might boil over, and this was also cleared off at regular intervals by skimming, and carried to a distance. The fermentation usually lasted for about nine days, and as soon as it had subsided and the *mustum* had become *vinum*, the *dolia* were closely covered, the upper portion of their interior surface as well as the lids (*opercula doliorum*) having been previously well rubbed over with a compound of defrutum, saffron, old pitch, mastic, and fir-cones. (Geopon. vi. 12; Cato, *R. R.* 107; Varro, i. 63; Colum. xii. 25, 80.) The *opercula* were taken off about once every thirty-six days, and oftener in hot weather, in order to cool and give air to the contents, to add any preparation required to preserve them sound, and to remove any impurities that might be thrown up. Particular attention was paid to the peculiar light scum, the *dyctes oleus* (*λας οἶν*), which frequently appeared on the surface after a certain time, since it was supposed to afford indications by its colour and consistence of the quality of the wine. If red (*πορφυρίστω*), broad, and soft, it was a sign that the wine was sound; if glutinous, it was a bad symptom; if black or yellow, it denoted want of body; if white, it was a proof that the wine would keep well (*μέλιμον*). Each time that the *opercula* were replaced they were well rubbed with fir-cones. (Geopon. vii. 15; Colum. xii. 38.) [TETRAEUS.]

The commoner sorts of wine were drunk direct from the *dolium*, and hence draught wine was called *vinum doliare* or *vinum de cupa* (Dig. 18. tit. 6. a. 1. § 4; Varr. *ap. Nov.* c. 2. n. 113), but the finer kinds, such as were yielded by choice localities and possessed sufficient body to bear keeping, were drawn off (*distendere, μεταγγίλλειν*) into *amphorae* or *lagenae*, many fanciful precautions being observed in transferring them from the larger to the smaller vessel. (Geopon. vii. 5, 6; compare Plin. xiv. 27.) These *amphorae* were made of earthenware, and in later times occasionally of glass; they were stoppered tight by a plug of wood or cork (*cortex, suber*), which was rendered impervious to air by being smeared over with pitch, clay, or gypsum. On the outside the title of the wine was painted, the date of the vintage being marked by the names of the consuls then in office, or when the jars were of glass, little tickets (*pitaccia, tesserae*) were suspended from them indicating these particulars. (Petr. 34.) The *amphorae* were then stored up in repositories (*apothecae*, Colum. i. 6; Plin. *Ep.* ii. 17; *horrea*, Senec. *Ep.* 115; *tabulae*, Colum. xii. 41) completely distinct from the *cella vinaria*, and usually placed in the upper story of the house (whence *descende, testa*, Hor. *Carm.* iii. 21. 7; *deripere horrea*, iii. 28. 7) for a reason explained afterwards.

It is manifest that wines prepared and bottled, if we may use the phrase, in the manner described above must have contained a great quantity of dregs and sediment, and it became absolutely necessary to separate these before it was drunk. This was sometimes effected by fusing with yolk

of eggs, those of pigeons being considered most appropriate by the fastidious (Hor. *Sat.* ii. 4. 51), or with the whites whipped up with salt (Geopon. vii. 22), but more commonly by simply straining through small cup-like utensils of silver or bronze perforated with numerous small holes, and distinguished by the various names *ἀλαστήρ*, *τρύγαιος*, *ῥημός*, *colum vinarium*. (Geopon. vii. 37.) [COLUM.] Occasionally a piece of linen cloth (*σάκος*, *saccus*) was placed over the *τρύγαιος* or *colum* (Pollux, vi. 19, x. 75) and the wine (*σακκίας*, *saccatus*) filtered through. (Martial, viii. 45.) The use of the *saccus* was considered objectionable for all delicate wines, since it was believed to injure (Hor. *Sat.* ii. 4. 51) if not entirely to destroy their flavour, and in every instance to diminish the strength of the liquor. For this reason it was employed by the dissipated in order that they might be able to swallow a greater quantity without becoming intoxicated. (Plin. xiv. 22, compare xxiii. 1, 24, xix. 4. 19; Cic. *ad Fam.* ii. 8.) The double purpose of cooling and weakening was effectually accomplished by placing ice or snow in the filter, which under such circumstances became a *colum nivarium* (Martial, xiv. 103) or *saccus nivarius* (xiv. 104).

The wine procured from the *mustum tortivum*, which was always kept by itself, must have been thin and poor enough, but a still inferior beverage was made by pouring water upon the husks and stalks after they had been fully pressed, allowing them to soak, pressing again, and fermenting the liquor thus obtained. This, which was given to labourers in winter instead of wine, was the *δάμνα* or *δευτέριος* of the Greeks, the *lora* or *vinum operarium* of the Romans, and according to Varro (*ap. Non.* xvii. 13) was, along with *sapa*, *defrutum*, and *passum*, the drink of elderly women. (See Athen. x. p. 440.) The Greeks added the water in the proportion of $\frac{1}{3}$ of the must previously drawn off, and then boiled down the mixture until $\frac{1}{2}$ had evaporated; the Italians added the water in the proportion of $\frac{1}{5}$ of the must, and threw in the skimmings of the defrutum and the dregs of the *lacus*. Another drink of the same character was the *fuscatum* from wine-lees, and we hear also of *vinum praeliganeum* given to the vintagers, which appears to have been manufactured from inferior and half-ripe fruit gathered before the regular period. (Geopon. vi. 3; Cato, *R. R.* 23, 57, 153; Varro, i. 54; Colum. xii. 40; Plin. xiv. 12.) We find an analogy to the above processes in the manufacture of cider, the best being obtained from the first squeezing of the apples and the worst from the pulp and skins macerated in water.

In all the best wines hitherto described the grapes are supposed to have been gathered as soon as they were fully ripe and fermentation to have run its full course. But a great variety of sweet wines were manufactured by checking the fermentation, or by partially drying the grapes, or by converting them completely into raisins. The *γλέκος οἶνος* of the Geoponic writers (vii. 19) belongs to the first class. Must obtained in the ordinary manner was thrown into the *dolia*, which remained open for three days only and were then partially covered for two more; a small aperture was left until the seventh day, when they were luted up. If the wine was wished to be still sweeter, the *dolia* were left open for five days and

then at once closed. The free admission of air being necessary for brisk fermentation, and this usually continuing for nine days, it is evident that it would proceed weakly and imperfectly under the above circumstances. For the *Vinum Dulce* of Columella (xii. 27) the grapes were to be dried in the sun for three days after they were gathered, and trodden on the fourth during the full fervour of the mid-day heat. The *mustum lividum* alone was to be used, and after the fermentation was finished an ounce of well-kneaded iris-root was added to each 50 sextarii; the wine was racked off from the lees, and was found to be sweet, sound, and wholesome. (Colum. l. c.) For the *Vinum Diachytum*, more luscious still, the grapes were exposed to the sun for seven days upon hurdles. (Plin. *H. N.* xiv. 11.)

Lastly, *Passum* or *raisin-wine* was made from grapes dried in the sun until they had lost half their weight, or they were plunged into boiling oil, which produced a similar effect, or the bunches after they were ripe were allowed to hang for some weeks upon the vine, the stalks being twisted or an incision made into the pith of the bearing shoot so as to put a stop to vegetation. The stalks and stones were removed, the raisins were steeped in must or good wine, and then trodden or subjected to the gentle action of the press. The quantity of juice which flowed forth was measured, and an equal quantity of water added to the pulpy residuum, which was again pressed and the product employed for an inferior *passum* called *secundarium*, an expression exactly analogous to the *δευτέριος* mentioned above. The *passum* of Crete was most prized (Mart. xiii. 106; Juv. xiv. 270), and next in rank were those of Cilicia, Africa, Italy, and the neighbouring provinces. The kinds known as *Pythium* and *Melampythium* possessed the peculiar flavour of the grape and not that of wine, the *Seybillites* from Galatia and the *Halvatum* from Sicily in like manner tasted like must. The grapes most suitable for *passum* were those which ripened early, especially the varieties *Apiana* (called by the Greeks *Sticha*), *Scirpula* and *Psithia*. (Geopon. vii. 18; Colum. xii. 39; Plin. *H. N.* xiv. 11; Virg. *Georg.* ii. 93.)

The Greeks recognized three colours in wines: red (*μέλας*), white, i. e. pale, straw-colour (*λευκός*), and brown or amber-coloured (*κυφρός*). (Athen. i. p. 32, c.) Pliny distinguishes four: *albus* answering to *λευκός*, *fulvus* to *κυφρός*, while *μέλας* is subdivided into *sanguineus* and *niger*, the former being doubtless applied to bright glowing wines like Tent and Burgundy, while the *niger* or *ater* (Plaut. *Menaech.* v. 6. 17) would resemble Port. In the ordinary Greek authors the epithet *ερυθρός* is as common as *μέλας*, and will represent the *sanguineus*.

We have seen that wine intended for keeping was racked off from the *dolia* into amphorae. When it was necessary in the first instance to transport it from one place to another, or when carried by travellers on a journey, it was contained in bags made of goat-skin (*δακός*, *utres*) well pitched over so as to make the seams perfectly tight. The cut below, from a bronze found at Herculaneum (*Mus. Borbon.* vol. iii. tav. 28), exhibits a Silenus astride upon one of them. When the quantity was large a number of hides were sewed together, and the leathern tun thus constructed carried from place to place in a cart, as

shown in the illustration on page 90. (Compare Lucian, *Les. 6.*)

Among the ancients recourse was had to various devices for preventing or correcting acidity, heightening the flavour, and increasing the durability of the inferior kinds of wine. This subject was reduced to a regular system by the Greeks: Pliny mentions four authors who had written formal treatises, and the authors of the *Geoponic* collection, together with Cato, Varro, and Columella, supply a multitude of precepts upon the same topic. The object in view was accomplished sometimes by merely mixing different kinds of wine together, but more frequently by throwing into the dolia or amphorae various condiments, or seasonings (*depruvæis, medicamina, condituras*). When two wines were mixed together those were selected which possessed opposite good qualities and defects. (*Athen. i. p. 32. 6.*)

The principal substances employed as *condituras* were, 1. sea-water; 2. turpentine, either pure, or in the form of pitch (*pis*), tar (*pis liquida*), or resin (*resina*). 3. Lime, in the form of gypsum, burnt marble, or calcined shells. 4. Inspissated must. 5. Aromatic herbs, spices, and gums; and these were used either singly, or cooked up into a great variety of complicated confections.

We have already seen that it was customary to line the interior of both the dolia and the amphorae with a coating of pitch; but besides this it was common to add this substance, or resin, in powder, to the must during the fermentation, from a conviction that it not only rendered the wine more full-bodied, but also communicated an agreeable bouquet, together with a certain degree of raciness or piquancy. (*Plin. N. H. xiv. 25*; *Plutarch, Symp. v. 3.*) Wine of this sort, however, when new (*novitium resinatum*) was accounted unwholesome and apt to induce headach and giddiness. From this circumstance it was denominated *crapula*, and was itself found to be serviceable in checking the fermentation of the must when too violent.

It must be remembered, that when the vinous fermentation is not well regulated, it is apt to be

renewed, in which case a fresh chemical change takes place, and the wine is converted into vinegar (*σφοδρῶς*), and this acid, again, if exposed to the air, loses its properties and becomes perfectly insipid, in which form it was called *coppa* by the Romans, who used the word figuratively for a worthless blockhead.

Now the great majority of inferior wines, being thin and watery, and containing little alcohol, are constantly liable to undergo these changes, and hence the disposition to acescence was closely watched and combated as far as possible. With this view those substances were thrown into the dolia, which it was known would neutralize any acid which might be formed, such as vegetable ashes, which contain an alkali, gypsum, and pure lime, besides which we find a long list of articles, which must be regarded as preventives rather than correctives, such as the various preparations of turpentine already noticed, almonds, raisins steeped in must, parched salt, goats' milk, cedar-cones, gall-nuts, blazing pine-torches, or red-hot irons quenched in the liquid, and a multitude of others. (*Geopon. vii. 12, 15, 16, &c.*) But in addition to these, which are all harmless, we find some traces of the use of the highly poisonous salts of lead for the same purpose (*Geopon. vii. 19*), a practice which produced the most fatal consequences in the middle ages, and was prohibited by a series of the most stringent enactments. (See Beckmann's *History of Inventions*, vol. i. p. 396, *Trans.*)

Defrutum also was employed to a great extent; but being itself liable to turn sour, it was not used until its soundness had been tested by keeping it for a year. It was then introduced, either in its simple state, in the proportion of a sextarius to the amphora, that is, of 1 to 48, or it was combined with a great variety of aromatics, according to a prescription furnished by Columella (*xii. 20*). In this receipt, and others of the same kind, the various herbs were intended to give additional efficacy to the nourishing powers of the *defrutum*, and great pains were taken to prevent them from affecting the taste of the wine. But from a very early period it was customary to flavour wines highly by a large admixture of perfumes, plants, and spices. We find a spiced drink (*σφοδρῶς κατασκευαζόμενος*) noticed under the name of *τρίμυα* by Athenæus and the writers of the new comedy. (*Athen. i. p. 31, e.*; *Pollux, vi. 18*), and for the whole class Pliny has the general term *aromatiles* (*xiv. 19. § 5*).

There was another and very numerous family of wines, entitled *οἶνοι θυγιστοί*, into which drugs were introduced to produce medicinal effects. Such were *vinum marrubii* (horehound) for coughs, the *scillites* (squill-wine), to assist digestion, promote expectoration, and act as a general tonic, *absinthium* (wine of wormwood), corresponding to the modern *vermouth*, and above all the *myrtiles* (myrtle-berry-wine), which possessed innumerable virtues. (*Columell. 32, 39*; *Geopon. viii. 1, &c.*)

Pliny, under the head of *οἶνα scititia*, includes not only the *οἶνοι θυγιστοί*, but a vast number of others bearing a strong analogy to our British home-made wines, such as cowslip, ginger, elderberry, and the like; and as we manufacture Champagne out of gooseberries, so the Italians had their imitations of the costly vintages of the most favoured Asiatic iales. These *οἶνα scititia*

were, as may be imagined, almost countless, every variety of fruit, flower, vegetable, shrub, and perfume being put in requisition: figs, cornels, medlars, roses, asparagus, parsley, radishes, laurels, junipers, cassia, cinnamon, saffron, nard, malobathrum, afford but a small sample. It must be remarked, that there was one material difference between the method followed by the Greeks and that adopted by the Romans in cooking these potions. The former included the drug, or whatever it might be, in a bag, which was suspended in a jar of wine, and allowed to remain as long as was thought necessary; the latter mixed the flavouring ingredient with the sweet must, and fermented them together, thus obtaining a much more powerful extract; and this is the plan pursued for British wines, except that we are obliged to substitute sugar and water for grape-juice. (Geopon. viii. 32, 33, 34; Plin. *H. N.* xiv. 19; Colum. *ll. ac*; Cato, *R. R.* 114, 115.)

But not only were spices, fragrant roots, leaves, and gums, steeped in wine or incorporated during fermentation, but even the precious perfumed essential oils (*unguenta*) were mixed with it before it was drunk. The Greeks were exceedingly partial to this kind of drink. (Aelian, *V. H.* xii. 31.) We also learn from Aelian (*l. c.*) that it was named *μυρρίνιον*, which seems to be the same with the *μυρρίνη* of Poseidippus (Athen. i. p. 32, b.), the *μυρρίνη* of Hesychius, the *μυρρίνη* of Pollux (vi. 2), and the *murrhina* of Plautus (*Pseudol.* ii. 4. 50; compare *nardini amphorum*, *Miles Gl.* iii. 2. 11; Festus, s. v. *Murrata potio* and *Murrina*). The Romans were not slow to follow the example set them, valuing bitterness so highly, says Pliny (*H. N.* xiii. 5), that they were resolved to enjoy costly perfumes with two senses, and hence the expressions "*foliata sitis*" in Martial (xiv. 110) and "*perfrusa mero spumant unguenta Falerno*" in Juvenal (vi. 303).

In a more primitive age we detect the same fondness for the admixture of something extraneous. Hecamede, when preparing a draught for Nestor, fills his cup with Pramnian wine, over which she grates goat-milk cheese and sprinkles the whole with flour (*ll. xi.* 638), the latter being a common addition at a much later epoch. (Athen. x. p. 432.) So also the draught administered by Circe consisted of wine, cheese, and honey; and according to Theophrastus (Athen. i. p. 32, a.) the wine drunk in the prytaneum of the Thasians was rendered delicious by their throwing into the jar which contained it a cake of wheat flour kneaded up with honey. (Compare *Plat. Symp.* i. l. 4.)

This leads us on to notice the most generally popular of all these compound beverages, the *οινόμει* of the Greeks, the *mulsum* of the Romans. This was of two kinds; in the one honey was mixed with wine, in the other with must. The former was said to have been invented by the legendary hero Aristæus, the first cultivator of bees (Plin. xiv. 4), and was considered most perfect and palatable when made of some old rough (*asotum*) wine, such as Massic or Falernian (although Horace objects to the latter for this purpose, *Sat.* ii. 4. 24), and new Attic honey. (Mart. iv. 13, xiii. 108; Dioscor. v. 16; Macrob. *Sat.* vii. 12.) The proportions as stated in the Geoponic collection were four, by measure, of wine to one of honey, and various spices and perfumes, such as myrrh, cassia, costum, malobathrum, nard, and

pepper, might be added. The second kind, the *oenomelum* of Isidorus (*Orig.* xx. 3. § 11), according to the Greek authorities (Geopon. viii. 26), was made of must evaporated to one half of its original bulk, Attic honey being added in the proportion of one to ten. This, therefore, was merely a very rich fruit syrup in no way allied to wine. The virtues of *mulsum* are detailed by Pliny (*H. N.* xxii. 4; compare Geopon. *l. c.*); it was considered the most appropriate draught upon an empty stomach, and was therefore swallowed immediately before the regular business of a repast began (Hor. *Sat.* ii. 4. 25; Senec. *Ep.* 122), and hence the whet (*gustatio*) coming before the cup of *mulsum* was called the *promulsia*. (Cic. *ad. Fam.* ix. 16 and 20.) We infer from Plautus (*Bacch.* iv. 9. 149; compare Liv. xxxviii. 55) that *mulsum* was given at a triumph by the Emperor to his soldiers.

Mulsum (sc. *vinum*) or *οινόμει* is perfectly distinct from *melsa* (sc. *aqua*). The latter, or *moed*, being made of honey and water mixed and fermented, is the *μελικρατον* or *ιδρόμει* of the Greeks (Geopon. viii. 28; Dioscorid. v. 9; Isidor. *Orig.* xx. 3. § 10; Plin. *H. N.* xiv. 20), although Pollux confounds (vi. 2) *μελικρατον* with *οινόμει*. Again, *ιδρόμειλον* (Geopon. viii. 27) or *hydroromelum* (Isidor. *Orig.* xx. 3. § 11) was cider; *δέξμει* (Plin. *H. N.* xiv. 20) was a compound of vinegar, honey, salt, and pure water, boiled together and kept for a long time; *ροδομει* was a mere confection of expressed juice of rose-leaves and honey. (Geopon. viii. 29.)

The ancients considered old wine not only more grateful to the palate but also more wholesome and invigorating (Athen. i. p. 26, a.; ii. p. 36, e.), and curiously enough, Pliny supposes that it grew more strong and fiery by age in consequence of the dissipation of the watery particles (*H. N.* vii. 8). Generally speaking the Greek wines do not seem to have required a long time to ripen. Nestor in the *Odyssey*, indeed, drinks wine ten years old (iii. 391), and wine kept for sixteen years is incidentally mentioned by Athenæus (xiii. p. 584, b); but the connoisseurs under the Empire pronounced that all transmarine wines arrived at a moderate degree of maturity (*ad ætatem mediam*) in six or seven. (Plin. xiv. 10.) Many of the Italian varieties, however, as we shall see below, required to be kept for twenty or twenty-five years before they were drinkable (which is now considered ample for our strongest ports), and even the humble growths of Sabinum were stored up for from four to fifteen. (Hor. *Carm.* i. 9. 7; Athen. i. p. 376.) Hence it became a matter of importance to hasten, if possible, the natural process. This was attempted in various ways, sometimes by elaborate condiments (Geopon. vii. 24), sometimes by sinking vessels containing the must in the sea, by which an artificial mellowness was induced (*præcos vetustas*), and the wine in consequence termed *thalassites* (Plin. *H. N.* xiv. 10); but more usually by the application of heat. (Plut. *Symp.* v. 3.) Thus it was customary to expose the amphoræ for some years to the full fervour of the sun's rays, or to construct the *apothecæ* in such a manner as to be exposed to the hot air and smoke of the bath-furnaces (Colum. i. 6), and hence the name *fumaria* applied to such apartments, and the phrases *fumosos*, *fumum bibere*, *fuligine testæ* in reference to the wines. (Tibull. ii. 1. 26; Hor. *Carm.* iii. 8. 9; Juv. v. 35.) If the operation was

not conducted with care, and the amphorae not stoppered down perfectly tight, a disagreeable effect would be produced on the contents, and it is in consequence of such carelessness that Martial pours forth his maledictions on the fumaria of Marseilles (x. 36, iii. 82, xii. 123).

The year B. C. 121 is said to have been a season singularly favourable to all the productions of the earth; from the great heat of the autumn the wine was of an unprecedented quality, and remained long celebrated as the *Vinum Opimianum*, from L. Opimius the consul of that year, who slew C. Gracchus. A great quantity had been treasured up and sedulously preserved, so that samples were still in existence in the days of the elder Pliny, nearly two hundred years afterwards. It was reduced, he says, to the consistence of rough honey, and, like other very old wines, so strong and harsh and bitter as to be undrinkable until largely diluted with water. Such wines, however, he adds, were useful for flavouring others when mixed in small quantities.

Our most direct information with regard to the price of common wine in Italy is derived from Columella (iii. 3. § 12), who reckons that the lowest market price of the most ordinary quality was 300 sesterces for 40 urnae, that is 15 sesterces for the amphora, or 6*d.* a gallon nearly. At a much earlier date, the triumph of L. Metellus during the first Punic war (B. C. 250), wine was sold at the rate of 8 asses the amphora (Varro, *op. Plin. H. N.* xviii. 4), and in the year B. C. 89 the censors P. Licinius Crassus and L. Julius Caesar issued a proclamation that no one should sell Greek and Aminean wine at so high a rate as 8 asses the amphora; but this was probably intended as a prohibition to their being sold at all, in order to check the taste then beginning to display itself for foreign luxuries, for we find that at the same time they positively forbade the use of exotic unguents. (*Plin. H. N.* xiv. 16, xiii. 3.)

The price of native wine at Athens was four drachmas for the metretes, that is about 4*½d.* the gallon, when necessities were dear, and Böckh considers that we may assume one half of this sum as the average of cheaper times. In fact, we find in an agreement in Demosthenes (*In Lacrit.* p. 928) 300 casks (*κεράμια*) of Mendacian wine, which we know was used at the most sumptuous Macedonian entertainments (Athen. iv. p. 129, d.), valued at 600 drachmas, which gives two drachmas for the metretes, or little more than 2*d.* a gallon; but still more astonishing is the marvellous cheapness of Lusitanian wine, of which more than ten gallons were sold for 3*d.* On the other hand high prices were given freely for the varieties held in esteem, since, as early as the time of Socrates, a metretes of Chian sold for a mina. (*Plut. de Anim. Tranquil.* 10; Böckh, *Publ. Econ. of Athens*, vol. i. p. 133, 1st ed.)

With respect to the way in which wine was drunk, and the customs observed by the Greeks and Romans at their drinking entertainments, the reader is referred to the article SYMPOSIUM.

It now remains for us to name the most esteemed wines, and to point out their localities; but our limits will allow us to enumerate none but the most celebrated. As far as those of Greece are concerned, our information is scanty; since in the older writers we find but a small number defined by specific appellations, the general term *olbos*

usually standing for the epithet. The word that which dwelt upon the Ulysses. It (*μελιηδέα*), so in the mansion of the trusty housekeeper was mingled that even when and most temperate (*H. N.* xiv. 6) similar noble region in his than once (*ὄλβος Πραγμα*) interpreted by p. 28, f.) In name was from the hill village, as, in the shrine of Cybele &c.; Plin. xi. characterized by harsh (*αἰσθη*) qualities which derided it partially (Athen. i. p. 3).

But the wine brilliant period Roman conquest Thasos, Lesbos favoured spots xiv. p. 637), the ridge which from that of ii. 97; Ovid. divides the tripartite the Maecander region of the still retains its the environs of dus (Athen. i. p. 3) and of Clazomenae the first place sent conceded delicious varieties Ariusium, in Plin. *H. N.* xiv. promontory of the island. (V. *Lesbian* occupied the palm In Lesbos the around Mytilene p. 92, d.), and Pausan. x. 19 i. 57.) Pliny over all others Lesbian had the epithet "to point out the It may heredation whatever Greek wines, in the Aegæan most part to reverse is proved, *λεπτός*, a number, while *γλυκός* comparatively

of poetry. "*Vinum omne dulcos minus odoratum*," says Pliny (*H. N.* xiv. 11), and the ancients appear to have been fully sensible that sweet wines could not be swallowed either with pleasure or safety, except in small quantities. The mistake has arisen from not perceiving that the expressions *olivos γλυκούς* and *olivos ἡδύς* are by no means necessarily synonymous. The former signifies wine positively sweet, the latter wine agreeable to the taste from the absence of acidity, in most cases indicating nothing more than sound wine.

It is well known that all the most noble Italian wines, with a very few exceptions, were derived from Latium and Campania, and for the most part grew within a short distance of the sea. "The whole of these places," says Strabo (*v.* p. 234), when describing this coast, "yield excellent wine; among the most celebrated are the Caecuban, the Fundanian, the Setinian, and so also are the Falernian, the Alban, and the Statinian." But the classification adopted by Pliny (*xiv.* 6) will prove our best guide, and this we shall follow to a certain extent.

In the first rank, then, we must place the *Setinum* which fairly deserves the title of *Imperial*, since it has been the chosen beverage of Augustus and most of his courtiers. It grew upon the hills of Setia, above Forum Appii, looking down upon the Pomptine marshes. (*Pendula Pomptinos quas speciat Setia campos*, Mart. xiii. 112; see also *vi.* 86, ix. 3, x. 74, xiii. 112; *Juv.* v. 34; Silius, viii. 378; Plin. *H. N.* l. c.) Before the age of Augustus the *Caecubum* was the most prized of all. It grew in the poplar swamps bordering on the gulf of Amyclae, close to Fundi. (Mart. xiii. 115.) In the time of Pliny its reputation was entirely gone, partly in consequence of the carelessness of the cultivators, and partly from its proper soil, originally a very limited space, having been cut up by the canal of Nero extending from Baiae to Ostia. Galen (*Athen.* i. p. 27, a.) represents it as generous, full bodied and heady, not arriving at maturity until it had been kept for many years. (Plin. *l. c.*; Strabo, *v.* p. 231; Mart. xiii. 115; Hor. *Carm.* i. 20. 9, iii. 23. 2, &c.)

The second rank was occupied by the *Falernum*, of which the *Faustianum* was the most choice variety, having gained its character from the care and skill exercised in the cultivation of the vines; but when Pliny wrote, it was beginning to fall in public estimation, in consequence of the growers being more solicitous about quantity than quality, just as was the case with Madeira a few years ago. The *Falernus ager*, concerning the precise limits of which there have been many controversies, commenced at the Pons Campanus, on the left hand of those journeying towards the Urbana Colonia of Sulla, the *Faustianus ager* at a village about six miles from Sinuessa, so that the whole district in question may be regarded as stretching from the Massic hills to the river Volturnus. Falernian became fit for drinking in ten years, and might be used when twenty years old, but when kept longer gave headaches, and proved injurious to the nervous system. Pliny distinguishes three kind, the rough (*austerum*), the sweet (*dulce*), and the thin (*tenuis*). Galen (*ap. Athen.* i. p. 26, c.) two only, the rough (*αυστηρόν*) and the sweetish (*γλυκδῶν*). When the south wind prevailed during the season of the vintage the wine was sweetish and darker in colour (*μελαστερός*), but if

the grapes were gathered under weather of a different description, it was rough and tawny or amber-coloured (*κιρρός*). The ordinary appearance of Falernian, which has been made a theme of considerable discussion, seems to be determined by a passage in Pliny (*H. N.* xxxvii. 12), in which we are informed that the finest amber was named *Falerna*. Others arranged the varieties differently; that which grew upon the hill tops they called *Cuscinum*, that on the middle slopes *Faustianum*, that on the plain *Falernum*. (Plin. *l. c.* and xxiii. 21; *Athen.* i. p. 26, c.; Hor. *Carm.* i. 20. 10; Prop. iv. 6; Martial, ix. 95; Silius, vii. 159.)

In the third rank was the *Albanum*, from the Mons Albanus (*Mons Juleus*, Mart. xiii. 109), of various kinds, very sweet (*praedulce*), sweetish (*γλυκδῶν*), rough (Plin. xxiii. 21), and sharp (*δυσπικίας*); it was invigorating (*nervis utile*), and in perfection after being kept for fifteen years. (Plin. *l. c.*; Mart. xiii. 109; Hor. *Sat.* ii. 8. 14; *Juv.* v. 53; *Athen.* i. p. 26, d.) Here too we place the *Surrentinum*, from the promontory forming the southern horn of the bay of Naples, which was not drinkable until it had been kept for five-and-twenty years, for being destitute of richness (*δλιψός*) and very dry (*ψαράφός*), it required a long time to ripen, but was strongly recommended to convalescents, on account of its thinness and wholesomeness. Galen, however, was of opinion that it agreed with those only who were accustomed to use it constantly; Tiberius was wont to say that the physicians had conspired to dignify what was only *generous vinegar*; while his successor, Caligula, styled it *nobilis uappa*. (Plin. *l. c.*; *Athen.* l. c.) Of equal reputation were the *Massicum*, from the hills which formed the boundary between Latium and Campania, although somewhat harsh, as would seem, from the precautions recommended by the epicure in Horace (*Sat.* ii. 4. 51; compare *Carm.* i. 1. 19, i. 7. 21, iii. 21; Mart. xiii. 111; Silius, vii. 207), and the *Gauranum*, from the ridge above Baiae and Puteoli, produced in small quantity, but of very high quality, full bodied (*εἶστρος*) and thick (*παχύς*). (*Athen.* l. c.; Plin. *H. N.* iii. 5; Flor. iii. 5.) In the same class are to be included the *Calenum* from Cales, and the *Fundanum* from Fundi. Both had formerly held a higher place, "but vineyards," moralizes Pliny, "as well as states, have their periods of rise, of glory, and of fall." The *Calenum* was light (*κοῖφος*), and better for the stomach than Falernian; the *Fundanum* was full bodied (*εἶστρος*) and nourishing, but apt to attack both stomach and head; therefore little sought after at banquets. (Strabo, *v.* p. 234; *Athen.* i. p. 27, a.; Hor. *Carm.* i. 31. 9; *Juv.* i. 69; Mart. x. 35, xiii. 113.) This list is closed by the *Veluternum*, *Privernatum*, and *Signinum*, from Velitæ, Privernum, and Signia, towns on the Volscian hills; the first was a sound wine, but had this peculiarity, that it always tasted as if mixed with some foreign substance; the second was thin and pleasant; the last was looked upon only in the light of a medicine, valuable for its astringent qualities. (*Athen.* i. p. 27, b.; Plin. *l. c.*; Mart. xiii. 116.) We may safely bring in one more, the *Formianum*, from the gulf of Caieta (*Laestrygonia Bacchus in amphora*, Hor. *Carm.* iii. 16. 34), associated by Horace with the Caecuban, Falernian, and Calenian (Hor. *Carm.* i. 20, iii. 16), and compared by Galen (*ap. Athen.* i. p. 26

a.) to the Privernatium and Rheginum, but richer (*Ἀκραιοτέρως*), and ripening quickly.

The fourth rank contained the *Mamertinum*, from the neighbourhood of Messana, first brought into fashion by Julius Caesar. The finest, called *Potalanum* (*Ποταλῖνος*, Athen. i. p. 27, d.), from the fields nearest to the main land, was sound (*ῥόδος*), light, and at the same time not without body. The *Tauromenitanum* was frequently substituted fraudulently for the *Mamertinum*, which it resembled. (Athen. i. p. 27, d.; Plin. l. c.)

Of the wines in Southern Gaul, that of *Baeterrae* alone bore a high character. The rest were looked upon with suspicion, in consequence of the notorious frauds of the dealers in the Province, who carried on the business of adulteration to a great extent, and did not scruple to have recourse to noxious drugs. Among other things, it was known that they purchased aloes, to heighten the flavour and improve the colour of their merchandise, and conducted the process of artificial ripening so unskillfully, as to impart a taste of smoke, which called forth, as we have seen above, the malediction of Martial on the fumaria of Marseilles. (Plin. *H. N.* xiv. 8. § 5.)

The produce of the Balearic isles was compared to the first growths of Italy, and the same praise was shared by the vineyards of *Tarraco* and *Lauron*, while those of the *Laletani* were not so much famed for the quality as for the abundance of their supply. (Plin. *H. N.* xiv. 8. § 6; Mart. xiii. 118; Silius, iii. 370.)

Returning to the East, several districts of Pontus, Paphlagonia, and Bithynia, Lampascus on the Hellespont, Telmessus in Caria, Cyprus, Tripolia, Berytus, and Tyre, all claimed distinction, and above all the *Chalybonium*, originally from Beroea, but afterwards grown in the neighbourhood of Damascus also, was the chosen and only drink of the Great King (Plin. *H. N.* xiv. 9; Geopon. v. 2; Athen. i. p. 28, d.), to which we may join the *Babylonium*, called nectar by Chaereus (Athen. i. p. 29, f.), and the *Βυβλῖνος* from Phoenicia, which found many admirers. (Athen. i. p. 29, b.) The last is spoken of elsewhere as Thracian, or Grecian, or Sicilian, which may have arisen from the same grape having been disseminated through these countries. (Compare Herod. ii. 35; Athen. i. p. 31, a.)

Passing on, in the last place, to Egypt, where, according to Hellanicus, the vine was first discovered, the *Mareoticum*, from near Alexandria, demands our attention. It is highly extolled by Athenaeus, being white, sweet, fragrant, light (*λεπτός*), circulating quickly through the frame, and not flying to the head; but superior even to this was the *Tuenticum*, so named from a long narrow sandy ridge (*ταυρία*) near the western extremity of the Delta; it was aromatic, slightly astringent, and of an oily consistency, which disappeared when it was mixed with water: besides these we hear of the *Sebennyticum*, and the wine of Antylla, a town not far from Alexandria. Advancing up the valley, the wine of the Thebaïs, and especially of Coptos, was so thin and easily thrown off that it could be given without injury to fever patients; and ascending through Nubia, to the confluence of the Nile with the Astapus, we reach *Meroë*, whose wine has been immortalized by Lucan. (Athen. i. p. 33, f.; Strab. xvii. p. 799; Hor. *Carm.* i. 37. 10; Virg. *Georg.* ii. 91; Lucan,

x. 161; Plin. have held them the vinegar of l. 112.)

Pollux, vi. foll.; Athenæus, lib. i. and lib. x.; besides which there are a multitude of passages in other parts of the above authors, in Cato, Varro, and in the classics generally, which bear more or less upon these topics.

Of modern writers we may notice particularly, Prosper Rendella, *Tractatus de Vinæ, Vindemia et Vinæ*, Venet. 1629; Galeatius Landrinus, *Quæstio de Mixtione Vini et Aquæ*, Ferrar. 1593; Andreas Baccius, *de Naturali Vinorum Historia*, dec., Rom. 1596, *de Concoctis Antiquorum*, dec., Gronov. Thea. Græc. Antiq.; Sir Edward Barry, *Observations on the Wines of the Ancients*, Lond. 1775; Henderson, *History of Ancient and modern Wines*, Lond. 1824. Some of the most important facts are presented in a condensed form in Becker's *Gallus*, vol. ii. pp. 163—176, and pp. 238—241, and *Charicles*, vol. i. p. 456, foll. [W. R.]

VIOCURI. [QUATUORVIRI VIALES.]

VIRGA, dim. VIRGULA (*πάσσα*), a rod or wand. This was in many cases the emblem of a certain rank or office; being carried, for example, by the *Salii*, by a judge or civil officer (see woodcut, p. 98), a herald [*CADUCEUS*] (Non. Marc. p. 528; Ovid. *Mét.* i. 716), and by the *Tricliniarum* [*TRICLINIUM*], or any other person who had to exercise authority over slaves. (Senec. *Epist.* 47.) The use of the rod (*πάσσα*, *Act.* xvi. 22) in the punishment of Roman citizens was abolished by the *Lex Porcia* (p. 696, a). In the *FASCES* a number of rods were bound together.

The wand was also the common instrument of magical display, as in the hand of Circe (Hom. *Od.* x. 238, 293, 318, 389), and of Minerva (xvi. 172). To do any thing *virgula divina* was to do it by magic. (Cic. *Att.* i. 44.) The stripes of cloth were called *virgæ*. (Ovid. *Ar. Am.* iii. 269.) [*PALLIUM*; *TELA*.] [J. Y.]

VIRGINES VESTALES. [VESTALES VIRGINES.]

VIRIDARIUM. [HORTUS.]

VIS. *Leges* were passed at Rome for the purpose of preventing acts of violence. The *Lex Plotia* or *Plantia* was enacted against those who occupied public places and carried arms (Cic. *ad Att.* ii. 24, *de Harusp. Respons.* 8; the Dissertation of Waechter, *Neues Archiv des Criminalrechts*, vol. xiii. reprinted in Orellii *Onomasticon*). The *Lex* proposed by the consul Q. Catulus on this subject, with the assistance of Plautius the tribune, appears to be the *Lex Plotia*. (Cic. *pro Coel.* 29; Sallust. in *Cic. Declam.*) There was a *Lex Julia* of the dictator Caesar on this subject, which imposed the penalty of *aquæ et ignis interdictio*. (Cic. *Philipp.* i. 9.) Two *Julianæ Leges* were passed as to this matter in the time of Augustus, which were respectively entitled *De Vi Publica*, and *De Vi Privata*. (Dig. 48. tit. 6, 7.) The *Lex de Vi Publica* did not apply, as the title might seem to import, exclusively to acts against the public peace, and it is not possible to describe it very accurately except by enumerating its chief provisions. The collecting of arms (*arma, tela*) in a house (*domus*), or in a villa (*agros in villa*), except for the purpose of hunting, or going a journey or a voyage, was in itself a violation of the *Lex*. The signification of the word *tela* in this *Lex* was very extensive. The punishment for the violation of this *Lex* was *aquæ et ignis interdictio*, except in the case of attacking and plundering houses or villas with an armed band, in which case the punishment

was death; and the penalty was the same for carrying off a woman, married or unmarried. The cases enumerated in the Digest, as falling within the penalties of the *Lex Julia de Vi Privata*, are cases where the act was of less atrocity; for instance, if a man got a number of men together for a riot, which ended in the beating of a person, but not in his death, he came within the penalties of the *Lex de Vi Privata*. It was also a case of *Vis Privata*, when persons combined to prevent another being brought before the prætor. The *Senatusconsultum Voluianum* extended the penalties of the *Lex* to those who maintained another in his suit, with the view of sharing any advantage that might result from it. The penalties of this *Lex* were the loss of a third part of the offender's property; and he was also declared to be incapable of being a Senator or Decurio, or a *Judex*: by a *Senatusconsultum*, the name of which is not given, he was incapacitated from enjoying any honour, quasi infamia. (This matter is discussed at length by Rein, *Das Criminalrecht der Römer*, p. 732.) [G. L.]

VIS ET VIS ARMATA. There was an interdict *De Vi et Vi Armata*, which applied to the case of a man who was forcibly ejected from the possession of a piece of ground or edifice (*qui vi dejectus est*). The object of the interdict was to restore the party ejected to possession. (Dig. 43. tit. 16; INTERDICTUM.) [G. L.]

VITIS. [EXERCITIUS, p. 504, b.]

VITRUM (*βάλος*), glass. A singular amount of ignorance and scepticism long prevailed with regard to the knowledge possessed by the ancients in the art of glass-making. Some asserted that it was to be regarded as exclusively a modern invention, while others, unable altogether to resist the mass of evidence to the contrary, contented themselves with believing that the substance was known only in its coarsest and rudest form. It is now clearly demonstrated to have been in common use at a very remote epoch. Various specimens still in existence prove that the manufacture had in some branches reached a point of perfection to which recent skill has not yet been able to attain; and although we may not feel disposed to go so far as Winckelmann (i. c. 2. § 20), who contends that it was used more generally and for a greater variety of purposes in the old world than among ourselves, yet when we examine the numerous collections arranged in all great public museums, we must feel convinced that it was employed as an ordinary material for all manner of domestic utensils by the Egyptians, Greeks, and Romans.

We find the process of glass-blowing distinctly represented in the paintings of Beni Hassan, which if any faith can be reposed in the interpretation of hieroglyphics according to the phonetic system, were executed during the reigns of Osirtasen the First, the contemporary of Joseph, and his immediate successors, while a glass bead has been found at Thebes bearing the name of a monarch who lived 3800 years ago, about the time of the Jewish Exodus. Vases also, wine-bottles, drinking-cups, bugles, and a multitude of other objects have been discovered in sepulchres and attached to mummies both in Upper and Lower Egypt, and although in most cases no precise date can be affixed to these relics, many of them are referred by the most com-

petent judges to a very early period. (Wilkinson, *Ancient Egyptians*, vol. iii. p. 88, &c.)

A story has been preserved by Pliny (*H. N.* xxxvi. 65), that glass was first discovered accidentally by some merchants who having landed on the Syrian coast at the mouth of the river Belus, and being unable to find stones to support their cooking-pots, fetched for this purpose from their ship some of the lumps of nitre which composed the cargo. This being fused by the heat of the fire, united with the sand upon which it rested and formed a stream of vitrified matter. No conclusion can be drawn from this tale, even if true, in consequence of its vagueness; but it probably originated in the fact recorded by Strabo (xvi. p. 758) and Josephus (*B. J.* ii. 9), that the sand of the district in question was esteemed peculiarly suitable for glass-making, and exported in great quantities to the workshops of Sidon and Alexandria, long the most famous in the ancient world. (See Hamberger and Michaelis on the Glass of the Hebrews and Phoenicians, *Commentar. Soc. Gott.* vol. iv.; Heeren, *Ideen*, i. 2. p. 94.) Alexandria sustained its reputation for many centuries; Rome derived a great portion of its supplies from this source, and as late as the reign of Aurelian we find the manufacture still flourishing. (Cic. *pro Rabir. Post.* 14; Strabo, *l. c.*; Martial, xi. 11, xii. 74, xiv. 115; Vopisc. *Aurel.* 45; Boudet, *Sur l'Art de la Verrerie né en Egypte; Description de l'Egypte*, vol. ix. p. 213.)

There is some difficulty in deciding by what Greek author glass is first mentioned, because the term *βαλος*, like the Hebrew word used in the book of Job (xxviii. 17) and translated in the LXX. by *βαλος*, unquestionably denotes not only artificial glass but rock-crystal, or indeed any transparent stone or stone-like substance. (Schol. *ad Aristoph. Nub.* 737.) Thus the *βαλος* of Herodotus (iii. 24), in which the Ethiopians encased the bodies of their dead, cannot be glass, although understood in this sense by Ctesias and Diodorus (ii. 15), for we are expressly told that it was dug in abundance out of the earth; and hence commentators have conjectured that rock-crystal or rock-salt, or amber, or oriental alabaster, or some bituminous or gummy product might be indicated. But when the same historian in his account of sacred crocodiles (ii. 69) states that they were decorated with ear-rings made of melted stone (*ἀρτήματα τε λίθινα χυτὰ καὶ χρύσεια ἐς τὰ ὦτα ἐνθέντες*), we may safely conclude that he intends to describe some vitreous ornament for which he knew no appropriate name. The *σφραγὶς βαλινῇ* and *σφραγιδε βαλίνα* of an Athenian inscription referred to B. C. 398 (Böckh, *Corp. Inscript.* n. 150. § 50), together with the passage in Aristophanes (*Acharn.* 74) where the envoy boasts that he had been drinking with the great king "*ἐξ βαλινῶν ἐκπωμάτων*" decide nothing, especially since in another comedy (*Nub.* 737) Strepsiades describes a *βαλος*, or burning-glass, as a transparent stone sold in the shops of apothecaries, and we know that any solid diaphanous substance ground into the form of a lens would produce the effect. Setting aside the two problems with regard to glass, attributed to Aristotle, as confessedly spurious, we at length find a satisfactory testimony in the works of his pupil and successor, Theophrastus, who notices the circumstance alluded to above, of the fitness of the sand

at the mouth of glass.

Among the be the first in 604, vi. 991) to his country along with pay merchandise l 14). the workman became liable for the value of the vessel destroyed. (Dig. 9. tit. 2. § 27; see Salmassius *ad Vopisc. Saturn.* c. 8.) The art of etching upon glass, now so common, was entirely unknown, since it depends upon the properties of fluoric acid, a chemical discovery of the last century.

We may now briefly enumerate the chief uses to which glass was applied.

1. Bottles, vases, cups, and cinerary urns. A great number of these may be seen in the British Museum and all the principal continental cabinets, but especially in the Museo Borbonico at Naples, which contains the spoils of Herculaneum and Pompeii, and includes upwards of 2400 specimens of ancient glass. These sufficiently prove the taste, ingenuity, and consummate skill lavished upon such labours; many which have been shaped by the blowpipe only, are remarkable for their graceful form and brilliant colours, while others are of the most delicate and complicated workmanship. A very remarkable object belonging to the last class, the property of the Trivulsi family, is described in the notes to Winckelmann (i. c. 2. § 21) and figured

here. It is a glass cup contained within a sort of network, also of glass, to which it is attached by a series of short and very fine glass prope placed at equal distances from each other. Round the rim are several letters connected with the cup in the same manner as the network, and forming the words *SIBI E V I VAS MULTOS ANNOS*. The characters of the inscription are green, the network is blue, the cup itself resembles opal, shades of red, white, yellow and blue predominating in turn according to the angle at which the light falls upon it. It was at first believed that this effect was the result of long interment beneath the ground; but it is much more likely to have been produced by the artist, for it corresponds precisely to the account given of two precious cups presented by an Egyptian priest to the emperor Adrian, and characterised as *calices allascentes versicolores*. (Vopisc. *Saturn.* c. 8.) Neither the letters nor the network have been soldered to the cup, but the whole has been cut of a solid mass, after the manner of a cameo, the marks of the wheel being still visible on the little prope, which are more or less angular according as the instrument was able to reach them completely or not. But the great triumph of ancient genius in this department is the celebrated

Portland Vase, formerly known as the Barberini Vase, which is now in the British Museum. It was found about three hundred years ago, at a short distance from Rome, in a marble coffin within a sepulchral vault, pronounced upon very imperfect evidence to have been the tomb of Alexander Severus. The extreme beauty of this urn led Montfaucon and other antiquaries to mistake it for a real sardonix. Upon more accurate examination it was ascertained to be composed of dark blue glass, of a very rich tint, on the surface of which are delineated in relief several minute and elaborately wrought figures of opaque white enamel. It has been determined by persons of the greatest practical experience, that these figures must have been moulded separately, and afterwards fixed to the blue surface by a partial fusion; but the union has been effected with such extraordinary care and dexterity, that no trace of the junction can be observed, nor have the most delicate lines received the slightest injury. With such samples before us, we need not wonder that in the time of Nero a pair of moderate-sized glass cups with handles (*pteroti*) sometimes cost fifty pounds (*H.S. see millibus*, Plin. *H. N.* xxxvi. 66). For a full description of the Portland Vase, see the eighth volume of the *Archæologia*.

2. Glass Pastes presenting fac-similes, either in relief or intaglio, of engraved precious stones. In this way have been preserved exact copies of many beautiful gems, of which the originals no longer exist, as may be seen from the catalogues of Stosch, of Tassie, of the Orleans collection, and from similar publications. These were in demand for the rings of such persons as were not wealthy enough to purchase real stones, as we perceive from the phrase "*vitræis gemmis ex vulgi annulis*." (Plin. *H. N.* xxxiv. 30.) Large medallions also of this kind are still preserved, and bas-reliefs of considerable magnitude. (See Winckelmann, i. c. 2. § 27.)

3. Closely allied to the preceding were imitations of coloured precious stones, such as the carbuncle, the sapphire, the amethyst, and above all, the emerald. These counterfeits were executed with such fidelity, that detection was extremely difficult, and great profits were realised by dishonest dealers who entrapped the unwary. (Plin. *H. N.* xxxvii. 75.) That such frauds were practised even upon the most exalted in station is seen from the anecdote given by Trebellius Pollio of the whimsical vengeance taken by Gallienus (*Gall.* c. 12) on a rogue who had cheated him in this way, and collections are to be seen at Rome of pieces of coloured glass which were evidently once worn as jewels, from which they cannot be distinguished by the eye. (Plin. *H. N.* xxxvii. 26. 33. 75; Senec. *Ep.* 90; Isidor. *Orig.* xvi. 15. § 27; Beckmann, *History of Inventions*, vol. i. p. 199. Eng. Trans. 3d edit.)

4. One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in such a manner as to depict upon the upper surface some figure or pattern, upon the principle of a minute mosaic. The filaments thus combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole of the little column thus formed, and hence if it was cut into thin slices at right

angles to the direction of the fibres, each of these sections would upon both sides represent the design which would be multiplied to an extent in proportion to the total length of the glass threads. Two beautiful fragments evidently constructed in this way are accurately commented upon by Winckelmann (i. c. 2. § 22, 23, 24), and another recently brought from Egypt is shown on the frontispiece to the third volume of Wilkinson's work. Many mosaic pavements and pictures (*opus musivum*) belong to this head, since the cubes were frequently composed of opaque glass as well as marble, but these have been already discussed in p. 915 of this work.

5. Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling houses, just as scagliuola is frequently employed in Italy, and occasionally in our own country also. Rooms fitted up in this way were called *vitreas camerae*, and the panels *vitreas quadratae*. Such was the kind of decoration introduced by Scaurus for the scene of his theatre, not columns nor pillars of glass as some, nor bas-reliefs as others have imagined. (Plin. *H. N.* xxxvi. 64; Stat. *Syl.* i. 5. 42; Senec. *Ep.* 76; Vopisc. *Firm.* c. 3; Winckelmann, i. c. 2. § 21; Passeri, *Lucernae Fictiles*, p. 67. tab. lxxi.)

6. The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavations at Pompeii, for not only have many fragments of flat glass been disinterred from time to time, but in the tepidarium of the public baths a bronze lattice came to light with some of the panes still inserted in the frame, so as to determine at once not only their existence, but the mode in which they were secured and arranged. (Mazois, *Palais de Scaurus*, c. viii. p. 97; *Ruines de Pompeii*, vol. iii. p. 77; Becker, *Gallus*, vol. ii. p. 20.) [Domus, p. 432.]

7. From the time that pure glass became known, it must have been remarked that when darkened upon one side, it possessed the property of reflecting images. We are certain that an attempt was made by the Sidonians to make looking-glasses (Plin. *H. N.* xxxvi. 66), and equally certain that it must have failed, for the use of metallic mirrors, which are more costly in the first instance, which require constant care, and attain but imperfectly the end desired, was universal under the Empire. Respecting ancient mirrors, see *SPECULUM*.

8. A strange story with regard to an alleged invention of malleable glass is found in Petronius (c. 51), is told still more circumstantially by Dion Cassius (lvii. 21), and is alluded to by Pliny (*H. N.* xxxvi. 66), with an expression of doubt, however, as to its truth. An artist appeared before Tiberius with a cup of glass. This he dashed violently upon the ground. When taken up it was neither broken nor cracked, but dented like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative, upon which the order was given that he should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known. [W. R.]

VITTA, or plural VITTAE, a ribbon or fillet, is to be considered, I. As an ordinary portion of

female dress.

1. When female dress, head, and sex (*vittae*) the hanging down Ovid. *Met.* i. It was worn Prop. iv. 11. *Virg. Aen.* ii. the vitta as different forms 3. 15, iv. 11. Max. v. 2. §

The Vitta fair character retices; hem pudoris, and served to point tron. (Ovid. 247, *Ep.* as

The colour white and pu ii. 413, *Orid.* of those represented with caes set with tit. 2. a. 25.

The following views of the on which we lamo, vol. ii.

II. When usually twisted held together iii. 487, *Aen.* ad *Virg. Aen.* 142, &c. is employed as an who offered x. 537; Tac. cially those for a Vestal. Ovid. *Fast.* (3.) Prophet priests, and intertwined w *Aen.* iii. 81, i. 11, *Theb.* (*Virg. Aen.* Stat. *Silv.* iii. crifice. (*Virg.* v. 366; Ovid. ii. 301.) (6. iii. 64.) (7. Tacit. *Hist.* i. anta. (*Virg.*

The sacred vittæ, as well as the infulæ, were made of wool, and hence the epithets *lanæa* (Ovid. *Fast.* iii. 30) and *mollis*. (Virg. *Ecl.* viii. 64.) They were white (*nivææ*, Virg. *Georg.* iii. 487; Ovid. *Met.* xiii. 643; *Stat. Theb.* iii. 466), or purple (*purpureæ*, Prop. iv. 9. 27), or azure (*caeruleæ*) when wreathed round an altar to the manes. (Virg. *Aen.* iii. 64.)

Vitta is also used in the general sense of a string for tying up garlands (Plin. *H. N.* xviii. 2; Isidor. xix. 31. 6), and *vittæ leuææ* for the leathern straps or braces by which a machine was worked. (Plin. *H. N.* xviii. 31.) [W. R.]

ULNA (ὐλῆν), properly the fore-arm from the shoulder to the wrist, is also used for the whole arm, and even for the whole span of both arms; and hence, as a measure of length, it appears to be used with different significations. In the chief passages in which it occurs (Virg. *Buc.* iii. 105, *Georg.* iii. 355; Ovid. *Metam.* viii. 750; Hor. *Epod.* iv. 8) there is nothing to determine its length, except, perhaps, in the last quoted passage, where, however, we may easily suppose the exaggeration of caricature. Servius, however, in his note on the first of these passages, says that it was the space between the outstretched hands, that is, the same as the Greek ὀρῦλα of six feet; and this is evidently its meaning in Pliny (*H. N.* xvi. 40. a. 76, 32. a. 57), where it is important to observe that *crassitudo* refers to the *circumference* of the trunk, not to its *diameter*. Later writers use it as equivalent to the *cubit* or a modification of it, and hence the modern *ell*. (Pollux, ii. 140; Solin. 54.) [P. S.]

UMBO. [CLYPEUS; TOGA, p. 1136, b.]

UMBRA'CULUM, UMBELLA (σκιάδειον, σκιάδιον, σκιάδιον) a parasol, was used by Greek and Roman ladies as a protection against the sun.

They seem not to have been carried generally by the ladies themselves, but by female slaves who held them over their mistresses. The daughters

of the aliens (μέτρουαι) at Athens had to carry parasols after the Athenian maidens at the Panathenææ, as is mentioned under HYDRIAPHOBIA. The parasols of the ancients seem to have been exactly like our own parasols or umbrellas in form, and could be shut up and opened like ours. (Aristoph. *Equit.* 1348; Schol. *ad loc.*; Ovid. *Ar. Am.* ii. 209.) They are often represented in paintings on ancient vases: the annexed woodcut is taken from Millin's *Peintures de Vases Antiques*, vol. i. pl. 70. The female is clothed in a long Chiton or Diploidion [TUNICA, p. 1172, b.], and has a small Himation, which seems to have fallen off her shoulders.

It was considered a mark of effeminacy for men to make use of parasols. (Anacreon, *ap. Athen.* xii. p. 534, a.) The Roman ladies used them in the amphitheatre to defend themselves from the sun or some passing shower (Mart. xiv. 28), when the wind or other circumstances did not allow the velarium to be extended. To hold a parasol over a lady was one of the common attentions of lovers (Mart. xi. 73; Ovid. *l. c.*), and it seems to have been very common to give parasols as presents. (Juv. ix. 50.)

Instead of parasols the Greek women in later times wore a kind of straw hat or bonnet, called *σολία*. (Pollux, vii. 174; compare x. 127; Theocr. xv. 39.) The Romans also wore a hat with a broad brim (*petasus*) as a protection against the sun. (Suet. *Aug.* 82; Dion Cass. lix. 7.) See Paciaudi, *de Umbellæ gestatione*, Rom. 1752; Becker, *Charikles*, vol. ii. p. 73.

UNCIA (ὄγκια, ὀγκία, ὀγγία), the twelfth part of the *As* or *LIBRA*, is derived by Varro from *uncus*, as being the unit of the divisions of the *as* (*L. L.* v. 171, Müller). It was subdivided into 2 *seuncias*, 3 *duellæ*, 4 *sicilici*, 6 *sestulæ*, 24 *scrupula*, and 144 *siliquæ*. The values of the *Unica* and its subdivisions, in terms of our own weights, will be found in the Tables.

In connecting the Roman system of weights and money with the Greek, another division of the *uncia* was used. When the *drachma* was introduced into the Roman system as equivalent to the *denarius* of 96 to the pound [DENARIUS; DRACHMA] the *uncia* contained 8 *drachmæ*, the *drachma* 3 *scrupula*, the *scrupulum* 2 *oboli* (since 6 *oboli* made up the *drachma*), and the *obolus* 3 *siliquæ* (κεραρία). Therefore the *uncia* was divided into 8 *drachmæ*, 24 *scrupula*, 48 *oboli*, 144 *siliquæ*. In this division we have the origin of the modern Italian system, in which the pound is divided into 12 ounces, the ounce into 8 drams, the dram into 3 scruples, and the scruple into 6 carats. In each of these systems 1728 *κεραρία*, *siliquæ*, or *carats* make up the pound.

The *uncial* system was adopted by the Greeks of Sicily, who called their *obol* λίτρα (the Roman *libra*), and divided it into twelve parts, each of which they called *ὄγκια* or *ὀγγία* (the Roman *uncia*). In this system the *ὄγκια* was reckoned equal to the χαλκοὺς. [LITRA; NUMMUS, pp. 813, 814.]

Müller considers that the Greeks of Sicily, and also the Romans themselves, obtained the *uncial* system from the Etruscans. (Etrusker, i. p. 309.)

The Romans applied the *uncial* division to all kinds of magnitude. [As.] In length the *uncia* was the twelfth of a foot, whence the word *inch*, in area the twelfth of a jugerum, in content the twelfth of a sextarius, in time the twelfth of an

hour. [As, *sub fin.*] Respecting the *uncia* as a coin see *As*, p. 141, a.

(Böckh, *Metrolog. Untersuch.* pp. 155, 160, 165, 293; Wurm, *de Pond.* &c. pp. 8, 9, 63, 67, 118, 138.) [P. S.]

UNCTUA'RIVM. [BALNEAE, p. 190, b.]

UNGUENTA, ointments, oils, or salves. The application of Unguenta in connection with bathing and the athletic contests of the ancients is stated under BALNEAE, ATHLETAE, &c. But although their original object was simply to preserve the health and elasticity of the human frame, they were in later times used as articles of luxury. They were then not only employed to impart to the body or hair a particular colour, but also to give to them the most beautiful fragrance possible; they were, moreover, not merely applied after a bath, but at any time, to render one's appearance or presence more pleasant than usual. In short they were used then as oils and pomatums are at present.

The numerous kinds of oils, soaps, pomatums, and other perfumes with which the ancients were acquainted, are quite astonishing. We know several kinds of soap which they used, though, as it appears, more for the purpose of painting the hair than for cleaning it. (Plin. *H. N.* xviii. 12, 51; Mart. viii. 23, 20, xiv. 26, 27.) For the same purpose they also used certain herba. (Ovid. *Ar. Amat.* iii. 163, *Amor.* i. 14.)

Among the various and costly oils which were partly used for the skin and partly for the hair, the following may be mentioned as examples: mendsium, megalesium, metopium, amaracinum, Cyprinum, ausinum, nardinum, spicatum, iasinum, rosaceum, and crocus-oil, which was considered the most costly. (Becker, *Gallus*, ii. p. 27.) In addition to these oils the ancients also used various kinds of powder as perfumes, which by a general name are called *Diapasmata*. To what extent the luxury of using fragrant oils and the like was carried on, may be inferred from Seneca (*Epist.* 86), who says that people anointed themselves twice or even three times a day, in order that the delicious fragrance might never diminish. At Rome, however, these luxuries did not become very general till towards the end of the republic (Gell. vii. 12), while the Greeks appear to have been familiar with them from early times. The wealthy Greeks and Romans carried their ointments and perfumes with them, especially when they bathed, in small boxes of costly materials and beautiful workmanship, which were called *Narthecia*. (Böttiger, *Sabina*, i. p. 52.) The traffic which was carried on in these ointments and perfumes in several towns of Greece and southern Italy was very considerable. The persons engaged in manufacturing them were called by the Romans *Unguentarii* (Cic. *de Off.* i. 12; Horat. *Sat.* ii. 3. 228), or as they frequently were women, *Unguentariae* (Plin. *H. N.* viii. 5), and the art of manufacturing them *Unguentaria*. In the wealthy and effeminate city of Capua there was one great street called the *Seplasia*, which consisted entirely of shops in which ointments and perfumes were sold.

A few words are necessary on the custom of the ancients in painting their faces. In Greece this practice appears to have been very common among the ladies, though men also had sometimes recourse to it, as for example, Demetrius Phalereus.

UNGUENTA UNIV' of things (R into things G sense, and t objects of in division was as the object thing "meu thing, as a p be an Incorp Obligations things. Bu limited sens corporeal; i sense.

In a thing are parts, in versitas or s is made wit to a person's

as a thing in itself, that is, the whole is viewed *pro diviso*; for division in this case is the same as making many wholes out of one whole. It is here assumed that the thing is in its nature divisible; as a piece of land which is capable of being divided into parts.

But there are parts of things corporeal which are essential to the constitution of the whole, so that the whole cannot be divided into parts without the destruction of its nature; as a living animal for instance.

Besides the corporeal parts into which a (corporeal) thing is divisible, we may suppose incorporeal, ideal parts of a corporeal thing (Dig. 45. tit. 3. a. 5). These parts are assumed fractions of a whole, not corporeal parts. If such a part is the object of thought, the whole corporeal thing is viewed *pro indiviso*: the corporeal object of the will is the thing, and the limitation of the will to a part, is merely intellectual. Thus several persons may be joint owners of a piece of undivided land, but no one can say that any particular part belongs to him. The case just put is that of a corporeal whole and ideal parts. But the whole may be ideal and the parts corporeal: as when there is a number of independent corporeal things, not materially connected, but they are intellectually connected so as to form in idea a whole: thus a flock of sheep is an ideal whole, and the several sheep are the independent corporeal things. The ideal whole is not composed of the several corporeal things, for an ideal whole cannot be composed of corporeal parts; but the ideal whole is a notion which is formed with reference to some particular purpose. It is necessary that the purpose of the several things shall not be different from and independent of the general purpose for which the notion is formed, but subservient to it. Thus as separate corporeal things may be often materially united to form a new corpus; so the several independent things which are not capable of such material union, may be viewed as an ideal union or as a universitas for some purpose; the flock of sheep may be viewed as a whole, as a universitas, for the purpose of ownership. Such a universitas, as already observed, is independent of the several corporeal things: it still exists if they are all changed. Thus in a flock of sheep we have a fictitious, a juridical whole or thing, and in the notion of a universitas of persons we have a fictitious or juridical person, which is still the same person though all the individuals are changed. As a number of sheep must have a name, a flock, in order to be comprehended in one notion, so a juridical person must have a name, as the universitas of Fabri, or the city of Rome.

The term universitas then may have various senses, 1. Both the universitas and the parts may be corporeal (Dig. 50. tit. 16. a. 239. § 8): *territorium est universitas agrorum intra fines cujusque civitatis*. 2. The universitas may be corporeal, and the parts incorporeal, as when we imagine fractional parts of a thing. 3. The universitas may be incorporeal, and the parts corporeal, as a flock of sheep. 4. The universitas and the parts may both be incorporeal.

The fourth is the case when the notion of a whole and its parts is not applied to things, but to rights: thus a man's whole property may be viewed as a unit, or as a universitas, which comprehends the several rights that he has to the several

material things which form the ideal unit of his property.

In this way we arrive at the correct notion of a universitas of persons, which is the notion of a fictitious person imagined for certain purposes, as the notion of a universitas of independent material things is the notion of a fictitious thing, imagined for certain purposes.

A single person only can properly be viewed as the subject of rights and duties; but the notion of legal capacity may by a fiction be extended to an imaginary person, to a universitas personarum, but the fictitious person is not a unit composed of the real persons: it is a name in which the several persons or a majority may act for certain permanent purposes. The purpose itself is sometimes the fictitious person, as when property is given for the service of religion, whether it is administered by one person or several persons. Such juridical persons have certain legal capacities as individuals have; but their legal capacities are limited to property as their object. It is true that the Romans often considered persons as a collective unity, simply because they all exercised the same functions: thus they speak of the Collegium of the consuls [COLLEGIIUM], and of the Tribuni Plebis. In like manner they say that the Duumviri of a municipium are to be viewed as one person. (Dig. 50. tit. 1. a. 25). But these fictitious unities have only reference to Jus Publicum, and they have no necessary connection with juridical persons, the essential character of which is the capacity to have and acquire property by some name.

Juridical persons could be subjects of ownership, Jura in re, obligationes, and hereditas: they could own slaves and have the Patronatus; but all the relations of Familia, as the Patria Potestas and others of a like kind, were foreign to the notion. But though the capacity to have property is the distinguishing characteristic of Juridical persons viewed with relation to Jus Privatum, the objects for which the property is had and applied may be any; and the capacity to have property implies a purpose for which it is had, which is often much more important than this mere capacity. But the purposes for which Juridical persons have property are quite distinct from their capacity to have it. This will appear from all or any of the examples hereinafter given.

The following are Juridical persons: (1) Civitas: (2) Municipis: this term is more common than Municipium, and comprehends both citizens of a Municipium and a Colony; it is also used when the object is to express the Municipium as a whole opposed to the individual members of it. (3) Respublica. In the republican period, when used without an adjunct, Respublica expressed Rome, but in the old jurists it signifies a Civitas dependent on Rome. (4) Respublica Civitatis or Municipii: (5) Commune, Communitas. Besides the Civitates, component parts of the Civitates are also Juridical persons: (1) Curiae or Decuriones; the word Decuriones often denotes the individuals composing the body of Decuriones as opposed to the Civitas (Municipes), which appears from a passage in the Digest (4. tit. 3. a. 15), where it is stated that an action for Dolus will not lie against the Municipis, for a fictitious person cannot be guilty of Dolus, but such action will lie against the individual Decuriones who administer the affairs

of the Municipia. Sometimes the word Curia is used as equivalent to Civitas; and sometimes the Decuriones are spoken of as a Juristical person, which has property as such. (2) Vici; which have no political self-existence, but are attached to some Respublica; yet they are juristical persons, can hold property, and maintain suits. (3) Fora, Conciliabula, Castella. These were places between Civitates and Vici as to extent and importance; they belonged to a Respublica, but had the rights of juristical persons: they are not mentioned in the legislation of Justinian, but the names occur in the Tablet of Heraclea, in the Lex Galliae Cisalpinæ, and in Paulus (*S. R. iv. tit. 6. a. 2.*) In the later period of the Empire, Provinces were viewed as juristical persons.

In the writings of the Agrimensores, communities, and, particularly, colonies (*coloni*), are designated by the appropriate name of Publicæ Personæ, and property is spoken of as belonging to the *Coloni*, that is, the *Colonia*, *Coloni* being used here in the same sense in which Municipia was used as above explained.

Other juristical persons were (1) Religious bodies, as Collegia of Priests, and of the Vestal Virgins, which could hold property and take by testament. (2) Associations of official persons, such as those who were employed in administration; the body of Scribæ became one of the most numerous and important, as they were employed in all branches of administration; the general name was Scribæ, a term which includes the particular names of librarii, fiscales and others; they were divided into subdivisions called Decuriæ, a term which even under the Republic and also under the Empire denoted the corporations of Scribæ; the individual members were called decurii, and subsequently decuriales; the decurii had great privileges in Rome and subsequently in Constantinople. (*Cic. in Verr. iii. 79, ad Quint. Frat. ii. 3; Tacit. Ann. xiii. 27; Sueton. Aug. 57, Claud. 1.*) (3) Associations for trade and commerce, as Fabri, Pistores, Navicularii, the individuals of which had a common profession, on which the notion of their union was founded; but each man worked on his own account. Associations properly included under Societates [*SOCIETAS*]: such associations could be dissolved by the notice of any member, and were actually dissolved by the death of a single member. Some of these associations, such as those for working Mines, Salinæ, and farming the Portoria were corporate bodies, though they had the name of Societates. (4) Associations, called Sodalitates, Sodalitia, Collegia Sodalitia, which resembled modern clubs. In their origin they were friendly associations for feasting together; in course of time many of them became political associations, but from this we must not conclude that their true nature really varied; they were associations not included in any other class that has been enumerated, but they differed in their character according to the times. In periods of commotion they became the central points of political factions, and new associations; it may be reasonably supposed, would be formed expressly for political purposes. Sometimes the public places were crowded by the Sodalitia and Decurii (*Cic. ad Quint. Frat. ii. 3*), and the Senate was at last compelled to propose a lex which should subject to the penalties of Vis those who would not disperse. This was followed by a general dissolution of collegia according to Asconius

VOCA'TIO IN JUS. [Actio, p. 10. b.]

VOLO'NES is synonymous with *Voluntarii* (from *colo*), and might hence be applied to all those who volunteered to serve in the Roman armies without there being any obligation to do so. But it was applied more especially to slaves, when in times of need they offered or were allowed to fight in the Roman armies. Thus when during the second Punic war after the battle of Cannae there was not a sufficient number of freemen to complete the army, about 8000 young and able-bodied slaves offered to serve. Their proposal was accepted; they received armour at the public expense, and as they distinguished themselves they were honoured with the franchise. (Liv. xxii. 57, xxiii. 35; Macrob. *Sat.* i. 11; Fest. s. v. *Volones*.) In after times the name volones was retained whenever slaves chose or were allowed to take up arms in defence of their masters, which they were the more willing to do, as they were generally rewarded with the franchise. (Liv. xxiv. 11, 14, &c., xxvii. 38, xxviii. 46; J. Capitolin. *M. Antonin. Philos.* 21.) [L. S.]

UR'CEUS, a pitcher, or water-pot, generally made of earthenware. (Dig. 33. tit. 7. s. 18; Hor. *Ar. Poët.* 22.) It was used by the priests at Rome in the sacrifices, and thus appears with other sacrificial emblems on the coins of some of the Roman gentes. The annexed coin of the Pompeia gens has on the obverse a lituus before the head of Pompeius, the triumvir, and an urceus behind it.

URNA, an urn, a Roman measure of capacity for fluids, equal to half an AMPHORA. (Hor. *Sat.* i. 1. 54.) This use of the term was probably founded upon its more general application to denote a vessel for holding water, or any other substance, either fluid or solid. (Plaut. *Pseud.* i. 2. 24; Hor. *Sat.* i. 5. 91, ii. 6. 10; Ovid. *Met.* iii. 172.)

An urn was used to receive the names of the judges (*judices*) in order that the praetor might draw out of it a sufficient number to determine causes (Hor. *Carm.* iii. l. 16; Virg. *Aen.* vi. 432;

Plin. *Epist.* x. 3; Juv. xiii. 4); also to receive the ashes of the dead. [FUNUS, p. 560. a.] For this purpose urns were made of marble, porphyry, baked clay, bronze, or glass, of all forms and sizes, some quite simple, and others sculptured in bas-relief, or ornamented in an endless variety of ways. [J. Y.]

URPEX. [IRPEX.]

USTRI'NA, USTRI'NUM. [FUNUS, p. 559. b.]

USUCA'PIO. The history of Usucapio is an important fact in the history of Roman Jurisprudence. Usucapio is the acquisition of Quiritarian ownership by continuous possession; consequently, it is not possible in the case of a Peregrinus nor is it applicable to provincial land.

Gaius (ii. 40—42) states that there was originally in Rome only one kind of ownership: a person was either owner of a thing *Ex jure Quiritium*, or he was not owner at all. But afterwards ownership was divided, so that one man might be owner *Ex jure Quiritium*, and another might have the same thing *In bonis*, that is, have the right to the exclusive enjoyment of it. He then goes on to give an instance of the mode in which the divided ownership might arise by reference to the transfer of a *Res Mancipi*: if such a thing was transferred by bare tradition, and there was neither *Mancipatio* nor *In jure cessio*, the new owner only acquired the natural ownership, as some would call it, or only had it *In bonis*, and the original owner retained the Quiritarian ownership until the purchaser acquired the Quiritarian ownership by *Usucapio* (*possidendo usucapit*); for when the *Usucapio* was completed, the effect was the same as if the thing had been originally mancipated or transferred by the *In jure cessio*. Gaius adds, "in the case of moveable things the *Usucapio* is completed in a year, but in the case of a *fundus* or *aedes* two years are required; and so it is provided by the Twelve Tables."

In this passage he is evidently speaking of *Res Mancipi* only, and of them only when transferred to the purchaser by the owner without the forms of *Mancipatio* or in *Jure Cessio*. From this then it might be safely concluded that the Twelve Tables provided a remedy for defective modes of conveyance of *Res Mancipi* from the owner; and this is all that could be concluded from this passage. But a passage which immediately follows shows that this was all that the Twelve Tables did; for Gaius (ii. 43) proceeds to say, "But (*Ceterum*) there may be *Usucapio* even in the case of those things which have come to us by tradition from a person who was not the owner, whether they are *Res Mancipi* or not, provided we have received them *bona fide*, believing that he who delivered (*qui tradiderit*) them to us was the owner. And this rule of law seems to have been established, in order that the ownership of things might not be long in uncertainty, seeing that one or two years would be quite sufficient for the owner to look after his property, that being the time allowed to the Possessor for *Usucapio*."

The reason for limiting the owner to one or two years has little force in it and possibly no historical truth; but it is clear from this passage that this application of the rule of *Usucapio* was formed from analogy to the rule of the Twelve Tables, and that it was not contained in them. The limitation of the time of *Usucapio* is clearly due to

the Twelve Tables, and the time applied only to purchases of *Res Mancipi* from the owner, when the legal forms of conveyance had been neglected. But the origin of *Usucapio* was probably still more remote.

When Gaius states that there was originally only one kind of ownership at Rome, and that afterwards ownership was divided, he immediately shows how this arose by taking the case of a *Res Mancipi*. This division of ownership rested on the division of things into *Res Mancipi* and *Res Nec Mancipi*, a distinction that had reference to nothing else than the mode of transferring the property of them. Things were merely called *Res Mancipi*, because the ownership of them could not be transferred without *Mancipatio*. Things were *Res nec Mancipi*, the alienation of which could be effected without *Mancipatio*. There could be no division of things into *Mancipi* and *Nec mancipi*, except by determining what things should be *Res Mancipi*. *Res nec Mancipi* are determined negatively: they are all things that are not *Res Mancipi*. But the negative determination pre-supposes the positive. Therefore *Res Mancipi* were determined before *Res nec Mancipi* could be determined; and before the *Res Mancipi* were determined, there was no distinction of things into *Res Mancipi* and *Res nec Mancipi*. But this distinction, as such, only affected the condition of those things to which it had a direct application: consequently all other things remained as they were before. The conclusion then is certain, that the *Res Mancipi* as a class of things were posterior in order of time to the class of *Res nec Mancipi*, which comprehended all things except *Res Mancipi*. Until then the class of *Res Mancipi* was established, all property at Rome could be alienated by tradition, as *Res nec Mancipi* could be alienated by tradition after the class of *Res Mancipi* was constituted.

The time when the class of *Res Mancipi* was formed is not known; but it is most consistent with all that we know to suppose that it existed before the Twelve Tables. If we consider the forms of *Mancipatio* [*MANCIPATIO*], we cannot believe that they arose in any other way than by positive enactment. As soon as the forms of *Mancipatio* and of the *In jure cessio* (which from its character must be posterior to *Mancipatio*) were established, it followed that mere tradition of a thing to a purchaser and payment of the purchase-money, could not transfer the ownership of a *Res Mancipi*. The transfer gave the purchaser merely a *Possessio*, and the original owner retained the property. In course of time the purchaser obtained the *Publiciana actio*, and from this time it might be said that a double ownership existed in the same thing.

The introduction of *Mancipatio*, which gave rise to the double ownership, was also followed by the introduction of *Usucapio*. The bona fide Possessor of a *Res Mancipi* which had not been transferred by *Mancipatio*, had no legal defence against the owner who claimed the thing. But he had the *exceptio doli*, and subsequently the *Exceptio rei venditæ et traditæ* by which he could protect himself against the owner; and as Possessor simply he had the protection of the *Interdict* against third persons. He had the full enjoyment of the thing, and he could transfer the *possessio*, but he could do no act with respect to it for which *Quiritarian ownership* was necessary; consequently

he could not *Cessio*, and could not do away in which of by Testa that of *Usucapio* in no other effect was The Twelve but we do confirmed t

Besides t *Usucapio* in Hereditas. could only b only be est ownership o cording to t be the objec by Engelba Haustus, It of *Res Man* followed by established by *Usucapio* form of *Man* servitudes c lationes onl tione, the f effect was t her husband marriage U the woman passed into *possessio* v provided by

she did not wish thus to come into her husband's hand, she must in every year absent herself from him for three nights in order to interrupt the *usus*. (Gaius, i. 110.) Thus *Usucapio* added to *Usus* produced the effect of *Coemptio*. In the case of the *Hereditas*, when the testator had the *testamenti factio*, and had disposed of his property without observing the forms of *Mancipatio* and *Nuncupatio*, the person whom he had named his heres, could obtain the legal ownership of the *hereditas* by *Usucapio*. (Gaius, ii. 54.) In all these cases then the old law as to *Usucapio* was this: when the positive law had required the forms of *Mancipatio* in order that a certain end should be effected, *Usucapio* supplied the defect of form, by converting a *possessio* (subsequently called *In bonis*) into *Dominium ex jure Quiritium*. *Usucapio* then was not originally a mode of acquisition, but it was a mode by which a defect in the mode of acquisition was supplied, and this defect was supplied by the use of the thing, or the exercise of the right. The end of *Usucapio* was to combine the beneficial with the Quiritarian ownership of a thing. Accordingly the original name for *Usucapio* was *Usus Auctoritas*, the auctoritas of *usus* or that which gives to *Usus* its efficacy and completeness, a sense of *Auctoritas* which is common in the Roman Law. Some say that *usus auctoritas* is *usus et auctoritas*. (Cic. *Pro Caelio*. 19.) [AUCTORITAS; TUTELA.] But *Usus* alone never signifies *Usucapio*; and consistently with this, in those cases where there could be no *Usucapio*, the Roman writers speak of *Usus* only. *Possessio* is the *Usus* of a piece of ground as opposed to the ownership of it; and the term *Usus* was applied to the enjoyment of land of which a man either had not the ownership or of which he could not have the ownership, as the *Ager publicus*. In the later law, as it is known to us in the Pandect, *Usucapio* was a mode of acquiring ownership, the term *Usus Auctoritas* was replaced by the phrase *Usu Capere*, and in the place of *Usucapio* sometimes the phrase "*possessione or longa possessione capere*" occurs; but *Possessio* alone never is used for *Usucapio*. In order to establish the title by *Usucapio*, the *Possessio* must be continuous or uninterrupted during the whole *Usucapio*. If there was an interruption of the *Possessio* (*usurpatio*), and the *Possessio* was acquired again, this was the commencement of a new *Usucapio*. The *Possessio* must also have a legal origin, without which the *Possessio* would have no effect. The possessor must be able to show an origin of his *Possessio* which would give him at least bonitarian ownership: this was called *justa causa possessionis*, *titulus usucapionis*. The *causa* might be a bargain and sale, a gift (*donatio*), a legacy and others.

It appears from a passage of Gaius already quoted, that in his time *Usucapio* was a regular mode of acquisition, which was applicable to things which had come to a man by tradition from one who was not the owner, and was applicable both to *Res Mancipi* and *Nec Mancipi*, if the possessor acquired the *Possessio* of them *bona fide*, that is, for instance, if he believed that he brought them from the owner. There were however some exceptions to this rule: a man could never acquire the ownership of a stolen thing by *Usucapio*, for the Twelve Tables prevented it, and the *Lex Julia et Plautia* prevented *Usucapio* in the case of a thing *Vi possessa*. The meaning of the law was not that the thief or the robber could not acquire

the ownership by *Usucapio*, for the *mala fides* in which their *Possessio* originated was an obstacle to the *Usucapio*, but no person who *bona fide* bought the thing that was stolen or *vi possessa*, could acquire the ownership by *Usucapio*. (Gaius, ii. 45.) According to other authorities the rule as to a stolen thing was established by the *Lex Atinia*. Provincial lands also were not objects of *Usucapio*.

If a woman was in the *tutela* of her agnati, her *Res Mancipi* could not be objects of *Usucapio*, unless they had been received from her by tradition with the auctoritas of her tutor; and this was a provision of the Twelve Tables. The legal incapacity of the woman to transfer ownership by *Mancipatio* must be the origin of this rule. The property of a woman who was in *Tutela legitima* could not be an object of *Usucapio*, as Cicero explains to Atticus (*de tutela legitima nihil usucapere posse*, *ad Att.* i. 5). The foundation of this rule, according to some, was the legal incapacity of a woman who was in the *tutela* of her Agnati, to make a will. [TESTAMENTUM; but see TUTELA.]

In order to acquire by *usucapio*, a person must have the capacity of Roman ownership; consequently all persons were excluded from acquiring by *Usucapio* who had not the *Commercium*. The passage quoted by Cicero (*de Offic.* i. 12) from the Twelve Tables, "*adversum hostem (i. e. peregrinum) aeterna auctoritas*," is alleged in support of this rule of law; that is, a *Peregrinus* may have the use of a *Res Mancipi* which has been transferred by tradition, but he can never acquire anything more by *Usucapio*.

Things could not be objects of *Usucapio*, which were not objects of *Commercium*. Accordingly all *Res divini juris*, such as temples and lands dedicated to the gods, and *Res communes* could not be objects of *Usucapio*. The Limits or bounds by which the Roman *Ager* was marked out were consequently not objects of *Usucapio*, as to which there was a provision in the Twelve Tables. (Cic. *de Leg.* i. 21. "*Quoniam usucapionem intra quinque pedes esse noluerunt*.") The *Quinque pedes* are the *limites linearii*, the breadth of which was fixed at five feet by a *Lex Manilia*. The approach to a sepulchre was also not an object of *Usucapio*. Free men could not be objects of *Usucapio*. (Gaius, ii. 48.)

In the time of Gaius (ii. 51) a man might take possession of another person's land, provided he used no force (*vis*), the possession of which was vacant either from the carelessness of the owner, or because the owner had died without a Successor [Successio], or had been long absent; and if he transferred the field to a *bona fide* purchaser, the purchaser could acquire the ownership by *Usucapio*, even though the seller knew that the field was not his own. This rule was established against the opinion of those who contended that a *Fundus* could be *Furtivus* or an object of theft. But a man might in some cases acquire by *Usucapio* the ownership of a thing which he knew to be not his own: as if a man had possession of a thing belonging to the *hereditas*, of which the heres had never acquired the *Possessio*, provided it was a thing that could be an object of *Usucapio*. This species of *possessio* and *usucapio* was called *Pro herede*; and even things immovable (*quae solo continentur*) could be thus acquired by one year's *usucapio*. The reason was this: the Twelve Tables

declared that the ownership of *res soli* could be acquired by *usucapio* in two years, and all other things in one year: now as the *hereditas* was not a *res soli* it must be included in the "other things," and it was further determined that the several things which made up the *hereditas* must follow the rule as to the *hereditas*; and though the rule as to the *hereditas* was changed, it continued as to all the things comprised in it. (Seneca, *De Benef.* vi. 5.) The reason of this "*improba possessio et usucapio*," says Gaius, was that the heres might be induced the sooner to take possession of the *hereditas*, and that there might be somebody to discharge the *sacra*, which in ancient times (*illis temporibus*) were very strictly observed; and also that there might be somebody against whom the creditors might make their demands. This kind of *Possessio* and *Usucapio* was called *Lucrativa*. In the time of Gaius it had ceased to exist, for a *Senatusconsultum* of Hadrian's time enabled the heres to recover that which had been acquired by *Usucapio*, just as if there had been no *Usucapio*; but in the case of a heres *necessarius*, the old rule still remained. (Gaius, ii. 52—58; Cic. *Top.* 6; Plin. *Ep.* v. 1.)

Gaius mentions a mode of acquisition under the name of *Usureceptio*. If a man mancipated a thing to a friend or transferred it by the *In Jure Cessio*, simply in order that the thing might be in his friend's safe keeping (*fiduciae causa*; *quod tutius nostras res apud eum essent*), he had always a capacity for recovering it. In order to recover immediately the Quiritarian ownership of the thing, *Remancipatio* was necessary; but if the thing was transferred to him by *traditio*, the *Remancipatio* was completed by *Usucapio*, or as it is here called by *Usureceptio*: for *Usureceptio* differs in no respect from *Usucapio*, except that the person who acquires the Quiritarian ownership by *Usus*, in the one case acquires (*capit*), in the other re-acquires (*recipit*) the thing. In the case of a pignoratized thing, the debtor's capacity to recover by *Usureceptio* was the same as in the case of *Fiducia* as soon as he had paid his debt to the creditor: and even if he had not paid the money and had obtained possession of the thing neither by hiring it from the creditor, nor *precario*, he had a *lucrative usucapio*, which was a *usureceptio* and was probably formed from analogy to the *lucrative usucapio pro herede*.

Servitutes praediorum rusticorum were established, at least according to the old law, by *Mancipatio*: the right to the *Servitutes* could only be properly extinguished by a *Remancipatio*. If the *Servitus* was extinguished by mere agreement, there must be a *usureceptio* on the part of the owner of the servient tenement in order to complete its legal release from the *Servitus*. In order that the possession of the *libertas* of the servient land might be enjoyed uninterruptedly for two years, there must be for the same time a total abstinence from all exercise of the right on the part of him who had the *servitus*. Subsequently, it was considered sufficient if the person entitled to the *Servitus* did not exercise his right for two years.

When *usucapio* was established as a means of giving the Quiritarian ownership to him who had acquired a thing. In bonis, the form of *mancipatio* must have gradually lost its importance, and *Usucapio* came to be viewed as a mode of acquisition. Accordingly, it has been already observed, it be-

in some cases, forty years was required. From this time the terms *Usucapio* and *Longi temporis praescriptio*, were used indifferently, as some writers suppose, though on this point there is not uniformity of opinion.

(Engelbach, *Ueber die Usucapion zur Zeit der Zwölf Tafeln*, Marburg 1828; Mühlenbruch, *Doctrina Pandect.* § 261, &c.; *Ueber die Usucapio, pro herede* von Arndts, *Rhein. Mus. für Jurisprudenz*, vol. ii. p. 125; Puchta, *Inst.* ii. § 239.) [G. L.]

USURAE. [FENUS, p. 526, b.]

USURPATIO. One sense of this word is "Usucapionis interruptio," (Dig. 41. tit. 3. s. 2.) Appius Claudius, not the Decemvir, but he who made the Appia Via and brought the Aqua Claudia to Rome, wrote a book *De Usurpationibus*, which was not extant in the time of Pomponius. (Dig. 1. tit. 2. s. 36.) In some cases "usurpatio" means the preservation of a right by the exercise of it, as "jus usurpatum," in the case of a *Servitus aquae ducentiae*; and this nearly agrees with that sense of *Usurpare* which is equivalent to *Uti*. [USUCAPIO.] As to the passage in Gellius, iii. 2, see Savigny, *System*, &c. iv. 365. [G. L.]

USUS. [MATRIMONIUM, p. 741.]

USUS. [USUSFRUCTUS.]

USUSFRUCTUS and USUS were Personal *Servitutes*. [SERVITUDES.] (Dig. 8. tit. 1. s. 1.) *Ususfructus* is defined to be "jus alienis rebus utendi *fructus* salva rerum substantia." (Dig. 7. tit. 1. s. 1.) Accordingly *Ususfructus* comprehended the "jus utendi" and the "jus fructus." *Usus* comprehended only the "jus utendi." The complete distinction between *Ususfructus* and *Usus* will only appear from a statement of what each is.

A *usufructus* was the right to the enjoyment of the fruits of a thing by one person, while the ownership (*proprietas*) belonged to another. It could be established by Testament, which was the common case, as when the *Heredes* were required to give to another the *usufructus* of a thing; and it could also be established by contract between the owner of a thing and him who contracted for the *usufructus*. He who had the *usufructus* was *usufructuarius* or *fructuarius*, and the object of the *usufructus* was *Res Fructuaria*. The utmost limit of *usufructus* and *usus* was the life of the person who had the right. Thus the *usufructus* and *usus* were generally life estates; but not more. (Dig. 45. tit. 1. s. 38. § 12.)

There might be *usufructus* both in *Prædia Rustica* and *Urbana*, in slaves, beasts of burden and other things; and a *usufructus* of a whole property (*omnium bonorum*) might be given; or of some aliquot part. (Dig. 32. tit. 2. s. 37, 43.)

If the *usufructus* of a thing was bequeathed to a person, all the "fructus" of the thing belonged to the *fructuarius* during the time of his enjoyment. Consequently if the *usufructus* of a piece of land was given to him, he was intitled to collect and have for his own all the fructus that were already on the land, and all that were produced on it during the time of his enjoyment. But as he only acquired the ownership of the fructus by collecting them (*perceptio*), he was not intitled to fructus, which existed on the land at the time when his right ended, and which he had not collected: *quidquid in fundo nascitur, vel quidquid inde percipitur, ad fructuarium pertinet*. (Dig. 7. tit. 1. s. 59. § 1; tit. 4. s. 13.)

He was bound not to injure the land, and he

was bound to cultivate it properly. As to quarries and mines, he could work them for his benefit, if he worked them properly (*quasi bonus paterfamilias*). If after the bequest of the *usufructus*, minerals were found on the land, he could work them. He could be compelled to plant new trees in the place of those which died, and generally to keep the land in good condition. If the *usufructus* was of aedea, the *fructuarius* was intitled to all the rents and profits which he received during the time of his enjoyment. He could be compelled to keep a house in repair, but it seems to be doubtful how far he was bound to rebuild the house if it fell down from decay: at any rate he was liable for all moderate and reasonable expenses which were necessary for the maintenance of the property.

The *fructuarius* could not alienate the right to the *usufructus*, though he might give to another the *usus* of his right; and he might surrender the right to the *usufructus* to the owner of the thing. He could not subject the thing to *servitutes*; nor could the owner do this even with the consent of the *fructuarius*. The *fructuarius* could make such changes or alterations in the thing as would improve it, but not such as would in any way deteriorate the thing, or even render the maintenance of it a greater burden. Consequently he had greater power over cultivated land than over houses or pleasure-grounds, for a part of the value of houses or pleasure-grounds and things of the like kind consists in opinion, and must be measured by the rank, wealth, and peculiar disposition of the owner.

The *fructuarius* could maintain or defend his rights by action and by interdicts. On the completion of the time of the *usufructus*, the thing was to be restored to the owner, who could generally require securities from the *fructuarius* both for the proper use of the thing and for its restoration in due time. This security was in some cases dispensed with by positive enactments, and in other cases by agreement; but it could not be dispensed with by testament.

Originally there could be no *usufructus* in things unless they were things corporeal and such as could be restored entire, when the time of *usufructus* had expired. But by a *Senatusconsultum* of uncertain date, there might be quasi *usufructus* of things which were consumed in the use, and in this case the *fructuarius* in fact became the owner of the things, but was bound to give security that he would either restore as much in quantity and value as he had received, or the value of the things in money. (Dig. 7. tit. 5. s. 7; and compare *Randall v. Russell*, 3 Mer. 190.) It is generally supposed that this *Senatusconsultum* was passed in the time of Augustus, and a passage of Cicero (*Top.* 3) is alleged to show that it did not exist in the time of Cicero: "Non debet ea mulier, cui vir bonorum suorum *usufructum* legavit, cellis vinariis et oleariis plenis relictis, putare id ad se pertinere. *Usus enim non abusus legatur*." The only difficulty is in the words "id ad se pertinere," which are usually translated "these things, (the cellae vinariae, &c.) are not objects of *usufructus*," from which it is inferred that there was at that time no *usufructus* in things which were consumed in the Use. But if this is the sense, the words which follow, "for the *usus*, not the *abusus* (power to consume) is the object of the legacy," have no clear meaning. These words simply sig-

nify that a *Usus* is given, not an *Abusus*; but this does not prove that an *abusus* could not be given. Puchta shows that the phrase "*res pertinet ad usufructuarium*," which exactly corresponds to the phrase in Cicero, does not mean "that the thing is an object of usufructus," but that "it belongs to the fructuarius." In the Digest (7. tit. 1. s. 68) the question is, whether the young child of a female slave belongs to the fructuarius (an *partus ad fructuarium pertineat*), and it is answered in the negative, with the following explanation: "*nec usumfructum in eo fructuarius habebit*." The passage of Cicero therefore will mean, that wine and oil in the testator's possession are not given to her by a bequest of the usufructus of his property, for it is *usus*, that is, the enjoyment of the future fruits, which is given, and not "*abusus*" or the power to consume fruits which already exist. In other words the testator gives the woman a *Ususfructus* in all his property, that is a right to gather the fruits, but he does not give the wine and oil, which are fruits already gathered, to the woman to be her property as if she had gathered them during her *Ususfructus*. Puchta contends that "*abusus*" does not necessarily signify that there could be "*abusus*" only in the case of things "*quae usu consumuntur*:" he says that in the place of wine and oil Cicero might have given the young of animals, as an example without altering his expression. If this interpretation is correct, Puchta contends that the *Senatusconsultum* as to *Quasi usufructus* is older than the time of Cicero.

Usus is defined (Dig. 7. tit. 8. s. 2) by the negation of "*frui*:" "*cui usus relictus est, uti potest, frui vero non potest*." The title of the Digest above referred to is "*De Usu et habitatione*," and the instances given under that title mainly refer to the use of a house or part of a house. Accordingly the *usus* of a house might be bequeathed without the *fructus* (Dig. 7. tit. 8. s. 18): it has been already explained what is the extent of the meaning of *Ususfructus* of a house. The *usus* of a thing implies the power of using it either for necessary purposes or purposes of pleasure. The man who was intitled to the *usus* could not give the thing to another to use, though a man who had the *usus* of a house could allow another to lodge with him. A man who had the *usus* of an estate could take wood for daily use, and could enjoy the orchard, the fruit, flowers and water, provided he used them in moderation, or as it is expressed "*non usque ad compendium, sed ad usum scilicet non abusum*." If the *usus* of cattle (*pecus*) was left, the usufructuary was intitled to a moderate allowance of milk. If the *usus* of a herd of oxen was bequeathed to a man, he could use the oxen for ploughing and for all purposes for which oxen are adapted. If the *usus* was of things which were consumed in the use, then the *usus* was the same as *Ususfructus*. (Dig. 7. tit. 5. s. 5. § 2; s. 10. § 1.) *Usus* was in its nature indivisible, and accordingly part of a *Usus* could not be given as a legacy, though persons might have the *fructus* of a thing in common. (Dig. 7. tit. 8. s. 19.) As to his duties the usufructuary was in most respects like the fructuarius. In some cases *Usus* is equivalent to *Ususfructus*, as where there can be no *usus* of a thing without a taking of the *Fructus*. As to *Usus* in the English system, see *Slanning v. Style*, 3 P. Wins. p. 335, and *Hyde v. Parratt*, 1 P. Wins. p. 1.

be dangerous for an enemy to know. The intention of Lycurgus, more probably, was to preserve the national character of his countrymen, and prevent their being corrupted by foreign manners and vices (as Xenophon says), *ὅπως μὴ ῥαδιουργίας οἱ πολῖται ἀπὸ τῶν ξένων ἐμπιπλαιντο*. (*De Rep. Laced.* xiv. 4; compare *Plut. Lycurg.* 27.) With the same view the Spartans were themselves forbidden to go abroad without leave of the magistrate. Both these rules, as well as the feelings of the people on the subject, were much relaxed in later times when foreign rule and supremacy became the object of Spartan ambition. Even at an earlier period we find that the Spartans knew how to observe the laws of hospitality upon fit and proper occasions, such as public festivals, the reception of ambassadors, &c. (*Xenoph. Mem.* i. 2. § 61.) They worshipped a *Zeus ξένιος* and *Ἀθανᾶ ξενία*. (*Pausan.* iii. 1. § 111.) The connection, called by the Greeks *προξενία*, was cultivated at Sparta both by the state and by individuals; of which their connection with the Peisistratidae is an example; and also that of a Spartan family with the family of Alcibiades. (*Thucyd.* v. 43, vi. 89, viii. 6; *Herod.* v. 91; compare vi. 57.) [HOSPITIUM.] Many illustrious men are reported to have resided at Sparta with honour, as Terpander, Theognis, and others. (*Schömann, Ant. jur. Publ. Gr.* p. 142.) Xenophon was highly esteemed by the nation, and made Spartan *πρόξενος*. (See further on the subject of the *ξενία*, *Thucyd.* i. 144, with Goeller's notes; *Aristoph. Aves*, 1013; *Harpocr. s. v. Kal γὰρ τὸ μηδέναι*.) [C. R. K.]

XENIAS GRAPHE (*ξενίας γραφή*). This was a prosecution at Athens for unlawfully usurping the rights of citizenship. As no man could be an Athenian citizen, except by birth or creation (*γένει* or *ποίησει*), if one, having neither of those titles, assumed to act as a citizen, either by taking part in the popular assembly, or by serving any office, judicial or magisterial, or by attending certain festivals, or doing any other act which none but a citizen was privileged to do, he was liable to a *γραφὴ ξενίας*, which any citizen might institute against him. (*Demosth. c. Timoth.* 1204.) Or he might be proceeded against by *εἰσαγγελία*. (*Schömann, de Comit.* p. 187.) If condemned, his property and person were forfeited to the state, and he was forthwith to be sold for a slave. (*Demosth. Epist.* i. 1481.) The judgment however was arrested, if he brought a *δίκη ψευδομαρτυριῶν* against the witnesses who had procured his conviction, and convicted them of giving false testimony. During such proceeding he was kept in safe custody to abide the event. [MARTYRIA.] When a person tried on this charge was acquitted by means of fraudulent collusion with the prosecutor or witnesses, or by any species of bribery, he was liable to be indicted afresh by a *γραφὴ δωροξενίας*, the proceedings in which, and the penalty, were the same as in the *γραφὴ ξενίας*. The jurisdiction in these matters belonged, in the time of Demosthenes, to the *Thesmothetae*, but anciently, at least in the time of *Lysias*, to the *Nautodicae*. (*Harpocr. s. v. Δωροξενία, Πάροστασις, Ναυτοδίκαι*; *Heusch.* and *Suidas*, *s. v. ξενίας δίκη, Ναυτοδίκαι*; *Pollux*, viii. 40. 126; *Meier, Att. Proc.* pp. 83, 347, 761.)

In order to prevent fraudulent enrolment in the register of the *δῆμοι*, or *ληξιαρχικὸν γραμματεῖον*, which was important evidence of citizenship, the *δημόται* themselves were at liberty to revise their

register, and expunge the names of those who had been improperly admitted. From their decision there was an appeal to a court of justice, upon which the question to be tried was much the same as in the *γραφὴ ξενίας*, and the appellant, if he obtained a verdict, was restored to the register; but if judgment was given against him, was sold for a slave. [DEMUS.] (*Harpocr. s. v. Διαλήψεις*; *Schömann, de Comit.* p. 381.) For an example of this see the speech of Demosthenes against *Eubulides*. [C. R. K.]

XENI (*ξένος*), mercenaries. [MERCENARII]
XENUS, XENIA (*ξένος, ξενία*). [HOSPITIUM.]

XESTES (*ξέστης*), a Greek measure of capacity, both fluid and solid, which contained 12 *cyathi* or 2 *cotylae*, and was equal to 1-6th of the *χοῦς*, 1-48th of the Roman *amphora quadrantal*, and 1-72nd of the Attic *amphora metretes*; or, viewing it as a dry measure, it was half the *choenix* and 1-96th of the *medimnus*. It contained very nearly a pint English.

It is thought desirable to add here a few words to the remarks made under *MENSURA*, *PONDERA*, and *QUADRANTAL*, respecting the connection between the Greek and Roman measures of weight and capacity, according to the views of Böckh.

At this point the Roman and Attic systems of measures coincide; for, though the *ξέστης* may perhaps have varied in different states of Greece, there is no doubt that the Attic *ξέστης* was identical, both in name and in value, with the Roman *sextarius*: in fact the word *ξέστης* seems to be only an Hellenic form of *sextarius*. Also the Attic *χοῦς* was equal to the Roman *congius*, for the *ξέστης* was the sixth of the former, and the *sextarius* the sixth of the latter. Further, the Attic *metretes* or *amphora* contained 12 *χοῦς*, and the Roman *amphora* contained 8 *congi*; giving for the ratio of the former to the latter 3 : 2 or 1½ : 1. Again, the Attic *medimnus* was the double of the Roman *amphora*, and was to the *metretes* in the ratio of 4 : 3 : and the Roman *modius* was the sixth of the Attic *medimnus*, and the third of the Roman *amphora*. Hence the two systems are connected by the numbers 2 and 3 and their multiples.

How and when did this relation arise? It cannot be accidental, nor can we suppose that the Greek system was modelled upon the Roman, since the former existed long before the Roman conquest of Greece. We must therefore suppose that the Roman system was in some way adapted to the Greek. It is a remarkable circumstance that the uncial system of division, which characterizes the Roman weights and measures [AS; UNCIA], is not found in the genuine Roman measures of capacity (for the use of the *cyathus* as the *uncia* of the *sextarius* appears to have originated with the Greek physicians in later times): and this is the more remarkable, as it is adopted in the Greek system; the Greek *amphora* being divided into 12 *χοῦς*, and the Roman into 8 *congi*, instead of 12. In the Roman foot again, besides the uncial division, we have the division into 4 *palmi* and 16 *digiti*, which seems clearly to have been borrowed from the Greek division into 4 *παλαιστα* and 16 *δάκτυλοι*. It seems therefore highly probable that the Greek system of measures had a considerable influence on that of the Romans.

To find the origin of this connection, we must

look from the measures to the weights, for both systems were undoubtedly founded on weight. The Roman amphora or quadrantal contained 80 pounds (whether of wine or water does not matter here), and the congius 10 pounds. Also the Attic talent was reckoned equal to 80 Roman pounds, and contained 60 minae. Therefore the Attic mina had to the Roman pound the ratio of 80 : 60 or 4 : 3.

Now if we look at the subject historically, we find all the principal features of the Roman system in existence as early as the time of Servius Tullius. We must therefore seek for the introduction of the Greek element before that time. At that early period Athens does not appear to have had any considerable commercial intercourse with Italy, but other Grecian states had, through the colonies of Magna Graecia. The Phocaeans at a very early period had a traffic with the Tyrrhenians, the Aeginetans had a colony in Umbria, and Corinth and her colonies were in intercourse with the people of Central Italy, besides the traces of Corinthian influence upon Rome, which are preserved in the legend of the Tarquinii. It is therefore to the Aeginetico-Corinthian system of weights and measures that we must look for the origin of Grecian influence on the Roman system. Now the half of the Aeginetan mina had to the Roman pound the ratio of 10 : 9 ; and since the Aeginetan mina was to the Attic as 5 : 3, we get from the comparison of these ratios the Attic mina to the Roman pound as 4 : 3, as above.

(Böckh, *Metrologische Untersuchungen*, xi. § 10.) [P. S.]

XYSTUS. [GYMNASIUM, p. 580, b. ; HORTUS.]

Z.

ZACORI (ζάκοροι). [ARDITUL.]

ZETETAE (ζητηταί) *Inquisitors*, were extraordinary officers, appointed by the Athenians to discover the authors of some crime against the state, and bring them to justice. Public advocates, *συνήγοροι* or *κατήγοροι*, were sometimes directed to assist them in this duty. Frequently the court of Areopagus performed the office of inquisitors for the state, and indeed it was the duty of every magistrate to assist in procuring information against offenders. (Andoc. *de Myst.* 3, 5, 6 ; Dinarch. *c. Demosth.* pp. 90, 97, ed. Steph.) Ζητηταί were more frequently appointed to search for confiscated property, the goods of condemned criminals and state debtors ; to receive and give information against any persons who concealed, or assisted in concealing them, and to deliver an inventory of all such goods (ἀπογράφειν) to the proper authorities. The delinquent was then prosecuted, either before the *σύνδικοι*, or it might be before the *ζητηταί* themselves, if their commission extended to the holding of an *ἡγεμονία δικαστηρίου*. Any person, however, who thought himself entitled to the goods, which were the subject of such information, or to any part of them, might prefer a complaint against the inquisitor or informer, and petition to have the goods or the part to which he was entitled, or their proceeds, restored to him. This proceeding was called *ἐνπισηκνύμα*. [SYNDICI ; PARACATABOLE.] Inquisitors were also called *μαστήρες*.

On one part called *συνάλλα* property of overturning *της* : Böckh ed. ; Meier also the speaker *Aristoph. B.*
ZEUGION
ZONA, LUM (ζώνη), 9 ; *μίτρα*), by both sexes of dresses female girdle, *ζώνη* (ζώνιον) a finer kind whence the *πλόκος*. (Zonarius.)

The chief hold up the which was when person engaged in husband in the wood shipbuilders p. 886, of the 276. The many ancient as worn round the Magistrate embroidered extremities gold buckle The girdle, 539, x. 77, stituent part means of a protection to petticoat attire of the Greek of the use of *ζώνυσθαι* (Hom. *Il.* Athene was *στηρία*. (Hom. pp. 712, 855 descend low body, which or petticoat. sign of the probably on the wool, which *Il.* iv. 137, 187), so as men. The and inside foot long. (Bronzes of and is now Paris. We ening the and at the ring, which of a similar (*Rec. d'Ant.* Men used of a purse. 12 ; Sueton

fastened to the girdle; and still more frequently the fold of the tunic, formed by tucking it up, and called *sinus*, was used as a pocket to carry whatever was necessary.

As the girdle was worn to hold up the garments for the sake of business or of work requiring despatch, so it was loosened and the tunic was allowed to fall down to the feet to indicate the opposite condition, and more especially in preparing to perform a sacrifice (*veste recincta*, Virg. *Aen.* iv. 518; Ovid, *Mét.* vii. 182), or funeral rites (*disincti*, Sueton. *Aug.* 100; *incinctus*, Tibull. iii. 2. 18).

A girdle was worn by young women, even when their tunic was not girt up, and removed on the day of marriage, and therefore called *ζώνη νυμφευική*. (Jacobs, *Anthol.* ii. p. 873; *νυμφεύων μίτρον*, Brunn, *Anal.* iii. 299; Sen. *Oed.* ii. 3. 17; Hom. *Od.* v. 231; Longus, i. 2; Ovid, *Epist. Her.* ii. 116, ix. 66, *Festus*, s. v. *Cingulum*; Catull. ii. 13, *Lxiv.* 28.) The Flora in the museum at Naples

(see the annexed woodcut) shows the appearance of the girdle as worn by young women.

A horse's girth, used to fasten on the saddle [*EPHIPPIUM*], was called by the same names, and was sometimes made of rich materials, and embroidered in the most elaborate manner. (Ovid. *Rem. Am.* 236; Claud. *Epig.* 34, 36.) These terms, *zona* and *cingulum*, were also used to signify the five zones as understood by geographers and astronomers. (Virg. *Georg.* i. 233; Plin. *H. N.* ii. 68; Macroh. *Som. Scip.* ii.) [J. Y.]

ZO'PHORUS (*ζωφόρος* or *διζώμα*), the frieze of an entablature. (See COLUMNA, p. 324, a, and the woodcuts.) [P. S.]

TABLES OF GREEK AND ROMAN MEASURES, WEIGHTS, AND MONEY.

- XI. Greek Weights.
- XII. Greek Money.
- XIII. Roman Weights.
 - (1) The As and its Uncial Divisions.
- XIV. Roman Weights.
 - (2) Subdivisions of the Uncia.
- XV. Roman Money. (1) Before Augustus.
- XVI. Roman Money. (2) After Augustus.

In the construction of these Tables, the same authorities have been used as those referred to in the articles in the body of the work. Particular acknowledgment is due of the assistance which has been derived from the Tables of Hussey and Wurm. The last two Tables (of Greek and Roman money) have been taken without alteration from Mr. Hussey's, because they were thought incapable of improvement, except one addition in the Table of Attic money. All the calculations, however, have been made *de novo*, even where the results are the same as in Mr. Hussey's Tables.

The Tables are so arranged as to exhibit the corresponding Greek and Roman measures in direct comparison with each other. In some of the Tables the values are given, not only in our several measures, but also in decimals of a primary unit, for the purpose of facilitating calculations. In others, *approximate values* are given, that is, values which differ from the true ones by some small fraction, and which, from their simplicity, will perhaps be found far more useful for ordinary purposes than the precise quantities, while the error, in each case, can easily be corrected. Fuller information will be found under *MENSURA*, *NUMMUS*, *PONDERA*, and the specific names. [P. S.]

TABLE I.
GRECIAN MEASURES OF LENGTH.

I. SMALLER MEASURES.										Decimals of a Foot.	Feet.	Inches.
Δάκτυλος										·0632	"	·7584375
2 Κόνδυλος										·1264	"	1·516875
4 2 Παλαιστή, Δῶρον, Δοχμή*, or Δακτυλοδοχή										·2528	"	3·03375
8 4 Διχάς, or Ἡμιπύδιον†										·5056	"	6·0675
10 5 Διχάς†										·6320	"	7·584375
11 5½ Ὀρθόῳρον†										·6952	"	8·3428125

TABLE II.
ROMAN MEASURES OF LENGTH.

I. SMALLER MEASURES.										Decimals of a Foot.	Feet.	Inches.		
Digitus										-	-	-	-	.7281
1½	UNCIA* or Pollex									-	-	-	-	.9708
4	3	Palms								-	-	-	-	2.9124
12	9	3	Palms Major (of late times)							-	-	-	-	8.7372
16	12	4	1½	Pes†						-	-	-	-	11.6496
20	15	5	1½	Palmpes						-	-	-	-	2.562
24	18	6	2	1½	CUBITUS					-	-	-	-	5.4744

(1) NOTES TO TABLE I.

- * Some make the *Boxyph* = *ovoidaph*.
† The accounts of these measures are various and somewhat confused. (See Wurm, p. 91; Hussey, p. 235.)
‡ A measure mentioned by some late writers, which, from its name, may be presumed to have been used for measuring timber.
N. B. — *Approximate Values*. From the above Table, it will be seen that the Greek Foot, Cubit, and Oryxia, only exceed the English Foot, Foot and a half, and Fathom, by about 1-10th, 2-10ths, and 8-10ths of an inch respectively.

(2) NOTES TO TABLE II.

- * It is not thought necessary to give the whole scale of the Uncial divisions of the foot. They can easily be calculated from the Uncia.
N. B. — *Approximate Values*. The Roman Uncia, Pes, and Cubitus only fall short of our Inch, Foot, and Foot and a half, by less than 1-10th, 4-10ths, and 6-10ths of an inch respectively.

TABLE III.
GRECIAN MEASURES OF LENGTH.

II. LARGER MEASURES.—LAND AND ITINERARY.*										Decimals of a Mile.		Miles.	Feet.	Inches.

375,000	250,000	150,000	75,000	37,500	3125	75	50	DEGREE†	-	68•9488	68	5110	"

(1) NOTES TO TABLE III.

* In order to show the relations more clearly, the foreign measures most familiar to the Greeks are included in this Table.

† This is, of course, not the true number of English statute miles contained in a degree of a great circle of the earth, but the number computed from the data exhibited in the Table, some of which are only approximate; namely, 1 Degree=75 Roman miles=600 Greek Stadia, and 1 Greek foot=12•135 inches. The true value of a degree in English miles is 69½=69•0196, and the difference is only about 7•100ths of a mile.

(2) NOTES TO TABLE IV.

* See ACTUS and MENSAURA.

† See Note to Table III.

N. B. — The Roman mile only differs from the English by less than 1•10th

TABLE V.
GRECIAN MEASURES OF SURFACE.

ORDINARY LAND MEASURES.					Square Feet.	Perches.	Square Feet.
11072 (Square Foot)					-	-	1-0226

TABLE XI.
GRECIAN WEIGHTS.

1. Ratios of the three chief Systems.									
Aeginetan : Euboic or old Attic	-	-	-	-	-	6	:	5	
Aeginetan : Solonian or later Attic*	-	-	-	-	-	5	:	3	
Euboic : Solonian	-	-	-	-	-	138½	:	100	
						100	:	72	
						25	:	18	
The Aeginetan Talent = 6000 Aeginetan Drachmae = 7200 Euboic = 10,000 Solonian									
Euboic	"	=	5000	"	=	6000	"	=	8333½
Solonian*	"	=	3600	"	=	4320	"	=	6000

* Also called the *Attic Silver Talent*. When Attic weights are spoken of without any further distinction, these are generally intended.

2. Aeginetan Weights.						<i>Exact.*</i>			<i>Approximate.</i>		
						lb.	oz.	grs.	lb.	oz.	grs.
Obol (ὀβολός)	-	-	-	-	-	"	"	18.472½	"	"	20
6	Drachma (δραχμή)	-	-	-	-	"	"	110.83½	"	½	"
600	100	Mina (μνᾶ)	-	-	-	1	9	145.83½	1½	"	"
36,000	6000	60	Talent (τάλαντον)	-	-	95	"	"	100	"	"

* In this and the other tables the English weights used are those of the *avoirdupois* scale as fixed by statute; namely, the grain = the Troy grain, the ounce = 437½ grains, the pound = 16 ounces = 7000 grains.
† Or ½ of an oz.

3. Euboic or Attic Commercial Weights.*						<i>Exact.</i>			<i>Approximate.</i>		
						lb.	oz.	grs.	lb.	oz.	grs.
Obol	-	-	-	-	-	"	"	15.393½	"	"	15½
6	Drachma	-	-	-	-	"	"	92.861½	"	"	93½
600	100	Mina	-	-	-	1	5	48.61½	1½	"	"
36,000	6000	60	Talent	-	-	79	2	291.63½	80	"	"

* See pp. 933, b., 934, a. It is here assumed that the Attic commercial mina was exactly 138½ silver drachmae, not 138, as stated in the decree. The difference is not quite half a grain in the drachma.

4. Attic Commercial Weights increased.*						<i>Exact.</i>			<i>Approximate.</i>		
						lb.	oz.	grs.	lb.	oz.	grs.
1 Mina = 150 Drachmae (silver)	-	-	-	-	-	1	6	350	1½	"	"
5 Minae = 6 Minae (commercial)	-	-	-	-	-	7	14	291.6½	7½	"	"
1 Talent = 65 Minae (commercial)	-	-	-	-	-	88½	"	145.8½	90	"	"

* See p. 934, a.

† Here, as in the preceding table, the commercial mina is taken as equal to 138½ drachmae, not 138.

5. Attic Silver Weights.						<i>Exact.</i>			<i>Approximate.</i>		
						lb.	oz.	grs.	lb.	oz.	grs.
Obol	-	-	-	-	-	"	"	11.0833½	"	"	12
6	Drachma	-	-	-	-	"	"	66.5*	"	"	70
600	100	Mina	-	-	-	"	15	87.5†	1	"	"
36,000	6000	60	Talent	-	-	57	"	"	60	"	"

* This value is, if any thing, too small. Böckh makes it 67.4. Respecting other scales of weight see *PONDERA*.
† Or ½ of an oz.

GRECIAN MONEY.

I. ATTIC COPPER AND SILVER.

I. ATTIC COPPER AND SILVER.												
Lepton (Λεπτόν)	-	-	-	-	-	-	-	-	-	-	Ferthings.	
7	Chalchus (Χαλκοῦς)											"
14	2											"
28	4	Dichalcoun, or Quarter Obol (Δίχαλων)										"
56	8	2	Half Obol ('Ημισόβολον)									"
112	16	4	2	OBOL ('Οβολός)								"
168	24	8	4	2	Diobolus (Διόβολος)							"
224	32	12	6	3	Triobolus (Τριόβολος)							"
336	48	16	8	4	Tetrobolus (Τετρόβολος)							"
672	96	24	12	6	DRACHMA† (Δραχμή)							"
1344	192	48	24	12	Didrachm (Διδραχμον)							"
33,600	4800	2400	1200	600	Tetradrachm (Τετράδραχμον)							"
2,016,000	288,000	144,000	72,000	36,000	18,000	12,000	9000	6000	3000	1500	60	TALENT (Τάλαντον)

- Respecting the sense in which sums of ancient money are said to be equivalent to certain sums of our money, see NUMMUS, p. 815, a.

† The Drachma was very nearly equal to the French Franc.

II. *Acgrinetan and Euboic Silber.* — The coins of these systems can be easily calculated from the Attic, according to the ratios given in Table XI, No. 1.

thus calculated, the Aeginetan Talent was equal to 406*l.* 5*s.*, and the Euboic was equal to 398*l.* 10*s.* 10*d.*, and the Drachmae were equal respectively to

4*℥*. for the Aeginetan, and 1*s*. 1*℥*. + $\frac{1}{8}$ of a farthing for the Euboic. Respecting the values of the coins actually found, see NUMMUS.

III. *Grecian Gold.* — The values of the Grecian gold cannot be conveniently reduced to the tabular form; they will be found in the articles *STATÈRE*

and Darius.

TABLE XIII.
ROMAN WEIGHTS.
